In all that makes a model municipality in this twentieth century, Decatur stands very near to the head of the line. Points of especial interest to the editors outside of its wonderfully perfect trolley system, great public schools and churches, remarkably well conducted newspapers, and fine hotels, were the James Millikin University, the Pythian Home, the Mueller Manufacturing Co. factories, the Leader Iron Works, the great newspaper and job printing establishments, and Staley's Starch Works; and, when it came to recreation, social enjoyment and entertainment, the Country Club, on the banks of the Sangamon, overlooking valley and forest, and the unrivaled golf field of one hundred and twenty acres, surpassing all others in the state, took the highest honors and furnished greatest pleasures.

The sessions were held in the hall of the Decatur Club, which, by the way, is housed in one of the largest, best arranged and furnished club buildings to be found in any city of the size of Decatur anywhere in the United States.

Mayor Recognizes Power of Press and Enforces Obligations for Uprightness

The first session was opened Tuesday morning, June 3, with prayer by Rev. T. N. Ewing of the Grace Methodist Episcopal Church of Decatur, and the city's mayor followed the worthy divine's petitions for Heaven's blessings on the editors, with welcoming words proclaiming the pleasure over their visit, saying in substance, among other kindly things, that the city of Decatur appreciates the coming of the Illinois association as an honor and also as a compliment. The gentlemen of the Illinois Press Association are men of discriminating judgment, and he believed that they would appreciate Decatur as Decatur appreciates them. The mayor said that he realized the power of the press in molding public opinion and as a source of information from which a very large majority of the people must derive most of their information as to public affairs. In his opinion the newspaper that deceives or misleads the public in matters of important news is as culpable as a public official who betrays the trust that has been reposed in him. He was glad to say that the Illinois press is not open to the charge of deceiving or misleading, but that it gives the news as it is and prints the facts regardless of politics. He was pleased to say, also, that the newspapers of Illinois are beginning to pay much attention to the character and veracity of advertising as well as to news, on the ground that a newspaper lends endorsement and support to an advertisement by giving it space in its columns.

Hon. Owen Scott Tells of City's Greatness

Hon. Owen Scott, formerly of Bloomington, from which city he was elected to Congress, a past president of the Association, and one of the oldest and most highly respected members, followed the mayor, joined in Decatur's welcome, told of his joy over the visit of his newspaper comrades to his new home city, and enumerated a few of the things that make Decatur so desirable and worthy of praise. Among these he spoke of its sixteen public school buildings, with 6,200 pupils; a $652,000 high school, four parochial schools, business college, $80,000 library with 35,000 volumes; James Millikin University, ten years old with 1,200 students; thirty-three churches; Y. W. C. A. and Y. M. C. A. buildings; St. Mary's hospital, which has done a splendid work; the Wabash employes' hospital, and the Decatur and Macon county hospital which is now being built, and will be the equal of any in the state.

"We have 171 acres in parks — Fairview, Lincoln, Nelson, Torrence and Central parks; the Pythian home, the Anna B. Millikin home, a private institution which is doing a wonderful work in caring for dependent children.

"Our accessibility as the center of the state is another feature. It is possible to get in here from seventeen directions, and I can't understand why more of your members are not here this morning.

Five Hundred Traveling Men

"Five hundred traveling men live here and radiate out from Decatur in many directions singing our praises and preaching our prosperity. We have something like 200 factories, employing from 5,000 to 8,000 men, and there is now building the Wabash car shops, which will cost $1,000,000. Then there is the traction company shops, where are repaired and built the cars of the Illinois Traction System, Mueller's Manufacturing Company, which ships brass goods to all civilized parts of the earth."

L. S. Dun, of Divernon, made telling points in favor of "The Country Newspaper as an Advertising Medium." The intense human interest of the home paper, that touches every member of the family, and the confidence of all the readers in the editor, whom they personally know; the personal message each week, and the natural appeals of the home news to the women of the households, were among the things enumerated that make for the paper's value to advertisers.

In speaking of the parcels post, Mr Dunn suggested a farmers' exchange or want column. The parcels post gives an opportunity for a speedy and cheap delivery of small objects. Why not use it?

In conclusion he claimed that the home paper affords a superior advertising medium. It only remains to prove this to the world by example, and with the enthusiasm of one who knows that his is the best and then charge a price that is commensurate with the service rendered.

Legislation was discussed by J. M. Page, of Jerseyville, and E. A. Snively, of Springfield. In this discussion and in subsequent remarks it was made apparent that Mr. Snively, who has served for twenty-five years as Legislative Committeeman of the Illinois Press Association, considered that the newspapers have no reason to fear any adverse legislation from the present Legislature. He grew a little humorous over the bill that might prevent the printing of Lydia Pinkham's ads in the papers. He had never had any of it in a paper that he had published but did not see how some papers could get along without it.

Some of the Members of the Illinois Press Association Who Attended the Convention at Decatur, Illinois, June 3, 4 and 5, 1913

At the opening of the morning session Wednesday, President Hughes delivered an able annual address, filled with practical suggestions, in the main telling of plans for the betterment and strengthening of the organization. More extended notice of the address, and of matters treated therein, will appear in some subsequent issue of the National Printer-Journalist, with a view to the benefit of the Illinois and other editorial organizations.

The excellent local dailies, the Morning Herald and the Evening Review, gave extended, interesting and intelligent accounts of the sessions, and the following, gleaned from the last named publication, contains all that our crowded pages will permit publishing this month:

A Leading Lawyer's View of the Newspaper

Attorney C. C. LeForgee of Decatur delivered a masterly address on "The Newspaper," in which he described the beginning of newspapers and discussed their growth in scope, circulation, power and influence, placing the position of the press as one of great responsibility and commanding influence. He closed in an eloquent peroration in which he referred to the development in late years to a great feeling of unrest which he said he could not call anarchism, socialism or progressism, but nevertheless it was a powerful sentiment whose strength has not yet been measured which tends to look upon the Constitution of the state and of the United States as outgrown and worn-out documents. These constitutions he looked upon as the work of men who were well-nigh inspired, and he believed that the perpetuation of this government and the success of this nation depends upon their force and justice being properly recognized by the people. It is up to the newspapers, he said, to instil into the minds of the public this necessity for regard and obedience.

Other features of the morning program were an address on "Ready Print" by S. J. Porterfield of Cullom, and another by Terry Simmons of Marseilles on "When an Editor is at His Best."

E. A. Snively, legislative agent for the association, said he was finishing his twenty-fifth year in that position, and he wished to offer an informal report, inasmuch as it was likely he would not be re-elected. He discussed briefly the various bills now before the legislature affecting newspapers.

There was some discussion following this report, some members opposing Mr. Snively's position in regard to the tax matter. An adjournment was taken at 12:30, when the members of the association were photographed as a group. The morning program was prolonged in order to give the afternoon to sight-seeing.

The program for the afternoon included a visit to the Staley Starch works, and dinner at the Country Club.

In the evening the editors listened to an illustrated address by Bert Hall of the Country Improvement League. He gave in detail the methods that are being carried on through county organizations and county agents for the advancement of agriculture, the improvement of stock, the increase of the products of the field, general farm or rural betterment, and good roads.

It was intensely interesting and broadly instructive. The movement is one in which every newspaper man and every good citizen should take an active part, and as being the especial concern of all papers having a rural or suburban constituency — and herein are included all newspapers, both daily and weekly, large and small — will receive extended treatment in our August issue.

At the morning session on Thursday, Sam F. Hurd of the Canton, Ill., Ledger, gave an excellent and very practical talk on "Special Advertising," illustrating his remarks with papers in which the plan had been used to great profit.

The Elgin Daily News used this method in an issue which was recently reviewed, at some length, in these pages. The plan is to secure illustrations and use matter pertaining to certain trades or lines of business, and then make a thorough canvass among the merchants and manufacturers in the line treated, especially soliciting those who had been non-advertisers. The result was in each instance the getting out of a very profitable special number.

More than this, those who went into the special issue were frequently secured for six or eight inserts, and were often made permanent advertising customers of the paper.

Mrs. S. S. Merritt of the Lostant Local gave an exceedingly interesting paper on "Justice Demands the Equality of the Ballot Box."

The following officers were elected for the ensuing year :

President — Charles W. Warner, Chronicle, Hoopeston.

First Vice-president — Frank L. Shup, Press, Newton.

Second Vice-president — James E. McClure, Democrat, Carlinville.

Third Vice-president — W. B. Davis, Democrat, Jerseyville.

Secretary — J. M. Page, Democrat, Jerseyville.

Treasurer — S. J. Porterfield, Chronicle, Cullom.

Member of Executive Committee — W. G. Dustin, Star-Herald, Dwight.

Member of Auditing Committee — W. J. Smith, Sun, Waukegan.

At the morning session there was an excellent paper by Sam T. Hurd of the Canton Ledger on "Special Advertising."

Underlying Principles of Efficient Advertising

Through Courtesy of August Wolf, 707 Tegler Building, Edmonton, Alta., Canada

"ADVERTISING is the motive power which keeps the wheels of trade humming the song of volume in production and distribution to the tune of profits for the manufacturer and dealer," said Samuel E. Webb, an advertising expert of Chicago, in the course of an address at a largely attended meeting of the Edmonton, Alta., Ad Club on May 28. "It is the avenue through which a larger expenditure of money is made than any other outlay of money, and, since it is also doubtless attended with a greater waste of energy, it would appear that the time has come when the principle of efficiency must be applied to advertising, just as it has entered in other departments of business." Continuing, Mr. Webb said, in part:

"Let us first understand what is advertising. A definition that will cover its scope of usefulness might read: It is a means of bringing buyer and seller into a mutually beneficial relationship, resulting in an exchange of money or other value for something of use or profit to the buyer.

"Such an understanding and application of advertising would eliminate many of the undesirable qualities and effects now attributed to this most potent power; such a conception would raise it to the proper level in the mind of the public and perforce increase its effectiveness for business institutions and add to the benefit of the reader. The business world is fast swinging around to this position as a matter of economic horse sense.

"We are concerned today with the use of advertising. We can best arrive at this through analysis. Three functions are apparent to the student of the subject: To inform the public, to educate the public or to convince the public. The informational function is applied to subjects upon which the public has already been educated. It involves 'business news' — merely stating the names and prices of articles and how and where obtained. About all a woman would wish to know about a dishpan or broom is where to get it and the price; but in the advertising of an electric dish, washing machine or vacuum cleaner, the educational function of advertising is employed to show her the value of new methods of house work, hence education is necessary. The third function of advertising is to convince the public; in other words, to make a sale. In fact, both the other functions must eventually lead up to this point in the mind of the reader or else it is valueless.

"Six points, at least, are to be considered as the requisites of efficiency, whereby the functions of advertising may be expressed to the best advantage to the advertiser, as follows:

"First. The selection of the proper medium. This may be determined by the class of readers to be reached. It may be the general masses, or certain classes; it may be consumers or confined to dealers. The nature of the article or service to be advertised will also affect the selection.

"Second. The language used. An advertisement is no place to display one's familiarity with the dictionary or encyclopedia. The shortest, plainest Anglo-Saxon words will get there quicker than long words of doubtful meaning. Trade expressions and technical terms are to be avoided in addressing the general public. Whenever it is necessary to introduce technique, proper explanation should be made.

"Third. To tell the truth, not merely as a matter of ethics, but because it pays good dividends. It is a solid foundation upon which confidence may be built and become a real asset in any legitimate business; furthermore, truth enlarges the influence of advertising beyond the actual reader — it radiates to the reader's friend and circle of acquaintances.

"Fourth. Repetition. One advertisement of anything produces results adequate to the expenditure involved. The impression seldom is intensified through repetition, and the subconscious mind records the fact often without realization on the part of the reader. A thought is often brought to the surface of the mind and acted upon as an original idea, which, in fact, was a result of the influence of an advertisement unconsciously recorded at some previous time quite remote to the action.

"The fifth and sixth factors in efficiency of advertising deal with the manner of bringing the reader to a favorable conclusion.

"There are only two ways in which a man is influenced to act — through logic or reasoning and through suggestion. Every normal person demands more than opinion of the seller regarding his own goods when it comes to giving up good money for them. He would rather know the facts or points of merit and form his own opinion as to whether he will derive the benefit. Just because an advertiser thinks well of his own stock, is not a good reason for the reader to buy. Especially is this true when any considerable amount of money is involved.

"Suggestion, however, does play a big part in advertising. Whenever a strong suggestion is placed in the mind of a person, the tendency is to act upon it. The potency of a direct suggestion may be defeated, however, because a contrasting suggestion arises in the mind in other words, an auto-suggestion.

"A positive suggestion crystallizes the thought of the reader for definite expression in action. It is also the shortest cut to immediate results. While a direct command is the most powerful suggestion that can be employed, its force is limited. A man may buy a newspaper or a package of breakfast food because the newsboy yells at him or the billboard tells him, but to convert him into a customer for a piano store or automobile house, the mere suggestion would not get his money. He would have to be shown points of merit and reasons set forth before he parts with his cash.

"Three points to which I would direct your attention as detriments to the efficiency of advertising are: Misrepresentations, comparisons and the use of superlatives. It is readily understood that misrepresentations as to goods or conditions surrounding the sale of anything, have no place in legitimate business. Superlatives merely voice opinions. That 'an unsupported statement proves nothing' is a principle of law. The space could be better used for giving reasons, based upon points of real merit.

"Superlatives tend to arouse antagonism in the reader's mind when the statement is at variance with his own experience. Comparisons distract or divide the attention between the subject under discussion and the competitive article or proposition. An advertiser should stick strictly to the discussion of his own goods and keep away as far as possible any thought about any other article of similar nature. There may be explosive power in comparisons, but the recoil sends the reader to investigate competitive goods, which often results in business for the other fellow.

"First in discussing the writing of an ad that 'pulls' we want to know the benefit the purchaser may derive from the article or service under consideration. We must analyze it as closely as we have the subject of advertising. Take it apart and ascertain each point of merit, then systematize or reconstruct those points for presentation to the customer, keeping in mind all the time that the reader is the man to whom the appeal is to be made. Forget the 'we' side of the case and think of the 'you' side.

"The first step in building the ad is 'how may we attract the reader's favorable attention?' The answer is, to say something that is vital to him. The next step is to arouse his interest. A man will read a thing after his attention is attracted, when it is to his interest to read it. The beginning of an advertisement is no place to tell all about how important we are and how big a stock we have and how long we have been in business and similar trite expressions.

"When the attention is once attracted and a man's interest ia aroused to the act of reading, then the point or points of merit should be shot into his mind. This is designed to create a desire for the article advertised. When this desire is crystallized by forceful words or arguments, his mind acts favorably toward you, just in proportion to the manner in which you have appealed to his selfish nature. All men are selfish when it comes to spending or investing money, and the quicker we understand this the better.

"Action in the advertiser's favor, then, is determined upon the amount and quality of evidence submitted to support the statements about his goods, coupled with a powerful suggestion to purchase. Of course, price enters into the deal, but a man will pay the price when you have convinced him that it is to his own benefit and that the article or service is worth more to him than the money in his pocket.

"To sum up this question of efficient advertising, it is just this: Ascertain where you are going before you buy your ticket; use logic and suggestion; leave out your own opinions; build in the reader's mind a house of benefits to him, and the sale is a natural result."

Address by Arthur Capper

Chairman Agricultural Division of Baltimore Convention

We have come together this morning — agricultural publishers and editors, agricultural advertisers and advertising agents — for a purpose slightly different from that which usually animates a gathering of this sort. We are here not to air our grievances nor to enter our protests; not to point with pride nor to view with alarm, but, in the language of Mr. Graves' hard-working and capable committee: "To formulate a definite expression and message which is broad enough to be worthy of consideration by all the different departments of advertising in conference."

We shall endeavor, therefore, to confine the deliberations of this meeting to the consideration of problems that affect advertising in general; or at least, let us avoid those smaller problems which affect only our own particular business and individual interests.

Arthur Capper, Proprietor Capper Publications, Topeka, Kan.

What is the vital mesage which we who are particularly interested in agricultural advertising have for the advertising world?

Mr. Le Quatte, in his excellent address Monday afternoon, placed especial stress upon the problem of gaining from the business world recognition of the fact that

human beings live on farms and operate them; and upon the necessity of adequate development work on the part of advertisers on the country trade, and most of all he pleaded for mutual understandings and general co-operation that will result in complete advertising campaigns on merchandise that is sold to both city and country people.

I am not sure that our program this morning, outlined as it was weeks prior to the preparation of Mr. Le Quatte's address, will bring out with special force the points Mr. Le Quatte emphasized.

And yet what Mr. Le Quatte pleaded for yesterday may be summed up in the one word — efficiency.

Efficiency in the advertising and efficiency in the salesmanship that affects the more than thirty million people who live on the farms of America.

Let us make that, then, the keynote of our session — efficiency.

Not how can we, agricultural publishers, get more advertising; not how can agricultural advertisers gain a little advantage here or there; but, "What can the business world do to get the rich trade of six million farms, more efficiently?"

In considering this big question, we must necessarily consider some of the problems which have solely to do with the agricultural press and its relations to advertisers and agencies; but I feel sure that every gentleman who addresses you this morning has a vital message, not only for us, but for the entire advertising world.

The truth is that if we can formulate a message here this morning that will make the business men and the advertisers of this country really appreciate the fact that more than thirty million human beings — the very backbone of our nation — live upon our six million farms; if we can make the advertising world really comprehend and appreciate the vast volume of trade that originates on these farms; if we can lead the business world into an understanding of the peculiarly close and intimate relations existing between the agricultural press and these thirty millions of people; if, in short, we can open the eyes of the advertising world to the possibilities of this vast and hitherto almost untouched market, we will have fully justified not only this departmental meeting but will have made this great Baltimore convention worth while — even if it should accomplish nothing else.

The agricultural press occupies a unique position in the publishing world — unique in that the farm paper, while primarily a technical trade journal, is at the same time an intimate family magazine.

This peculiar condition is not the result of an attempt on the part of the agricultural editor to "cover the earth," but is a perfectly natural condition arising from the nature of farm life and farm work. As Mr. Le Quatte said yesterday, "The farm home is a part of the farm factory." On the well-regulated farm everybody works; every member of the household has some part in the operation of the farm, and consequently is interested in the journal which deals with farm life. It is this catholicity of interest which gives the farm press such wide scope, enabling it to carry a wider range of advertising than almost any other class of publications.

There are few lines of general business which can afford to ignore entirely the agricultural press, especially in these latter days, when the farmer's buying capacity has so greatly increased and his tastes and desires have kept pace with his increased income.

But this wide range of appeal is not the only distinctive feature of the agricultural press. The average reader is not conscious of his need of the advertising in his daily paper or in his magazine. He looks upon it as something extraneous, and often regards it as an impertinence. Not so with the farmer and his farm paper. To him the advertising is a necessity and he knows it. He reads and studies it and acts upon it. If it is not there he asks why. And there is a simple and perfectly natural reason for his interest in the advertising columns, and the reason is this:

The farmer does not pass a hardware store, or an implement house, or a tailoring shop twice a day as he goes to and from work. The farmer's family does not see the department store windows every day or once a week. The advertising columns of their favorite farm papers are almost their sole means of "shopping." It is through the advertising columns that they keep in touch with the great merchandising world, and they are just as eager to get the good things of life — those things which will help them in their daily work, or which make life worth living, as the manufacturer and merchant are eager to sell them.

They read advertisements and, owing to the high standard that the agricultural press has maintained in its advertising columns, they believe in advertising. The vast volume of mail order advertising transacted every year with farmers; the pages and pages of livestock advertising, calling for an expenditure of from $25 to $500 for animals "sight unseen," is ample proof of the farmer's faith in the advertising carried in his favorite farm paper. No medium of advertising has a stronger hold upon its readers, or sustains more intimate relations with them than the good farm paper.

With this as a basis: Thirty million consumers, with an annual productive capacity of nine billion dollars, reached by a class of media of peculiar intimacy and force, depending almost solely upon this one medium for their "shopping facilities," let us eliminate all "talk to the gallery" and devote our necessarily hurried session to a careful consideration of:

First. What can we do as agricultural publishers and agricultural advertisers to make the agricultural press of greater value to the merchandising world?

Second. What can we do to bring advertisers to a keener sense of appreciation of our field and our media? And inasmuch as service is the only basis on which we can consistently ask patronage, the two questions resolve themselves into one. What steps can we take to serve better the sellers of wares? What means can we adopt to become a greater factor in American merchandising?

Let us turn the searchlight of honest inquiry upon conditions as they are and see just where the agricultural press stands:

In its relation to its subscribers;
In its relation to advertising agencies;
In its relation to advertisers, and
In its inter-relation — its family relation.

It is this that our program attempts to do, and I am sure that the able and experienced gentlemen who shall address us will point out some of the shortcomings of agricultural advertising, and what is of greater importance, tell us how to remedy whatever trouble exists — how to attain great efficiency. The time of each speaker is necessarily limited, as we must, above all else, have opportunity for a general discussion of the papers and addresses. We want to get "the general sense of the meeting" as the basis of our message to the advertising world.

Notes From Ben Franklin Club Headquarters

GRADUALLY new cities are added to the list of those employing paid secretaries. Word has reached this office that Arthur Wilson has been appointed secretary of the Essex County Printers' Board of Trade, with offices at Lynn, Mass. Also word has been received that the Indianapolis, Ind., Ben Franklin Club has hired L. A. Heath as secretary. May the good work go on. "May their tribe increase."

✣ ✣ ✣

May 20 the Calumet Ben Franklin Club of Chicago held their meeting at the Windermere Press. After 6:30 luncheon was enjoyed at Cafe Beck. About thirty printers gathered to spend an evening on "estimating." The first lecture was a stereopticon lecture on "The Time Element in Estimating," given by Secretary Ed E. Sheasgreen of the Ben Franklin Club of America. He was followed by Henry Allen, who gave a demonstration of the square inch cost of composition as worked out by the St. Louis Ben Franklin Club. R. F. Welsh, of the Welsh Printing Service Company, gave a talk and demonstration on estimating, using certain jobs as illustrations. Joe Hays, of the Monotype Company, Arthur Rice of the Review Printing and Embossing Company, and Fred Wolfe, who was one of the early organizers of the Ben Franklin movement in Chicago, and Secretary R. F. Brines of the Chicago Ben Franklin Club, all gave short talks. General discussions were entered into by all present on all topics brought up. The meeting was voted one of the most successful and interesting yet held by that club.

The officers claim that they are going to try for an attendance of forty at their next regular meeting.

✣ ✣ ✣

Organization work is the great work of the hour. On all sides effort along trade and industrial organization lines is being put forth. But organization work means hard labor, it means digging down deep. It means building broad enough so as to rear structures that will be worthy, and that will stand the test of time. To build this way it takes an immense amount of hard work.

Hot air or sky rocket effects in organization work should absolutely have no place.

Labor only builds skyscrapers and all the other wonderful works of man. Hot air blisters retard the work.

Sky rockets flare out in the air to only come down like sticks.

✣ ✣ ✣

The printer who holds aloof from joining organization work because there is some one in the club he does not like, or because he does not like the name of the organization, or, more foolish still, because he cannot forget what the organization may have done to his union when he was a worker — well, he is the real foolish man.

He is the man who should join the organization and help make it what he thinks it should be.

Mr. Employing Printer: If you want your craft (that, in spite of all the great work done the last few years, is still far down the list of financial standing) raised to a higher plane; if you want to help make your own business road far easier to travel; if you want the respect of your fellow competitors, then be honest with yourself and your family, forget the past, live in the present and work for the future welfare of all that is yours. In other words, get into the new organization to be known as the United Typothetae and Franklin Clubs of America.

If this new organization is not what you want it to be — just the more reason for your joining now, so you may have a hand in its affairs, have the right to work from within and not waste good effort from without in trying to make it do the kind of work you think a national organization should do.

✣ ✣ ✣

In our letters to the craft the last two months we have been studying the cost of hand composition and cylinder press work. These little studies have been presented for the purpose of enlightening the employees, as well as the employers, as to how and why the products of the divisions in which they are interested cost so much.

There has been a great deal said about bindery work cost, and so in this letter we will take up the cost of the straight "table work" of the hand folding, gathering, inserting, wrapping, mailing, etc. A great many employes as well as employers imagine that because girls and women are employed in bindery work, and that because the average wage runs in the neighborhood of ten to twelve cents an hour, that if this product were to be sold for 25 cents an hour, there would be "money" (profit) in it.

Let us see just what the situation is in a factory division, known as "table work" or "bindery C."

The following is taken from the same plant which the other two have been taken from, a plant valued at $48,159, with an investment in equipment for "table bindery work" of $507, this investment being in tables, chairs, glue pots, etc., etc.

The items of expense in this particular plant for table bindery work are as follows:

Building expense, made up of rent, heat, janitor and building repairs	$ 10.21
Valuation expense, made up of replacement funds and interest on $507, and insurance and taxes on the same	7.40
Light	.66
Water, soap and towels	.81
Commercial expense, its share of executive salaries, selling expense, advertising, packing and delivering, clerk salaries, postage, telegraph and telephone, stationery and supplies, bad accounts, organization dues, donations, interest on commercial investments, spoilage, and miscellaneous	177.30
Department direct expense, made up of paste, thread, folders, etc., etc	2.00
Pay roll of department	151.47
Total cost of department	$349.85

Total chargeable hours produced	891
Total non-chargeable hours paid for	135
Total pay roll hours	1,026

Now, since we are finding the cost of the chargeable hour, all we have to do is to perform the simple problem of dividing 891 chargeable hours into $349.85, the total cost of the department, to get 30 cents an hour cost for every hour sold into the product.

While this plant had a very good cost this particular month, still it experienced months when the cost of table work had gone to over 50 cents an hour.

You workers, boys or girls, men or women, who have often thought that you would like to go into business for yourself and to sell your labor at just double what your employer was paying you, just take this matter under consideration and study it over. Make yourself thoroughly acquainted with the fact that to "double wages" does not begin to bring back to the employer the whole cost of the product. In this particular plant the pay roll cost of an hour was 17 cents (the hours divided into the pay roll); if this was doubled we would have only 34 cents an hour, but, according to the actual records we would, on a thirty-four cent basis, be losing five cents on every hour sold, for the whole cost of the hour was thirty-nine cents.

Right in connection with this there comes up a point in economics that is also worth thinking over, and that is that if in this department where a little over $500 was invested in equipment and the cost per hour is 30 cents, what must be the cost per hour to the employe, **to the** human machine, in which there is an average invested capital of $5,000?

Think this over, also, as you imagine you would like to go into business.

* * *

A WISE GIFT BY I. L. STONE, PRESIDENT OF DUPLEX PRINTING PRESS COMPANY — COMMENDED BY THE LOCAL PRESS

The Morning Enquirer — The Evening News
Battle Creek, Michigan

June 7, 1913.

Editor, The National Printer-Jaurnalist, Chicago, Ill.

Dear Sir: I am enclosing clipping from our paper announcing the very generous action of Mr. I. L. Stone, President and Active Manager of the Duplex Printing Press Company of this city, who has given to the Y. W. C. A. of Battle Creek $50,000 to build a new home. Mr. Stone's gift was so timely in meeting the urgent necessities of the organization and was so in keeping with his life work in Battle Creek that we have been especially interested in it.

Mr. Stone's prominence in the publishing world makes this matter, we believe, of some interest to you.

Respectfully,
THE ENQUIRER PUBLISHING CO.
A. L. Miller, Editor and Manager.

The comment of the Evening News on this gift is as follows:

A SPLENDID GIFT

The offer of Mr. I. L. Stone to give $50,000 for the erection of a new building for the Battle Creek Y. W. C. A. is a magnificent expression of that interest in Battle Creek, and those of her influences which make for culture and for better manhood and womanhood, which Battle Creek has known in endless ways from Mr. Stone in the long years of his residence here.

It richly illustrates the fortune of Battle Creek in the possession of the citizenship which makes industrial prosperity and turns that prosperity into the means to city betterment—and the betterment of men and women.

It is not surprising that Mr. Stone should bring this new token of the public service to which his entire life here has been so largely devoted, by act and example — except that the generous size of the gift, at the particular time when the problems of the Y. W. C. A. seemed very complex and difficult, is of itself as surprising as it is gratifying.

From an interview with Mr. Stone as to this donation the following is given:

"I am very glad to be able to offer this much toward an institution which I regard as very important to the real welfare of the city," said Mr. Stone this morning. "My only regret is that I might not do more than this, in similar causes. I have had a very high appreciation of the work of the Y. W. C. A. Since the building project has been under consideration, and since I have thought of the possibility of extending some substantial help, I have visited other cities and inspected their buildings. I am convinced that for the sum which I have proposed we shall be able to build a building here adequate to the needs of our organization."

Editor Miller is right in believing that Mr. Stone's prominence in the publishing world makes this matter of interest not only to us but to all publishers of newspapers to whom Mr. Stone's acquaintance extends. He is prized very highly as a liberal, benevolent-minded, honorable, public-spirited gentleman wherever known. This manifestation of regard for the good of others and the welfare of his community only heightens the esteem in which he is held.

Another thing worthy of note is that of the interest manifested and the cordial expressions of commendation and approval extended by the press of Battle Creek. It is a matter of glory that all worthy newspapers today are ever active and outspoken for all that tends to the public good and are ever alert and ready to encourage good deeds and to commend the doers thereof.

ILLINOIS WOMAN'S PRESS ASSOCIATION ANNUAL MEETING

The twenty-ninth annual meeting of the Illinois Woman's Press Association was held at the Press Club of Chicago, June 5. A luncheon in the woman's dining room preceded the business meeting. The following were elected to serve for the ensuing year: President, Miss Ethel M. Colson, Record-Herald; vice-presidents, Mrs. Mate Palmer, Banner of Gold; Mrs. Idah McGlone Gibson, Newspaper Enterprise Association, and Miss Elizabeth Lonergan, New York World; secretary, Mrs. Maude S. Evans; treasurer, Mrs. Estelle Ryan Snyder; corresponding secretary, Miss Ruth Wilson Herrick; historian, Mrs. Mary Henson; librarian, Mrs. Mary Helm; chairman of the author's section, Mrs. Marcus Kavanaugh (Herminie Templeton); chairman of correspondents and contributors' section, Mrs. Ida L. Hower; of editors' section, Mrs. Mary O'Connor Newell, Record-Herald; poets' section, Miss Harriet Monroe, editor of the Poets' magazine; publishers' section, Mrs. Carrie Jacobs Bond. For standing committees the following were elected as chairmen: Social, Miss Hattie Summerfield; membership, Mrs. Laura S. Rabb; program, Mrs. Myrtle Dean Clark; courtesy, Caroline A. Huling; house, Mrs. Mary Holden, Examiner; literature extension, Mrs. Katherine Wallace Davis; auditing, Mrs. Roselle M. Dean; finance and needy authors' fund, Mrs. Charles H. Sergel; manual, Mrs. Elizabeth C. Nolan.

As this organization accepts authors, publishers and magazine writers as well as newspaper women, those of the above not crredited to a paper are writers of other classification. All members must be professional writers.

Reports of officers indicated a good condition, that of the treasurer showing a large balance. A memorial meeting, a tribute of respect for Mrs. Florence Adams Gebhardt, late corresponding secretary of the association, will be held at an early date. The organization will be represented at the convention of the National Press Association of America, at Colorado Springs, June 17, 18 and 19, by Mrs. Estelle Ryan Snyder, Caroline A. Huling, Mrs. Mary Helm, Mrs. Mary D. Holden, and Mrs. Addie Farrar Inman.

Addresses Delivered Before N. P. A. Convention at Colorado Springs, Colo., June 17 to 19, 1913

THE COST SYSTEM AND EFFICIENCY

By **Ed E. Sheasgreen, Secretary Ben Franklin Club of America**

(Read before the National Press Association, Colorado Springs, Colo., June 17, 1913.)

NOTICE that this subject contains three very vital words — words full of great potentialities —

COST,
SYSTEM,
EFFICIENCY.

In order named let us consider what each of these words mean, and then study for a moment where this combination of words will ultimately lead us.

"COST" — What is cost?

Cost is not a law of man, but is that great law of Nature that accounts for all losses and wastes, and is reached through her law of Balance, Depreciation (or decomposition), Interest (or increase), Distribution and Co-operation.

The LAW OF BALANCE is Nature's first great Law of Cost that says where there is the night there will come the day, where there is a storm there will come the calm — that where there is an outgo of expense there must be an income of the same, through the selling price.

The LAW OF DEPRECIATION is that law Nature uses to show man how decomposition changes the form of all matter back to its original state — the earth.

The LAW OF INTEREST is Nature's law of increase.

The LAW OF DISTRIBUTION is the Natural Cause that has brought all things to the places where they are found.

The LAW OF CO-OPERATION conserves every bit of energy, moving with exact precision, so that the most may be accomplished with the least possible effort.

On the LAW OF BALANCE is based the Science of Accounting.

On the LAW OF DISTRIBUTION is based the Science of Cost Finding.

The Law of Co-operation brings the height of perfection and efficiency.

It Costs to maintain balance, to care for depreciation and interest, to properly distribute expenses and to have fullest co-operation.

Whether man ever gave thought to the question or not, the Cost line of all effort has always existed, still exists, will ever exist.

Just as the first man paid the Cost in putting forth his first effort, whether that effort was taking his first step or in fighting his first battle, that Cost being paid in the wasting away of the bodily tissues and in the time consumed in gaining the desired end; just as the first prisoner or slave paid the cost of his crime or of being made captive by being imprisoned, or driven in slavery, just so the first business man paid the Cost when he ventured his capital, hired men to work for him, and bought stock and material from other men, by sooner or later failing when he continually attempted from the ORIGINAL CAPITAL INVESTED to pay depreciation, interest, insurance, taxes, wages or any other of his Costs of doing business. The Cost Line — the Death Line of business — was there all the time, but he did not know where or how to find it.

As with the first business man to fail, so has it been with the millions who have failed and with the hundreds of thousands of business men who today, are paying the Cost out of their original capital because they do not know scientifically where and how to find Cost, and hence are gradually forced over the Death Line of business to finally go down and out.

Just as Nature deals in Time, as inscrutable a mystery as it is, in bringing forth her various products, an hour (as man measures Time) for this, a day for that, a week, a month, a year, a century, or an age for some other thing, so man deals with the same element in bringing forth his products, no matter what they may be. Hence it is Time, and only Time, that gives value to a thing.

Ed. E. Sheasgreen, Secretary Ben Franklin Club of America

Some of you say, "You are wrong; how about Stock?" Well, how about stock?

Let us analyze the paper stock on your press room floor — what is it but accumulated TIME which has been put by man, with the use of tools and equipment (Capital) into a natural product. The paper stock which is your raw product, came to you as the paper warehouse's finished product. It came to them as a raw product in the shape of paper stock, but to the paper mills from which the paper house bought, this stock was their finished product. At the mills the finished paper was only wood pulp worked up (Time) with and by the use of machinery and equipment (Capital), and the logs which made up the pulp were the finished product of the landowner who had spent time to cut down the trees which had taken Nature centuries to mature. And so, after all, man's products, as innumerable and as valuable as they are, represents only the accumulation of Time.

Now, the more TIME spent, and the more CAPITAL used, the more Time Costs, and the value of these costs, however they may have been found, have always been considered in certain monetary units.

Accumulated time is called "product." When a product can be produced, sold or exchanged we have what men call "business," the value of which rests in the number of units of "time" and the value of the equipment used in the making of "business." The life of "business," the life of industry, is activity of Trade, better known as "competition," and practiced today in the depths of ignorance — the ignorance of what Cost of Production means, and ignorance of the proper scientific system of finding it.

What is "Science?"

Science is knowledge arranged under general truths and principles and arrives from the discovery of Identity against Diversity.

Scientific System, or Method, is reasoning to proceed from the Unknown to the Known.

The Science of Cost Finding — or a Scientific Cost Finding System — is based on the Natural Law of Distribution, and such a scientific cost system properly operated must first gather all the time spent or used (known scientifically as productive time) directly by the employes on the product passing through the several productive centers of the plant, charges each individual job with the time and stock spent on it, and then once a month takes every kind of expense item, and through the monthly summary sheet distributes these expenses among and onto the units or things (whether area, dollars invested, horsepower hours, department, job or any other kind of units) benefited by those expenses. When the total expense or cost of a productive center is known, and this total expense is divided by the total chargeable hours in that department, we have the "Chargeable Hour" Cost, we have found the cost of that element that makes the products of business and of competition. By and through this most essential knowledge competition then becomes much less of a black monster and more of a willing slave.

We have been speaking of "Product"— that something which may be called a stove, chair, confection, clothes, paper or a job of printing. Any product has but two elements in it — stock and labor.

The stock is that element of a product the cost of which is always known because the stock is bought from others and paid for at so much per piece, per pound, per yard, etc., etc.

Labor is of two kinds only, the world over — hand and machine — and is that element of a product the cost of which is not known. The reason being that the basis of figuring cost has always been, with most cost finding systems, the distribution of all overhead expenses according to the wages paid in departments, the total sales, or by some other method not based on the unit or thing benefiting by such expense. Any other method does not give true cost — only a rate.

To find these costs correctly a "lay-out" of the plant must be properly made to locate the centers of production so that the time used by employes and machines may be gathered from these centers of production and at the end of the month the total chargeable (productive or sold) hours of a center of production divided into the total cost of the centers of production (the cost items of which had been properly distributed) and the hour cost found by the method of division.

These hour costs from the first summaries show the true conditions of the business, be they rotten or of the highest efficiency, and whatever they may be, an honest manager will begin a study for greater efficiency.

What is "EFFICIENCY?"

To quote backward the Law of Co-operation, "The height of efficiency is accomplished by a co-operation so true that every pound of energy may be made to move with that exactness of precision that the most may be accomplished with the least possible effort."

A study of efficiency from the Scientific Cost System means that a better knowledge of the true situation in a plant can be had as to the number of hours it takes to complete a product, what these hours cost, how to reduce operations — that is, to cut out lost motion so that where three motions had been made only two or maybe one need be made; to show how to more properly estimate, how to make better still the products and then to get better prices for the same; how to eliminate unprofitable work, and how, above all else, to get the full co-operation of every employe in the plant so they will do their very best for their employer, who can, because the losses and waste are being covered, consequently reduce working hours or increase the pay; or, as has been occasioned in some plants by the use of the Cost System, a combination of both.

A few illustrations along the line of efficiency that have arrived from the use of the Cost System are herewith presented, and which I trust will be of value, are taken from an experience covering several years of cost system and installation work.

A plant manager, when approached about having a system installed in his plant, honestly owned up to the fact that at the rate their plant was going down hill they would probably live about four years more. He eventually allowed the installation to begin, and in three days' time the non-chargeable hours in his plant, which employed about eighty-five people, were reduced 9½ to 2 per cent. In one department he had sixty girls working. One job of calendars came through which showed that it took the girls an average of one minute to paste a calendar pad, the size of your thumb, on to the calendar mount. By properly instructing the forelady, assistants and employes how to do this work, and by watching other conditions in the plant, at the end of the year, a larger volume of business was done with but twenty-two employes in that one department. The equipment had been rearranged and all lost motion had been reduced to a minimum.

In another plant the cost of a certain class of product in the shape of order books was reduced over 600 per cent by simply rearranging the layout of the job and running it a different way. This new way meant the cutting out of extra motions in the handling of the product.

In another plant the job tracers showed that on large work the girls in the bindery were swung from one job to another in crews of from twenty to thirty, and allowed to work on jobs from one-half to an hour apiece, when they would be swung to some other job. The reason for these changes was that the office and sales department made promises for delivery which was almost impossible to fulfil and which compelled an ever changing condition in bindery work and management. A study of the tracers by the manager of the plant brought about a new method of promising work which reduced the changing of the help in the bindery to a minimum and put through jobs at from 50 to 100 per cent less time in that particular department.

Very often plants are not equipped to handle certain products. At one plant a certain product which they thought was the big money-maker, proved to be the one product in their plant which was losing the money they did make on other products they considered as the real money losers. They had considered these other products money losers from the standpoint of employes not doing good service. In fact, the poor equipment used in producing the work, which they thought the profitable product, was the big losing factor.

In one plant a stock man with a cutting machine in the basement was continually hounded by the superintendent and pressman because of delays in the press room occasioned by waiting for stock. This loss of time in the cylinder room, which amounted to thirty or forty minutes a day, was overcome by the use of a simple stock cutting order. This order was made out at the time the job was entered, providing the customer knew the quality of stock to be used and the number of pieces to be run. The leak in the press room was overcome in two days, hundreds of dollars a year saved, and the man in the basement was considered one of the best men in the plant. Matters ran along smoothly with the result that a better efficiency throughout the entire business was ultimately had.

In one plant where there were five cutting machines the superintendent had in mind to dismiss one of the operators because that certain employe had not been getting as much work through his machine as had the other four. Investigation found that the motor was too light for the work to be done, and though reported many times, it remained for some one to come in from the outside and remedy the situation. When a motor of greater horsepower had been put onto the machine the operator produced as much as any of his co-workers.

The study of the speed of presses results in greater output. It does not always mean more actual output per hour because the speed of the press is high. Invariably a moderate speed will give a higher average output per running hour. From press and other machine records the output of all machines can be readily increased by a close study of conditions the record shows. The same study should also be made of the output of the individual hand worker.

The study of the selling organization from the records produced will always lead to a higher efficiency in that particular part of the organization and will tend to raise the salesmen to a point where they will become real salesmen and not "beggars" of business.

These are but a few of hundreds of little and big problems that have been straightened out. The same can be done in any plant where a cost system is in use — but it means a proper study of **all** the records all the time, in order to bring about a better efficiency.

"Keep the record straight."

And now as to "the where" a study of "COST," "SYSTEM" and "EFFICIENCY" will lead us.

The printers have started a movement which will grow to a magnitude they do not now realize. The Science of Cost Finding will, as the years go by, work one of the greatest revolutions throughout business and society in general that the human race has ever experienced. In time these principles and methods will be applied to every kind of human effort. First will be found the cost of producing the effort which men sell for a "wage" or a "salary," then will be found the cost of operating the "home plant," then the cost of producing "results," (graduations) in schools — common, graded, manual and domestic science, business colleges, agriculture, or theological. Every line of manufacturing and of merchandising will be influenced and operated under these laws of cost, until every town, city, county, state and even the national governments of the world will all be following the same identical laws and methods in conducting the various branches of governmental work, just as they now all follow the same laws and rules of mathematics.

And farther yet, because the science of Cost Finding is based on the Natural Law of Distribution and because the cost of ALL effort will have been known, the proper study of this law will begin to bring about that even distribution of the wealth produced by the workers of the world, that civilization has long dreamed of, with the result that the high places of inestimable wealth will be brought down, and the low places of an abhorrent poverty raised so that the average line of the distribution of the wealth of society will be, by the application of these natural laws, more uniform.

Then we will be nearer having what the world has for a long time been waiting for — EQUALITY.

* * *

"UNCLEANLINESS VS. CASH IN THE PRINTING BUSINESS"

Address Delivered by Walter Walker Before the National Editorial Association, Colorado Springs, June 17, 1913

I REALIZE that the theme assigned me on this program is a comprehensive one, a peculiar one — a theme that could be discussed or viewed from several standpoints, and withal, a theme pregnant with importance. I hope, in an humble way, to do at least a small amount of justice to the subject.

I shall handle this theme of "Uncleanliness vs. Cash in the Printing Business" mainly as to the effect uncleanliness in the physical or material surroundings of a newspaper has upon the cash receipts and the profit side of the ledger.

Is it more profitable to have a clean, neat, well ordered printing office than to maintain one without any serious thought being given to the cleanliness of the office and neatness of appearance?

Time was when a newspaper office and a print shop were commonly supposed to be as dirty and untidy as a blacksmith shop. Reference to a dirty printing office was received in a jocular vein. That day has passed.

In these late years a dirty printing office is no longer a joke; it is a disgrace. We have come to realize that cleanliness is as practical and as desirable and as necessary in a newspaper office as it is in a jeweler shop, a grocery store or a clothing house, and that uncleanliness is as detrimental to success and as dangerous to profits and as hostile to cash receipts as anything possibly could be.

Why it was that for a great many years no one expected a newspaper office to be anything other than untidy in its appearance we have never been able to figure out, but such was the case. However, we are glad to say that along with other reforms came the displacement of this idea.

The presence of presses, of inks, of oils, of exchange piles, of type, etc., do not necessitate untidy appearances or uncleanly offices. Cleanliness always could, can now, and always should predominate in a newspaper office and printing plant.

There is no justification for unswept floors, unwashed windows, unpainted walls, piles of mouldering exchanges, unemptied dead copy hooks, overflowing waste baskets, unpolished presses, dirty covered desks and kindred insignia of newspaper office uncleanliness.

The man who harbors the idea that a printing office must be as dirty as a blacksmith shop is laboring under a delusion.

Cleanliness, so we have been told since the world was young, is next to godliness. Who will deny that a newspaper has the right to aspire to association or contact with the godly, and who also will deny that a newspaper needs the benefit of every avenue of assistance in order to get next to godliness? Therefore, if cleanliness is next to godliness, isn't that fact in itself sufficient reason for every newspaper to seek to be clean?

I contend that uncleanliness is detrimental to success. This is as true in the newspaper field as in any other field of human endeavor.

If uncleanliness is pitted against profit and cash, then profit and cash are certain to suffer. The result is inevitable.

The man who maintains a cleanly, tidy newspaper and printing office has a world of advantage of the competitor or contemporary whose office is untidy, uncouth in its arrangements and unattractive in its appearance. There need be no argument on this point.

Walter Walker, "Daily Sentinel," Grand Junction, Colo.

I contend that many a newspaper has failed to make a financial success simply and solely because of dirty offices and unkempt plants.

If you could stroll through that always yawning and ever widening place of sorrow, the newspaper graveyard, and if over every mound there stood a stone bearing the truthful cause of the death of the newspaper cadaver lying beneath, on many and many a stone this inscription would be found: "Died — Because of Dirty Offices."

Do you think I am exaggerating? If you do, it is easy to prove that I am not.

Let's draw two pictures. With both of them I believe all of you have become acquainted. See if these two pictures, rapidly sketched, do not prove my contentions:

In a town there are two newspaper offices. Both started out under circumstances of a similar nature.

We will say that one office is owned and managed by Editor Brown, and the other office by Editor Jones. Both bright, likable, reliable fellows.

Editor Brown has the age-old idea in his head that a newspaper office is not expected to be clean; that it is the "nature of things" that a newspaper shop shall be dirty; that it doesn't make any difference; that the fact that the office is dirty or is clean has no bearing on the cash receipts or the profits.

Let us take a stroll through Editor Brown's office.

A sign painted years ago, winter worn and summer scorched, dilapidately decorates the front of the roomy building. The front windows are dirty without and fly-specked within, and lithographs and bills announcing attractions whose appearance is now ancient history hang in these windows.

We are in the general business and editorial office. The office floor was swept Saturday a week before. It was scrubbed by the office boy one dull day not more than a year ago, burnt matches are on the floor, the cuspidors are unwashed and foul, the business counters are dirty and ink-stained and piled with a hopeless miscellany of articles.

The desks of the editor and his business office force are littered and disordered with answered and unanswered correspondence, newspapers, blotters, circulars, books, clippings, etc.

Typewriters are dusty and the covers have long been lost. Congressional records and government reports are stacked on the floor in one corner and a measureless pile of exchanges fill another corner. A dozen calendars, some three years old, adorn the musty walls, keeping company with various maps, cut proofs and political candidates' faces.

On one table reposes a big ear of corn, a prize-taking turnip and the abnormal squash and some other freaks brought in "for the editor to see" months ago from the rural districts. On the — but why extend this "front office" picture any further? You can see the rest without me detailing it.

We step into the back office. Here are the job presses, the newspaper press, the type cases, the paper, the stock cases, etc., the floor is dirtier than in the front office, although the boy sprinkles and sweeps once a week and sweeps without sprinkling on other days around the presses and down the "main alleys."

The presses are standard makes but their nickled and steel parts have lost their brightness simply because they have never been rubbed up. The job stock cabinet is pretty large but very disordered and dusty. Ink cans are open, sucking in the dust and oozing out ink which cost eight cents per pound with freight added.

Proof files and copy files are running over, there are no covers for the presses, the walls are decorated with all manner of job printing specimens, show bill beauties and male horse posters.

In the rear we find the dirty sink where the men "wash up." And there, as a center piece of this realm of dirt and disorder, the grand eloquent emblem of printing office uncleanliness, hangs the time honored printing office towel, famed in song and story. As we look at it we recall to memory that touching little poem Robert J. Burdette once wrote after gazing upon a scarred and skuffed veteran towel:

"When I think of the towel,
The old fashioned towel,

Which used to hang up by the print house door;
I think that nobody,
In these days of shoddy,
Can hammer iron to wear as it wore.

The tramp who abused it,
The devil who used it,
The make-up and foreman,
The editor (poor man),
Each rubbed some grime off
While they put a heap on.

In, over and under,
'Twas blacker than thunder,
'Twas harder than poverty, rougher than sin;
From the roller suspended
It was never unbended,
It flapped on the wall like a banner of tin.

It grew thicker and rougher,
And harder and tougher,
And daily put on a more inkier hue;
Until one windy morning,
Without any warning,
It fell on the floor and was broken in two."

This is a bird's eye view of Editor Brown's office and Editor Brown says, "a newspaper office isn't supposed to be clean anyhow. We are here for business, not to keep fussed up and cleaned up." He has the same idea about cleanliness held by the mother who sent her boy to school dirty and unwashed. The teacher objected and finally sent Johnny home with a note to his mother telling her that Johnny must be kept clean and his face washed, that he was so dirty that he even smelled badly. The mother sent Johnny back with a note reading: "Teacher: Johnny is no rose; learn him, don't smell him."

Now let's step over to Editor Jone's office, a little way up the street from Editor Brown's offices. A plain, but neatly repainted sign swings over the entrance. The front windows are cleaned. We step into the front office; the floor is covered with plain, inexpensive, but neat linoleum. The walls are clean, though perhaps a little smoked and time stained. The desks are arranged in an orderly way. The counters are dusted and free from unnecessary miscellany. The exchanges are piled in a neat stack, the cuspidors are presentable. There are a few framed and appropriate pictures on the walls. Everything is orderly, comfortable and free from stale and mould. It is the air of cleanliness and not the air of luxury and extravagance.

In the back office we find well kept, occasionally polished presses, neat and orderly stocked cabinets, covered ink cans, floors smooth and free from filth, walls clean, presses not in use are under covers to protect them from dust, print paper neatly piled and other things orderly and systematically arranged.

The whole plant and office has an air of prosperity, bustle and success. Why? Because the whole office has an appearance of neatness and an air of cleanliness.

We find that Editor Jones believes that a newspaper office can be kept clean, and should be kept clean. He believes that cleanliness begets prosperity, brings in the cash and piles up the profits.

If you dropped into that town and were not in the newspaper business and you visited Editor Brown and Editor Jones' offices what would be your impression?

It would be that Editor Jones' office was the most prosperous, successful and desirable. Why would you have that impression?

Simply because Editor Jones' office was the cleanest, neatest and most orderly arranged. Not because he had a better plant, for he didn't have; and not because he had spent more money on keeping his office in a cleanly condition for he hadn't spent more.

Editor Brown's location was just as good as Editor Jones,' his ability just as great, but Editor Jones took the lead because he believed in keeping his offices clean.

I want you to pardon a few personal references. I give them just to bear ont my point. Doubtless many of you have had similar experiences.

A few years ago following a six years' steady grind on a daily paper I went to a mountain town and bought a weekly, a paper that had been established many years and had always enjoyed a fair patronage owing mainly to favorable political circumstances.

That office, though well equipped, was maintained along the line of Editor Brown's office. If it got cleaned up good once in five years it was doing well. The first week after I took charge was devoted to cleaning up. It was a pleasantly and conveniently arranged series of offices as far as building arrangements went.

In the warehouse were the accumulated odds and ends of years. I had all this hauled away. I worked a revolution along the same line in the mechanical room, the stock cabinet and the job department. In the business offices I washed everything, polished chairs and desks, cleaned the walls, took down all but a few desirable pictures and from one end to the other wrought a change in the appearance of that pioneer office. Then after it was all done I made iron clad rules so as to bring about the preservation of that state of cleanliness. The office boy swept out every morning, consequently this job never was a heavy one. Every Saturday night he mopped the floors. The stock cabinet was kept clean. The presses were wiped off once a week and kept covered when not in use and the force soon got in the habit of keeping everything neat.

Old time citizens coming into the office quickly noted the change and would make such remarks as this: "My, what a difference. You must be prospering, and haven't you put in a lot of new stuff?"

The change was wrought simply by the inauguration of this policy of cleanliness in a newspaper office.

I know that I profited greatly by that policy of cleanliness in that weekly office and when I sold the business to return to the daily newspaper field I know that the cleanly, orderly appearance of the weekly office added several hundred dollars to the sale price.

We have also found in the operation of The Daily Sentinel at Grand Junction that the policy of cleanliness in a newspaper office pays. My predecessor, the late I. N. Bunting, who founded this paper twenty years ago and owned and edited it until he died two years ago, always maintained that there was no valid excuse for a newspaper office being dirty and we have ever maintained this standard and that it has been profitable there can be no question.

I know many of you can give similar experiences. I cite mine not because I believe they are exceptional but to illustrate and to bear out my contention that it pays to maintain attractive offices.

Cleanly newspaper offices impress all observers as being prosperous.

People prefer to do business in attractive, neat offices. Therefore, cleanliness attracts patronage.

Appearances count heavily, so let your offices appear cleanly.

It doesn't cost so much to keep your office clean as it does to allow it to go dirty.

If you let your office become slovenly and cherish the old idea that a newspaper office isn't supposed to be clean, think of these facts: Presses unpolished and left uncovered deteriorate rapidly, job paper stock carelessly kept shows a great amount of waste, ink cans opened lose a large percentage in waste, uncleanly offices mean carelessness and extravagance on the part of your office force and measured by any standard uncleanly newspaper offices are never as prosperous and successful as cleanly ones.

Uncleanliness has lost to many an editor a profitable job of printing or a velvety legal notice.

This is an age of cleanliness. Newspapers are pace setters, so let us set and keep the pace in cleanliness.

Uncleanliness is by no means confined to small daily and weekly newspapers. We have seen big newspaper offices reeking in untidiness and overrun by disorder.

It pays all to be clean, the big or the little, the city daily of the country weekly.

The newspaper that is clean in its physical or material surroundings and environments should also be clean in its moral tones, but only for a moment am I going to dwell on this point for I feel that my discussion was intended by the committee to deal primarily with the effect of cleanliness in offices and plants along the lines I have already discussed.

Let us keep our offices clean and also our pages.

We of the daily field can be sensational enough to suit the public taste without being dirty in our columns. We may have clean offices and neat plants and yet make no discrimination in our news columns between the cleanly and uncleanly and after all have reason to guiltily shrink and quake at the leper's cry of "unclean, unclean."

We can maintain clean offices without getting out a clean paper unless we make the same broad rules of cleanliness apply to our newspaper morals that we apply to its physical side.

The printed page can be made as slovenly by the dirty story as the press room can be made slovenly by the dirty towel or the front office by the unswept floors.

So, therefore, in the high court of newspaperdom, when the case entitled "Uncleanliness vs. Cash in The Printing Business," is called, you may rest assured that the plaintiff will be able to prove that he, the aforesaid uncleanliness has gained title to the cash and the profits envolved in the litigation.

Uncleanliness is a menace to the cash receipts and the profit side of the ledger of every newspaper.

Therefore it is dangerous to be unclean in your offices and likewise in your columns.

Uncleanliness cuts down the dividends.

Cleanliness increases the dividends.

Do you know of any editor whose dividends will stand cutting? I don't. So let's encourage that which will keep up the dividends; let all newspapers buy stock in those corporations known as Neatness, Orderliness and Tidiness and watch the investment bring in big returns.

Let us all get as far away as possible from the old fake idea that a newspaper office "isn't supposed to be clean anyhow."

Let's be clean and, as I have remarked before, we will then be next door to godliness, and I do not know of any other way for a newspaper man to get next to godliness.

"BENEFITS OF THE NATIONAL PRESS ASSOCIATION TO ITS MEMBERS"

By H. C. Hotaling, Blue Earth County Enterprise, Mapleton, Minnesota

CENTURIES ago men marveled at the knowledge of the Carpenter of Nazareth, and wondered that a man who had not visited the scribes and priests should have the wisdom to instruct those who gathered within the sound of his voice. Said they: "How knoweth this man letters, having never learned?" Through all the ages down to the present time there have been those who have had distinction thrust upon them, who were born orators and writers, but they were the exception rather than the rule. For that reason most of us feel that it is wise to seek knowledge from every font of wisdom available, realizing that from a newspaper point of view education is like the leaven which the woman of other days hid in three measures of meal till the whole was leavened. The education, the knowledge, the information which the editor imbibes at such gatherings as this he carries back home with him as he would rare treasures from these grand old Rockies, and they become the dynamic power for good in the community in which he is the local publisher. I had intended saying power for good or evil, but the ideas gathered at a convention of this character are invariably uplifting and ennobling.

The average country publisher, and most of us belong to that class, is a product of the print shop, the greater share of his knowledge having been gained while battling up against the world running errands as a printer's devil, or selling newspapers as a newsboy, pondering over Horace Greeley like copy on his case as a journeyman print, pouring over exchanges as a publisher, or burning midnight oil in the search for more light from the lamp of wisdom in order that a burning editorial might be turned out roasting the competitor around the corner who had not yet installed a cost system. The minority represent those who have been fortunate enough to push out on the sea of journalism equipped with all the advantages which come to those possessed of college training.

In latter years journalistic schools are preparing men for the strenuous work of journalism as they were never prepared before. Many of those of us who have forced our way against the current without the training afforded by these schools have been inclined to look with skeptical eyes upon the school-made journalist, but there is no denying that he has the foundation principles thoroughly grounded, and with practical experience should prove a greater success and wield a wider influence than the man who has made his way up the ladder against many obstacles. The difference should be almost as great as the advancement of the linotype over old methods of hand composition.

But whether the journalist is the product of the college, the school of journalism or has simply "growed up" in the printing business, he can realize practical benefits by becoming a member of the National Press Association and attending its various gatherings.

I have been asked to speak of the "Benefits of the National Press Association to its Members." It is not just such a subject as I would have chosen myself, but there are benefits that are real and profitable in belonging to this association. Some one has said, "The man who talks with nobody knows nothing." Thus, if one confines himself to his own sanctum, to his own locality, he is inclined to become narrow and contracted, to believe that the world moves within a very narrow orbit. To the man who takes advantage of the annual gatherings of this association there is really no limit to the benefits which he may acquire. In traveling to and fro from the various meeting places the members have been able to secure a more comprehensive knowledge of the country in which they live than they could have otherwise obtained, as the conventions have been held in all parts of the land, while the excursions which have followed have enabled the members to study at close range those points of interest which dot our fair land from the mines and glaciers of Alaska to that stupendous undertaking, the digging of the Panama canal. We have viewed the beauties of the Great Lakes and their final climax, the Falls of Niagara; have traveled through the vastness of western Canada and also looked in upon the Canucks in their eastern provinces. We have traveled our own land from Seattle and San Francisco on the west to New Orleans on the south, Boston and Washington to the east and Juneau, Alaska, to the north. No one can question the educational value of all this travel, all this sightseeing to those who participated therein; but these are not all the benefits that a member of this organization receives. At conventions similar to this one today we have the pleasure of listening to the brightest men in the nation. The men who have been the movers in all the great undertakings that have marked the progress and growth of our country, politically and commercially. We have learned from these men how vast problems have been solved and how wonderful projects are made to become realities. Captains of industry have graciously permitted us to look in upon their great manufacturing plants, where nothing is allowed to go to waste and minute matters are turned to profitable account. We have been invited to view great schools of learning and have been allowed to study, first handed, institutions for the care of the unfortunate of our land as well as those which harbor criminally inclined.

H. C. Hotaling, "Enterprise," Mapleton, Minn.

At these gatherings we are permitted to listen to the ablest men in our profession — the men who have attained distinction in the journalistic field. We are given the benefit of their experiences, their research, their study. Yea, more. By coming in contact with the brothers of the quill from all sections of the country we are able to learn how the other fellow is handling his business, and if he has any short cut to the royal road of success he is generally willing to point out the way, that we, too, may profit and benefit by his experience. This exchange of ideas and the discussions which follow are of inestimable value to the man who is anxious to make the most of his chosen calling.

It was Oliver Goldsmith who said: "The man who leaves home to mend himself and others is a philosopher, and I esteem the traveler who instructs the heart." This is especially applicable to the newspaper man who, tired and worn with strenuous toil, steals away from the grind of the print shop to gaze upon new sights and new scenes, to imbibe new ideas and dream of new plans for the upbuilding of his home community, for every newspaper man is by instinct a booster. Imbued with these new panaceas, he returns home to alleviate the ills of others by pointing out their advantage and interest.

Many of the worries of life are imaginary, and if by an annual trip away from home the editor can come back contented and satisfied, he is placed in a position to accomplish much for his clientage, in making it plain to them that they have advantages which others do not enjoy. No community boasts all the good things, neither does any community have all the advantages. The press is a mighty counsellor, and for that reason, if the editor has traveled widely he is in position to counsel advisedly. And with this responsibility he owes it to himself and to his constituency to take advantage of every opportunity to broaden his life and intellect; and there is no fountain of greater leavening force than the National Press Association. A few years ago when this gathering convened in my home state, Archbishop Ireland, of St. Paul, pointed out the publisher's responsibility when he said: "The newspaper of today is pre-eminently the mentor of the people; it is read by all; it is believed by nearly all; its influence is paramount; its responsibility tremendous." "This sentiment," says Father Herbert, our beloved first president, "puts the newspaper calling in influence, power and dignity above the teacher in the schools, the educator in our universities, the clergymen in their pulpits, the lawyers pleading for their clients at the bar, the judges clothed with their judicial ermine, the legislators in state and national assemblies, the highest executive of the government, the diplomats and the statesmen."

This being true, it is certainly pre-eminently the duty of the publisher to make the most of his profession by taking advantage of every means which will increase his knowledge to fulfill this strenuous position of responsibility and trust.

One of the greatest benefits to be derived from belonging to this association and participating in its deliberations is that broadening spirit which must come to us all by coming in contact and mingling with the grand men and women who comprise America' s greatest thought-moulders and builders union. While they represent every shade of political belief, all creeds and religious denominations, they also represent a greater brotherhood than can be found in any other profession, as they are all looking forward to the same goal, the betterment of humanity. They gather to learn how they can best serve their constituency, realizing that there is no medium which wields a more broadening influence than the press, and desiring that this influence should be directed along lines best calculated to illuminate the dark plague spots by exposing fraud and hypocrisy, by lifting up the depraved, by educating the ignorant and removing as far as possible selfishness and oppression.

The benefit of personal acquaintance with newspaper men in various parts of the country, aside from the pleasure it gives, is worthy of mention, for the newspaper profession embraces within its ranks some of the nation's greatest men, and justly so, for no other calling better fits men for public service. In the words of a Louisiana publisher, Hon. Robert Roberts, "It's a great thing to be the editor of a newspaper. In point of honor, influence and power for accomplishing good in this country, the editor of a good newspaper ranks next to the President of the United States." This may be putting the case a little strong, but in proof of his contention Mr. Roberts mentions among the newspaper workers Col. Roosevelt, Hon. W. J. Bryan, Governor Folk, Senator LaFollette, and others. One thing is certain, many of our greatest men have at some time or other had experience in the newspaper business, and have not been slow to realize the truth of the maxim that "the pen is mightier than the sword." All this should convince us as to the dignity of our profession and the importance of preparation.

We have now referred to the personal and public benefits of this association as they apply to the publishers from an educational standpoint. There is also a commercial view. At these gatherings every conceivable phase of the printing business is brought under consideration, and he is indeed dull who goes home from a meeting of this association without having picked up something new relative to the business in which he is engaged. Here we have had discussed the building of the printing office from the foundation stone, the laying out of the office with a view of economy of room and time, the purchase of machinery, the buying of paper stock, the installation of the cost system, subscription schemes and plans, advertising methods, libel laws and postal laws, in fact every question which deals with the making of a newspaper. But this is not all. This association, together with the state organizations, is the only avenue through which the publisher has a means of taking concerted action to secure needed legislation or object to such mandates of the lawmakers as have a tendency to restrict the rights of the press and circumscribe the business of newspaper making. The National Press Association is not only a real benefit to its members, but its good influence overflows as the water from the spring and flows on and on, benefiting all who are engaged in the art preservative. Its maintenance is a source of economy to every publisher, whether he is a member of this association or not, and for that reason, if for no other, every wideawake newspaper man in the country should have his name enrolled as a member of this association and contribute his mite to its continuance.

SOCIO-ECONOMIC DEVELOPMENT AND THE EDITOR

By Charles J. Downer, Editor "Mining Science" Denver, Colo.

IN whatsoever degree the editor perceives the money cost of introducing his fact or his idea to the public, in that degree he is bound to acknowledge his direct organic attachment to the economic processes of the world.

The price of printing and circulating facts and ideas is always paid. That means that someone always pays it. The normal way of paying the price of any product is through the collection of that price from the consumer of the commodity. In our case the commodity delivered is a systematic arrangement of words having the variable properties of intelligence.

The consumer of intelligence is the reader of the book or the periodical, and the natural source of revenue with which to pay the money cost of print is what is technically known to the publisher as circulation. The editor of a publication is naturally and primarily interested in circulation. In my own office I recently suggested that all personal letters dealing with the procurement and retention of readers should be supervised and signed by the managing editor, and I have seen some evidence that other magazines are leaning the same way.

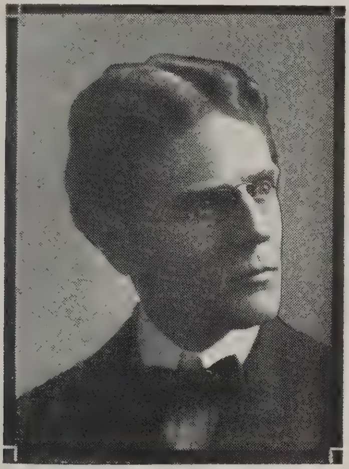
But, under the conditions which prevail in the publication of periodicals, circulation is not the only, nor even the primary, source of revenue with which to pay the money cost of intelligence. We have, as all of us have discovered, an artificial source of revenue which has grown great enough in many cases to entirely swallow up all thought of the other resource.

I speak of advertising as an artificial means of producing the gain of the publisher, because my discussion is presented solely from the point of view of the editor. If I were writing as a publicity agent for a merchant or manufacturer, I should speak of advertising as a natural means of promoting the interests of salescraft, and of the work of an editor as an artificial means of conveying the product called publicity to the buyer of commodities. To the advertiser the periodical over which the editor labors is merely a vehicle. But the vehicle of editorial intelligence (whether regarded as natural or artificial) is at least essential to the whole situation; otherwise advertising would circulate of its own momentum. The publicity agent would not pay the greater share of the money cost of circulating editorial facts and ideas, if the utterances of the salesman possessed the gift of perpetual motion.

So much is this true that it has become a practice among many large commercial, manufacturing and financial institutions to issue their own periodicals as vehicles of their own advertising. Some of these so-called "house organs" are really meritorious publications, and the house publishers have gone so far toward simulating the status of the independent journal that they operate under the second class mailing privileges of the post office department.

While this simulation of the independent journal is really a tribute to the greatness of editorial intelligence, it is at the same time a symptom of a tendency very different from that which is here imagined. I refer to the disposition of the publicity agent to secure what he regards as the essential editorial vehicle for advertising at a minimum cost — to concentrate and economize in the intelligence which is deemed necessary to promote the interests of salescraft. This is in response to an economic law which is everywhere binding in the commercial world.

The novelist, Balzac, in addition to being an artist of consummate skill, was a philosopher of grasp and a historian of discernment. I receive, therefore, with a great deal of confidence his generalizations concerning the development of newspaper advertising in Paris. Writing of the times which followed the fall of the first empire, he created a story of business, of the life of the rising bourgeois, which is probably unmatched in literature. In his "Rise and Fall of Caesar Birotteau," which is the story I quote, it is related that the prospective son-in-law of the great perfumery merchant, seized upon a formula for hair-oil which the old man had picked up and, calling to his aid the "Illustrious Gaudissart," the typical traveling man of the time, managed to save his sweetheart's father from bankruptcy by cleaning up a fortune out of this toilet article. Under the advice of the traveling man, a shrewd newspaper reporter was employed to keep the name of Cephalic Oil before the public in the editorial columns of the press. I quote from this striking narrative of Balzac the following typical and salient passages:



Charles J. Downey, Managing Editor, "Mining Science," Denver, Colo.

"Popinot had promised Finot five hundred francs for each of the leading newspapers and three hundred francs for each second-rate paper, if the Cephalic Oil was mentioned three times a month in each. * * * * Finot filled up spaces at the foot of the last columns in the papers, and left the money to those upon the staff. * * * * He wrote insinuating letters, he worked on the vanity of all and sundry, he did dirty work for the editors, to the end that his paragraphs might be inserted in their papers. * * * * By means of tickets for the play he corrupted the men who finish off the columns toward midnight with short paragraphs of small news items already set up; hanging about the printing office for that purpose, as if he had proofs to revise.

"So by dint of making everyone his friend, Finot secured the triumph of the Cephalic Oil over the 'Pate de Regnault' and the 'Mixture Bresilienne'; over all the inventions, in fact, whose promoters had the wit to comprehend the influence of journalism and the effect produced upon the public mind by the piston-stroke of the reiterated paragraph. In that age of innocence, journalists, like draught-oxen, were unaware of their strength; * * * * they lorded it over all creation and made no practical use of their powers.

"In this campaign, Finot discovered the power of advertising, which he was to wield so wisely and so much to his own profit. Three months later this pioneer was the editor of a small paper of which, after a time, he became the proprietor, and so laid the foundation of his fortune. * * * * And then began the descent of the thousands of ambitious tradesmen who have since gone down by batallions into the arena of journalism, and there called advertising into being. A mighty revolution was wrought."

Very well, indeed. A mighty revolution had been wrought. In the very germ of its development, according to tis Frenhchman's observations and philosophy, advertising had consisted in a form of petty bribery of editors and make-up men. Editors did not realize their financial power; there were evidently no business managers to perceive the advantage. The shrewdest of salesmen discovered the importance of insinuating the mention of his wares into the "filler" spaces at the bottom of the editorial columns. The power of advertising in the press was discovered, and the form of petty bribery, instead of being surpressed, was legitimatized as a frank and open purchase of newspaper space.

This picture concerns only Paris, after the fall of Napoleon. I am well aware that newspaper advertising existed more than a century earlier in England, but it is equally true that the great English revolution occurred more than a century in advance of the corresponding revolution in France. It may be that English literature contains somewhere a picture of the birth of newspaper advertising in that country which equals in philosophic discernment the description of Balzac, but I do not know where it is. It is a historic fact that newspaper advertising in England was taxed as an indirect means of getting even with the press, somewhat as our last administration sought to discipline the magazines by increasing the postage rate; and this may fairly be interpreted as a protest against that artificial source of publishers' revenue which brought over the press to the support of the great middle class of tradesmen against the weakening aristocracy.

At any rate, in the beginning, salescraft was a suppliant of the press, and it bought its way into the press; first, perhaps, surreptitiously, and, finally, as a frank acknowledgement of salescraft as the significant form of modern business and as a legitimate purchaser of newspaper space. If our editorial ancestry thus yielded to the allurements of advertising revenue, it is to them that we must trace the development of that condition under which salescraft is no longer the suppliant but the master.

I do not believe in apologizing. Rather I adhere to the doctrine of refraining from those impulses which make apologies necessary. Nevertheless, I do not wish to impair the effect of my discussion through a misunderstanding of its historical logic. Let me emphasize the view that our socio-economic developments are an inevitable product of historical causes, and that which we meet today is not to be deplored or regretted on the score of the ignorance of our predecessors, but to be welcomed and greeted with optimistic eyes on the score of historical predestination. Once upon a time I listened to an eloquent speaker who, swaying his graceful arm above his head, announced with divine confidence that "ideas rule the world." No, they do not. Let no editor think that. Ideas have no weight, no dynamic quality whatever; they are nothing but the phantom reflections of physical images and processes. Whatsoever a man is, so thinks he. Our ideas of contemporaneous events are strictly metaphysical; if we desire to find in our own personalities the properties which make citizens and social units out of us, let us look to our emotions, the product of sensations, which are the only physical explanation of ourselves as valid factors in politics, in business and in domestic life.

Editors of today find themselves correlated to an artificial source of livelihood from paid publicity, which proves the master of these economic processes under which editors are compelled to live, because our editorial ancestors, our Addisons and Steeles, our Wilkses and the employers of our Juniuses and Edgar Allen Poes, were guided by these human emotions which find their outlet in vanities which must be purchased with money.

A little earlier I spoke of the disposition of the publicity agent to secure what he regards as the essential editorial vehicle for advertising at a minimum cost. All of us are aware of that concentration of industrial ownership in large corporations which has "pari passu" increased the concentration of power over the lives of the many. Out of this condition has developed the most highly scientific rules of salescraft. The scientific publicity agent has no need of circulation which does not reach a buyer. The subscriber who is not a buyer and who affords no likelihood of becoming a buyer, while good enough for the editor "per se," who does not differentiate between buyers and non-buyers of advertised commodities, is of no advantage to salescraft. It follows, therefore, that the editorial vehicle which is essential to a particular advertiser is one which directs itself to his particular buyer. In his mastery of the situation, the publicity agent demands a particular kind of vehicle. It is this general truth which accounts for the existence of large numbers of special journals — strictly trade journals in most cases, to use a standard term. The editor himself is a specialist with respect to some industry or more or less restricted line of trade. The manager of the vehicle boasts of the quality of his circulation, as against quantity, although quantity is never sneered at.

But there still remains many commodities which are to be regarded as staples; that is to say, everyone buys of them periodically. While the commodities which are staple only in a restricted field create the class journal, the commodities which are universally staple create the city daily, the country weekly and the popular magazine.

The phenomenon of the so-called "house organ" is to be viewed as a symptom. If by any process of reasoning the publicity agent can convince himself that he has exhausted the use of a particular journal as vehicle, through which to become acquainted with the buyers represented by that journal, he may feel convinced, also, that his list of buying acquaintances derived from that source is a sufficient equipment with which to continue selling to that clientele. Inasmuch as he has taught himself that the advertising which he publishes is in the nature of news to his buyers or possible buyers, he may reflect upon the wisdom of circulating that news direct through an advertising medium of his own. I say, he may reflect upon that program; indeed, he very probably will do so. If, as a result of such reflections, he decides to withdraw his advertising from the independent medium and to confine it to his own "house organ" his decision may be taken to indicate one tendency of our times. If, on the other hand, he decides that it is best to continue advertising in the independent medium, supplemented perhaps by private circulation of his own "literature," this decision may be taken to indicate another tendency, coördinate with the first. Let me consider these two tendencies.

The tendency to withdrawal of paid advertising, or very rigid limitation of it, or to increased exactions in the way of circulation, must, of course, be explained by a desire for economy. But at the same time, it is to be partly explained by the temperament of independence. First, it must be said that this publicity agent has no fear of any journal in particular, in the sense that he feels it necessary to indulge in the petty bribery of making that journal think and speak well of his goods; second, that he has no fear of losing the effect of that "piston stroke of reiterated statement" in the public press. In proportion, therefore, as these two sources of possible fear may be removed by the concentration of economic power in the hands of large corporations and the disappearance of competition, will the economic mandate of salescraft produce a smaller and smaller occasion for periodical advertising, and a greater and greater occasion for systematic, scientific salescraft through a knowledge of its commercial and industrial demands of the time and the means of most economically distributing commodities to that demand. That is the first tendency, which, while it applies in a more immediate way to the class journal, applies also, but perhaps remotely, to every other journal of whatever kind. The continual scramble for circulation gives evidence of that ever present threat of withdrawal which the advertiser holds over the publisher's head.

The second tendency is of a political nature; that is to say, any tendency to continue periodical advertising, when it has ceased to be economically necessary or judicious, is simply a recognition of the power of the press as against the interests of private investment in business. We have arrived at a time when private investment in business on a large scale is seriously regarded as a trusteeship in behalf of the whole society. I need only to call attention to the state and governmental proceedings against industrial corporations of many kinds, and the general agitation of the policy of national regulation of big business. Now, while big business possesses the economic mastery of the editorial function generally, in that it has stamped itself upon the actual form and method of our journals, it is politically at the mercy of independent editors, when such editors are in sufficient union of view to excite the masses of the people against it. The weapon which a group of editors has the power to wield is to unite the people upon a well defined and vigorous sentiment, and if that weapon were directed against the country's corporate investments, it could create untold confusion.

It is an acknowledgement of this general truth that our country seems to have accepted the standard practice of maintaining the advertising departments of influential periodicals, daily, weekly and monthly, notwithstanding that it is very doubtful whether this is economically necessary, at this day, to the adequate promotion of salescraft in a profitable manner. I am certain to meet with disagreement in this statement, but I may at least plead the right, in this professional gathering, to voice for your hearing what I hold as a settled conviction. State regulation of big business can never stop until it has extended to the very limit of the function of salescraft itself, and when it has extended to that limit, we shall discern the conflict that must arise out of the apportionment of advertising according to the political influence of publishers, and indeed out of the mere fact of advertising itself. The old English plan of taxing advertising was only a symptom which we shall behold again in our own day.

It is impossible to do more than generalize; details differ in different places and situations, and according to differences of individual temperament. It is not only conceivable that a newspaper can whip its way into the advertising appropriation of a large concern, but this has been done. It is also a matter of history, not of theory, that the department stores of a city have combined to boycott the advertising columns of one or more newspapers. Some years ago, a discerning person approached me with the proposal that I agree to edit a department store paper, for which he was attempting to secure department store support, this publication to be distributed free at every door in town, to the end that the stores themselves might conquer in a disagreement with the regular publishers. While I appreciated this argument, I did not take the matter very seriously, and I learned enough to be satisfied that the organized business of a city does not dream of ignoring the political and commercial power of the press.

Disregarding all exceptions and all details, periodical advertising will continue to exist for a long while as a matter of public policy. The editor has become a part of this public policy, and will continue in it as long as it lasts. It is this public policy, indeed, which defeats the primary tendency of which I have spoken, to economize in periodical advertising and to cencentrate the forces of salescraft in scientific and symmetrical method, based upon the slow elimination of the competitive impulse in business.

The difficulty of crowding into this discussion very much that seems essential to it has forced me to let some phases of it lag. I have spoken of the effect of staple commodities in creating certain types of periodicals. Now, as a matter of fact, it is the tendencies in the more restricted fields of advertising and journalism that best illustrate what may be regarded as tendencies of a universal nature, and it is not always easy to trace or identify such forces in the larger sphere. This last point is especially true of the popular magazine and its field of paid advertising. To begin with, the popular magazines receive the announcements of many commodities and offerings which, while not strictly staple, are of general appeal. Such offerings, moreover, often represent large margins of profit which can comfortably be divided with the publisher. The immense national circulation which some of such periodicals enjoy has been built up by a special, vacuous type of literature, bending to a particular assortment of commodities, in many cases what may be classed as luxuries. The salescraft of luxuries is, in general, the creator of the popular magazine. This type of periodical shares in some measure the domain of the daily "yellow" journal, in that its appeal is often to the women of the land. I do not think it is necessary to give much elaboration to the point that the feminine buyer is the principal influence in producing the human interest art of certain metropolitan dailies. Department store advertising is directed to the women, and for this reason the editor of a daily newspaper has been driven to create a continuous line of vaudeville for their benefit. I believe, however, that, in proportion as this editorial policy is carried to an extreme, a newspaper loses substantial political influence, notwithstanding the women are voters in a number of western states.

Whereas formerly the urgency of advertising seems to have rested with the advertiser, the modern publisher, who is the real editor-over-all, does not require to be wooed or supplicated. Advertising is systematically solicited, and advertising space is rated as a commodity in itself. The artificial source of editorial revenue has been constituted as the superior impulse of all editorial work. The editor-over-all makes of himself a practical politician who urges beneficial legislation in his own interest, such as the parcel post — a begetter of paid publicity for that type of journalism, especially, which is the creature of the luxury-commodity. Wood pulp tariffs are fought out of existence in order that the circulation of print paper may be reduced in cost. These are but symptoms of the modern point of view, which refers to the acceptance of the artificial as the natural.

Now let us consider the effect of these phenomena upon the status of the editor proper. To begin with, he finds himself in the position of addressing an audience of buyers as buyers. He does not address them primarily as his audience. The moral, intellectual or sentimental measure of his readers is not taken by any yardstick or criterion of his own — by any rule of his own character or capacity — but by a purely trade standard. He must have a message for buyers, or none at all. The citizen who is not a buyer has no claim upon an editor.

It follows from this that the editor is forced to possess a large audience whether he desires it or not. Editors, like lecturers, are flattered by a large audience, if the audience indeed assembles to receive what they instinctively wish to say. But the size of an audience really has nothing to do with the value of the editor's or lecturer's utterances, nor indeed with their ultimate influence. The weight of words is not necessarily proportional to the number of consumers; it may often vary in an inverse ratio. In the case of the modern periodical, the size of the audience is the sole consideration; therefore, when we consider the thousands who watch a heavy weight pugilist defend his championship title, or the number which gathers at a circus, we may readily appreciate the significance of mass circulation. Circulation-getting on a large scale is the foe of education. The editor is not hired to progressively instruct, but to digressively entertain. It has been said of the late Joseph Pulitzer that his favorite newspaper was — not the New York World — but the New York Evening Post.

An editor is always proud of any audience he may possess; he is never ashamed of the number, whether large or small. Surely, then, it is not the editor who obstructs all inquiry as to the extent of his circulation. Neither is it the editor who opposes a law requiring the publication of truthful circulation statements; but I am willing to admit that the opposition to this national law, which has now been upheld by the Supreme Court of the United States, may rest on sound morals. The strenuous competition for larger and larger circulation, in response to a natural law of business, is driven back home to the editor's bosom at every moment of the day, and it is only an act of common humanity that dictates a limit to the clamor for circulation in the interest of editorial individuality. Surely, some newspaper writers must pause long enough to yearn for a diminishing circulation, with a return to editorial simplicity and a select audience. I admire some of our great metropolitan newspapers, with their staffs of brilliant men, but I know very few people that read more than the first page for themselves and the pictorial jokes for their children. While I admire these remarkable creations, I must say, to paraphrase a well known saying, that the more I see of newspapers, the better I like books.

What I take to be the most successful of the popular magazines of our day cannot, in my judgment of it, possess as much weight in the current history of literature, politics and society as an ordinary bill-poster. In a certain sphere of trade journalism, with which I am familiar, the most successful periodical is, in my judgment, of second rate importance in an editorial way. Of the several daily newspapers which I receive for personal consumption, the one which seems to be the weakest with respect to advertising revenue is a paper which has returned to that elemental simplicity of former days; and I cannot refrain from asking God's blessing upon the head of a publisher who dares to remain in that class.

Even the Associated Press has been impressed into the mad chase after buyers of commodities. A few years ago it was staid and conservative; but the circulation-getters have put a different mark upon it. Salescraft is exacting more and more; and bye-and-bye its exactions will have reached that point where even the greatest of the apostles of print will tremble and wonder if the jig is not up. His forebodings will be entirely vain; because we know that we will still possess the safe retreat of editorial simplicity, of elemental news, and of primitive interest in events that are significant and dramatic in themselves.

In all of this, what has become of our old-time editor. the man who loved to observe and to generalize and to express his deductions sanguinely and with the candor of youth? He may be working for any amount between $25 and $200 a week, but he is not generally known to the world. He has become as wise as his generation, but I believe he predicts in his heart, as I do, that the tendencies of our day are bringing us back to the innocent age of natural journalism, when salescraft will separate itself from the way of the philosophic historian of current events. The public policy which maintains the press by our modern method is to change to a public policy which accounts salescraft as a needless scar upon the production of wealth.

* * *

CASH IN ADVANCE SUBSCRIPTIONS

By Will Curtis, Plaindealer, St. James, Minn.

It has been frequently asserted that newspaper men are poor business men. The assertion is not without a good deal of foundation. Yet the situation is far better than it was a few years ago. Since the agitation of the cost finding system began it has awakened many publishers to the fact that they have been doing business on a losing basis, and they have begun to improve their methods. Good things are catching as well as some bad things. One publisher adopts a cost finding system and cash in advance system, and his neighbor, seeing that he is prospering, is induced to adopt the same advanced methods. The publisher that is making money is far more valuable to his community than the one who is always in debt. He can be more independent. He is in a position to say things that should be said. He is classed by the people with the successful banker, lawyer or business man. People have more respect for him. One of the first elements of success in publishing a newspaper is to first print a good paper, covering well the news of your territory, and then to collect cash in advance for every paper that goes out.

I want to call attention first to a few of the disadvantages of the "Pay as You Please Way." There is sure to be a considerable loss in collecting the subscriptions. My own experience has been that this loss amounts to from 20 to 30 per cent. You are sure to get a number of "dead beats" on the list. People living away will take the paper for several years and you get a notice, "Paper refused," or "Parties moved; address unknown." You are compelled to stop the paper and lose from one to three or four years' subscription. If you are printing 1,000 or 1,500 papers the loss yearly will amount to several hundred dollars.

Second. Another disadvantage is the irregularity in the way the subscription money comes in. If you don't keep hammering on the subscription collections all the time you will have long periods. When you get very hard up for ready money to meet your bills, you make an extra inducement to have subscribers pay, either by making a discount or offering some attractive premium. Some years your collections nearly double what they are other years. You are always publishing more papers than you are getting paid for. The "Pay as you please" plan is unbusinesslike and unprofitable.

Now for some of the advantages of the "Cash in Advance System."

First. It is the business way of running a paper. All of the larger papers and papers of a general circulation are on that basis.

Will Curtis, Plaindealer, St. James, Minn.

Second. It eliminates all losses on subscriptions. You get pay for all the papers you print.

Third. Your income from subscriptions is steady. It runs the same on the corresponding months of each year, except that each year should show an increase over the previous year's collections.

Fourth. The subscribers like the plan much better when they get used to it. They do not feel that the publisher is trying to force his paper upon them. They never feel that a bill for subscription is accumulating. They never have to pay more than one year's subscription at one time.

Fifth. The publisher feels better. His money is coming to him regularly. He is getting pay for all the papers he is publishing, and he feels like putting forth his best efforts to give the people their money's worth.

The next question is how to adopt the system. It will take some courage and backbone to put the change into effect and stand by it.

If you are publishing the only paper in your town, the matter is easy. Announce through your paper that at a future date the "cash in advance system" will go into effect. Explain the advantages to the people and to yourself, and when the date comes put it into operation. The real trial comes when you have your first batch of twenty-five or fifty subscribers who have not responded to your notice that their subscriptions had expired and who have not renewed, and you have to take their names off the list. It will save some work if you just set their names aside and keep them up in type for a few weeks, for most of them will come back and renew in a short time.

If you have a competitor in the same town it is easier if he will agree with you to go onto the "cash in advance" basis. It is better still if you can form a county organization and have all the papers in the county agree to collect cash in advance.

There are only four papers published in Watonwan County, Minnesota. One of the four papers, located in the west part of the county, had already adopted the system and had been going it alone for two years, and that very successfully. Shortly after coming to Minnesota I suggested to the other publishers of the county the advisability of forming a county organization. This was soon done, and among the first things done was an agreement for all the papers to adopt the "cash in advance system." We also agreed to charge full legal rates for all legal notices, adopted a scale of prices for public printing and agreed on a division of the county printing. This organization has been a great benefit to all the papers of the county.

This is the way I work the "cash in advance system." First I make all subscriptions expire on the first of the month. Those that expired during the month I advanced to the first of next month. This is for greater convenience in working the system.

We have three sets of notices printed. The first one reads as follows:

ST. JAMES PLAINDEALER
Will Curtis, Editor
St. James, Minnesota.

Dear Sir: We beg to advise you that your subscription to the Plaindealer expires on the first of next month, and that you should kindly advise us at an early date if you want the paper continued to your address. If it is not convenient for you to pay now, kindly sign and return to this office the attached notice below.

The postal regulations require publishers to have a definite order for the paper if it is sent after the time for which it is paid.
Yours respectfully.
St. James Plaindealer.

At the bottom of the slip is printed the following:

Please continue the Plaindealer to my address and I will pay for the same about....................191....
Name............................
Address..........................

This notice is sent two weeks in advance of all expirations. If the subscriber does not come in or send the money by the middle of the following month, the "last notice" is sent him. This reads as follows:

Office of the St. James Plaindealer
Last Notice

If you want the Plaindealer continued to your address please notify us at once. The postal regulations make it imperative that we have a definite order from each subscriber to whom we extend credit for more than a year. So we must have the money in advance for each subscriber or an order from the subscriber. You can use form below. Kindly send order or money within ten days.
Will Curtis, Publisher.

At the bottom is the same notice as on the other slip.

Editor Plaindealer:
Please continue to send the Plaindealer to my address and I will pay for same about..................191....
Name............................
Address..........................

There will be a few who live at some distance from your town who may not care to send the money by mail, but who expect to be in town in a few days, or few weeks. In order to accommodate them the little notice is printed at the bottom of the slips, permitting them to order the paper and state definitely when they will pay for it. Less than ten per cent of our subscribers ask for any time. More than ninety per cent pay promptly when their subscriptions expire. With all "single wrapper" subscribers we never send but the two notices, before stopping the paper. To the subscribers living in the country we sometimes send a second "Last Notice" before stopping the paper. If they do not renew, then we stand to lose a month and a half's subscription. We are of the opinion that it is just as well to stop the paper promptly when it has run two weeks over time. On stopping a subscription the following notice is sent:

STOP NOTICE
St. James, Minn., ...191....
Dear Mr..................
....

With this issue of the Plaindealer it has been stopped going to your address, not because we wanted to, but because the postal regulations require an order from the subscriber for the paper, and you haven't sent the order.

Our books show you owe from ...., 191.., to ...., 191... The amount is $..... We hope that you will send this amount and for another year in advance. Let us hear from you at once with a remittance.
Will Curtis, Publisher.

This is quite effective in bringing in the few stragglers who have not renewed. Quite a number did not respond at first to all the notices sent them and permitted their papers to be stopped. After being without the paper for one or two weeks, they realized how much they missed it, and began coming back. Sometimes it would be three or four weeks before some of the subscribers would renew. A very few never did not renew, but our net loss in subscribers was very small. I think that after the system had been in operation for one year we had about 100 less subscribers on our list than before, but with 100 less subscribers our collections were about 200 more on subscriptions than on the previous year. The system has been in operation for three years, and we are now printing as many papers as before starting it, and with constantly increasing yearly receipts.

Hundreds of our subscribers have expressed their approval of the system. We would not think of going back to the old way.

We unhesitatingly recommend to every publisher of a country paper in the United States to adopt the "cash in advance system" for collecting subscriptions.

WHAT ORGANIZATION AND CO-OPERATION SHOULD DO FOR THE PRINTER

An Address Delivered before the National Press Association by C. D. Traphagen, President State Journal Company, Lincoln, Neb., at Colorado Springs, Colo., June 18, 1913

IT is my hope that in the not far distant future that whenever it may be the pleasure of myself or others to speak upon this topic that that intransitive verb of performance, "does," which requires no further object or explanation to complete its sense may be substituted for that imperfect one "should," used in the title of these remarks, which at its best is but a word of promise or contingency and the supposition of a fact; however, we must deal with conditions as they are, recognizing that the awakening and effort of the last two or three years, the effect of international cost congresses, similar to this in character, are resulting in a fruitage that will eventually cause printing and its kindred crafts to take their rightful place in the industry of this country.

At the coming international convention of the United Typothetae of America, to be held in the city of New Orleans in October next, the International Cost Congress, the sessions of which have usually been held in connection with that of the United Typothetae of America, will be merged with the regular sessions of the United Typothetae of America, and two days devoted to papers and discussion under the heading, "Business Administration of Printing as Applied to Accounting, Cost Finding, Efficiency and Selling," and I shall, to a large degree, confine that which shall be said here to the first two of these subdivisions.

The discussion of the last two or three years has almost wholly revolved around cost finding, and frequently when they have thought they had found it, they have not known what to do with it, because no proper system of accounting had been devised to be used in conjunction with it.

The institution with which I am connected has always, within the years past, had a system of cost finding, crude though it may have been, and at its command a vast amount of accumulated detail of time consumed and material used in various manufactured product, in consequence of which it had at its disposal experience data of an invaluable character whenever the exigencies of business required its use.

C. D. Traphagen, "State Journal," Lincoln, Nebr.

Whatever degree of success has accrued to the institution is due in a large measure to its attention to the accumulation of this information.

The activities of international cost congresses and cost commissions caused an active investigation as to whether methods in use could not be improved upon, with the result that early in 1910 we began a complete revision of our methods for the ascertaining of cost of production, with the result that is was soon found that scientific cost finding would not produce its greatest benefits without an accompanying system of accounting and the revolutionizing of the methods in use.

Once the decision made, all the traditions and heritages accumulated in more than a third of a century of business existence were put behind, and the necessary revision of method devised.

This revision of method has changed uncertainty into a positive knowledge that stress of competition does not shake, and no time is devoted to nullifying the results of the accounting and cost finding system by estimating the maximum of possible production gathered from the literature of the press and machine builder, against the minimum of the productive hour as shown by experience.

The diversified interests in the institution made something of a problem of the accounting question, and I shall not go into that largely, by the presentation in detail of that which might seem complex and complicated, for the reason that I wish to avoid creating the impression that accounting and cost finding for the average printing office is a formidable task.

Suffice it to say that our accounting and cost finding system is but an enlargement of the elementary plan of the American Printers' Cost Commission, adapted to our peculiar needs.

The first step in the devising of the accounting system is to decide the accounts necessary for the accumulating of the desired information and provide for a proper distribution to the various departments and their subdivisions, the charges for material, labor and overhead burden, and to this end a Chart of Accounts was devised.

Its purpose is to guide those whose duties require them to keep the accounts, and also those who designate the account to which material and overhead burden shall be charged.

This Chart of Accounts is divided into three classes of accounts, namely, Assets, Liabilities and Revenues, and as the Assets must equal and be in balance with the Liabilities and Revenues, it consequently forms the basis of the balance sheet.

For analytical and informative purposes assets are divided into four classes: active, passive, invested and accruing, and they may be explained as follows:

Active assets signify cash or that which is negotiable and quickly convertible into cash.

Passive assets represent the exchange of active assets for material, labor and departmental expense in the course of manufacturing operation, and remain as such until written off in a profit and loss statement.

Invested assets signify the exchange of active assets for machinery and tools, and represent that portion of the physical plant and are of a permanent nature, subject to deductions for replacement, or depreciation, if you please.

Accruing assets represent the exchange of active assets for benefits paid in advance, such as taxes and insurance, and is handled in this manner for the purpose of making an equitable division for entry on the monthly cost of production sheets.

These four divisions may be and in our case are subdivided into the many accounts necessary for securing the desired information on cost of production.

For the same purposes of analysis and information, liabilities are divided into three classes, known as floating, accruing and capital, and may be defined as follows:

Floating liabilities are those of a current and changeable nature.

Accruing liabilities are those anticipated in the future and for which a fund is created known as reserve, to which moneys are credited that would otherwise be credited to loss and gain and be distributed in dividends.

Capital liabilities represent the indebtedness of the company to its stockholders for the amount of their investment and undivided profits.

Revenues are represented in the income accounts to which are credited the sales of the various departments, and are subdivided to the extent necessary to secure the desired information through such distribution.

While a more extended explanation might under some circumstances be desirable, the purpose sought has been served in illustrating the first steps necessary to the installation of a satisfactory cost finding system.

The cost finding system developed and at present in use is, as previously stated, an adaptation of the plan recommended by the American Printers' Cost Commission and known as the Standard Uniform Cost System, for which the United Typothetae of America stands as sponsor, and now being installed by the field men of that organization wherever their activities take them, which at this time embraces the entire United States.

It will undoubtedly become the Standard Uniform System in fact as well as in name, for no other system or method will have the endorsement of any organization of consequence.

To my mind much harm has already been done by the exploitation of the printing industry by unattached so-called cost experts, whose varying methods are partially responsible for the present existing confusion and lack of uniform results.

The science of cost finding is based upon certain underlying principles, which may seem complex and complicated to the uninformed, but which are surprisingly simple and exact when understood.

The application of these essentials results in confusion if the seeker after knowledge of his business fails to thoroughly inform himself as to these basic principles.

One of the greatest benefits of cost finding lies in its value for comparison.

Through these comparisons the value of any given proposition may be determined, the efficiency of various workmen, quantity of material used, and in fact every question constantly arising in this industry of never ending detail.

When cost of production is accurately determined and the printer has the courage of his knowledge and tenaciously holds his position, you may be sure that prices will be raised to a living level and a profit secured.

Attempt will not be made here to give a detailed explanation of the Cost Finding System here referred to, and I will do no more than give a general explanation of the method employed to accumulate the information shown upon our statements of production costs, which are divided into the departments of Printing, Photo-Engraving and Lithographing, the last department also exhibiting the Cost Finding results of steel die stamping and embossing and copper plate printing.

Inasmuch as the cost of the sold hour is the primary information sought, it is necessary to know, in addition to the pay roll cost, the exact amount of expenditure in each department for the month separately.

The items accumulated to the cost of production sheets are pay roll, rent, heat, light, power, insurance, taxes, interest on department investment, replacement, or depreciation if you please, bad debts, spoiled work, department direct expense, office stationery and postage, advertising, miscellaneous expense, and cost of stock handling and shipping.

Over the heading of each department for which information is sought, is carried the exact amount of the investment in that department and this investment allotment is the result of an exact and painstaking appraisal of the department and the total of all departments being in balance with the investment as shown by the books of the company.

The pay roll sheets show in detail the time charged to each department, and the entries to the cost of production statements are made therefrom.

Rent and heat are apportioned according to the floor space occupied by each department.

Power and light is apportioned on the basis of the amount consumed in the department.

Insurance and taxes are determined on the basis of the total expenditures required for the year, and one-twelfth of this total charged to its proper department in the cost of production statements.

Interest on department investment is computed upon the basis of six per cent per annum ,and one-half of one per cent is charged each month against each sub-division based upon the department investment.

Replacement or depreciation partakes of the nature of an arbitrary charge, but 25 per cent on type, brass rule, etc., and ten per cent upon furniture and machinery is the accepted practice, and one-twelfth of the total so arrived at is charged against its proper department each month.

Bad debts are computed on the basis of one per cent of the total of yearly sales, and one-twelfth of one per cent is charged into each monthly cost of production statement to the general expense column.

Spoiled work, accruing within each cost of production period, is a definite charge against the department producing it.

Direct department expense is also a definite charge, and the totals for each month are taken from the analysis ledger and charged to the department for whose benefit the expense was incurred.

Office stationery and postage and advertising are definite charges, and in common with the charge for bad debts, are charged into general expense and distributed to all departments in the diffusion of the general expense account.

The general expense account is made up of the cost of the general office administration of the business, consisting of salaries and expenses of a character that are not directly departmental.

Stock handling and shipping is carried in a column to which all cost incidental to these departments may be entered, and its relation to the total cost of material handled may be determined by percentage. We have found it to be 15 per cent and frequently more, dependent upon yearly conditions.

It may be desirable to call the attention of those printers whose custom it may be to accept orders for printing to be executed on material furnished by the buyer, to this cost of handling and shipping.

These cost figures are the result of neither dreams nor indigestion, but the product of unsentimental experience, and when you follow the practice of accepting the buyer's material for manufacture, you are not only assuming the risk of manufacture without an attendant profit, but are making the traditional present for the privilege of doing so.

Why not, as one of the results of this meeting of 1913, return to your several localities firm in the resolve that this particular pernicious practice shall have no further place in your particular business?

When, by the methods sought to be described, you have found your department cost, by the addition of the several columns, without general expense, you are then prepared to apportion your general expense to each of the several departments and its sub-divisions, and this is accomplished by distributing it upon the basis of the relation of the cost of each department sub-division to the total general expense, by percentage, and when the necessary calculations have been made and the division found, its addition to the department cost will give you the total department cost.

You are then ready to ascertain the cost of the sold hour, and upon reference to your pay roll sheets you will find that the time you have paid for, as shown by the time tickets of your employees, will be shown thereon as chargeable or non-chargeable hours, or in more self-explanatory terms, sold and unsold hours.

The simple division of your total cost of each sub-division of departments by the number of sold hours, as shown by your pay roll sheets, of that sub-division of a department, will give you the cost of the sold hour of that sub-division.

In passing to generalities it may not be amiss to direct your attention to data you may obtain in addition to the cost of the sold hour.

In addition to the cost of the sold hour for the particular period under consideration, you can have before you the comparison with the cost for the same period last year, and the average cost for any given number of months.

We enter the chargeable or sold hours of each sub-division, as shown by the pay roll, on our cost of production statements, and also accumulate and enter those posted to our individual cost sheets against them as a check, and they should and usually do balance, thus proving that you have posted to your individual job costs all the hours that you have paid for.

There can also be shown the percentage of productive and non-productive time, and comparisons made with any period of time desired.

In finding the cost of production of presses it is possible to ascertain the total number of make-ready and running hours, these being sold hours, and their cost per hour, and in addition ascertain the total number of impressions produced within any given period, and the number of impressions averaged per running hour, also the cost per thousand impressions, as well as obtain comparisons with any given period.

The cost of composition is found for both hand and machine work.

The cost of hand composition is found on the sold hour basis only, while in finding costs for machine composition you may obtain it both on the sold hour basis and the cost per thousand ems.

The finding of production costs for stereotyping and electrotyping, photo-engraving, lithographing and any of the allied crafts, is but a repetition of the methods touched upon, varied to meet the requirements of the particular craft to which they are applied.

Accounting and cost finding as I now comprehend it, is one of the fruits of organization, and without organization the progress of the last three years would not have been marked, and every individual in attendance upon this meeting should avail himself of what is now common knowledge, and be prepared to contribute of his time and ability to the effort being made to place the industry in that eminent position to which it is entitled, and assist in making it a profit producing business. Only through organization and co-operation within the organization can the present level, where printing as a business finds itself, be raised.

With organization and co-operation it is within the range of possibility that the printer could have voice and influence concerning his interest in the trade customs established by the paper manufacturer and dealer, and they, together with the type founder and press builder, might lend a more willing ear to the representatives of organization concerning the correction of some of their methods.

With organization and co-operation exerting the beneficial influence of which it is capable, there could be brought about the cessation of the present cannibalistic competition, and substituted in its stead the competition of intelligent and honorable, creative and constructive salesmanship, and the field of activity of the piratical purloiner of ideas, who sows the seed that produces a harvest of destructive, ruinous and pernicious practices, would be so restricted that his influence would become a minus quantity.

With organization and co-operation there could be devised and installed a uniform system of accounting and cost finding, all embracing in its purview, correcting the existing confusion resultant from the lack of standardized method.

With co-operation, uniform cost finding would be followed in natural sequence by uniform estimating, and there could be substituted for the uncertain and variable judgment of today, a fixed and positive unity of measurement and production, and a value placed upon all the various operations within the industry.

Don't permit yourself to be persuaded into the belief that any system has been devised that will operate itself without trouble or the intervention of intelligence.

You must be willing to dig, burrow and bore into those details.

There is no place for the printer inoculated with the virus of mental or physical hookworm, in the installation or operation of an accounting and cost finding system.

Those men are successful who find their business an absorbing vocation. When a man puts his very life into his business, it is because he likes the game. If you can't do this, it is time to hire the expert, but it is a rare bird that gives service of comprehensive benefit without your assistance.

There is nothing the matter with printing, as a business. The fault, if any, lies within the individuals pursuing it as an avocation.

The business as a business was good yesterday, good today, will be good tomorrow and good in all the tomorrows following. The individuals engaged in printing and its kindred crafts are responsible for the customs and practices which make conditions what they are today, and these selfsame individuals, who are continuing these undesirable customs and practices, have the power to eradicate them if they so desire.

The eradication of the abuses and destructive practices now existing will never be brought about by a revolution, but by a reformation, and this reformation must be within ourselves. It is an individual problem and work, and its solution lies not in awaiting the change in your neighbor.

Everywhere in the printing industry we hear of the unrestrained, ignorant and spineless competition conducted by first aids to the press builder and type founder, and of that band of Ishmaelites "Whose hand is against every man and every man's hand against his brother."

To attempt their elimination by individual effort would result in the postponement of the printers' millennium to a date beyond eternity.

That Elysian field where there is less of cannibalistic competition and more of "brotherly love" is a consummation devoutly to be wished for. Organization and co-operation will advance the date of one, and make a present day realization of the other.

ADDRESS OF A. D. MOFFETT

President National Press Association, Colorado Springs, Colo., June 17, 1913

MEMBERS of the National Press Association—Ladies and Gentlemen:

Election by one's colleagues to the highest office within their power to bestow should always inspire appreciation in the recipient of their favor. This appreciation I feel and do now express.

My predecessors, in this place of honor and responsibility to which you have called me, B. B. Herbert, W. S. Capeller, Walter Williams, Major W. W. Screws, and all the other good men who have added to it dignity and power, have given the association some contribution expressive of his personality which has been a factor in strengthening the organization and making it more effective in some phase of the business of making and publishing a newspaper.

I feel my responsibility and wish, like my worthy predecessors, to make some contribution towards its growth and its efficiency as an aid to its members in the advancement of their profession.

My membership in this association covers a good many years. I found it well developed along social and educational lines. In the annual meetings there is good fellowship and good cheer. There is conversation illuminated with wit and humor, philosophy and rich experience. Friendships are formed and sympathies are broadened and deepened by acquaintance with broad-minded, genial, whole-souled men and women from all parts of our common country.

The convention programs are replete with good things. Almost every phase of newspaper work has been presented with vigor and precision and the give and take of discussions and personal contact with men of many minds gives knowledge and breadth of view invaluable to us all.

There is also great educational value in the many delightful trips the members of this association have made in parts of the United States and Canada. Educational value not only to the members themselves but to the communities visited and to the readers of the papers in which the accounts of country and people visited have appeared. These trips have broadened our social life, and have been a factor in quickening the industrial life of many a community. They have given us a better comprehension of our neighbors across the border, and have strengthened our faith in the people and their capacity for self-government. They have helped us to lay aside our prejudices, given us a deeper patriotism and a broader faith.

Upon these broad character building lines the association has justified its existence and does credit to its founder.

Its fine social spirit and the educational function it has performed has endeared it to the hearts of the older members and commends it to those who have come into it in these later years.

But changed and changing conditions have created a demand for something more in the association and the growing desire for a closer organization and the consideration of effective methods of promoting the business interests of the members has already taken form as the four departments into which the association work is now divided. This division and specialization makes for the greater efficiency of the association and promises much for the future. But there is a persistent belief among some of the members that the association may be made to pay actual dividends in hard cash by the establishment of an agency to handle foreign advertising, in part at least, of the newspapers represented in its membership.

If I can help to crystallize this belief into action at this meeting I shall feel that I have made some small contribution to the strength of the organization and will have discharged the responsibility laid upon me by your suffrage.

The low rates paid by the middle-men and the large profits made by them upon the advertising done in the country newspaper is well known to most of us. I have knowledge myself of many country newspapers which receive but two and three cents per inch for foreign advertising that is set in the office.

It is not divulging a professional secret to say that the average country editor and publisher is not a brilliant success as a money maker. He is usually too busy making a living to make money, and he proves an easy mark to the wily-minded advertising agent in too many cases. Most of us have had our experiences with the vexations of spirit incident to the collection of the meager sums coming to us from these agencies and advertisers.

The honest, capable management of the business connected with foreign advertising would be a great boon to the average country publisher, and I can think of nothing that would add to the membership of this association so effectually and rapidly as would the establishment of such an agency controlled and managed by the association for the benefit of its members.

I believe that such an agency will give its stockholders as large a dividend upon the investment as any other part of your business and will relieve them of one of their most annoying problems. It would transfer the large per cent of profit now going into the middleman's pocket to the newspaper man and enable him to start a bank account.

Such an agency could and should set a minimum price for all newspapers having the privilege of membership and sharing in its business, and it is certain that many publishers would profit by it.

Business could be solicited by this agency upon a basis fair and equitable to both advertiser and publisher. An honest representation once made to the advertiser and his business secured there should be no necessity for a second solicitation. Knowing the scope of the territory covered and the standing of the publications represented in the agency or association, the advertiser will turn solicitor himself.

The establishment of this agency should be undertaken only after due deliberation and a careful canvass of the advertising field. This should be left to a board of directors, duly elected and qualified under the law, but the plan can be promptly sketched and presented by a committee selected from those present today, and I suggest that a committee of five be appointed to consider the feasibility of such an agency and report to this association not later than Wednesday at noon.

I am convinced that the idea of making the National Press Association an efficient instrument in the promotion of the interests of its members is not an idle dream. Shall we take a decisive step at this meeting toward increasing its efficiency in that direction?

(Addresses continued on page 499)

✢ ✢ ✢

Last month Canadian printers and publishers of Ontario familiarized themslves with the development in their own Province by excursioning to northern Ontario. The party of 150 men and women explored the most important mining and scenic regions, gaining information and enjoying recreation at the same time.

ADVERTISING RATES PROMPTLY FURNISHED UPON APPLICATION

SUBSCRIPTION RATES—In the United States, Cuba and Mexico, $2.00 per year. Canada, $2.50 per year. Foreign subscriptions, $2.85 per year.

CHICAGO, JULY, 1913

This number of the National Printer-Journalist should be preserved as a priceless work, to be read and consulted constantly by every member of the office and working force. Carefully mark the valuable passages and pass the paper on to managers and foremen of the different departments and to all the active intelligent workers therein for study, consideration and application.

✣ ✣ ✣

"Cleanliness is Next to Godliness" is a generally accepted proverb among enlightened peoples One can not well have much claim to godliness without being clean in the broadest sense of the word, but it has remained for Mr. Walter Walker, in his address before the National Editorial Association, published on pages 471-2 of this issue, to illustrate and express the truth as to the relation of cleanliness in the printing office to the cash drawer and to prove that "a dirty printing office is no longer a joke, it is a disgrace."

✣ ✣ ✣

All who have doubted or who have not fully realized the benefits of the National Editorial Association, should read the thoughtful and convincing addresses on this subject by H. C. Hotaling and G. W. Hughes, published this month. There will be found in these productions many valuable suggestions, as well as the proofs as to the value, broadening influences, business benefits, enlightening pleasures and enjoyable, helpful, ennobling friendships made possible by the National Editorial Association, through active membership therein and attendance upon its conventions.

✣ ✣ ✣

An old saying, and a true one, is that "Time is Money." Secretary Sheasgreen, of the Ben Franklin Club of America, forcibly, in his able paper on "The Cost System and Efficiency," shows how "it is time that gives value." Time, figured down to the chargeable hour, is the basis of accurate cost finding — the very foundation of the cost system. Time enters into all production and all growth. The cost of time, its value, the efficiency with which it is employed determine the cost or value of every product, then it follows, as day the night, that the cost or price can only be found by "keeping the record straight" and that is about all there is to the cost system which is imagined by too many printers and publishers to be so intricate. It is perfectly simple.

✣ ✣ ✣

The twenty-eighth annual convention of the National Editorial Association (it is the N. E. A. again by change of constitution) was one of the most enjoyable, most useful and most promising for the future in the history of the organization. It was found impossible to give an account of the routine of the proceedings at Colorado Springs this month, but the papers and addresses are published in full and constitute a most complete statement of the methods and principles that are now being adopted in the conduct and management of up-to-date, worthily-successful, profitable newspaper and printing offices.

The four departments, under each respective chairman, developed a great wealth of practical knowledge, principles and suggestions. The twelve or more able papers, taken together, are equal, if not far superior, in practical value, to any volume now extant in the callings covered.

✣ ✣ ✣

The ideas of the necessity for advertising efficiency, as necessary to business success, announced by Samuel F. Webb, in an address before the Ad Club, away up at Edmonton, Alberta, Canada, comes with a force and freshness appropriate to the rapidly developing region of the far Northwest.

Effective publicity is the power that is pushing on the progress of the world. It will no longer answer for a publisher to look upon the announcements that he gets from business men as only a means of filling his columns and getting support — forgetting all obligations on his part — but as the highest profit-bringing service, for both the vendor and the purchaser, as to goods effectively advertised and honestly exploited. Anything short of this real, helpful, informing service is tainted with dishonor and failure.

It is sometimes difficult to trace immediate results and doubtless it frequently occurs, as Mr. Webb states, that "A thought is often brought to the surface of the mind and acted upon as an original idea which, in fact, was the result of the influence of an advertisement unconsciously recorded at some previous time, quite remote to the advertisement." Still there should be that in every ad and in its composition, treatment and display, capable of exerting an "influence" and every ad must reach and influence the minds of prospective buyers, or, in other words, must be placed in publications that have the attention of people to whom the goods, appliances or machinery advertised will be desirable or useful.

It may be that a congregation, out of a feeling of religious duty and loyalty, will support the accredited minister of their chosen denomination, whose preachings and works bring no fruits, but the publisher cannot depend on any such feeling of duty to the press for advertising or other support. The newspaper maker must earn his spurs if he wears them.

✣ ✣ ✣

The address of Arthur Capper, of Topeka, Kan., appearing in this issue of the National Printer-Journalist, while dealing with advertising in farm papers, contains much that has a broader application and confirms much that we have had occasion to point out as to the great value of home papers, and of a trade paper like the National Printer-Journalist, that goes largely to owners of newspaper and printing offices outside of the great central commercial municipalities, where there are great supply houses and the trade is reached directly every day.

Mr. Capper says, "The farmer does not pass a hardware store or implement shop twice a day as he goes to and from his work." The printer-journalists, in cities from two thousand to two hundred thousand population, are not next-door neighbors to nor do they pass every day a printers' supply establishment, type foundry, press factory, or paper house, nor are they daily visited by representatives of all the manufacturers or dealers in their supplies.

The advertising pages of a publication like the National Printer-Journalist is the only direct, constant means of information as to the machinery and goods provided to meet their needs and to direct them where and how to buy and to know the reasons why.

In the rapidly developing smaller cities, like Decatur, Ill., for illustration — spoken of in the account of the forty-ninth annual convention of the Illinois Press Association — newspaper making and job printing have made the most substantial and rapid growths during the past two decades.

What Mr. Capper says, however, is not only applicable to a paper like the National Printer-Journalist, but especially applicable to the home papers, which this publication serves and that outnumber a hundred-fold all other publications. The home paper has to do with every interest of the home and appeals to every member of every family that it reaches, by dealing with things of personal interest to each. The home paper is part of the home life and of the community and neighborhood life.

The advertising of the home paper is of the stores where the readers naturally trade, and it is strange that manufacturers have been so long a time learning that the best method of creating a demand for their goods is to co-operate with the local merchant who must sell to the user, to the ultimate purchaser. There is no profit in loading the shelves or filling the stores of the retailers with goods that they cannot or do not sell.

As Mr. Capper says of the farmers, so may it be said of the readers of the home paper, whose convenience, interest and very instinct induces him to buy of the home merchant. "To him advertising is a necessity. He reads and studies and acts upon it. If it is not there he asks why.".

✣ ✣ ✣

NEW EDITOR OF OKLAHOMA FARMER

John W. Wilkinson, one of the leading agricultural writers and educators of Oklahoma, has become editor of the Oklahoma Farmer, one of the Capper farm papers. For four years Mr. Wilkinson was assistant state superintendent of schools of Oklahoma, in charge of the rural schools, for five years he was at the head of the department of agriculture of the Northwestern State Normal School at Alva, Okla., and for the past three years has been state supervisor of boys' and girls' agricultural clubs at the Oklahoma Agricultural College, which position he has just resigned to join the Capper publications. Mr. Wilkinson is author of several agricultural books, including "Practical Agriculture," published by the American Book Company, and "The Teacher's Handbook of Agriculture and Domestic Science," which has been in use in Oklahoma and other states for several years. He is the author of an agricultural chart for public schools and has been contributing editor to many of the leading western farm journals for several years.

✣ ✣ ✣

In an excellently well illustrated advertisement appearing in the "Cleveland Leader" of Wednesday, May 28, the Cutler-Hammer Manufacturing Company of Milwaukee, Wisconsin, tells convincingly of the advantages of the "Kohler System" of electrical control.

In the office of the New York Herald on May 19 last there were received in response to advertisements printed in the Sunday Herald of the previous day a total of 35,879 letters.

The Herald's enumeration included letters in reply to advertisements that were received in the main office, in Herald Square; in the downtown office, at Broadway and Fulton street, and at the Harlem, Brooklyn and Bronx offices of this newspaper.

If there were any practical means of adding to the 35,879 replies received through the Herald's office organization the enormous number of those received elsewhere, it would be found again that the figure named is only a fraction of the whole.

Illinois Cost Congress at Springfield

THE Second Illinois Cost Congress at Springfield Friday and Saturday, June 13 and 14, was not the success numerically it was expected to be by its officers. The attendance was representative but not what it should have been. A number of very helpful and decidedly interesting lectures and addresses were characteristic of the program and the opportunity of hearing them was worth traveling many miles for.

The new officers for the state organization are: President, E. C. Finch, Aurora; vice-president, E. J. Smith, Peoria; secretary, Henry Allen, Chicago, and treasurer, C. M. Pearson, of Champaign. The date and place for the next meeting was left with the president and executive committee.

The first session of the organization was held at 9:30 o'clock in the morning in the gold room of the Leland. Local employing printers and shop managers had been organized into a reception committee, and at once made the visitors feel at home, preparing the way to make the sessions of the second annual convention the most successful in the history of the organization.

Printers and Publishers in Attendance Upon the Second Illinois Cost Congress, Springfield, June 13-14, 1913

Registration of delegates consumed the opening hour of the session. Then an hour was devoted to a "getting acquainted session." At 10:30 o'clock the first business session of the two days' meeting was called by the president, Frank B. Brown, of Peoria.

The invocation was given by the Rev. William Schulzke, pastor of St. John's German Lutheran Church, after which Mayor Schnepp presented to the visitors the keys of Springfield.

Governor Edward F. Dunne followed Mayor Schnepp with a greeting to the delegates on behalf of the state, wishing them a happy session. Frank B. Brown, the president of the clubs, responded to the welcome of the mayor and governor, thanking the Springfield members for their hospitality.

Mr. W. J. Hartman, president of the Ben Franklin Clubs of America, was the first speaker in the afternoon and he treated his subject, "The History of the Cost Finding Movement and Its Benefit to Printerdom," in an entertaining and pleasing manner.

In the course of his remarks he said that in 1880 the average printer then paid 15 cents a thousand more for composition tha he got for doing the work. That presses were run for 65 cents to 75 cents a thousand, including ink. He reviewed very carefully the history of the Ben Franklin movement and showed that the Great Cost Movement which is sweeping the country had its beginning in Franklinism.

Other afternoon speakers and their subjects were: "The Satisfaction of Helping Others," R. T. Deacon, St. Louis, Mo.; "State Printing," H. L. Williamson, State Printer Expert; "Organization and Co-operation," H. W. Flagg, Secretary U. T. A., and "Cost of Advertising in Country Daily and Weekly Newspapers," E. K. Whiting, Owatonma, Minn. Mr. Deacon, of St. Louis, treasurer of the Ben Franklin Club of America, showed the great "Satisfaction of Helping Others." One of the results of the help given to St. Louis printers by the Ben Franklin Club was shown in a sign hanging in that particular printer's window which showed each month to his customers, and to the public, just how his plant was progressing under the use of a Cost System. One month this particular printer advertised that his business was "Number 59 in volume, Number 39 in profit, and Number 1 in progressiveness." One of the large printers of St. Louis had one day waited a long time for a street car and finally grew angry. Just at this point a printer who owned a very small plant came spinning along in a very fine automobile, driving it himself. This so peeved the big printer that he walked up town and immediately contracted for an automobile for himself. The spirit, help and the good will prevailing among the printers throughout the United States is the result of the help given to printers by organizations and the satisfaction enjoyed is worth while from any angle one wishes to look.

Mr. Williamson, Illinois State Printer, made the printers gasp at the information he gave them with his paper about "State Printing." A few of the things that made them gasp were the facts that machine composition was being sold to the state at five cents per thousand ems, that some classes of press work was being sold to the state for two and a half cents per hundred impressions, that the state furnished all paper stock, and that every price which he quoted in his paper was fair and square with no chance for graft to creep in. The question in every printer's mind who knows cost was, "How can the darn fool do it and live?" "Brethren, there aint no sich thing as a livin' in those prices for those fool printers" was the way one printer expressed himself.

H. W. Flagg gave an address on "Organization and Co-operation," and pleaded for more harmonious relations between the members of the craft.

"The Cost of Advertising in a Country Newspaper," by E. K. Whiting, of Owatonna, Minn., aroused great interest and general discussion. This fine gentleman has made a very exhaustive study of this subject and was in a position to back up his arguments by the use of charts and diagrams, which showed how the advertising "load" varied from month to month in his own paper.

The Saturday morning session was opened by Mr. Burner, of Normal, Ill., who gave a very instructing address on "Efficiency in a Small Print Shop." He showed lantern slides of his composing room and press room which gave the printers present many simple ideas which they could work out to their good advantage.

The American Type Founders Company, of Chicago, have in A. W. Kellog, their efficiency expert, a live wire. His address on "Shop Efficiency" very clearly demonstrated how, by moving equipment to more advantageous positions, and changing old style for new, that many dollars worth of time in a week could be saved.

The Cost School session began at 11:40 and continued throughout the day. This was in charge of Ed. E. Sheasgreen, secretary of the Ben Franklin Club of America. His stereopticon lecture was so arranged that first the printer was made acquainted with what the capital was and how it should be used. He then started a person in the printing business, the floor space was chosen and laid out, the equipment laid in, the first job estimated and sold, and then was begun the study of the job in its passage through the plant. The office job register was shown, the job or factory ticket, the job tracer, time tickets, the posting of the time from the time tracer, the pay roll distribution sheet, the chargeable and non-chargeable hour record sheet, and the monthly distribution sheet for expenses were all gone into very thoroughly and carefully. After these forms had been studied a slide was shown of a distribution sheet for the monthly expenses which made every distribution on the basis of natural laws or, as Mr. Sheasgreen put it, "As Nature does it in her Cost System." Arranged about the distribution sheet were many arguments which were used to prove the soundness of the methods advanced. Throughout the whole lecture, which lasted, but for a few moments' interruption, over five hours, slides were shown which continually reminded all present that business must be done more in accordance with the laws of Nature if the right kind of success is to be had. Questions by the score were asked and answered, often several printers being on their feet at the same time. All expressed the opinion that more attention should be given to the Cost School at Cost Congresses. Printers more than ever want to know the "how" to get Cost Systems installed and working correctly.

To stand up before a company of hungry, skeptical, progressive, stand-pat, talkative, non-committal, big and little printers, for over five hours and answer scores of questions on the Cost System and general business ethics, and to answer to everybody's entire satisfaction means that one must know whereof he speaks. With the long experience in the game of installing Cost Systems and of solving cost and efficiency problems in over a hundred plants, Secretary Sheasgreen is certainly equipped to be the kind of a Cost School teacher that holds the complete attention of his classes.

The banquet Friday evening was the most enjoyable affair. The toastmaster was the Honorable Thomas Reese, manager of the Illinois State Register, who read the toast list, which was a good one, in a most admirable manner.

Among the speakers were B. Frank Brown, of Peoria, retiring state president; Wm. Hartman, of Chicago; Warren Skinner, of the St. Louis Ben Franklin Club; Walter A. Townsend, editor and manager of the Springfield "Record"; and J. C. Adderly, secretary of the Ben Franklin Casualty Insurance Company.

Many present said that the printers of Illinois were being handed "theirs" in the shape of iron knives and forks and spoons and the lack of waiters. One good banqueter said that since man had been made first and woman last, that the woman has been following him ever since. But another banqueter got back at him by saying that if looks counted for anything his judgment would have it that the ladies had reversed the deal by having in their banquet hall (the suffragettes were in banquet with state senators and representatives in another part of the hotel) all the fine silverware and waiters, that in that respect at least they were not following but leading. The printer-banqueters contented themselves with the knives, forks and spoons furnished at the banquet, though they bore a strong resemblance to iron.

"Theologian" Townsend acquitted himself with proud distinction by quoting from the books of "Hagar and Job" to prove that the art of printing is a very old one and that for all the years back to 1500 B. C. the printer has always been sore beset on every hand and a dead broke fellow. Mr. Townsend, however, looks for a clean cut reversing of this situation in the next few years. All glory and praise be to the Cost System, Amen!

President W. J. Hartman, treasurer; R. T. Deacon; Directors Warren Skinner and E. C. Finch, and Secretary Sheasgreen, all of the Ben Franklin Club of America, held an hour's secret conference Friday afternoon relative to national organization affairs in general, and the amalgamation question in particular. Someway or other no "scoop" could be secured from these gentlemen as to what definitely had been talked of.

PITTSBURGH PRINTOLOGY

The Pittsburgh Publicity Association entertained about 150 delegates from western advertising clubs, who were enroute to the national gathering of advertisers at Baltimore, Saturday afternoon, June 7. The delegates were taken through the plant of the H. J. Heinz Company, where they were served a dainty lunch. In the afternoon the party were present at Forbes Field to witness the battle between the Pirates and the Phillies. Wagner, of course, was the center of attraction for the visitors. In the evening the party went to the Hotel Schenley.

J. E. Stevenson of the Alling & Cory Company was present at the gathering of advertisers held at Baltimore. He was absent from his desk for over a week.

The Aldine Printing Company of this city has just finished the order for the commencement announcements for the University of Pittsburgh. The order called for several thousand copies of the invitations and programs for the events of commencement week.

The Pittsburgh Printing Company has just put out the Junior Owl, the annual publication of the junior class of the University of Pittsburgh. The book contained over 500 pages. Five hundred copies were printed in the first edition, but these have been sold out and it is thought that the staff will place an other large order for extra books at once.

Stevenson & Foster are doing a good business at their new location on Seventh Avenue. The new shop of the firm gives them a great deal more floor space than in the old location and enables them to handle a much larger volume of trade in a shorter period of time.

A. M. BARNHART, DECEASED

In the passing of Mr. Arthur Middleton Barnhart, late president of Barnhart Brothers & Spindler, type founders, the type founding industry loses one of its oldest American exponents. He was born in Hartfield, Chautauqua County, New York, February 17, 1844. He died at his late residence, 4455 Drexel Boulevard, Chicago, May 14 last. His school education was in the grade and high schools of Hartfield and in Schoolcraft, Michigan, to which latter place his parents removed while he was a youth. His first business venture was in the oil fields of Pennsylvania; from that industry he soon retired with honor but without profit. As the family had meantime removed to Independence, Iowa, he for some years made that state his home and became, with his brothers, George, Warren and Alson E., the owner of several papers, including the Iowa State Leader, Des Moines; the Courier, Muscatine; the Conservative, Independence; and the Advance, Marshalltown. In 1868 he removed to Chicago, entered the advertising business, and soon after, with his brothers, bought the struggling little type foundry of Toepfer Brothers, changed the name to Barnhart Brothers & Spindler (Mr. Spindler being the practical founder), and combining it with the advertising business, began to go ahead rapidly, so rapidly that the advertising connection was soon dropped entirely. The growth of the business from that time was steady and rapid, until in May, 1911, after forty-three years of achievement and of active devotion, the Barnharts sold their interests and left the work to be carried on by their former partners, Messrs. French, Murray, Conable and Hovey. Mr. Spindler remained as a stockholder.

A. M. Barnhart, Deceased

Mr. Barnhart was prominent in business, civic, social and religious circles. He was a patron of the arts and was always active in matters which tended to the progress and betterment of the city. He was one of the executive committee of the Legislative Voters' League and Civic Federation; was trustee of the Wesleyan Hospital and of the St. James M. E. Church; was one of the governors of the Art Institute; was a member of the Union League, Chicago Athletic, Cliff Dwellers, City, Caxton, South Shore Country, Quadrangle, Glen View and Homewood Golf, Kenwood and New York City clubs. In his private life he was a generous, kindly, quiet man; his benefactions were many but so unostentatious that few even of his intimates knew much of his deeds of good will to men. He was the warm friend of those who worked for and with him, and will be long remembered by his associates, relatives and friends for the integrity, generosity and ability which were his leading characteristics.

* * *

WM. GRAHAM JOHNSTON, AGED 85, PROMINENT PITTSBURGH PRINTER, DEAD

William Graham Johnston, founder of the printing and stationery firm of W. G. Johnston & Company, died June 1,, at his home in Watertown, N. Y., aged 85 years. He was a member of a pioneer Pittsburgh family and was a prominent factor in the business and civic affairs of the community. In 1849 he was one of the first of the argonauts to reach the gold fields of California.

Mr. Johnston was born in Pittsburgh, August 22, 1828. He was the eldest son of S. R. Johnston, of Johnston & Stockton, printers and publishers in the earlier days of Pittsburgh, S. R. Johnston being one of the proprietors of the Pittsburgh "Gazette" from 1818 to 1822. His great grandfather, Samuel Johnston, a surgeon in the Revolutionary army, died in the service April 4, 1877.

Mr. Johnston received his education in private and public schools, the Western University of Pennsylvania and the Belle Vernon Academy. When 21 years of age he accompanied a party of Pittsburgh men in a trip over the plains to California during the excitement following the discovery of gold. He was one of the first men to reach the famous Sacramento valley. In 1857 he founded the firm of William G. Johnston & Company, locating the place of business at Second avenue and Wood street, and in 1886 he erected the building at Penn avenue and Anderson street where the firm now is in business.

Mr. Johnston was prominent in public affairs. He was active in organizing the Western Pennsylvania Society, the Citizens' Insurance Company, the Duquesne National Bank, the Pittsburgh Steel Casting Company, and formerly president of the Atlantic & Pacific Telegraph Company, which was absorbed by the Western Union, and the Woodruff Sleeping Car Company, taken over by the Pullman Company. He took a lively interest in church affairs, being a ruling elder in the East Liberty Presbyterian Church, Pittsburgh, and superintendent of the Sabbath School.

Mr. Johnston spent much of his time in later years in travel. He was a close observer and for many years contributed to the newspapers and magazines. In 1892 he published for private circulation a book recounting his experiences in the rush to California in 1849, and later a book concerning the history of Pittsburgh in earlier days.

In 1853 he married Miss Sara Stewart. They had six children, five of whom survive. Mrs. Johnston died while traveling abroad in 1889. In 1894 he married Miss Winslow, of Watertown, N. Y., who died a few years later, and in 1899 he married Miss Ely, of Watertown, who survives. Since 1894 Mr. Johnston had resided in Watertown.

NEW SUBSCRIBER ENJOYS THE N. P.-J.

June 12, 1913.

National Printer-Journalist, Chicago, Ill.

Gentlemen: Please send me an extra copy of your current issue as I lost mine while riding. Enclosed find check for subscription and extra. I enjoy the publication very much.

Yours very truly,

DAVID PHILLIPS,
The Kiron News, Kiron, Ia.

MORE WORK THROUGH PUBLICITY

Address all samples and communications for this Dept. to Harry Albro' Woodworth, 43 St. Botolph St., Boston, Mass.

A series of critiques in Economic Advertising, Toronto, Can., entitled "Recent Ads — Good and Otherwise," by a writer who calls himself "The Captious Critic," contains some admirable criticism, to my way of thinking; but it seems to me that he bestows too much praise on the ad shown as Figure 1.

Here is what he says of it and funny ads in general:

> There is a whole raft of difference between the "Fool Ad," which I have on several recent occasions felt compelled to criticise adversely, and the "really funny" ad, with its humorous drawings and short, snappy, colloquial talk, which is going to attract the attention of every smoker. The idea of the Pinnace Ad is ludicrous in the extreme. Here's Jack on shore leave, takes his "bloomin' bird" with him, which soon gets into trouble in a fowl-yard. The idea of emphasizing the name of the tobacco by putting the command, "Say, Pinnace, you beggar," into the mouth of the bird, who is at the same time giving the chief rooster the time of his life, is novel, and to my mind mighty good advertising. It is so different from anything we have seen for a long time, that it cannot fail to attract attention, even though the average Canadian is not so familiar with the man-o'-war's men's picturesque language and failings. There has been a series of these ads, and I think this is the best of the lot, and as the space used has been generous, they must have attracted a lot of attention.

No. 1

I should like very much to know what "The Captious Critic" would consider a specimen of the "Fool Ad," if this is not one.

I do not call it a very good test of an ad that it is "ludicrous in the extreme," and this certainly does appear to be about the limit.

Its humor, or attempt at humor, may appeal to the English public, for whom it was evidently originally designed, but a writer in what is now part of Canada was said by Artemus Ward and Mark Twain to be the first American humorist (wrongly, I think — I, though a Canadian, would give the honor to Ben Franklin), and Canadians appreciate the American brand of humor much more than the English kind.

Especially is this so when an English funny man makes an attempt at extravagance in statement, at which he could never be the equal of any of the great American humorists. Even Dean Swift was more of a satirist than a teller of extravagant yarns. And the yarn the deep-sea smoker spins is like so many other stories stolen by English writers from American humorists — the point is either painfully elaborated or omitted. Here it is omitted.

This is the story as an American writer told it — I am sorry that I do not remember the exact words, but I have not forgotten the point. For unlike any tale I ever read that began with the words, "A good story is told," etc., this is really a good story.

Jones had a parrot of whose linguistic abilities he was wont to brag to his friends, who were so skeptical, after the manner of friends, that he invited a number of them to his house to hear the parrot perform. "Say 'uncle,'" Jones demanded of the parrot, over and over again. But this "bloomin' bird," like many children in such an emergency, was distressingly silent, however loquacious he might have been on other occasions. So finally Jones, in his extreme but not unnatural exasperation, wrung the parrot's neck and threw the bird into the henhouse.

Repenting of his deed after his visitors had left, he went to the henhouse to see if by any chance the parrot was alive. It was; but the corpses of all his prize Plymouth Rocks save one strewed the floor, with necks twisted, and that one was being held by the neck by the parrot, who was screaming:

"Say 'uncle,' damn you — say 'uncle.'"

But there is no such art in the story of Jack's "bloomin' bird" teaching hens to ask for a brand of smoking tobacco. It is not even artistic nonsense, like the expression Canadian boys used to begin a story with:

"Once upon a time
When pigs was swine,
And turkeys uster chaw terbacker."

And I don't believe it is good advertising, although as an advertisement it would appeal very much more to English readers than to Canadians.

I really think my countrymen in Canada are a little too serious-minded; probably it is because we are nearer the seriousness of pioneer days than even the people of the United States; taking the whole country into consideration, we are a newer people. I have had a good deal of advertising experience in both countries, and have learned that though some kinds of advertising are equally profitable in Canada and "the States," a really funny ad that might be very successful in New York will not appeal to Canadian buyers. Some of Wanamaker's funny Philadelphia phrases would, for instance, never do for Eaton's in Toronto or Winnipeg.

The advertising of tobacco can stand more humor than that of some other commodities, and it is one of the advertised articles in respect to which a matter of prime importance is to impress the name on the public. In the story as told by the American writer, the word "uncle" was used, whereas another word would do as well. I did not remember the exact wording of the most of the story, but the word "uncle" stuck in my memory, as would, no doubt, the word "Pinnace." The use of the story as it was originally told, with the substitution of this word for "uncle," would have made a much better ad for the tobacco, as the story is one that in respect to its essentials, will be remembered by nearly everybody who reads it. In this tale, the name of what the bird was told to say, and finally said, is brought strongly to the attention three times, which is, I think, almost as often as the word spoken by Poe's raven. In the English tale the word "Pinnace" is used thrice, it is true, but not as an essential part of the story. And why capitalize (and thus make as prominent as "Pinnace") the name of the "wessel"?

It is not a bad idea to have a nautical name like "Pinnace" for "navy cut" tobacco, and a series of tales by a "dipsy" smoker is likewise appropriate. But it was not an example of plagiarism as a fine art to use the American story, leaving out the point. To have taken all but the "uncle," or even to have done so with acknowledgements, would have made a better story and a better advertisement.

✣ ✣ ✣

If your advertising does not pay it should be made to pay. Right methods should take the place of wrong ones. To stop advertising will not reimburse past losses, and prevents the possibility of future profits.

✣ ✣ ✣

Hints for Trade and Other Journals

There is a marked tendency on the part of trade journals to help their advertisers, not only by write-ups, but by direct communication with the advertisers' possible customers. Here (Fig. 2) are two post cards, with a crease between them for tearing, sent to likely customers of their advertisers by the mechanical trade paper, Castings. The address side of the lower postal contains the lines, "Castings, Caxton Building, Cleveland, O." Such service to the advertiser and the reader is bound to benefit both, and should help in securing more advertisers, more advertising, more readers, and more reading of advertisements.

In this connection, it should be impressed on the publishers of trade and other journals that appeal to a number of trades that their card index systems would often be greatly strengthened if the cards contained information as to what business the subscriber is engaged in. In some cases it is well to have a line on a reply form sent to prospective subscribers where they can specify the various branches of their business. Often a publisher's advertising literature is sent to, say, a thousand manufacturers of a certain product, but even though a good proportion of these "prospectives" may become subscribers, there is nothing on the subscription list to indicate their particular business. The bare name, "Smith Manufacturing Company," does not tell this. It is often a tremendous advantage to a publisher who is making an effort to obtain advertising of plumbers' supplies if he knows how many plumbers he has on his list. Such knowledge could sometimes be obtained easily by a keying system — using, for instance, one key for grocers to whom publisher's literature is sent; one for butchers, etc. Of course, such suggestions are impractical in some cases; but the general idea should prove suggestive in the attainment of systems that will suit particular cases. Systems that do not cost too much to install in proportion to what a publisher stands to get out of them will often bring that desideratum of the modern publisher — the highest service to both advertiser and publisher. The business that gives real service is the one that deserves permanent success, and it is the only one that will obtain it.

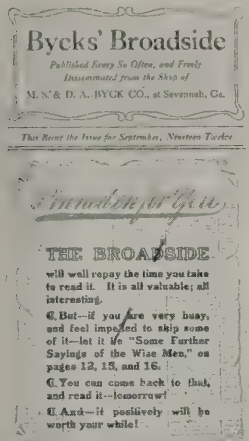
Byck's Broadside Scattereth Yet Increaseth

Byck's Broadside, published by M. S. & D. A. Byck Co., Savannah, Ga., is a house-organ of a printing and stationery house. It is a live magazine; the house cannot be a dead one. "Good printing," says one of the bits of paneled wisdom, "has raised many a man from G to A in Bradstreet's." These are the "subscription rates": "One year, nothing; six months, half price; three months, the same; single copies, free. In other words, the Broadside is yours for the asking; all we ask is a careful perusal of its pages." The latter sentence, with its good-natured demand for reciprocity, tones the flippancy. The title page, which has pinned to it a slip with a gray background tint, is shown as Fig. 3a. The cover shows the cannon, "High Quality and Service," belching a broadside at "Bad Printing," "Poor Delivery," and "High Prices."

No. 3b is the third page of cover, the "talk" displaying the originality and good sense that characterize the rest of the book, even though the exuberant humor of the writer is given a rest. This talk has an earnest ring, and the idea is distinctly clever, and well carried out.



Bycks' Broadside

Published Every So Often, and Freely Disseminated from the Shop of

M. S. & D. A. BYCK CO., at Savannah, Ga.

This Being the Issue for September, Nineteen Twelve

THE BROADSIDE

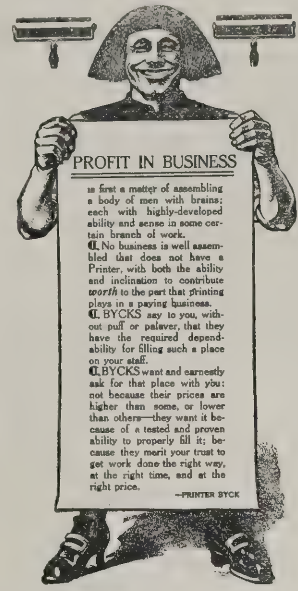
will well repay the time you take to read it. It is all valuable; all interesting.

¶ But—if you are very busy, and feel impelled to skip some of it—let it be "Some Further Sayings of the Wise Men," on pages 12, 13, and 16.

¶ You can come back to that, and read it—tomorrow!

¶ And—it positively will be worth your while!

No. 3a



PROFIT IN BUSINESS

is first a matter of assembling a body of men with brains; each with highly-developed ability and sense in some certain branch of work.

¶ No business is well assembled that does not have a Printer, with both the ability and inclination to contribute *worth* to the part that printing plays in a paying business.

¶ BYCKS say to you, without puff or palaver, that they have the required dependability for filling such a place on your staff.

¶ BYCKS want and earnestly ask for that place with you: not because their prices are higher than some, or lower than others—they want it because of a tested and proven ability to properly fill it; because they merit your trust to get work done the right way, at the right time, and at the right price.

—PRINTER BYCK

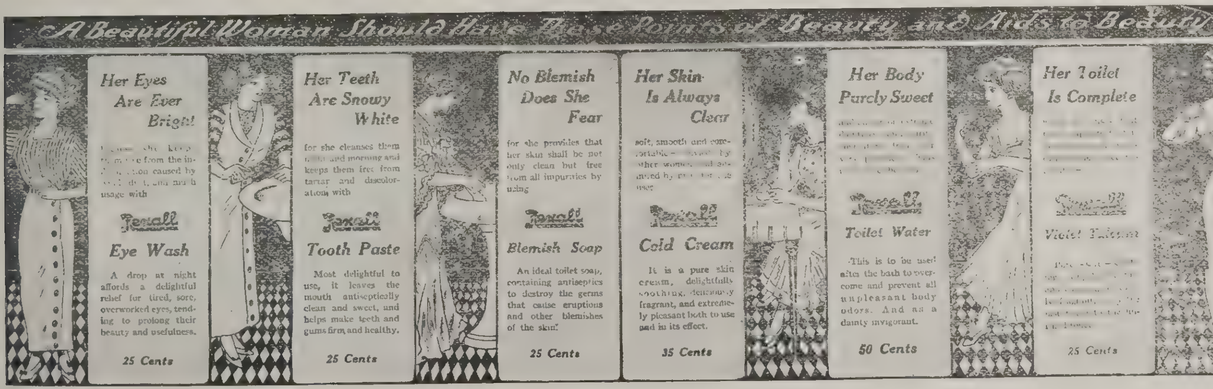
One Way of Using Rhyme in Advertising

Rhyme in advertising has its detractors, but rhyme is certainly with most people an aid to memory, and a good many of us were taught rhymes in our childhood that we have remembered longer than the prose we learned at the same time. The parts of the multiplication table that had rhythm, like "Five times," were the easiest to remember.



A Beautiful Woman Should Have These Points of Beauty and Aids to Beauty

Her Eyes Are Ever Bright

[illegible] she keeps them free from the in[illegible] caused by [illegible] and much usage with

Rexall Eye Wash

A drop at night affords a delightful relief for tired, sore, overworked eyes, tending to prolong their beauty and usefulness.

25 Cents

Her Teeth Are Snowy White

for she cleanses them night and morning and keeps them free from tartar and discoloration with

Rexall Tooth Paste

Most delightful to use, it leaves the mouth antiseptically clean and sweet, and helps make teeth and gums firm and healthy.

25 Cents

No Blemish Does She Fear

for she provides that her skin shall be not only clean but free from all impurities by using

Rexall Blemish Soap

An ideal toilet soap, containing antiseptics to destroy the germs that cause eruptions and other blemishes of the skin.

25 Cents

Her Skin Is Always Clear

soft, smooth and comfortable — [illegible] by other women [illegible]

Rexall Cold Cream

It is a pure skin cream, delightfully soothing, deliciously fragrant, and extremely pleasant both to use and in its effect.

35 Cents

Her Body Purely Sweet

Rexall Toilet Water

This is to be used after the bath to overcome and prevent all unpleasant body odors. And as a dainty invigorant.

50 Cents

Her Toilet Is Complete

Rexall Violet Talcum

25 Cents

No. 4

In England the rhymed ad has been particularly in favor. The manufacturers of some of the most famous pens in the world owe their popularity largely to this couplet:

They come as a boon and a blessing to men —
The Pickwick, the Owl, and the Waverly pen.

This would have been better if "pen" were plural, though number seems of no account with most of the songs now sung at the moving-picture houses, where "whirl" is shamelessly rhymed with "girls," and "joy" with "boys." These manufacturers were so delighted with the above effusion that they not only awarded it a large money prize in a competition, but also voluntarily sent the poet as big a sum every New Year's Day as even the late Alfred Austin received for a couplet from the most enterprising publishers.

There can be no doubt whatever that the rhymed "Sapolio" advertisements have brought business. The same old series is still used in the street cars, even in this age of dippy "daffy-dills"— which inane and insane productions have been largely used in the most modern publicity. The catch-phrase with a rhyme, like "The Ham What Am," has been used by many of the most successful advertisers. This is not a poetic age; but then, neither are such productions poetry.

One of the greatest French psychologists thinks "reason-why" matter the poorest kind of advertising; and many a successful firm has never used it. The fact is, it is all right in advertising some products; but there are others whose publicity calls for even rhyme rather than reason. Rhyme appeals to nearly all of us always; reason to some of us when we feel the need of it.

This advertisement (Fig. 4) owes its appeal largely to rhyme, and still more to the arrangement of the rhyme. Write the rhyme in this way, and you have doggerel of very little, if any, advertising value:

Her eyes are ever bright;
Her teeth are snowy white;
No blemish doth she fear;
Her skin is always clear;
Her body purely sweet;
Her toilet is complete.

— even if other lines are introduced connecting the charms of the fair one with the Rexall preparations. But in this ad, the different lines of the "poem" are used as three-line headings in connection with sensible and uniformly-displayed body matter, with an appropriate fountain head, and illustrations that emphasize the various "points."

The ad is from a house organ called The Rexall News, issued by the various Rexall stores, and extends across two pages. The top head and the background of the pictures are in orange, giving a strong touch of color to the page.

Surely it would be hard to advertise six preparations better in one advertisement. Collectively and individually the preparations are brought to the attention in a strong way, and what is said about them is sure to leave a lasting impression, in which the rhyme helps wonderfully.

The unformity of the different parts of this advertisement is worthy of the most careful study. On taking this suggestion myself, I see that the ad is not entirely uniform as to headings, or even as to nameplates. But perhaps even this divergence from the original plan has its merits. Anyhow, it is a good ad — I care not what the "experts" may say.

* * *

The employee who always waits to be told what to do will probably do some waiting before he is told to take a higher position.

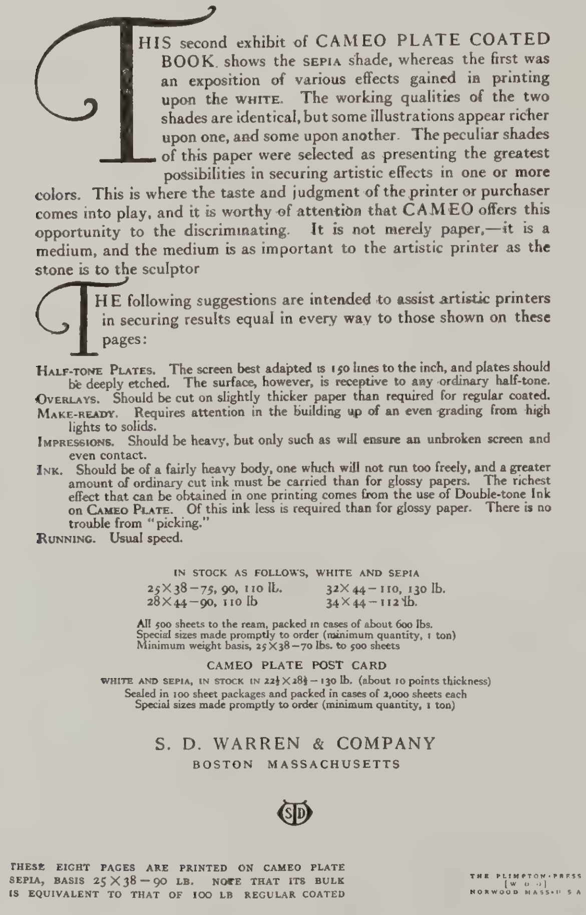
Cameo Plate and Sepia Tint

Eight pages devoted to an exposition of the merits of Cameo plate coated book stock form, they say, "the second exhibit," this being of the sepia shade, whereas the first was one of various effects gained in printing upon the white. Cameo plate, says this real advertisement, "is not merely paper — it is a medium, and the medium is as important to the artistic printer as the [kind of] stone is to the sculptor."

The landscape illustration from a 150-screen halftone, printed with one impression from Brazil brown doubletone ink, has the "feel" of the woods. I am writing this in the woods of June, and though the prevailing note is green, there is a charm of tone-contrast that is the same as that of October — and this very greenwood could be pictured in the brown on the sepia tint, and recall this glorious day of summer. Here, though, is the cover of a "summer booklet" of the Eastman Kodak Co. that has a touch of green — it being in three-color and black — two of the colors making the green that is, on this stock, like the bright green of the grass beneath the trees near where I am sitting, toned by their shadows. The fine detail of a photograph is well preserved on such stock. Other pages show how harmonious the sepia tint, together with the smoothness of the stock, is in color work along commercial lines. A page (5) is reproduced to show a unique arrangement as to initials and indentation, the initials being in lake. The stock is made by S. D. Warren & Company, Boston, Mass. The Plimpton Press of Norwood, Mass., printed the book.



THIS second exhibit of CAMEO PLATE COATED BOOK shows the SEPIA shade, whereas the first was an exposition of various effects gained in printing upon the WHITE. The working qualities of the two shades are identical, but some illustrations appear richer upon one, and some upon another. The peculiar shades of this paper were selected as presenting the greatest possibilities in securing artistic effects in one or more colors. This is where the taste and judgment of the printer or purchaser comes into play, and it is worthy of attention that CAMEO offers this opportunity to the discriminating. It is not merely paper,—it is a medium, and the medium is as important to the artistic printer as the stone is to the sculptor

THE following suggestions are intended to assist artistic printers in securing results equal in every way to those shown on these pages:

Half-tone Plates. The screen best adapted is 150 lines to the inch, and plates should be deeply etched. The surface, however, is receptive to any ordinary half-tone.
Overlays. Should be cut on slightly thicker paper than required for regular coated.
Make-ready. Requires attention in the building up of an even grading from high lights to solids.
Impressions. Should be heavy, but only such as will ensure an unbroken screen and even contact.
Ink. Should be of a fairly heavy body, one which will not run too freely, and a greater amount of ordinary cut ink must be carried than for glossy papers. The richest effect that can be obtained in one printing comes from the use of Double-tone Ink on Cameo Plate. Of this ink less is required than for glossy paper. There is no trouble from "picking."
Running. Usual speed.

IN STOCK AS FOLLOWS, WHITE AND SEPIA

25×38—75, 90, 110 lb. 32×44—110, 130 lb.
28×44—90, 110 lb 34×44—112 lb.

All 500 sheets to the ream, packed in cases of about 600 lbs.
Special sizes made promptly to order (minimum quantity, 1 ton)
Minimum weight basis, 25×38—70 lbs. to 500 sheets

CAMEO PLATE POST CARD

WHITE AND SEPIA, IN STOCK IN 22½×28½—130 lb. (about 10 points thickness)
Sealed in 100 sheet packages and packed in cases of 2,000 sheets each
Special sizes made promptly to order (minimum quantity, 1 ton)

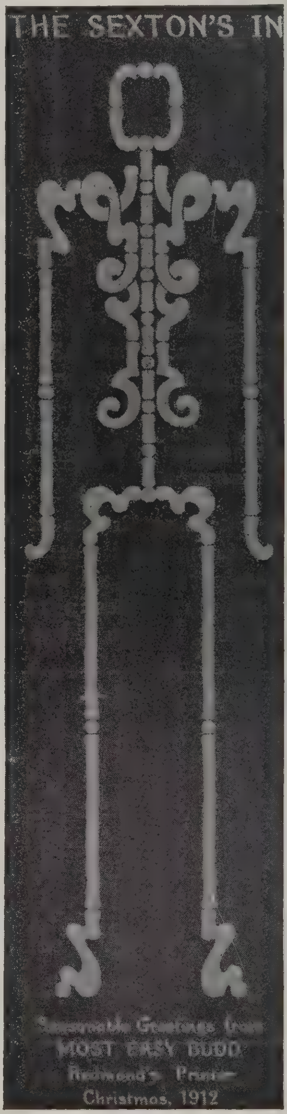
Reminder of the Hereafter

M. E. Budd is nothing if not original. But who would have thought he would send a friend — even though that friend be a critic — such a Christmas remembrance as the two leaves of which 6 is the first page? The production is cut from the most funereal of black cover stock so that the two leaves join only at the straight edge near the top. Even the aluminum ink is so somber that the "skellington," ingeniously composed of bits of Stylus border, will possibly be all the engraver can catch. Above the insulting vaccuous head are the words, "The Sexton's In," and at the bottom are the lines:



No. 6

Seasonable greetings from
MOST EASY BUDD
Richmond's Printer
Christmas, 1912

Budd is working for and with a man named Richmond now, which shows that Richmond is "in the field."

The inner leaf has Walt Mason's poem, "The Sexton's Inn," set coffin-shaped. Walt is generally as cheerful as Budd, but he was obsessed by the Glooms when he wrote that, all right.

The use of the coffin die is just another instance of Most Easy Budd's tendency to make others Most Uneasy by jesting on grave subjects.

But I am somewhat like Burns in that I "cannot hate the Devil himself with the old-fashioned orthodoxy," so I will forgive the Colonel — who is no longer a devil, of course, but is, rather, a "divil," or as Burns would say, "a clever deil" (the N. P.-J. compositor set it "cliver deil" in the May installment; he must have Scotch-Irish blood in his dark veins).

And who could hate Most Easy "for long" after reading this appreciation of him from one who knew him personally — a tribute in the Mulvane (Kan.) News, I chanced to come across some time ago:

> Last Sunday for a few hours we had the pleasure of a visit from "Col." M. E. Budd [then] of Burlington — one of the best printers that ever stepped foot in Kansas. For seven years he worked for the writer while we were an employing printer in Wichita, and never did he fail to meet the demands made on his time and skill. He was faithful to every trust, conscientious in the performance of every duty, and phenomenal in the amount of work he could and would do. With him printing was an art. No picture so beautiful as the skilful arrangement of type on the well-printed page — unless we except the picture made by the loving faces of the children he loved so well. Generous, yes, to a fault — so generous that the boys interpreted his initials as "Most Easy" — a sobriquet he upheld with everybody but himself. Modest, unassuming, unambitious, he is the same old Budd, with a slightly grayer tinge across the temples, and a new wrinkle or two — the love-marks of time. The two-day vacation he had treated himself to, after months of faithful service, was already growing irksome. Before he was in town an hour we knew he was hearing the call of the shop — was wondering how the boys were getting on with the work; and long ere this is printed he will be back in the harness again, printing his life away. Such men are scarce in these days; and as we grasped his honest hand to say good-bye, we were tempted to paraphrase a line from Riley and say: "When God made Budd I'll bet he didn't do anything else that day but just set around and feel good."

Isn't that fine? Doesn't that ring true? It is written in the spirit of many of the contributors to this department — this spirit of fellowship and understanding between employers and employes — and if it was as common as it should be, there'd be no so-called "labor" troubles. I should like to meet Budd personally, and I should also like to make the acquaintance of as true a writer as M. E. is a printer — the whole-souled editor of the Mulvane News. And if I don't meet them in this scheme of existence, I hope to where they are at work in the next.

No, not at shoveling coal — though Budd may deserve it for sending me that most unseasonable greeting; at the same business. For none of us would be happy in a hereafter which had nothing in common with the Art Preservative of Arts. And we do not "slumber for ever and ever more," as Walt Mason says we do in his poem — not unless we are really "dead ones"; neither do we forever rest; I'm convinced of that. I don't think either Most Easy or the editor of the Mulvane News — is his name Mulvaney? — would want it so most easy as that.

I gave my views on the subject, which further consideration assures me are somewhere near correct, in some verses I wrote many years ago on the motto of a class — Ohne Hast, ohne Rast — Without haste, without rest — at the college I attended. This is all I can remember of the verses:

Go
Slow,
Do not rest
Till you're numbered with the blest.

* * * *

What their motto is, we do not know;
May not what is best for us below
In that Higher College still be best?
Is there Rest in rest that has no rest?

* * * *

Eve dallied with the Prince of Idleness,
And lost what she then deemed true happiness;
But when our parents left their garden cool,
And earned the bread of toil in life's stern school,
God, the Wise Punisher, in mercy sent
This compensation for their banishment:
They learned the blessedness of Work; they saw
Toil is the hard beginning of the Law
That has its consummation in that sphere
To which their Eden were a desert sere;
The bitter yeast was but the blessed leaven
That concentrates the sweat-earned bread of Heaven.

The other day I bought a book of 950 pages for thirty-five cents. It seemed to be worth it, for it was called "The Unknown Country." But it is a symposium of what ministers of the entire Christian era to date think they know about it. They do not agree. There is even more difference of opinion among living theologians than there was among those of a thousand years ago. There are 57 varieties of hell and no hell at all; and there is almost as much confusion as regards the other place. I have as much right to my opinion as any of these ministers, and certainly must know as much about the matter as most of them appear to, and I do not fully agree with any of them, but the man who comes closest to my way of thinking is a man whose memory will ever be green in American hearts — a great editor and publisher, the gifted author of "The Man Without a Country" — the Lend-a-Hand philosopher who so lived his famous motto as to take time in his busy life to commend one of my earliest ventures in verse — the crude efforts of an entire stranger; who was — and IS — the friend of countless other struggling writers — the scholar and citizen to whom a noble monument was erected this week in the city I am in at present — the Reverend — and revered — Edward Everett Hale. He would not, however, have commended "The Sexton's Inn," for he writes:

> We speak familiarly, for instance, of life above, and life on earth, as if spirits lived in the sky, and not elsewhere. As a matter of poetry, this may be just tolerated. But not as a matter of fact. * * *
>
> So, again, our familiar phrase, in which we speak of the life "there" as contrasted with the life "here," is dangerous. Or, when we speak of a friend as having "passed away." It should always be remembered that these phrases are excusable merely as poetry. * * * It is far worse when we speak of a dead friend as "lying in the ground." Such language should never be permitted. [And why speak of him as "dead"?—H. A. W.] * * * I believe that the more men come to see that they are simply in training here for other life, with larger powers, the better is the chance that life will be pure and peaceable, kind and merciful, charitable, just and true.

And increasingly useful. Of all the different kinds of work that have helped to broaden and spiritualize this life, the labor of printers and editors is among the most efficient. And have the men who have made these callings their life work no application in the other life for what they have learned with so much study and toil, but with the love of the soul that has found its work? No, I believe that the released spirit of Budd will blossom forth with larger powers in very much the same line of optimistic work as he has fitted himself to excel in; and that the editorial labors of the cheery humorist of the Mulvane News will continue to be an inspiration to the souls of men.

LARGEST NEWSPAPER IS DISCOVERED

Publisher Grateful That He was Bred in Printing Office

According to the Philadelphia Inquirer of recent date, a copy of the largest newspaper ever printed is in the possession of Ferdinand J. Dreer of 1520 Spruce Street, of that city. Few men alive today are acquainted with the fact that the newspaper monstrosity called "The Quadruple Constellation" was published fifty-four years ago by George Roberts of 12 Spruce Street, New York. The pages measure 100 x 70 inches in size.

The first edition was published to the number of 28,000 copies, and only the finding of one of these copies by Mr. Dreer, while examining personal papers and books left by his father, brought the oddest of newspapers to light. "The Quadruple Constellation," judged from the standpoint of the modern reader, is a publication of such bulk as to prevent perusal except with the aid of a billiard table or something that offers equivalent handy space, and it is likely that Mr. Roberts' idea of having it published once every hundred years will not look feasible to present day publishers, because of an eccentric reading public that demands its reading, even when it falls under the head of the curious, in shape that can be easily handled.

Perhaps Mr. Roberts' own opinion of his product is justified. He says: "The publisher does not wish to conceal the honorable pride which he feels in presenting this sheet to the public. It is the offspring of Invention, Taste, Enterprise and Herculean Industry." He offers the fact that the paper is produced in sheets that measure 100 by 70 inches, in pages of thirteen columns, each 48 inches long, as proof of his claims for the "wonder," and suggests that lovers of the artistic should place the copy they buy in a box and leave it on the center-table to be read by children and grandchildren to infinity as "the greatest curiosity of the nineteenth century." Explaining his ability to produce so magnificent an example of newspaper enterprise, Mr. Roberts declares in his editorial notice that "We thank God we were bred in a printing office from the age of nine years, and we have no doubt we will die there with harness on our back."

Took Forty People Eight Weeks to Do It

The Constellation, of the edition in possession of Mr. Dreer, was produced in 1859. Contemporary history with big news, oddities and writings of the time comprise its contents. There are splendid engravings of President Buchanan, N. P. Banks, Rev. Henry Ward Beecher, Rev. E. H. Chapin, Baron Humboldt, Gordon Bennett, Horace Greeley, Elizabeth Barrett Browning, and of the Crawford Statue of America. Other engravings include a scene in the plantation district of the south, which, about the time of the paper's publication, was planning its secession from the Union. Mr. Roberts says that the work of placing these facts and fancies in readable shape required the labor of forty people for eight weeks and the use of the largest size sheet paper then on the market.

Much space is given to "The Moon Hoax," from the New York Sun, of the year 1835. The publisher of the freak "Quadruple Constellation" justifies the reprinting of the hoax with an explanation that although the story was first produced as a joke, it was nevertheless accepted as a scientific fact by English newspapers and served to bring the Sun into a world-wide prominence. The hoax deals with discoveries of living forms on the moon, describing their modes of life, their ability to either walk or fly, and, in short, gives a detailed account of the moonfolk as they were seen through a wonderful telescope erected at Sandy Hook. It was months before the world was aware of the truth, that the Sun was merely offering an April-fool yarn to its readers.

Published Lottery Ads

About one-quarter of one of the great pages of the Constellation is given to a reproduction of an etching of the $50,000 lotteries at Wilmington, Del., and Augusta, Ga. Evidently the lottery was looked upon as a business opportunity, for the "mastodon of newspapers" prints not only an account of its wonderful working, but also carries an advertisement of the ticket sales. As a side issue it deals in a glowing description of the marvelous "elliptic bed-spring," a device constructed for the ultimate comfort of the tired sleeper.

It may be that the eight-page quadruple "Constellation" will never be attempted again for publication. The copy owned by Mr. Dreer is one of 28,000 offered at 50 cents apiece by the publisher in 1859, and while still in readable shape is marred slightly by yellowing and by the creasing and tearing that must be incidental to digestion of its contents by the reader. Mr. Roberts probably conceived its production after having suffered financial loss. At least he takes pains to notify editors that he has severed business relations with a certain Mr. Benjamin, who has brought suit for services that he only thinks he has rendered the publisher of the curiosity.

* * *

PRINTERS' LEAGUE OF AMERICA PROGRESSING

The Printers' League of America Is Progressing In Its Influence and Practical Usefulness

The report of the president, Mr. Charles Francis of New York, at the recent convention in New York City, indicated that the work of the league was advancing in a most satisfactory manner, and it is probable that the near future will see branches established in a number of other cities, several being well on the way to organization. Three charters were granted during the year — to Toledo, Cincinnati and Chicago. In two or three cities the branches had been formed and had secured contracts with the unions, and then the work of the branches had been allowed to lapse, but it was certain that when these contracts approached expiration the branch would again become active, as the advantages of collective contracts were plainly apparent to the employers in those cities, even though they formed little occasion for meeting in the intervals between the negotiation of scales.

In Toledo the formation of the league resulted in relieving the employers from a very critical situated created by the demand of the pressmen and feeders for an increase of scale. It happened that the president of the National League was passing through Toledo on his way to New York from Chicago, and had wired the secretary of the Ben Franklin Club of Toledo inquiring if he could be of service in that city. The telegram was received during a meeting of the committees from the employers and the unions just at the moment when negotiations were about to be broken off. The effect of the telegram was to adjourn the meeting until the arrival of the President, and following his arrival and the formation of a branch league the matter was again taken up with the unions on league lines and a satisfactory adjustment quickly reached.

President Francis instanced the extension of the principles the league stands for into other trades and prophesied that within a few years every industry having to deal with organizations of labor would be working along similar lines. He said that organized labor was one of the conditions employers had to deal with, and that the hope of some employers that it would be destroyed was without foundation. He thought it was desirable that employers should encourage the conservative elements of labor and deal equitably with them, rather than by fighting them strengthen the radicals and anarchistic. The more conservative and saner actions of the trade unions, as compared with other more recent organizations, should convince employers in every line that the league method of dealing with labor problems is the only safe course to follow.

The following are the officers of the league:

President, Charles Francis, New York.

First Vice-President, A. R. Morgan, Cincinnati.

Second Vice-President, J. W. Hastie, Chicago.

Secretary, Charles E. Hawkes, New York.

Treasurer, Wm. H. Van Wart, New York.

Executive Committee members: F. E. Wilder, New York; W. D. Frank, Cleveland; J. J. Kelly, Cincinnati; H. C. Vortriede, Toledo; T. H. Faulker, Chicago.

The advisory board for the three districts are as follows, from the membership of the executive committee:

Eastern District, Charles Francis, W. D. Frank, Wm. H. Van Wart, and Floyd E. Wilder.

Middle District, A. R. Morgan, W. D. Frank, and J. J. Kelly.

Western District, J. W. Hastie, H. C. Vortriede, and T. H. Faulker.

THE FREE AD NOTICE FIENDS

Suggested Medicine for Riddance or Cure

Office of D. W. Grandon, Vice-President
Hillsdale, Mich., May 22, 1913.

Benjamin B. Herbert,
Chicago, Ill.

Dear Sir: Every day I am more and more surprised at the number of newspapers seemingly willing to print the free advertising matter sent out by the smooth press agents of the country. For years past I have dropped all such matter in the waste basket, but have never been able to head off the deluge that comes daily to the Hillsdale Daily, as it no doubt comes to thousands of other newspapers throughout the country.

However, I think a method of getting rid of these troublesome pres agents was recently suggested by Albert M. Snook, ex-president and present chairman of the executive committee of the Inland Daily Press Association. At our last meeting at Chicago he urged each member to get a rubber stamp which would read:

WHY DON'T YOU
PAY FOR IT?

This stamp would cost but a few cents, and when each piece of free advertising is received the publisher should use the stamp on the envelope and enclose it in a plain envelope addressed to the party sending the free advertisement. Do not stamp the envelope, as the postoffice has blanks and will notify the party to whom the envelope is addressed that a first-class letter calling for postage is being held. If the postage is sent the letter will be forwarded. After paying postage on a lot of these letters and opening up the mail to find boldly stamped thereon these words, "WHY DON'T YOU PAY FOR IT?" it strikes me the grist of free advertising will grow much lighter.

I trust with your large circulation you will be kind enough to give this suggestion of Mr. Snook wide publicity and to editorially urge your readers to follow this plan. Very truly yours.

D. W. GRANDON,
Manager the Hillsdale Daily.

BANKER PRAISES NEWSPAPERS AS AN ADVERTISING MEDIUM

Newspapers were pronounced far superior to magazines as an advertising medium by F. O. March, of E. B. Smith & Co., bankers, in an address on "Financial Advertising" at a round-table luncheon of the Poor Richard Club, Philadelphia, on May 27.

Experiments have recently been made by New York firms, Mr. March said, in advertising with syndicated and individual newspapers in most of the big centers of the country. The carefully tabulated record of results shows that heavier and quicker response came from the newspapers than from similar advertising placed with magazines.

"Financial advertising has changed considerably in recent years," said Mr. March. "Financial houses are coming to realize that bonds and stocks are subject to the same laws of distribution and sale as potatoes. They accordingly are not satisfied with merely inserting a card in the paper calling attention to the number of years they have been in business, but specifically state why the bonds they offer are best."

Mr. March pointed out that advertisements in old city directories show that only a short time ago the "card" advertisement was used by the grocer. He said that bankers usually balk at more blatant methods of displaying their wares on ethical grounds.

"Having determined the nature of advertising," continued Mr. March, "where it shall be placed becomes the next problem. Many people get the habit of advertising in one paper. They keep no record on results and try no other medium. In many cases they are simply wasting their money."

✣ ✣ ✣

"EXCELLENT FARM WRITING"

"Excellent farm writing" is the way Charles Dillon, managing editor of the Capper group of farm journals, describes the Springfield, Mass., Union's rural feature page, supplied by students of the state agricultural college under direction of Prof. Robert W. Neal. This page, the Bay State Ruralist, ended its second year on May 25, when the students had entire charge of it without editorial supervision of any kind. "It was fine," writes Mr. Dillon in the June 7 Kansas Industrialist. "There was a swing and a freedom in the first sentences that was positively refreshing, and every one of them was well within the limits of dignity and proper writing."

Excellence in farm and other forms of industrial writing is rapidly becoming indispensable. Not only do the magazines and the newspapers require it, but the technical journals and the farm papers also are steadily insisting on a better quality of writing. They are compelled to do so, for their readers demand it of them. At the same time, the demand for material of this sort is increasing. The city reader and the country reader alike welcomes the well-told fact of agriculture, rural life, or industry.

Hence the increase of courses intended to train to "excellent farm writing." They are found in the universities, and the agricultural colleges have perceived their desirability. At least six agricultural colleges give courses of the sort — Wisconsin, Kansas, Michigan, Iowa, Ontario, and Massachusetts.

Some of these aim at no more than practising the student in writing of agricultural articles; others — as in the case of Massachusetts — seek professedly to prepare men for country newspaper work even when drilling them largely on agricultural subjects. The belief is that there is opportunity for competent men of education in country newspaper work, and that educated men of strong rural sympathies can be especially useful in their community through the home paper. But it is also held that a good news form and style are essential under any conditions to "excellent farm writing." Judged by the results at Massachusetts, the theory seems to be sound.

* * *

QUIT BLAMING OTHERS

The following paragraphs are taken from a snappily written circular sent out in connection with the recent Illinois Printers' Cost Congress:

No man can get anything out of this world, out of the printing business, or out of organization, unless he shows enough energy and ambition to do a litle something for himself.

Organization will not run itself any more than your own business will exist without your time and effort back of it. If organization is going to do you any good, it is you who must make the organization. You must realize now that it is up to you to do something for yourself. That is what is the matter with the printing business—every printer is looking for the other fellow to do something, while he himself sits back and does nothing. You complain continuously because your competitor quotes a lower price in every estimate he makes. Are you doing any differently? Are your own selling prices based upon a known cost plus a reasonable profit? If not, what right have you to complain?

The object of this preachment is to put the proposition squarely up to you printers of Illinois, to ask you to give your time, more than anything else, to the organization movement, and incidentally some of your money. The more workers we can get into the organization, the sooner we can bring about the new conditions in the printing bnsiness that we all desire.

Brother Printers, when are you going to quit blaming others for your condition, and resolve at least to try to do something for yourselves?

Are we going to permit Illinois to lag behind in this great movement? Must we take a back seat while Ohio, Indiana and other states go marching by on the road to progress?

Recent statistics show that in the State of Illinois out of 2,352 printers no less than 1,282 are absolutely without any financial rating whatever. You will see by these figures that there is much to be accomplished to place our great industry on a sounder basis, and by hearty co-operation we can do it. Won't you do your share?

AMONG THE ASSOCIATIONS

About 300 editors and their wives were in attendance at the annual summer meeting of the Kentucky Press Association last month, June 17-19, inclusive. The gathering this year was held at Olympia Springs.

The following officers were elected:

John S. Lawrence, of the Cadiz (Ky.) Record, president; James B. Lemon, Mayfield Messenger, vice-president; J. C. Alcock, Jeffersontown Jeffersonian, secretary and treasurer; James B. Stears, Nicholasville News, chairman of the executive committee.

The program was one of unusual excellence and the members expressed their gratitude formally and otherwise. Woodson May, of Somerset, denounced the sliding scale for advertisement prices and discussed the lack of business methods prevailing in many local newspaper offices.

"The Round Table," presided over by Mr. J. A. Spears, a veteran editor, was an interesting feature of the meeting. The free discussions of numerous questions which enter into the successful management of most printing and publishing offices proved enlightening and decidedly helpful.

The meeting closed with a banquet tendered by the Olympian Springs management.

DENVER PRINTING NOT ALL DONE IN DENVER

Denver, in common with other large cities, has found that much of its printing is done outside of the city's limits.

It is said that Denver loses $1,000,000 annually through the practice of certain interests in the city who have their printing done by outside firms, according to a letter sent recently to the Denver Chamber of Commerce by the various printers' organizations. It is urged that if all the printing required in Denver was done by local firms it would necessitate an increase of about 700 workmen to turn out its work; that the plants would be put to an expense of $275,000 to meet the orders, and that the population would eventually be increased 2,500 by the coming to Denver of printing trade workers with their families.

The letter points out that the printing business is the largest single industry in the city, and that it is of vast importance to see that Denver does not lose her share of the trade through the placing of orders outside of the state.

RANDOM NOTES

A real estate firm of Akron, Ohio, announces in a full page advertisement in the "Times" of that city its success in securing a new home for the newspaper. The portraits of two members of the firm appear in the advertisement, and their boast, "We are the boys who found the new home for the Akron Times," carries with it the inference that the building was acquired upon the most advantageous terms. The advertisement claims that "a more suitable building and location could not have been obtained in the city."

A sample copy of the "Georgetown Commercial," Lee J. Rountree, editor, is an eloquent testimony that the merchants of the little Texas city are believers in newspaper publicity. Many of the advertisements are creditable typographic productions.

In a recent issue of the Lyons, New York, "Republican," there appeared an interesting 2,000-word history of the Lyons Printing Company. According to the article, Mr. R. P. Ostrander, the owner, made the first payment on a monotype equipment in 1905, following the favorable sale of a thoroughbred French bull dog and five pups. The company has flourished and prospered since this memorable event. The Lyons Printing Company now has a weekly payroll of nearly $1,000, with sixty-one employes. An additional paragraph is significant: "In spite of the fact that the printing trade is languishing throughout the country, and has been for months, the local company is full of business at present and is booked for months ahead. So great has been the demand that for six weeks past it has kept two machines busy in Rochester and part of the time two in Syracuse in addition to its own large equipment."

The Boston Transcript of recent date says that large American exhibits are already being arranged for the Exposition of the Graphic Arts, to be held in Leipzig during the summer of 1914.

COST FINDING AS A CREDIT ASSET

By Frank Barhydt, Kansas City, Mo.

EFFECTS of the Cost System on Credits with the Supply Men may be considered from two points of view: one

The attitude of the supply house toward the printer having a cost system. The other

The effects of the cost system with the printer as shown in his payments to the supply houses.

Of these, the first may be readily and intelligently discussed, while the other is more difficult to speak on for the reason that specific and detailed information is lacking.

Supply men know that many printers do not pay because they do not make money and cannot pay. Before they are warranted in extending credits, it is necessary for them to know that there is a reasonable prospect of receiving their pay. They are aware that in a great majority of cases where customers do not pay the failure is due to the fact that the printer has not properly calculated the expenses of turning out his work, and as a result uses up his capital and takes work from other shops only to find out in the end that he has been operating at a loss. Such a printer is not to be credited by any supply man who knows his condition, not because he is not honest, but because he is not a good risk. On the other hand, when the supply men know that a printer is familiar with his cost of producing, he will make proper charge for his product, and will not take a job in which there is no profit. Not only is he considered a good risk, but having knowledge of the expenses of each department of his establishment, he realizes the advantage of modern appliances and the expensiveness of labor, and installs such equipment as will make for "efficiency"; and efficiency is the foreword today in all lines of business. When the supply men know that the printer's profit is not a matter of "luck," but is figured on a scientific basis, they will be willing to extend all needed credit.

In regard to the effects of the cost system as shown in the payments of the printers to the supply houses, conferences with the credit men of the allied trades strengthen the opinion that the cost system, as now understood, has not been used long enough nor by a sufficient number of printers to produce any marked effect on either sales or credits. Those who have not been able to see its advantages, are the kind of printers who are not making money, and this fact, alone, is a good argument for the adoption of some kind of system of cost finding. Those who have put in cost systems are, as a rule, those of the better class of printers, who have known something of what has been going on in their business, who were making money, and who are among our prompt-paying customers.

In certain localities credit conditions have improved in the past year or two, but whether or not this is due to the installation of the cost system, no supply man can tell. However, there have come to the attention of all supply men, without a doubt, a few unmistakable evidences of better conditions among certain of their customers who have adopted a cost system — customers who, while very slow pay formerly, now discount their bills; and the natural inference is that their improved conditions are due to the effects of the cost system in bringing them into a knowledge of the cost of doing business and thus enabling them to adjust their business to a proper and paying basis — and this, in the last analysis, is what a cost system stands for.

While it so far has been impossible to determine definitely just what has been accomplished by the cost system in the way of bettered conditions in the settlement of printers' accounts, it is certain that it enables them to put their business on a profit-making basis, and this will eventually benefit not only the printers with the cost system, but will lead the others up to better prices and better conditions, and it is safe to say that no printer need have any misgivings as to his credit with his supply man, or his banker, if he has a cost system and is working it overtime.

"THE AD CLUB IN OUR TOWN"

By C. E. Curtice, Miner and Mechanic, Neosho, Mo.

HAVING been invited by Mr. Edgecombe, manager of the Country Weekly Department, to prepare a paper on the above topic, I take it for granted that what is wanted is simply a correct and concise statement regarding the organization of the Ad Club in the little city in which I live; what it has accomplished in the way of improvement in the advertising done by the different merchants of Neosho, and what benefit has been derived from it by the newspapers and print shops of the town.

The Neosho Ad Club was organized in December, 1910, and is affiliated with the Associated Advertising Clubs of America. One of our leading business men, Mr. G. R. Lowe, while in St. Louis on business, met and had a talk with Mr. I. H. Sawyer, advertising manager of the Brown Shoe Company, and at the time vice-president of the national organization of advertising clubs. Mr. Sawyer is an enthusiast on the ad club proposition, and very naturally pumped considerable ad club hot air into his visitor before leaving him. The seed thus planted immediately took root, and as soon as Mr. Lowe returned home he began talking up the matter of organizing a club in Neosho. A little later Mr. Sawyer was induced to visit our town and at a luncheon given in his honor by the commercial club, outlined the aims of the Associated Clubs and strongly urged the organization of an Ad Club in Neosho. A short time after Mr. Sawyer's visit a number of the business men met one evening and organized the Neosho Ad Club, with some ten or twelve charter members. Suitable quarters were secured for the meetings of the club and neatly fitted up. The meetings, held twice a month, were attended by nearly all the members, and at every meeting there were a number of applications for membership to vote on. The Ad Club idea took root and flourished. Its practical mission and purpose appealed to the business instinct of its growing membership. Later on the club outgrew its old quarters and a suite of rooms in the largest and most pretentious building in the town was secured and fixed up in elegant style as a home for this stalwart and growing infant. The club now has a membership of 56, comprising representatives of nearly every business institution in Neosho. The average attendance at the meetings is not less than 30. The membership fee is $5.00, and the monthly dues 50 cents. The organization has, in addition to its business phase, a social side that helps to attract and hold its membership. A luncheon is served at every meeting by one of the members, the honor of being "chef" for the evening being decided by drawing a slip containing a member's name from a box. After one name is drawn out it is not again placed in the box until all the others are drawn. Another feature that has added to the popularity of the club and increased the interest in it are two annual stunts that are pulled off regularly, one being a minstrel performance in the winter, and the other, a "humbug circus" in the summer. These attractions are invariably greeted by houses in which standing room is at a premium, and they have not only been a pleasant diversion from the routine of daily grind, but have proven a source of revenue to the club that has enabled it to fit up its quarters in fine shape and secure a stereopticon and other accessories for the use of lantern slides in illustrating the talks that are made on advertising. As to the principles and aims of the organization, we quote what its constitution says — and it is eloquent with force:

"We declare ourselves associated for the development of the best in advertising; to assist each other by the exchange of ideas; to produce better and more profitable work; to correct the abuses of advertising; to use our co-operation to further the interests of the Commercial Club; to promote social fellowship and to assist in advancing the interests of Neosho and the community in which we live."

C. E. Curtice, "Miner and Mechanic," Neosho, Mo.

The above is a general outline of the organization of the club, and now you will want to know what good it has accomplished. One of the first effects of the organization was the elimination of "fake" advertising schemes. The club has a vigilance committee composed of three members, whose duty it is to examine and pass on every advertising proposition of a special character presented for the consideration of the business men of the town. Every business man who is a member of the club, and some who are not, has a printed card displayed in a conspicuous place in his store, which reads: "No advertising proposition that does not have the endorsement of the Neosho Ad Club will be considered." And they stick to it, too. This makes it absolutely necessary to secure the endorsement of the vigilance committee to do any business in the advertising line in Neosho, and they can be relied upon to give their sanction only to such advertising as is legitimate and will bring some returns to the advertisers. This has practically eliminated our old friends, the lodge, church, or railroad directory, church cook book, opera house program, and many other forms of fake advertising that are generally admitted to be of no benefit to the advertisers. Even the venerable county fair premium list (the advertising in it) is a thing of the past. Again, the members have been making a systematic and pretty thorough study of advertising. At the beginning this study was confined principally to examination and criticism of the ads in the local papers; later on they took up magazine advertisements, and for the past six months or so they have been receiving the regular lantern slide lecture course on advertising from the National Association, these lectures being read by one of the members, and illustrated on a screen by use of the stereopticon and lantern slides.

The next question that will be asked is, undoubtedly, what benefit has this ad club been to the newspapers, and also to the merchants of Neosho? To this I would say, a great deal in both instances, in my judgment.

Before the organization of the Ad Club in our city the local papers, three in number, had about the same trouble with their advertisers that nearly every other newspaper published in a county seat town of from 4,000 to 5,000 inhabitants has. We chased ad copy and did not always get it; copy came in in poor shape and had to be edited; merchants said when approached that they had paid out so much for other kinds of advertising that they could not afford to advertise in the papers; other merchants set aside so much for newspaper advertising, and so much for outside schemes, and generally speaking advertising was a haphazard proposition. Now this is all changed. The merchants have the money they formerly paid out for different advertising schemes to spend on newspaper advertising. About the only other form of advertising used in Neosho is the mailing out of circulars and folders to persons whose names are on mailing lists covering the different rural routes in the county. I would estimate the display advertising in the Neosho papers since the organization of the Ad Club to be nearly double what it had been for the same period before. There has also been a vast improvement in the composition and arrangement of the copy. This is particularly noticeable in the copy furnished by the ad writers for four or five of the leading stores of the town. Their ads will compare favorably with those of the stores in much larger communities where special ad writers are employed at liberal salaries.

And again, the merchants have been greatly benefited by the increased sales resulting from the substitution of legitimate and systematic advertising methods for the old hit-and-miss form.

At the club meetings other questions that really pertain to advertising have been the subject of discussion and criticism, to-wit: window display, arrangement of stock, store service, etc. These accessories to newspaper advertising, if handled to the best advantage, are certainly a big help to the enterprising merchant in the selling of his wares, and the stores of Neosho show great improvement along each of these lines.

In addition to the study of advertising and kindred subjects, the Neosho Ad Club is also a booster organization for the town and has aided in such works of local interest as improving the city park, securing good roads, cleaning up the streets and alleys, etc. In fact, it is a live wire in every way, and can always be found working for everything that is for the best interest of the town.

I believe that Neosho is the only town in the United States of anything like its population that has an ad club, and that it is most fortunate in this respect. I would say to my brother editors that in my opinion your business will be added to by the organization of a live, energetic ad club in your town, and you should give any effort in that direction your cordial encouragement and aid.

BENEFITS OF THE NATIONAL PRESS ASSOCIATION TO ITS MEMBERS

By G. W. Hughes, Clinton, Iowa

BENEFITS of the National Press Association to its members depend upon two things: the members, and the opportunities offered them for being benefited. There are two classes of members: those anxious to receive benefit, and those who are indifferent as to the good results that may come to them, even though they may come with little effort on their part. Some are members of the association and attend the annual meetings that they may learn something which they can use to profit in their business and share in the pleasures of pleasant friendship. Others are members that they may attend the meetings and have a good time and return home no better informed than when they left, except the knowledge forced upon them by travel. He who travels will learn something worth while unless he goes to sleep or wilfully keeps his eyes closed. Though some learn but little and do less, it is only fair to admit that those who pay their dues and other expenses necessary to be a member are desirous of being benefited. It is possible that their idea of being benefited will not allow them to gain the knowledge it is possible for them to add to whatever they may know. While the desire of some may not at all times or at any time, be strong enough to insure them benefit from every opportunity presented, all should be charitable enough to not question their good intentions. To do so would be almost a direct accusation of their not knowing enough to know they do not know as much as they ought to about making the best of an opportunity. I would not accuse anyone unjustly. Every member of our association should be considered innocent of any intention of fooling away his time and his money until the preponderance of the evidence shows him to be guilty beyond the possibility of a reasonable doubt. Neither would I have anyone feel that I desire to meddle with his business further than to show him wherein he is unfair to himself and the association. It is hoped no one will take offense at the friendly flashes of light thrown upon any part of his life, especially when they are so general that he may feel assured that it is the other fellow who is meant.

There are two ways by which benefits may come to our members from membership in the National Press Association. The benefit may be mental or it may be physical. Each one may receive the two-fold benefit; and those who do not give proper welcome to the opportunity that comes to them while attending the meetings cheat themselves. There is the benefit that comes from a few days' rest, away from the many and urgent cares of business, far from the calls for copy and the presence of the collectors of bills. The benefit to be gained from this condition depends upon the number of unpaid bills left at home.

Rest is a benefit at any time;
  Sometimes it's an antidote for ills,
But it gives its greatest good
  When free from the sight of bills.

The benefit from travel must always be considered. It gives an opportunity for learning that is a part of an education. It adds a certain and a definite knowledge that can be gained in no other way. The broadening influence of travel upon the mind is of a worth that makes it a necessity for a complete education. Those who have never traveled have never known the difference between seeing things and reading the descriptions of those who have seen them. No matter how vivid a description may be it can only give an outline. Those who have never seen the mountains know little of what mountains really are. Those who have never seen them robed in perpetual snow when there is vegetation in the valleys below have never experienced the feeling of wonder that redoubles with each view. Those who have never seen the wonders of Yellowstone Park have not experienced one of the strongest evidences that there is a God. It might well be said that those who have never traveled have never realized fully what it is to live.

The social part of our meetings is of much importance. Meeting old friends and making new friends is a pleasure and a benefit that cannot be overestimated. It is often beneficial beyond any value ever placed upon gold. Meeting and associating with those engaged in a similar business with ourselves is a benefit that may become nation-wide. It cannot be told when a friend in California may be a friend, indeed, to a friend in Maine. No one can know when friends in other states may be of valuable assistance. At the annual meetings friendships are made that continue through life. So close are some of these friendships that they become stronger with each meeting. They are renewed each year with a pleasure that makes life sweeter and the flowers look more beautiful. Especially is this true when "soft eyes looked love to eyes that spake again." While Cupid is not a member of our association, he is with us on each excursion, and is busier than all the Pullman porters on the train. In fact, they are always a great deal busier than they would be if it were not for his presence. It is easy for him to make a slow porter swift and an unpleasant one pleasant. It has been known that some porters who had broken records for slowness became professional sprinters after being with one of our excursions three weeks, and others who would have been ideal cemetery signs were afterward employed to smile for the despondent. If such a thing were possible, a National Press

G. W. Hughes, "Register," Clinton, Ill.

Association excursion without Cupid would be almost as much without amusement as is a desert without vegetation. A few hours after the train starts he puts on a moving picture show of amusing situations that keeps everyone in a good humor. As much as the busy little god enjoys being with us he would perhaps not care to accompany us were it not for the rear end of the train. It is his favorite place for binding states and hearts together and make friendships seem like eternal happiness in a rose garden. It has been known that the rear end of the rear car was so much in demand that tickets for certain hours were issued that there might be no monopoly on the favorite location, thus preventing the parties to any friendship from beginning suit against the National Press Association for failure to provide sufficient desirable accommodation for them to worship Cupid according to the dictates of their conscience without being unnecessarily disturbed.

The rear end of an excursion train
  To friends of Cupid is "sweet home";
For it is there that they are
  Out of sight and all alone.

The principal, and, in most instances the most lasting benefit, comes, or should come, from the programmes. Here, as in all other conditions, the benefit gained depends upon the member. One with plenty of desire to be benefited can learn from a poorly selected programme; but one with little desire to make the best of an opportunity will not profit from good discussions or able addresses. An industrious pupil can easily learn from a poor teacher, but it is difficult for an industrious teacher to add to the knowledge of an indifferent pupil. A sage can learn from a fool, but a fool never learns from a sage. Knowledge can be gained though the opportunity is slight, if the determination to learn is not missing. While this is true, it does not create a reason for the use of poor judgment in preparing a list of subjects for consideration. As care is exercised in preparing food for the physical man, it should be used in preparing food for the mental man. To properly satisfy the mental or the physical man the food should be suitable for his nature, his need and the work to be performed. It would be as unwise to place only pastries before a laboring man as it would be to give a thinker food needed only by those who do physical work. The food should be of the kind the work to be done demands. Arranging a feast for the mental man is more difficult than preparing one for the physical man, because the mind has what may be termed more variations than the stomach. All who are in health will enjoy a good meal, but thousands who are robust prefer to attend a minstrel show than hear the address of a statesman. A cage of monkeys will be playing to a crowded house while the lions go to sleep waiting for an audience. A witty old farmer once explained it all when he said: "There is just as much difference in people as there is in anybody."

It is easier to criticise a programme than to prepare it. Those who have had experience know how easy it is to convince others that those who had the matter in hand knew little of what was expected of them. The real secret of preparing a suitable programme for the National Press Association or any other body is that it be in line with the work of those who are expected to be interested in and benefited by it. It should be made up from subjects that directly interest those who hear the discussions and the addresses. They will not be interested in them if they cannot learn things which they can put to use in their business. If it is a meeting of ministers they will want to learn something about preaching, and not how theological schools are conducted. If it is a convention of lawyers, they will want to learn something that will enable them to practice law more successfully than they have been doing. If it is a convention of teachers they will be more anxious about how to teach successfully, and not how colleges are conducted, or of their greatness and advantages in securing an education. If it is a meeting of editors their main desire is to hear something from which they can learn that which they can put to practical use in their business. If the programmes are such that there is lack of interest in them, it is more often due to the inappropriateness of the subjects discussed than it is to the inability of the speakers to discuss them in an interesting manner. Those who hear them are not so much interested in knowing how preachers, teachers, lawyers and editors get diplomas as they are in knowing how they achieve success after getting the diplomas.

These thoughts indicate that those whose prepare the programmes for our meetings may be responsible for much of the indifference of members towards the sessions. If they are more interested in a ball game or something equally less important than in the discussions, they may not be wholly to blame, but their absence from the sessions is not excusable. If the association is to live and grow the sessions must be attended. Paying dues and riding on excursion trains will not keep our association out of the cemetery. All who attend the meetings should attend all the sessions. As the future of each of us will be what we make it, the future of the National Press Association will be what we make it. Its future will be bright or cloudy in proportion to our efforts in its interest. It is in our power to make it what we would have it be — strong, hopeful and full of life.

THE FIRST STEP IN STATE ORGANIZATION

Address delivered by E. R. Purcell, of the Custer County Chief, Broken Bow, Nebraska, at the Meeting of the National Press Association, Held at Colorado Springs, June 17-19, 1913

Were it not for the purpose of bettering the condition of the publishers of this country, there would be no such thing as a National Press Association. The same purpose prompts the formation of state and district press clubs. It is the organized body that accomplishes things. The various state press associations of this country have, for many years, been productive of much good, but from a strict business standpoint we believe that great strides are yet to come.

The country publisher is awakening to the fact that it is possible to attain not only more business, but a better class of business; he has discovered that there is an undeveloped field of advertising; he is learning that there are improved methods of circulation building; he is awakening to the fact that system in his office and modern methods of bookkeeping will put him next to the leaks in his business; he is finding out that it is possible to transform his small profit and sometimes his loss of last year to an adequate remuneration for his investment and his ability this year.

The Cost Congress has brought a most startling revelation in demonstrating to leading country publishers that they have been conducting one department of their business at the expense of the other, and that it is only through organization that great things in business building and profit making can be accomplished. Practically every profession and every trade is now organized for business purposes. Then why not the country publisher?

My subject is, "The Next Step in State Organization," and it is along the line of a more progressive plan of organization that I wish to speak. Perhaps I can best illustrate my idea of such an organization by telling you of the move that I helped to inaugurate among the country publishers of my own state.

At a meeting of the Nebraska Press Association held at Omaha the fore part of this month, we succeeded in getting a few publishers of the better class of country weeklies to attend a meeting, the object of which was to promote and finance a permanent Secretary Bureau, an organization that would employ a secretary whose whole time would be devoted to the interests of its members. The project met with favor and twenty-seven publishers present enrolled their names. The following day a second meeting was held. The number of members was nearly doubled, and an executive committee of five was named to manage the association. Printed matter explaining the proposition and application blanks for membership were then mailed out to the publishers over the state, and, although but a short time has elapsed since this was done, the responses assure us that the Paid Secretary Bureau of Nebraska publishers will secure a paid-in-advance membership sufficient to finance the organization during the first year.

E. R. Purcell; "Chief," Broken Bow, Neb.

The membership fee is placed at $6 per year for publishers in towns having a population of 1,000 and under, and $12 for publishers in towns over 1,000. We have secured the services of a competent secretary, a man with wide experience, who will have charge of this bureau.

And now you naturally ask what we expect to accomplish. The secretary's first work will be to visit certain county seats and, by advance arrangement, meet the publishers of nearby towns. He will explain the project and secure the membership of as many as possible of those who have not already enrolled. When the organization is completed, the real work will begin. The secretary will travel over the state and visit the shops of the members. He will talk better business methods, discuss the cost system and modern methods of bookkeeping; he will carry to interested members the plans worked out by successful publishers in other parts of the state, and will endeavor to get the $1 papers in the $1.50 column, and help them to put their advertising rates and job work prices where they should be. Certain publishers may be interested especially in circulation building, and he will arrange for one or more expert solicitors who will find steady employment by filling engagements with a number of papers.

In towns where conditions are bad and prices cut to pieces, he will endeavor to get the boys together on a profit making basis.

The great opportunity for effective work is in the field of foreign advertising. For many years the magazine and class publications with great circulations have had a monopoly of the foreign advertising, and it is only of recent date that the country weekly could secure its present meager portion at living rates. The great advertisers who appropriate from a few thousand to half a million dollars each year for advertising purposes, and have been placing the entire amount with the magazines and class publications, are just beginning to see the necessity of reaching the rural reader through the country weekly.

The manufacturer who depends upon the retail merchant to sell his product is just beginning to see that he must advertise his goods in a paper that covers the field where his local agent (the retailer) does business. He is awakening to the fact that the local merchant does not and cannot carry on a campaign of advertising for each of the various brands of goods that he handles. Mail order competition is working the same hardship on the man who makes the goods that it does on the local dealer who sells them, and the time is near at hand when the manufacturer must carry the news direct to the rural consumers. He must come to the rescue of the man whom he depends upon to sell his goods. In other words, he must spend a portion of his annual advertising appropriation with the country weekly.

Not long ago I was asked by a hardware dealer of my town to write to the manufacturer of a certain range which he handled and ask the company to carry an ad in my paper. The letter was answered by the president of the company, who informed me that his firm did not advertise in country weeklies, but that it spent large sums of money with publications of great circulation, some of them having as high as a million readers. I then secured the list of periodicals which this product was advertised in, and in a close count revealed the fact that not to exceed a total of 125 copies of all these publications reached the people of my community. The ad of this firm appeared in the publication only at stated intervals. It was one of a great number of ads sandwiched among the many pages, which fact necessarily lessened its advertising value. I doubt if it attracted the attention of five out of the 125 subscribers to the periodicals mentioned. Notwithstanding the vast sum this company is spending for advertising, it is doing practically nothing along advertising lines for the rural dealers who sell its product.

At this same time of which I speak, another great stove company whose product is handled by a rival dealer in my town, was conducting an advertising campaign in country weeklies and getting results. No doubt both of these great stove factories appropriated similar sums each year for advertising purposes, and one of them is now probably wondering why it is that the rural merchant don't sell more stoves when his company is spending so much money in magazine advertising. The comparison between this advertising and that of the country weekly, both from the standpoint of covering the community and of actual value to the advertiser in that community, is too striking to need further comment. This firm will some time awaken to the fact that the publication with a million readers does not cover the field in the locality where the country merchant sells the stoves.

The other merchants of the town need a small portion of the advertising appropriation of the manufacturer as badly as does the hardware dealer. When we stop to consider that everything we eat, wear and use comes under this head, we can just begin to realize what is in store for the progressive country publisher when the tide of foreign advertising actually turns his way.

It is impossible for the individual publisher to do effective work in getting the great manufacturer to divert a portion of his vast advertising appropriation from the magazines to the country weeklies, but here is where organization comes in.

Suppose the publishers of the country weeklies in the principal towns were to enlist the merchants of those towns in a united demand, asking that the manufacturers of such goods and wares as are sold by them be advertised in their local papers. There would be little trouble in securing the recognition that our publications merit as advertising mediums.

In Nebraska, the permanent secretary of this bureau will see that this very thing is done. Under Nebraska's plan of organization the permanent secretary will work with responsible advertisers and with advertising agencies. He will endeavor to create new business for the country weekly and will not only help the country publisher, but the country merchant as well. It is not expected that the paper with the small circulation will get the foreign business that the papers of greater circulation receive, but it is expected that the benefit to be derived under this plan of organization will be such that no enterprising publisher can afford to remain outside of it.

If a Permanent Secretary Bureau is not a good thing, other lines of business would not be maintaining them. The members would not collectively spend three, five, ten or fifteen thousand dollars annually to better their condition, unless they got individual, as well as collective, returns.

Truly, the next step in state organization among country weeklies should be the formation of Permanent Secretary Bureaus in every state. One year from now Nebraska publishers will bring to you good reports of what they have accomplished under this new plan.

MAKING A SMALL CITY DAILY PAY

By Guy U. Hardy, Publisher Daily Record, Canyon City, Colorado

SHOULD a daily paper be run for profit or for principle? I should say for both — or rather for news, principle and profit. A newspaper that is run on a profit paying basis is pretty apt to be a much stronger advocate of its principles and of vastly more influence in its community, than the paper that is losing money.

What profit is the publisher entitled to — or should he strive for? Arthur Brisbane has been liberally quoted as saying that a country newspaper should knock out six dollars profit for each of its yearly subscriptions.

Is that high or low? Do you know any newspapers that are doing that well?

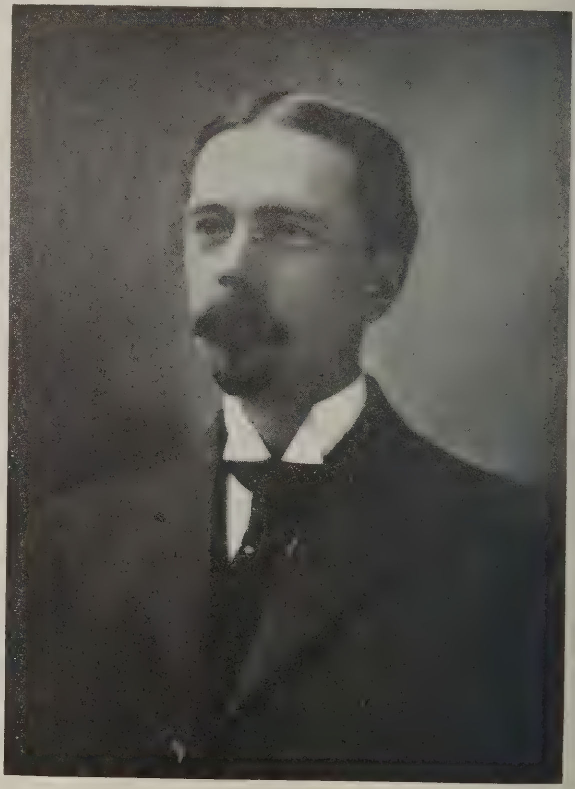
I know some, but not many.

It is easier to base a proposed profit perhaps on the volume of business done.

A friend of mine sets the standard of profit — the profit that should be aimed at — at 25 per cent of the volume of business done. I believe that this is a conservative estimate of what a small city daily paper ought to pay. That is, the proprietor, if he puts in his full time in connection with the paper, should take out for his salary and profit on investment at least 25 per cent of the volume of business done. He should do better than this if he can, but he should make that much anyway.

Profits in different newspapers vary greatly. I know of a country weekly in a town of 1,000 people that pays its owner about $4,000 a year. And I know of a dozen others in equally as good fields that do not pay $1,000 a year.

I know of a daily newspaper in a fine city of 12,000 people that does $50,000 in business a year that does not pay its owner 6 per cent of the business done. And I know of a daily paper in another city not half as good a field, that pays its owner from 25 per cent to 50 per cent profit on about half that volume of business.



Guy W. Hardy, Daily Record, Cañon City, Colo.

I know of another good city of about 12,000 people which has two good daily newspapers, each with a circulation of about 2,000 copies. The two papers appear nearly equal in quality and volume of business done to the outside observer. One of these papers has been netting its owner $10,000 a year, or 25 per cent on the volume of business done for several years, while the other paper runs behind more years than it runs ahead, and has never in many years made anything to speak of.

Getting out a good paper is not a very difficult job. It is largely a question of money. Brains, of course, are necessary. But men of newspaper making brains can be easily secured if you have the money to meet the pay roll.

But to make a good paper in any field pay a worthy profit is a difficult job. Men who have money making brains are mighty scarce and hard to hire.

And to sum up in a short paper of this class the essentials of a money-making paper — of a money-making publisher, is no easy task.

Money making in any line is largely a matter of thought. The publisher who thinks of the money-making side is apt to run a more profitable business than the publisher who devotes all his thought and energy to the political or editorial sides of the business.

Men accomplish usually those things which they set their hearts on — which they think most about.

Given the money-making thinking publisher, the next essential is the field. Many daily newspapers are striving to live in a weekly field. A man is a fool to try to run a daily newspaper in a weekly field — and many newspaper men are business fools.

When the right man is located in the right field, then one of the next important essentials is a cordial relationship with the opposition. The opposition, your esteemed contemporary in fact, may have about as much to do with your money-making success as you have yourself.

Be it far from me to advise any set of men to combine to violate any of the numerous, recently made, state anti-trust laws, but nevertheless, friendliness and co-operation among rival publishers has a great deal to do with the money-making success of local newspapers. And one tactful man can do much to bring about and maintain cordial relations and money-making conditions in a small field.

Economy should be the watchword in any business, large or small. Economy is one of the big essentials in the small publishing business. The grocer who buys sugar at $5 a hundred and sells it at 24 pounds for the dollar will go broke sooner or later. And the publisher at Junction City, Kan., who tries to give his limited field a newspaper equal to the Kansas City Star will go broke.

The newspaper should fit the field — should cost less than the total income — about enough less to yield 25 per cent or 30 per cent profit to the owner.

Of course any good paying shop must get out a good readable newspaper, and it must have a good business-getter on the staff, But a country town daily can be made too good and its salary list can easily grow too large to fit the field it is published in — too good to fit the possible business within its own field. To illustrate: I know of a newspaper in a town of 10,000 having a circulation of 1,700 that pays $75 a week for its A. P. service. I believe that this paper could cut its A. P. and linotype expense enough to pay 10 per cent or 12 per cent dividends on its $30,000 capital stock and not lose 25 subscribers from its list.

As a rule people take their local daily for its local news and not for its world-wide press service. A column of live local stuff is worth more than two or three columns of expensive telegraph any day.

So to sum up I would say that the essentials of making the small city daily pay are:

A fair field.
A money-making thinking publisher.
Co-operation with the opposition.
Economy in operation.

A strong local paper that fits the field — fits the possible business that can be secured.

Given these, and the minor essentials of money-making can easily be worked out in any country daily shop.

A WOMAN'S EXPERIENCE IN JOURNALISM

By Mrs. Juliet Strauss

THIS story begins where the old-fashioned, three-volume novel used to end. "And so they were married." I married journalism with no thought of taking a more active part in it than that of darning the journalist's hose and keeping home in the usual way of womankind.

The manner of my getting tangled up with the newspaper fraternity was thus: In the old village high school of happy memory I was a most dilatory and unambitious pupil.

I never could learn mathematics, for the reason, no doubt, that it was impossible for me to study. I never really got down to a subject in my life, but somehow I had a way of knowing certain things that nobody else in the class knew. The teacher rather depended on me on visitors' days to star a little, and when it came to literary exercises on alternate Fridays I was invariably called upon by lazy boys and stupid girls to help them with their "compositions," until the teacher, detecting my style, would run her blue pencil across the most eloquent paragraphs, simply marking them "Gyp," and proceed to grade the papers according to their real merits. One time I especially remember I wrote the whole thing for one of the boys who declared he "just couldn't," and it was handed back to him marked "All Gyp." Gyp was a nickname which I haven't gotten rid of yet.

Marked for Fame

It was on one of these "literary" days when the great public was invited to visit the high school that the die was cast and I was marked for fame by the one eye of a village editor who, unlike some village editors, was always browsing 'round for interesting material.

This man was the late John H. Beadle, an author and newspaper correspondent pretty well known to the newspaper fraternity thirty years ago. He was long a special correspondent for the Cincinnati Commercial, afterwards for the American Press Association, and he was also the author of several interesting books, among them "Life Among the Mormons," and he lost his eye in a riot in Salt Lake City — a sort of indignation meeting, as it were, over Mr. Beadle's exposes of Mormonism. Anyway, he had one eye left, and I felt the unusual brilliancy of this single orb fixed upon me with sudden concentration after I had read the first few sentences of my composition that day.

My compositions were not always approved by the minister and the village ladies who pattered over to the school building in their cloth gaiters, their black silk dresses and their lace mantillas to hear the literary exercises. The minister always cleared his throat and there was a rustling of silk as Mrs. Judge Bartholomew, who was a patron of the arts, searched for her smelling salts — but our teacher lived before her time and she used to enjoy the general consternation that ensued upon my reading my paper just as I had written it — and it was really very different from sweet Alice's composition on "Flowers," or pretentious outbursts on "Beyond the Alps Lies Italy." I always struck right out from the shoulder and said what I thought about things.

A Genius "Discovered"

Mr. Beadle, having knocked about the world as a newspaper correspondent for years, had decided to return to his native town and buy a newspaper — a country weekly — and run it independent of politics. It was to be such a good paper that everybody would take it and patronize it on its merits. If there is anybody in this audience who has tried this in a town of two thousand souls, and a county largely Republican, in the old days when Republican meant something, he has my permission to get out his handkerchief for a few reminiscent tears.

Mr. Beadle went over to our house at the close of the literary exercises and called upon my mother. He asked her if it had ever occurred to her that her daughter had literary talent.

My little mother was never by way of scenting genius in her children as some mothers are. She was more on the lookout for plain horse sense. She hoped we girls might soon be able to do something for a living, since father was dead and our income meager. But she was not sure that it was genteel for a girl to write for the papers as Mr. Beadle proposed I should do. I was to write for nothing, study shorthand and serve a general apprenticeship in country journalism.

Married an Editor

Mr. Beadle had another protege — a young man in whom he had detected "style" in writing — and who was then working as city editor on the munificent salary of four dollars a week. This young gentleman's name was Strauss.

I never did understand why they allowed us to get married. I was eighteen and he 22, but it was the old doctrine that if a boy and girl get married on nothing they would get along some way. And we did.

Mother didn't say much — she rather admired the boy, but I remember of my uncle, a quiet old farmer giving me some free advice.

I had told him that I was to be married — and he inquired bluntly what we expected to live on.

I explained that we meant to borrow the money to buy a half interest in the paper. "My husband is going to be an editor," I said proudly.

My uncle was chewing the proverbial straw of the ruminative farmer. He leaned back deliberately in the buckboard in which we were riding (I was teaching school and boarding at his house) and finally remarked sententiously:

"Don't you know that bein' an editor is the orneriest business in the world?"

I have never forgotten this — and there have been times when I believed it — but youth is courageous and so — as I said in the beginning — we were married.

I was nearly tickled to death because my husband's family was Republican. I had had such a dose of being a Democrat and belonging to a southern family with the stigma of treason upon me that I longed for a taste of that popularity that seemed to me to accrue naturally to Republicans. Imagine my dismay then, when in 1884, my husband came out a free trader and began being a Democrat himself!

This Took Nerve

Just at that time the Democratic paper had died the gentle and placid death of the third paper in a field for only two, so we came out boldly then as a Democratic paper in a county with two thousand Republican majority.

We were enjoying a boycott from both sides and the paper had to be set nearly solid in reading matter to fill the spaces left by withdrawn ads and legal notices.

There was one brilliant ray of hope in the clouded horizon — my editor was also a printer. If he hadn't been, my career in journalism would have been nipped in the bud. I say this was fortunate. But I do not know for sure. If he hadn't been a printer maybe he would have learned how to make money and we might have an automobile now and be able to carry ourselves with the swagger of the successful, but again, this is doubtful, for my editor was one of the sort of men I sometimes call injuriously honest. This mightn't have hurt him so much in some other business where he could have kept still about it but he just insisted on saying what he believed and in sticking to it, and there were such an awful lot of things which he believed!

When he used to come home tired and inky from a tussle with the old Washington handpress and say he did wish he had something to brighten up the paper a little I hadn't the heart to refuse to take the hint. It was just like the days in high school when perplexed schoolmates would push their scratch books over on my desk with a note begging, "Please put a little ginger in this for me — it's so easy for you and so hard for me!"

A Lost Art Now

I know it sounds senile to say it — but I can't help thinking that life was a little more piquant — a bit more interesting then than now. I was dreadfully busy with the two babies and all of my own housework and sewing and laundry work — it never occurred to me that these things were hardships, I just did them gladly — and grabbed such joys of reading and company and fun as I could get. It seems to me there was a lot of it. Our village was full of interesting people, and there was a way of living then that is a lost art now.

I used to put the sewing machine away or push back the ironing basket and hurriedly pen a batch of locals for my editor when the foreman was drunk or some other cataclysm had befallen. Soon people began doing as my high school teacher did — began detecting paragraphs which they pronounced "Gyp" — and then articles which were designated in the social conclave as "All Gyp."

These early journalistic efforts were not very popular at first. I remember one snowy day I was confronted by the stern demand to write something, and it seemed there was nothing spicy to write about. The children had the mumps, the woodpile was low and life seemed dragging its wheels terribly — but write I must — so I seized my stubby pencil and decided to write about the first thing that came into my head. I glanced out of the window and saw the court house steeple and proceeded to tell how it looked to me and what it made me think of. I am afraid I went into "fine writin'"— for the next week an exchange came out with this comment.

Effort Unappreciated

"The young editor of the Rockville Tribune is lately cultivating a style copied after Oscar Wilde's latest ode to the Cabbage. His dissertation on the court house steeple in last week's issue was slush. Cut it out, Ike."

I descended to terra firma after this, but there, too, I met with many difficulties — because I said things the citizens of the town took as personal. Really I am afraid they were, and though those whose withers were un-wrung were quite happy in letting the galled jade wince — their own time was sure to come sooner or later. So I always had several people mad at me at once for something I had said — some modern instance I'd sighted in my column of Squibs and Sayings which I have now kept going nearly thirty years without missing a single issue of the paper. You can't write thirty years about nothing without having a lot of people think you mean them.

In the Good Old Days

Let me pause here for a tribute to the old print shop days as I know that many of you remember them, from the touches of real genius on the editor's desk to the hell box in the corner of the composing room. Can't you smell the mingled odor of tobacco smoke, roller composition and sour paste that perfumed the atmosphere and hear the melodious profanity of the old-time foreman who is now actually out of print? Can't you hear old man Hargitt, the last of his race of classic tramp printers, quoting Shakespeare in deep gutturals from his bed of crumpled paper under the imposing stone where he had been stowed away to sober up, and see the genial crowd of talented, witty, ne'er do well habitues — students, lawyers, politicians, ready alike for a general discussion of theology or an impromptu game of cent ante?

I used to be able in some sort of fashion to run the paper in those days if the boys didn't get drunk and Doug Smith or Frank Howard or Bill Mason were in town. Bill was a good fight editor and Frank could write a poem and Doug was an all-around newspaper man who was writing an opera called "A Purse of Gold," which I verily believe would have been a "go" if Doug hadn't taken a hemorrhage and died one evening.

I got to thinking I was pretty smart along about that time, sort of independent of the strong arm of man, as it were.

But one day when I had left mother with the children and gone down to hold things level while the editor was out of town, I encountered what was called in our office a general "soup." Somebody had brought the expression "in the soup" to town and it stuck to us as a proper description of a time when everything goes wrong. At home I always call them devil days.

Couldn't Make the Press Go

This was a hot suicidal day when life in a country newspaper office is at its lowest ebb. Business was dull, the dust lay thick over everything — news was more than scarce. It seemed that nobody had Sundayed any place, no Aunt Nancy or Uncle Billy had broken a hip, nobody's barn had burned as it hadn't rained for six weeks and lightning bolts were scarce. All my faithful henchmen but Doug had deserted me and he declared that it was so dull that a new mule in town would be a society event. The boys began rushing the growler at an early hour. There was a saloon just opposite — and by and by it dawned upon me that things were going very badly and that unless the foreman sobered up th paper would not get out. Things dragged along, until in the afternoon a deadly silence fell in the basement and I realized that the wheels were not going round. This was after we had graduated from the Washington handpress, and had a press run by a petroleum engine, which had a fiendish habit of getting into such a snarl on press days that it took the combined mechanical genius of the town to straighten out. I went below to receive the doleful assurance from the perspiring and groggy force that she was "all balled up" again. Here I was helpless. I knew how to keep the boys in copy and had some idea as to what was news and what wasn't — I even ventured occasionally on an editorial. I could get on our scrubby pony and ride out to round up a load of stove wood promised by some dilatory subscriber and I could write an obituary almost complimentary enough to please the family of the departed — but I couldn't make the press go! Neither could Doug — who sat with me in deep despondency upstairs stating his willingness to lick the foreman for getting full if that would do any good.

Music to Her Ears

Suddenly in the midst of my despair a sound broke upon my startled ears from below. It was the sound of rhythmic mellifluous swearing and almost simultaneously the press started. The editor had come home and entered a side door into the press room in the basement. I am a religious woman and hope to read my title clear to mansions in the skies — but I never before or since have heard anything sound quite so good as this cursing — and if I could have a record of my favorite eloquence to which to listen in coming years as the Scotch terrier in the famous ad listens to his master's voice — I'd choose to hear this glorious swearing and the sound of renewed activity that followed.

I am a suffragist in a mild form, but whenever I get too sure of my ability to grapple with affairs, I remember this occurence and man's superior qualifications along certain lines. I remember the great joy that welled up in my soul because the boss had got back and brought the promethean fire to restore life and action to inanimate things.

Alas for the days when people worked for us because they loved us — when our hired girls would whip any tow-headed youngster who made faces at our youngsters and the foreman in the shop shared alike our prosperity and our most animated bust! When there was always a lot of promising lads around who were anxious to become devils for a chance of working up — the printer's devil belonged to the old regime when the printshop was an educational center and some flavor of the spirit of Ben Franklin still haunted its Rembrandt interior.

The evil days fall upon us by and by in which there was nobody to sit at the old cases and race with each other in the ems of type — and the last one of the old true foremen was finally lured to the city at a wage we couldn't possibly pay. I don't like to think of those days — for though times had changed and politics shifted until there was county printing and legal and job work and advertising, it looked as if we were going to have to shut up shop for lack of men to work. I hated to see the editor at the case far into the night in desperation trying to tide over till some promised help would come, perhaps only to turn out drunken and worthless when they arrived. The author of John Barleycorn, the wonderful story lately printed in the Saturday Evening Post, should have known the history of the printshop to give John Barleycorn his due!

The Deadly Third Paper

We worried along somehow through these sad years of transition, fighting the deadly third newspaper which is the dog in the manger of country journalism. In a rural community with a small county seat there is a good living for two country papers but a third one insists upon coming in, leading a precarious life and sapping the profits from those already established. This paper encourages the sorehead and the boycotter, complicates the political situation and generally harasses the business of both other journals.

But as I say we worried along until the linotype solved our difficulties and we were finally reconciled to the mechanical age as we see it now. One man sits at the keyboard now where three or four used to work at the cases and there is a great silence in the old composing room where once were sallies of wit and the comraderie of the old hand industries. We have a dry town now with a lot of retired farmers sitting like Cheshire cats on their front porches and good order prevails generally. We are duly thankful to be able to carry on business and I suppose we are righteously glad that everybody is sober — though sometimes I have a fancy that if I could just see the old gang again with Doug's black eyes flashing their appreciation of some exquisite bit of shop jargon and Revie, the foreman who would have had his tongue cut out rather than speak one word of complaint or disloyalty, no matter how hard up the office was, ducking along under the locust trees in front of the old tavern with a foaming pitcher of beer. Well —

Kept Pegging Away

Meanwhile during all the vicissitudes of being wedded to journalism I had kept fooling with literature in desultory fashion — very desultory indeed, since I was terribly interested in a lot of other things. I was very unlike the popular ideal of of the bluestocking. I dearly loved to keep house, I was slavishly devoted to my children and if there was any fun of any kind going I couldn't afford to miss it. So, literature just had to suffer — and it did. I used to just open my mouth and pull the string and the poetry would come out by the yard — and it wasn't such bad stuff either — but I have forgotten how to do it now — I think it went with the old no-account picturesque days and ways when we were younger — poorer, happier — and maybe not so good.

She Had An Idea

By and by one day I thought of something. I'd been pegging away at stories and had gotten a few of them printed and had written a short novel — a newspaper story by the way and had it carted around all over the country till the bill for portage was alarming — I have the manuscript yet and I still think it is good though editors by the dozens have thought differently. I had tried deep dissertations on various things and epigrammatic skits full of smart sayings — but this thing I thought of was to write, just as sincerely and simply as I could about the day's work, and the hour's play in a rather quiet rural community. I did this and signed it — "The Country Contributor," and I have been doing it ever since.

I was amused at something I saw in a magazine of journalism lately. Some feature writer humorously said, "When you have found your feature your feature has got you — and you'd just as well give up trying to do anything else — your feature won't let you."

I received a letter one day from Mr. Charles R. Williams of the Indianapolis News complimenting an article I had written on April in the country and saying he thought it one of the most beautiful examples of the personal essay he had ever seen.

My heart stood still for about three seconds I was so scared at the idea of having accidentally written an essay that Charles R. Williams liked!

Bok Impressed

Later when Mr. Edward Bok, the great and clever editor of the foremost woman's journal in the world liked my little talk on the subject, "How Mother Gets Her Halo," I was both scared and glad in the full knowledge that when you get right down close to the ground and tell simply and truly what you know and feel you are touching the major chords in harmony with the great "All's well" of the universe.

I know a girl who wanted to write. She did a little work in a country office (that great cradle of writers!) and was taken on in a city office to see what she could do at feature writing. She was to look out for little stories of the streets and for anything that pus sap into the too often stale pages of cut and dried journalism. One slushy winter morning as she was about to take her car down town a gentleman, who was also about to board the car, said to her: "You cannot get to the car without wetting your feet. If you will allow me I will carry you across. He did so, and five minutes later, as she stood on another corner looking in dismay at the still slushier street she must cross, a laboring man with his dinner pail said: "Miss, you can't get across here. I'll carry you if you'll let me."

"Oh," I gasped when she told me this. "What a grand fine story you had when you got to the office!"

She looked at me perplexedly. "Oh, I couldn't use that," she said, "it was so personal!"

Carried across the street twice inside of ten minutes in a world where chivalry is dead, and not able or willing to make a column of it!

Must Have Courage

If you would write the things that touch the heart and rest the brain, bring the relaxation of laughter or of tears to the reader who is tired of political contentions and market reports, and statistics and great arguments of great questions, you must not be afraid of what people who know you may say about you. Some day, after the folks at home have called you a fool and an egotist, and maybe a liar to boot; have accused you of being vain and of making yourself your own heroine, and of shamelessly laying bare family secrets and showing your skeleton closets indecently, somebody from away off will tell one of your fellow citizens that he and his neighbors sit up nights reading your stuff, and somebody else will ask the biggest man in town if he doesn't live in the town where you do, and some woman will go visiting and be the guest of honor at a literary club because she has a speaking acquaintance with you — and pretty soon they will all wake up and say they knew it all the time, and you can't go down the street without being held up by somebody who discovered you way back in the early days when you used to butt into print under the palpable disfavor of the village folk who invariably "frown upon effort and fawn upon success."

I do hope nobody expected from me any technical discussion of the woman in journalism or the woman any place else for that matter. I think it was our Hoosier poet, James Whitcomb Riley, who said: "Tell about it just as it wuz — it don't need no excuse."

And so I have, and this is "A woman's experience in journalism."

(Addresses to be concluded in August issue)

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

QUICK SERVICE FOR CALIFORNIA STATE PRINTER

In these days of rush and hustle there are frequent examples of wonderful enterprise. The "impossible" is acomplished with such surprising dispatch as to almost challenge belief. The particulars of one of the most recent illustrations of exceeding the "speed limit" in the printing industry are narrated in the June, 1913, number of the Linotype Bulletin, as follows:

On the morning of April 17 the work of the California legislature was delayed by the inability of the State Printer to handle the immense amount of printing forced upon him by the unusual number of bills presented for consideration. At 10 o'clock a. m. the State Printer presented the situation to the legislature and received immediate authority to add four more Linotypes to his equipment, provided they could be installed at once, and the following bill was immediately introduced:

AN ACT

Senate Bill No. 1761

Making an Appropriation to Pay for Linotype Machines and Equipment for the State Printing Office.

The People of the State of California do enact as follows:

Section 1. The sum of fourteen thousand three hundred thirty-nine dollars, or as much thereof as may be necessary, is hereby appropriated out of the money in the state treasury not otherwise appropriated, to pay for Linotype machines and equipment to be purchased by the superintendent of state printing for the state printing office.

Section 2. This act, inasmuch as it provides for an appropriation for the usual current expenses of the state, shall, under the provisions of Section 1 of Article IV, of the constitution, take effect immediately.

At 12 o'clock an order was telephoned to our San Francisco Agency for four Linotypes, including a Quick Change Model 8 three magazine machine, together with a large list of extra magazines, matrices, and special mold liners, and five tons of Linotype Metal. The order was shipped complete via steamer at 4 o'clock the same afternoon.

The agency machinists were scattered about the state, but Manager Van Schaick succeeded in getting four men into Sacramento by the following morning. The machines were received at the State Printing Office at noon the next day (the 18th) and two of them were turned over to the operators by 6 o'clock that evening, a third one at 10 o'clock, and the fourth the next morning.

The State Printing Office now has fourteen Linotypes in operation day and night.

Preferred risks in the insurance business are the least expensive to the insuring companies. In the printing business Barnhart's faces are often preferred by printers and may be said to be the least expensive. A handsomely printed book of nearly 200 pages displaying Barnhart type faces in every imaginable form has just been issued, a copy of which should be found in every printing and publishing office in this broad land.

With a copy of "Preferred Type Faces" in the shop, a printer has an insurance policy against the hazard of old-fogyism and down-in-the-rutishness. The type founders realize that well planned suggestions often inspire orders and stimulate trade. Most printers, who are good salesmen, likewise have come to a well-grounded conviction that their own clientele may be "egged on" by taking advantage of this established rule in practical psychology. The printer who fails in submitting new ideas to his customers, urging the possibilities of modern type, ornaments and borders will find himself in the lurch.

The Patterson-Gibbs Company, who are now advertisers in the National Printer-Journalist, have made a specialty of furnishing electrotypes of especially drawn designs for particular purposes and they give a special discount to printers and publishers.

By the intelligent use of their Cut Book Number 5, with its numerous illustrations in colors, any printer can stimulate sales of circulars, catalogues, programs, etc., that would otherwise not have been made or, if made, would have been much less resultful. The printer who suggests the use of new innovations to his customers which result in securing more business than the usual dry, matter-of-fact sort of stuff can possibly bring, will build up a business on a rock of faith which all the storms of fierce price-cutting competition will not affect.

The Patterson-Gibbs New Book of Cuts will freshen up anyone's Muse. Many of the illustrations, with their significant captions and wealth of connotation, inspire rushes of thought that sweep through the brain until every interstice is filled. If you want to set one of your most stolid and indifferent customers aquiver with enthusiasm, put a Patterson-Gibbs Cut Book in his hands.

The Mergenthaler Linotype Company has recently issued a descriptive, grey paper-bound book that painstakingly sets forth the merits of the machine which most printers and publishers expect to buy, eventually.

The engravings are wonderful specimens of the illustrative art and quickly convey, with clinching emphasis, the truths contained in the text. Printing of this kind is a joy to behold.

PONY SPECIMEN BOOK OF MONOTYPE FACES

In book making, India paper and very thin grades of ordinary super or machine finish stock are enabling printers and publishers to get into a very small compass reference works and catalogues which under former conditions would be very bulky and unwieldly. In line with this idea of condensing within the smallest possible space the greatest amount of information, we have just issued our Pony Specimen Book of Monotype faces, which is less than half an inch thick and contains specimens of 1,016 faces and over 500 fonts of figures. The same type matter which we have used in printing our loose leaf book has been used in this publication. On account of its permanent binding this book could not possibly be kept in an up-to-date form, as we have completed over fifteen faces since this book came from the press. A copy of the Pony Specimen Book will be sent to printers, publishers or advertisers interested in Monotype work.

The Swink Printing Press Company have issued a beautifully printed catalogue. The work was done by the Delphos Printing and Publishing Company of Delphos, Ohio. The text and rules are run in a grey tone and the illustrations and heads in black. The half tones are especially well made and print up perfectly. The analysis of the machine's capabilities is exhaustive and an examination of the catalogue must prove satisfactory to anyone interested in two roller, two revolution presses.

No truer observation than this has been made in regard to printing office economies: "The right equipment in the composing room means a higher efficiency, thereby giving increased production throughout the entire plant." The sentence is taken from a recent folder sent out by the Keystone Type Foundry, which recently equipped the "Cleveland Press" with fifty-odd pieces of composing room furniture.

The Linograph Company, of Davenport, Iowa, advertises their slug-casting machine in this number of the National Printer-Journalist. A descriptive booklet, or catalogue, concerning the machine, printed by the Democrat Printing Company, is a beautiful specimen of printing and the illustrations convey an intelligent idea of the merits of the mechanism. The manufacturers claim the following special advantages for the Linograph:

1. Simplicity in construction.

2. Low cost of maintenance. Very few parts are subject to wear and disorder, assuring few repairs and replacements.

3. Arrangement of mechanism convenient for the operator, saving time in making changes and adjustments, and eliminating to a large extent interruptions and annoyances.

4. Delivery of composition at less cost than has heretofore been possible.

The Mergenthaler Linotype Company has recently issued a colored poster illustrating their Quick Change Model 8. The job is well done and gives a correct idea of how the machine looks when set up ready for use. The reproduction is in four colors and is worth framing.

Steel Ad Frame K-258

A Practical Printerman Says
"I am delighted and satisfied with **Keystone Steel Equipment.** It makes our plant the leading one in the South, and I believe that it will pay for itself in a few years. The workmen all take more pride in their work and we get a much better output with less men than we did with our old equipment. This is not guess work for we maintain a cost system."

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order

A COLD SIMPLEX STEREOTYPING OUTFIT, $19 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage, for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

THE VAN BIBBER ROLLER CO., Sixth and Vine St., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

FOR SALE—Lever paper cutter, "Leader." In condition for immediate use. A bargain for some one. Address, Sohm Electric Co., Ravenswood, Chicago.

SPECIAL BARGAINS in Duplex, Goss Clipper, Hoe Flatbed Perfecting, two-revolution presses for newspaper plants; 8-page Scott web for $900; 24-page list. Write for List A, Peckham Machinery Co., 1 Madison Avenue, New York City, newspaper outfitters.

WANTED, TO BUY — COUNTRY NEWSPAPER plant, without power press. Reasonable. Address Taylor, 631 Dewey Place, Chicago.

OLD TYPE WANTED—Cash or exchange. Empire Type Foundry. (Not in the Trust), Buffalo, N. Y.

MONOTYPE WANTED—Second-hand. C. L. Darte, 306 Lexington avenue, Buffalo, N. Y.

FOR SALE — A two-revolution Hoe Press, ideal for printing newspaper and job work, 1,800 per hour. Will print 4 pages seven quarto. Is now doing highest grade job work. Can be seen running. For sale on easy terms to suit purchaser. The Republican Publishing Company, Hamilton, Ohio.

EXPERIENCED PRINTING HOUSE MANAGER, now printing expert for a western state, wants position to manage tiptop weekly or small daily newspaper and job business. Familiar with editorial, advertising, stationery and accounting. Absolutely reliable; gilt-edge references. Address Printer-Journalist.

Bargains in Printing Presses

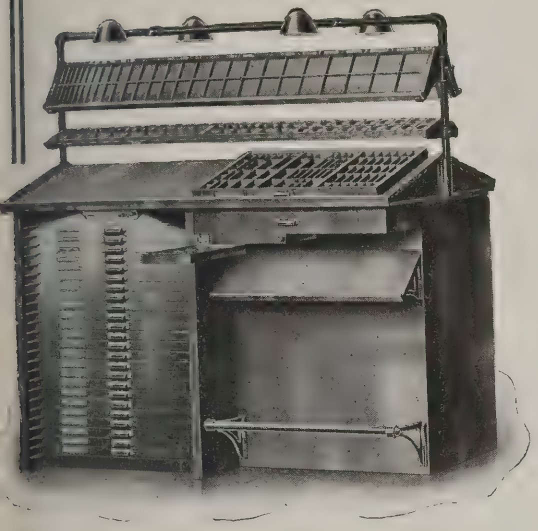
HAMILTON COMPOSING-ROOM FURNITURE

IN ALL STEEL OR WOOD CONSTRUCTION

SPACE-SAVING FEATURES
LABOR-SAVING QUALITIES



Ad-man's Steel Cabinet No. 551

There are 24 deep cases on each side of Cabinet, or 48 in all — each case deep enough to hold a 25-pound font of type. The overhead bank is divided for leads **and slugs from 4 to 28 picas on both sides. The rack** below bank is in a convenient place for compositor and contains justifying materials. There are two copy drawers in Cabinet—one on each side; also dump. Electric Lights, Foot Rails and swinging trays (under copy drawer) for Quarter Cases containing brass rule.

Ground to the bone, these spell efficiency in composing-room furniture.

There is no school like that of experience. In the process of evolution it eliminates the impractical and the wasteful, working toward the perfect piece of printing-office equipment.

For thirty years the Hamilton Company's products have stood for all that was best in printing-office furniture. Fifty thousand master printers are using this equipment in their establishments. More than two hundred thousand journeymen printers are familiar with its working qualities. Every printing office in North America is equipped more or less with Hamilton Composing-room Furniture. It is found in more than twenty thousand foreign printing-offices, including upwards of twenty government establishments.

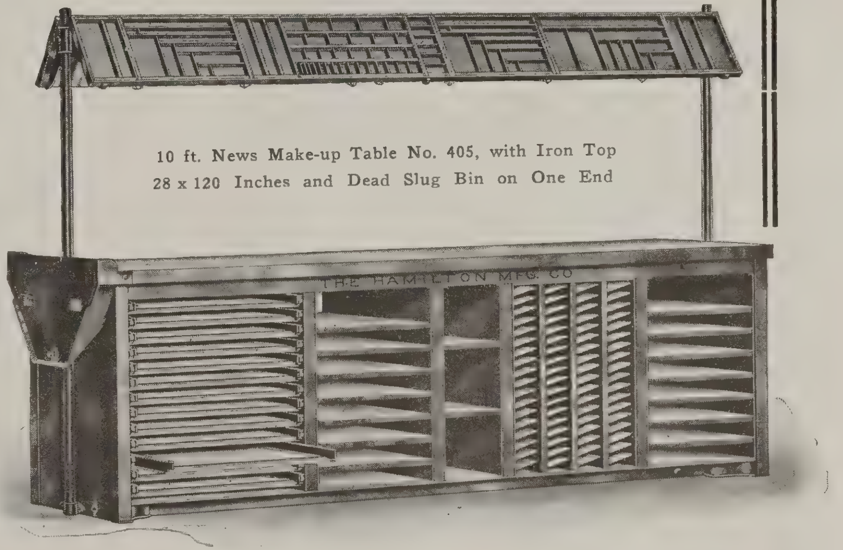
Each step toward the goal of theoretical perfection has found us with a determination to achieve a still greater measure of success.

We now announce a system of expansive, interchangeable, practical unit construction in newspaper and job office equipment with a choice of construction in pressed steel or in wood.

Such units are contained in frames of standard dimensions. The system will give the printer, at moderate cost, a choice of arrangement of materials and equipment in stock goods made in large quantities not heretofore to be had except at the excessive cost of furniture specially built to order.

It is our opinion that the development of this idea will represent the greatest advance in printing-office furniture since we began studying the problems of the printing-plant, more than thirty years ago.

Ask the supply man for information or write to us for information. It is possible to save fully 50% of the floor space and not less than 10 to 25% in labor in any office not modernly equipped.



10 ft. News Make-up Table No. 405, with Iron Top 28 x 120 Inches and Dead Slug Bin on One End

The Table contains the following Units in the order named, reading from left to right:

U-44. 13 letterboards on rollers, each board being sufficiently large to hold 8-column page in chase.
U-41. Flat Steel Shelves for Galleys.
U-39. Bins for Dead Galleys.
U-9. 4 tiers Single-column Galley Shelves.
U-41. Flat Steel Shelves for Galleys.

The overhead bank is also divided on our unit system.

Reading from left to right:

Unit B-1. Double and Single Column Matter.
Unit B-5. Cross Rules or Column Leads.
Unit B-4. Single-column Matter.
Unit B-3. Labor-saving Column Rule.
Unit B-6. Column Rules with tails.
Unit B-5. Cross Rules.
Unit B-2. Full, half and quarter length Column Rules with tails and 1 and 2 Column Matter.
Unit B-7. Single and Double Column Matter.

The reverse of overhead bank is divided into 6 large compartments.

PATENT NOTICE

LINOTYPE VS. INTERTYPE

We desire to announce that we have recently instituted an action in the United States District Court for the Southern District of New York, against the International Typesetting Machine Company (manufacturers of the Intertype) for infringement of United States Letters Patent to O. Mergenthaler, No. 614,229; to O. Mergenthaler, No. 614,230; and to J. R. Rogers, Reissue No. 13,489.

★This order replaces another kind of composing machine

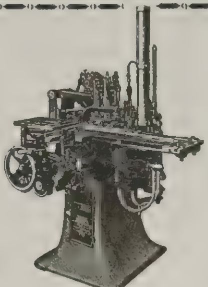
"Machines are Known by the Companies that Keep Them"

(Read Mr. Passano's article on Scientific Measurement, page 595, July "Inland Printer"; also Mr. Wisotzkey's article on Scientific Make-up in July "Monotype.")

18

Set in Monotype Series Nos. 158J and 36A and Monotype Borders Nos. 88 and 139

Type on the Galley
Plus
Type in the Cases



Means low cost of correction. Why pay a man and a machine to do something that can be done cheaper and quicker by the man alone?

The Monotype is the most flexible composing machine. It adapts itself to the job in hand—straight matter, tabular matter; no difference, no change, no special attachments—just go ahead.

Because corrections are made at the case, the machine is always producing copy. There are no delays, no irritating waits for machine changes, no presses standing idle for press corrections.

Type in the cases—the choice of more than 1050 fonts—is a by-product of the Monotype. No copy, no matter; make type. This means the Monotype returns to its owner more productive hours than any other composing machine he can buy. It means efficiency in the hand department, because type is the compositor's tools. In the Monotype office there is no lost time hunting for tools with which to work. The compositor keeps busy on the job for which he is paid—getting work *on* the stone. He does not waste time getting material *off* the stone.

You ought to have our new Specimen Book. It will cost you one cent for a postal card and one minute to say "Send It"

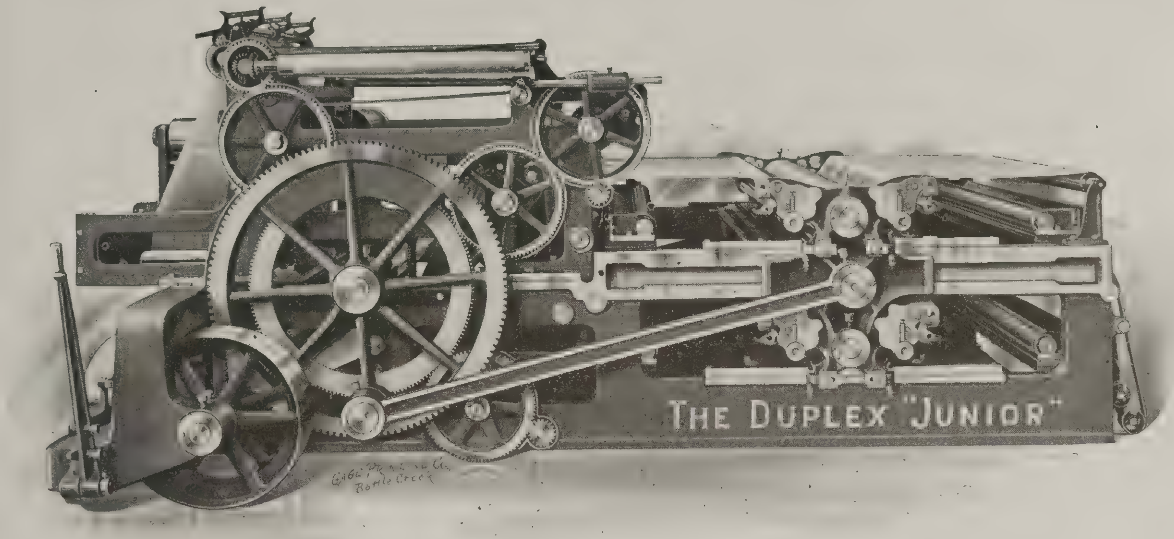
The Newest Newspaper Press

THE DUPLEX JUNIOR

We are now taking orders for the New DUPLEX JUNIOR FLATBED PERFECTING NEWSPAPER PRESS. Price $4,500.



SPEED : 5000 complete copies per hour. GUARANTEED.
PAGES : 2, 4, 6, or 8 with no mechanical adjustments in changing from one to another.
FOLD : Adjustable to either quarter or half page as desired. Folder is an integral part of the press.

THE DUPLEX JUNIOR may now be seen in practical operation in our Works. This machine is not a substitute for our regular 4, 6, and 8-page DUPLEX press which may safely be operated at a higher speed, but it is a machine which will produce **5000 papers per hour and the price is only $4,500.** Press and price are adapted to the large number of publishers of newspapers whose circulation does not require the speed of our higher priced Duplex but who wish a machine capable of printing **more than 2,500 or 3,000 per hour and which has the capacity to meet future demands.**

It should be appreciated that we are the pioneers in the development of flat-bed perfecting newspaper presses. We introduced them to the world when all previous attempts in this direction had been failures. We are more familiar with the requirements in this field than any others can possibly be and we are accordingly better equipped to build this line of machinery.

The DUPLEX QUALITY, now the standard throughout the world, will be maintained in the DUPLEX JUNIOR.

Write us for detailed information.

Says Barnhart's Jake:

He came in last Thursday and the moment he was inside the door I felt a compelling presence that caused me to look up. There is a magnetic energy about some men that infects everyone who comes near them.

"Jake!" he cried, "Gee! but I'm glad to see you again. How's tricks in the Metropolis of the Middle West? How's the good old firm of Barnhart Bros. & Spindler? How're all the boys?"

Yes, he was the same Harvey—older, heavier, clad now in much fine raiment—but the same Harvey underneath that he was ten years ago when I sold him the order of type and supplies that he used in starting his shop. Did me good to see him just as it did the first time. He's a living example of the fact that brains and push and cleverness and a lot of good hard thinking and close analysis can't help but make a winning every time they start.

He told me our new book of

PREFERRED TYPE FACES

had a preferred position on his desk. "Don't see how any real live printer can get along without it," was the way he put it. Gave me a good hunch, too—this one—that I shouldn't permit myself to get so enthusiastic over Barnhart type as to forget that we have the finest line of other printers' supplies you can get anywhere. Steel Furniture, Brass Galleys, Electric Welded Chases, Brass Rules, Leads and Slugs, Presses, Cutters and everything else a printer needs. Don't forget to write or call us whenever you are thinking of getting any of those things.

The Babcock Optimus
The Babcock Optimus

Can any stronger assurance be given a buyer than that the machine he is considering has never failed under any conditions in twenty years or more?

The confidence born of trial makes us prefer to install the Optimus where difficult work demands exceptional press qualities; where others have left something to be desired.

Our contract guarantees that it possesses as high speed and will do as good work as any like press. But this adds nothing to the force of the first paragraph above nor to that of the one below:

The Optimus has been substituted for every other similar press to get better results.

The Babcock Optimus

SET IN AUTHORS ROMAN

What Do Casual Observers Think of Your Output?

They don't analyze it! They just glance at it! The whole effect is what they note. Halftones that look gray or "smudgy" or vignettes with "blotchy" lines around them are blamed on YOU. People don't stop to figure that the engravings might have been poor and that your results are very creditable—Far from it.

IF THE ENGRAVINGS IN YOUR WORK DON'T PRINT WELL—YOU SUFFER!

Why not insure your work against adverse criticism by sending **your orders** for DESIGNS and ENGRAVINGS **to us.**

We have *co-operated* with the printer for over twenty-four years —We do not *compete* with him.

Say "*National Printer-Journalist*" and send us your next order.

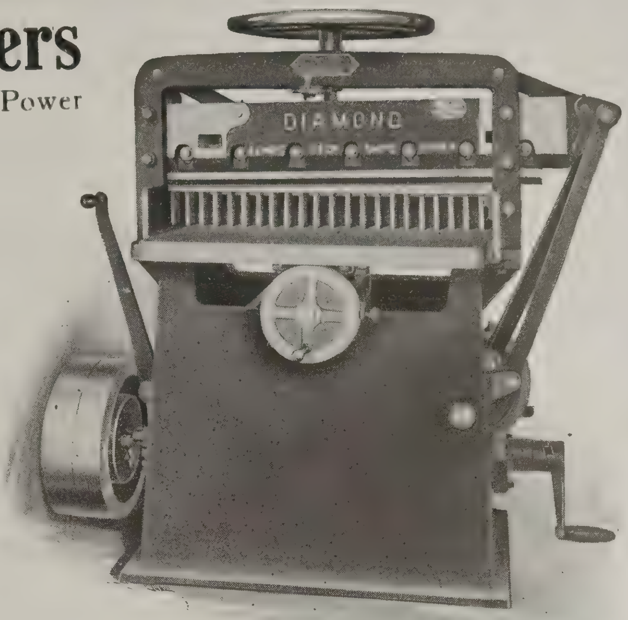
Diamond Paper Cutters

Lever—Power—Combination Lever and Power



Lansing, Mich., March 20, 1913.
Gentlemen:—We have changed our Diamond Lever Cutter to power drive. We are pulling it with a one horse, 110 volt motor and it's doing fine. ALLEN PRINTING Co.

SOME months ago the above concern purchased a DIAMOND LEVER PAPER CUTTER, which at that time met their paper cutter requirements. Later on increase of business brought with it the need for a power cutter. What could be simpler than to order the power fixtures and convert their DIAMOND LEVER into a power machine? No trouble and no extra expense over the original cost of a power cutter. Now they possess a combination lever and power paper cutter that can be changed from power to hand or vice versa in a few moments. This is only one of the many exclusive DIAMOND CUTTER features. Let us mail you descriptive matter giving full details. Diamond Cutters are kept in stock and sold by typefounders and dealers in all principal cities.

The Central States Printers' Binders' and Photo-Engravers'

THE extensive and varied nature of the exhibits, and the program of speakers, which includes men of national reputation, will make the Central States Exposition and Third Ohio Printers' Federation Trade and Cost Congress a history-making event in printing, publishing, binding and photo-engraving circles. This is not a private money-making enterprise, but a concerted effort on the part of the printers' organizations of the Central States, under the direct auspices of the Ohio Printers' Federation, to bring together a comprehensive exhibit of the newest machines and methods; the latest money-saving and money-making devices; the best ideas of the master-minds of the art.

The Exposition, Trade and Cost Congress will be held during the entire first week of September, in Terminal Exposition Hall, with ground floor space greater than Madison Square Garden or Chicago Coliseum. The list of exhibitors includes the leading manufacturers and jobbers of machinery and supplies. The list of speakers and entertainment features printed on the reverse of this page comprises a program of unusual interest, profit and pleasure.

The Ohio Printers' Federation invites you to be present and to participate in the feast of good things prepared on an unprecedented scale.

Saturday, September Sixth

12:00 M. Luncheon at Inverness Country Club.

4:00 P. M. Private Trolley Car for ride around Maumee River Belt.

8:00 P. M. Concert by The Kilties Band, Canada.

NATIONAL PRINTER JOURNALIST

A JOURNAL FOR PRINTING AND ALLIED TRADES

Volume Thirty-One Chicago, August, 1913 Number Eight

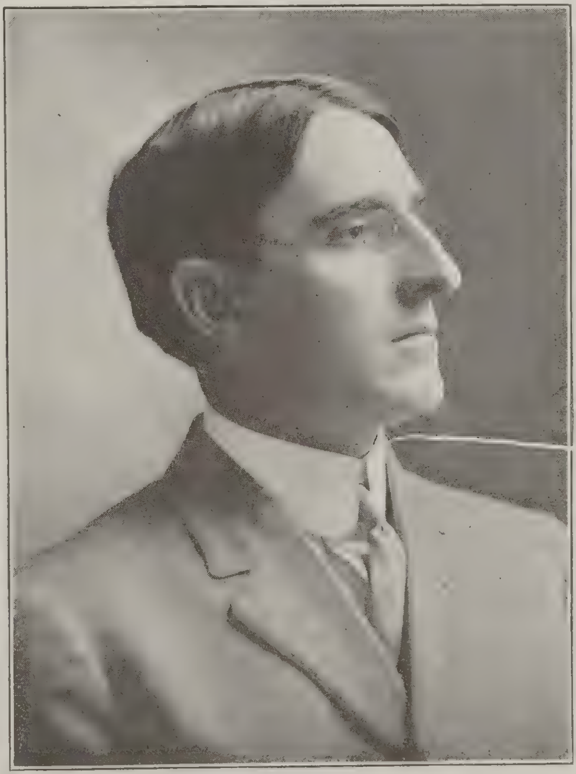
Country Newspaper Costs

By Charles H. Browne, Editor Headlight-Commercial, Horton, Kansas

WITH all due reverence to my chosen profession — that of country journalism — I wish to make this emphatic statement: The country newspaper man is the worst dub in all the category of poor business men in this wide land. This is a harsh criticism, and the pity of it is that it is entirely true. You may not admit it yourself, but make a list of the country newspaper men you know, and figure how many of them have made financial successes. They may print bright papers, they may have built up their town, they may be artistic printers in every sense of the word; but how many have a well-equipped plant, a home of their own, and a first-class bank account? Have you ever stopped to think why the newspaper and printing business ranks sixth in size among all American industries, and yet is among the very lowest in credit rating? Have you ever looked up your financial standing in the little books put out by Mr. Dun or Mr. Bradstreet? If you haven't, maybe you'll feel better if you never do so.

You may have heard this kind of talk before, and you may not have takn it to heart. I want to sear it on your memories. The newspaper business — and especially the country newspaper business — has proved the financial graveyard of some of the brightest men in America. You know and I know dozens of men, bright as whips, clever paragraphers — men whose splendid writings have been copied all over the country — who have been compelled to give up their papers because they couldn't meet their indebtedness, and often in too many cases today fill paupers' graves. Why? Why? Have you ever tried to figure it out?

Kansas — and that is the state I am most intimately acquainted with — has some wonderful country newspapers. It has a great many widely known newspaper men. The written thoughts of Kansas country editors are every week reproduced in the big daily newspapers all over the United States. Yet it is a fact that more than 80 per cent of the Kansas country newspapers are mortgaged. It is more than a pity; it is a shame and a disgrace. What is the reason? "What's the matter with Kansas" in the immortal words of that pestiferous Bull-Mooser, Bill White? Kansas has upwards of 1,000 newspapers, and no one denies that they have done much to upbuild the state, that their editors have fought, bled and died for decency, morality, clean politics, temperance, and, occasionally, for woman suffrage. The vast majority of these newspapers — something like 800 — are published in small towns and rural communities. Out of that number, the state editorial meetings never get together more than 20 per cent, and 100 of these are about all that seem to take much interest. The actual working force of the state association in Kansas might be narrowed down to probably fifty or lower — the ones who turn out every year, who can be depended upon to do something, and



Charles H. Browne, Horton, Kan.

who apparently have made successes of their calling.

Where are the other 80 per cent of the Kansas editors who are never able to attend the editorial meetings? They are at home trying to make both ends meet; they are paying more attention to "showing up" their competitors than to running their own shops, or they are valiantly striving to do printing cheaper than some darn fool in Wichita or Kansas City. What the country newspaper men need in Kansas — and in every other state for that matter — more than anything else, is education. Not education in regard to writing a better article, not instruction in how to do finer job printing, but a course in how to figure cost. Do you know what it costs an hour to set type by hand in your office? Can you tell to a cent what your job press costs to operate an hour? If you do not KNOW these things, how can you estimate on work; how can you fix a price that will give you a profit after a job is completed? You can't — absolutely cannot — and none of you need try to argue the matter with me. Tell me, if you can, Mr. Printer Without a Cost System, where you get the prices you charge for work in your plant? You may have fixed charges for certain work, but who fixed 'em? Maybe you got them from your foreman, or your predecessor, or maybe he got them from his competitor, or the man in the next town. And if you could trace it back far enough, you might find that some of the prices charged for printing originated with the job man who traveled with Mr. Noah on the first ocean voyage of which we have any record.

Now, this has all been preamble, but not as much piffle as you may think. I have been in the country newspaper game for seventeen years — half of that time working for other people and the rest of the time for myself. I had a little money when I bought my own paper seven years ago, and I was full of enthusiasm and buoyant hopes. I had obtained a first-class training as printer, linotype operator, reporter and bookkeeper. I considered that I knew the business in all its ramifications. I expected to make money, run an A-1 newspaper, turn out beautiful printing, and generally enjoy myself. The first five years I turned out some pretty good country printing, my friends said I issued a very creditable paper — and I worked like the devil. That is about all. I worked like the devil in all departments of my shop. I even took the devil's place when he wanted to lay off. I managed to make a living, but I didn't make any money. Why? I didn't know. I had energy, I had training, I had a good plant, I kept the shop busy. What was the trouble? I didn't know. Possibly some of you have been up against the same thing.

I studied a good deal over the matter. I thought we received good prices for our printing, and the newspaper carried quite a bit of advertising at fair rates. I came to the conclusion that I didn't know the business, and that my training and work of twelve years had been wasted. I could have made more working as a linotype operator eight hours than I cleaned up from my business to which I devoted every atom of mind and energy. A cousin of mine who had worked with us for six of seven years, became disgusted with the newspaper business and went to California. In the five years I wrestled with my own newspaper property he accumulated $30,000 in the real estate business. He dropped into my town one day and we talked the matter over. He said I was a fool — I had lost five years and while I had made a living I had no more to show for those vanished years than the amount I had put into my plant at the beginning. He was right, and I knew it. The fact had been worrying me for a good many months. I figured that I might go on for ten years more, or twenty — and then when I was worn out and my plant was ready to scrap, what would I have to show for my endeavors? I looked at the bankers around me who acquired comfortable little fortunes in fifteen to twenty-five years' work. Were they any cleverer than I? Why hadn't I begun work as a clerk in a bank? My fifteen years might have meant something. And I further reasoned: Isn't a good newspaper with a competent editor back of it just as valuable to a community as a banker? Then, why doesn't he make as much? After much mental anguish I finally arrived at the proper destination. The trouble wasn't with the newspaper or printing business — it was with the man who managed it.

I had heard of the cost system, but like many other people who ought to be half-way intelligent but aren't, I had the idea that it was only for the big city shops; that it was too complicated, that it took too much time, etc. However, I determined to install a cost system and see if it would help me. That was two and a half years ago. The cost system has made another man of me. I no longer wonder if I am not as valuable to the community as the banker. I know I am, and I make the banker believe it, too. I pay the banker the rate of interest he asks, and he in turn pays me what I ask for my printing and advertising. In the past I have had some complaints from the bankers — that my prices were higher than they have been paying for work for the past twenty years. I now tell them frankly that I don't care a whoop what they have been paying — we are living in the present, not in the past, and that the cost of work in my plant fixes the price. And the peculiar thing is that the bankers respect me for it. Not many years ago, I would have thanked a banker with tears of gratitude in my eyes for correcting some of my prices — for are not bankers men of finance, are they not thoroughly versed in matters of money? Of course. But none of the bankers I have met are competent to talk to me about printing costs, for they don't know. I do, and I have no hesitancy in telling them so.

No one talked to me about the cost system when I installed it. No one begged me to put it in, no one explained its many virtues. I simply took the bull by the horns, ordered a batch of blanks and set in to keep them correctly or bust. It was hard work at first, as I had no one to turn to, and I didn't know another country newspaper that used the system. After thirty months' experience under the cost system, I want to make this strong statement: I woudn't trade what I have learned in that brief time for all the knowledge I gained in my fifteen years' previous experience in the newspaper and printing business. To make this plainer, perhaps, I will say that I believe the man who starts out with a thorough knowledge of the cost system and absolutely no acquaintance with the printing business, has a better chance of success than the printer-editor with the technical training of a lifetime who tries to get along without a cost system.

The printshop run today without a cost system is a hit-or-miss business, a catch-as-catch-can sort of a proposition. If the boss has some money at the end of the year he doesn't know what job made it for him. With the cost system, every transaction of your plant is faithfully recorded, your business becomes as scientific as a piece of machinery. A bank knows where every penny goes. It can tell you the profit on every transaction. So can every big factory, every manufacturing plant. Why can't a printing office? Did you ever stop to think that a printing plant is the most complicated kind of a factory? Every piece of work that comes in is different. You cannot say letter heads cost $2.50 a thousand and should be sold above that to make a profit. You cannt say this because there are a hundred different kinds of letter heads. So on down the line with every kind and piece of printing. The man who starts a printing plant should install a cost system before he puts in his press or lays his type. And if this is true, how about the man who has been groping along in the dark all these years without one? He may have made money; he may be a financial success. But nine times out of ten he isn't.

Nobody knows or can tell what printing costs without some sort of a cost system. For five years I printed a weekly calendar of services for a church in my town. Because somebody else in some other town charged $1.50 a week for the job, I did likewise, figuring that there would be a small profit in it and even if we broke even that we were "keeping the press busy." Keeping the press busy has ruined many a good printer. After my cost system was put in we figured the cost of this job every week. It made me sick. I decided that the figures were wrong, that there wasn't much to the cost system. For eight months I watched that job every week, hoping and praying that its cost would grow less. It never did. For eight months, its average cost was $2.50 a week. For five years I had made the church a present of $1 a week for the privilege of printing these calendars — $52 a year, $260 for five years. I figured that I doubtless owed the church something, but I didn't believe it was that much. I took the matter before the church board. They first laughed about it and then became indignant. They would not pay any more, the price was high enough anyway; there was some mistake in my figures. I said I would consent to print the job for cost, but not one cent under $2.50. They took the thing to a job printer, and after he finally gave it up in disgust they talked of having it printed out of town. Then they did without. After six months, they came back, we settled on a smaller job and the price was fixed at $2 a week. My office now makes from ten cents to twenty-five cents weekly on the thing. Small profits, but remember it really is a profit. And at that rate it will take me some little time to get back the $260 I so kindly and innocently donated to the church.

When I started my system, I figured that $1 an hour would be high enough for hand composition and 75 cents for job presswork. The first year showed me that my hand composition cost $1.15 and hour, job presswork nearly $1, cylinder presswork $1.95 and linotype composition $1.80. My costs for 1912 changed some. Hand composition went to $1.25, cylinder presswork to $2.25, but linotype composition dropped to $1.50 and job presswork to 90 cents. From the figures obtainable so far, I feel certain that my costs in all departments will be a little higher this year. The costs are gradually raising all over the country. One reason is that labor and material is slightly higher, but the principal cause is that waste is being eliminated. With no personal records of your workmen, an ignorant or careless man might put in four hours on a job. After your system is installed you look over your records and speed the man up, show him a quicker way of doing the work, or fire him and hire a faster man. The first year your productive hour cost is low because you have a great number of hours. The next year the hour cost is probably higher because you are cutting out waste motion, which means less working hours at a higher cost per hour. But this does not mean that your customers must pay more. It frequently means that they pay less, for they gain by the systematic management of your plant and the shorter time your workmen take to complete a given job. Many printers tell me they have a cost system. If they have a real cost system, they know exactly what the productive hour in each department of their plant costs. If they do not know the hour cost, they have no cost system — they have a guess system.

As regards country newspaper costs, my system shows me not only the cost of every job, but the cost of my my newspaper. Last year the mechanical or printing cost of my paper was about $94 a week, while the office cost was about $26 a week, making a total cost of $120 per week. My advertising averaged $113.50 a week and my subscription $41.40, making a total weekly income from the paper of practically $155. This left an average weekly profit of $35 a week from the newspaper, or a total of $1,800. Estimating $200 for unpaid bills and lost accounts, I know that my paper made at least $1,600 clear last year.

Do you know what each inch of advertising space in your paper costs you? A cost system will show it. The total cost of my paper per week last year was $120. Deducting from this the weekly receipts of $41 on subscription, I have left about $80. We averaged 442 inches of display advertising a week last year. Dividing this into $80, shows me that I must get at least 18 cents an inch to break even on that amount of advertising. As a matter of fact, we charge 25 cents an inch for small advertisements or occasional insertions. The regular advertisers pay 20 cents an inch on yearly contracts. And I therefore know that my advertising rates are not only fair, but extremely reasonable, no matter what my advertiser has to say to the contrary.

Another thing. The cost system shows what machinery is making you money, and what is losing it. I have only one jobber, a 11 x 17 Peerless. Many printers have told me I should buy a little jobber. Last year this one press ran only a trifle over three hours every working day of the year, including all time for lock-up and make-ready. What kind of a sucker would I be if I installed another jobber?

Some of my good friends in Kansas City think I am "nuts" on the cost system. I am. It is the turning point in our business. It is the one thing that will in time put the printing business at the top of the heap. Get into the band wagon, boys, and help me toot!

"LIBERTY OF THE PRESS"

Paper by Smith McPherson, United States District Judge, Southern District of Iowa

I HAVE been asked to write touching the relations that should exist between courts and the press. As a general statement, as of course, this relationship ought to be fair and sincere. I wish it were more so than it is. As to the power of the press I need not write, because that is a subject much hackneyed, and known by all. I realize it, but on this occasion need not emphasize it. All know that the press has a great power. The freedom of the press is one of the institutions of this country, and as such will ever exist, and rightly so. And no one believes in this more than do the courts. It was but recently that the courts righteously, against terrific pressure, prevented the dragging of editors, one of them nearly a thousand miles, to make answer to an alleged libel. One recital in the Declaration of Independence against England was to the effect that Americans were carried beyond seas for trial. When a court in Washington City, backed by strong pressure and great power, sought to drag a New York City editor and an Indianapolis editor to Washington City, because of editorials with reference to the Panama Canal, it was the courts that stamped it as an outrage, and decreed that such oppression could not exist in a free country. The literature found in the published reports of the courts shows that the newspapers, their editors and publishers, will not plead in vain for protection by the courts. This protection will be given because it is just that it should be so. And the courts should be fairly considered by the press.

In speaking of the press, I have but little to say about the scandalmongers and the so-called "yellow journals." They are outlaws, and entirely beyond the pale of respect by the courts and decent citizens generally. We judges have no remedy as against them. Days of dueling and violence, because of things written or spoken, have happily long since passed, and will never again prevail. It is idle to talk about bringing actions, either civil or criminal, for libel, because such actions are expensive, and usually ludicrous if not farcial. Besides the distance is too far for one to think of instituting such a proceeding. Not only so, but it is beyond my comprehension how any judge would bring an action for libel, even when maliciously maligned. As against these maligners, we judges prefer to allow a well-formed public opinion make answer. The difficulty is not with such newspapers, and with such magazines. They have their say, and a dignified judge can seldom if ever make a reply and maintain his dignity. And having stated this much I pass them by. Most newspapers, like most men, are sincere as to their utterances. Their unfair criticisms come from lack of information. They are too impatient to strike.

In speaking of the relations that do, or ought to, exist between the newspapers and the courts, there are a number of fundamental errors, which like cobwebs, should be brushed away. One of these errors is in the fact that a great many of the judges seemingly believe that because they wear the robes of office, they are and should be beyond criticism. This is a fallacy. I believe as much as does any one in maintaining the dignity of the courts, and that the people should have respect for the courts. But a judge must command respect in some other way than by making this argument. He cannot command respect by becoming a recluse, nor by wearing a silk hat, or a morning frock coat, or a white tie, or by speaking in gutteral tones of voice. There must be something more than these things. To say that he should be honest is, of course, implied and understood by all. It is not much credit for a man to have it said of him that he is an honest man. People generally are honest, officials included. But it is a terrible arraignment to say of a judge or other official that he is a dishonest man. That he should be learned in the law is of course a mere truism. He should be fair and impartial. There is no room for argument here. He must work. He can have but few vacations. And he should have moral courage, and therein some judges fail to perform their duty. Some are weak by nature. Some are intimidated. Quite a percentage of the cases are embarrassing to a judge who seeks to shirk his duty. It is the monthly, and, perhaps, weekly — and sometimes daily — experience of every judge who feels as Chief Justice Marshall did when presiding at the trial of Aaron Burr for treason, when he said, in substance, that he would gladly pass the cup by and not be compelled to drain it to the dregs. But John Marshall did not flinch, and history speaks of him as great and has justified him. Public clamor, aided by a president and an attorney general, could not swerve him. It often happens that a prisoner is charged with a heinous crime; that the public mind is inflamed; the prisoner has no friends; but the facts may be such as to legally prevent a conviction. There is but one thing in such a case for convention and election.
an honest judge to do, and a courageous judge sees to it that the prisoner is protected regardless of the next

Take the cases relating to public utilities, such as have a bearing on water works, gas lights, street railways, and steam railroods; many men seemingly believe that the judge who hears and determines the case is happy at the opportunity to preside. All thoughtful men know that the judge whose duty it is to preside and determine the case feels as Marshall did at the conclusion of the Aaron Burr trial. But every courageous judge persists to a conclusion without taking a vote of the bystanders or outsiders or of clamorous newspapers. Every time a judge holds a city ordinance or state statute void, excitement follows, and the "head" of the judge is demanded for the basket. We are accused of making laws; we are accused of legislating; we are accused of having no respect for city councils or legislatures. If we judges are wrong in thus holding city ordinances or statutes to be void, the press ought to show the people why we are wrong. Every judge, state and national, before entering upon his office, must take an oath to support the Constitution of the United States, because that great charter requires it. Another provision of the United States Constitution recites that "This Constitution and all laws and treaties made pursuant thereto shall be the supreme law of the land." Therefore it necessarily follows that if a city ordinance or state statute is in conflict with the Constitution of the United States, if litigation presenting the question arises, such ordinance or state statute must be declared void, and will be so declared void if the judge is a man of honesty and has any moral courage. This is a simple question and easily understood. Instead of berating the judges as being in some indefinite way related to the "interests," controlled by railroad attorneys, or in close fellowship with the money trust, so-called; why is it that the press does not show by arguments that the decision overthrowing the city ordinance or statute is wrong, by presenting the reasons why the ordinance or statute is not in conflict with the Constitution of the United States? How many of you gentlemen write such editorials? Some of you do, and some of you do not. We all know that such cases can rightly be carried to the Supreme Court of the United States, and whatever may be the decision of that great court, all persons of all classes cheerfully yield obedience.

It is curious to note how many times the Supreme Court of the United States has held statutes to be void because in conflict with the Constitution of the United States. That court has held, in about one hundred and twenty-five years, twenty-eight statutes enacted by Congress to be void. Leaving out the original thirteen states and taking those states many of which have not been in the Union nearly as long as our government has existed, what do we find? The Supreme Court of the United States has held twelve statutes of the State of Alabama to be void; six of Askansas; three of Colorado; twelve of Georgia; ten of Illinois; eight of Iowa; eight of Kansas; eleven of Kentucky; six of Michigan; five of Minnesota; seventeen of Missouri; fifteen of Ohio; fourteen of South Dakota, and eleven of Texas. The older states have not been so unfortunate, for the reason perhaps that their legislatures have been more careful, both as to the rights of property and as to the rights of men. Cases are presented in which it is utterly impossible for the court to shirk the duty and decree that the state statute either is or is not in conflict with the Constitution of the United States. It may be, as some contend, that the government of Great Britain is a wiser and more beneficent government than ours. I do not believe it! But true it is that in Great Britain the Parliament is supreme and their courts cannot hold legislative enactments to be void. But in Great Britain, as I understand it, proposed statutes can only be introduced by the ministry, who recognize the solemnity of what a statute should be, whereas in this country, every member who can write, or employ some one to write for him, a bill, introduces it, and many of them are put through. Take the recent enactments in the State of California with reference to their alien statutes, as rspects the holding of real estate. I have no information as to whether that statute is in conflict with the treaty between Japan and this country or not. But can any man doubt what an honest and courageous judge will hold, if the case brought before him presents the question, and such court finds there is a conflict between the statute and the treaty, as to which shall give way? Can California or any other one state ride down a treaty between this country and Japan? I only say this for an illustration, and not as an expression of opinion with reference to the merits of the California legislation. But please recall the statement I made a few minutes ago, that the Constitution of the United States says that this Constitution and all treaties made thereunder shall be the supreme law of the land. And if a statute and treaty are in conflict, that which is supreme must prevail over that which is not supreme.

The better class of newspapers and magazines of the country are often of great aid to the courts in bringing about desired reforms in court procedure. Since the year 1842, and in some respects from the year 1789, the United States courts sitting in equity have been governed by rules prescribed by the Supreme Court of the United States for the government of trial courts in equity cases. Last year the Supreme Court took the matter up by a committee of three of their number, aided by a committee of lawyers of three from each of the nine judicial circuits of the United States. The committee of three of the United States Supreme Court took the matter up with the Lord Chancellor of Great Britain, and a new code of rules has been worked out which if observed will expedite and materially lessen the expenses as to the trial of equity cases. This new code of rules is a wonderful system and apparently of the very best. And the Supreme Court stands ready to further modify and revise these rules if the necessity should appear. This result is splendid and appeals not only to the country at large, but to the courts in particular. And the better newspapers are entitled to a full and fair measure of the credit for bringing this about. The American Bar Association and the courts as well, both trial and appellate, are now asking Congress to empower the Supreme Court to thus make rules for the trial of law cases, and for a uniform system covering the entire country. This will be simpler and will be much more effective than statutes regulating the practice of law actions. I have observed with much satisfaction editorials in the better papers and magazines urging this upon Congress. The newspapers and magazines can do no better work than to encourage Congress in this forward movement.

Something like two years ago Congress enacted a statute, heartily endorsed by President Taft, requiring trial judges to call to their aid two other judges, one of whom must be a circuit judge or an associate justice of the Supreme Court, before enjoining the enforcement of a state statute on the ground of its invalidity. There was a widespread belief that a statute, whether enacted by Congress or a state legislature, should not be tied up by an order or decree of a single judge. The enactment of that statute has been a very great relief to the trial judges of the United States. This is so because every trial judge knew in advance that regardless of the conclusion he might reach, he would be subjected to the most severe criticism. But the greatest advantage of that statute has been in the fact that the trial judge has the aid of two associate judges in reaching the right conclusion. If one judge sits alone in a case, he gets no aid or benefit excepting by argument of counsel representing conflicting interests. Now under this statute he has the great aid of the advice and learning of two associates. And now I apprehend that injustice to either party will but seldom be done when application is made to enjoin the enforcement of a statute. I am mindful of the fact that the newspapers by their criticisms of the courts gave most material and substantial aid to the enactment of that statute, and I cheerfully give them credit therefor.

There is another procedure which subjects trial courts to the most severe criticism, and some of it of the most unpleasant nature. And that subject is the one with reference to receiverships. The practice has grown up of an exparte application being made for a receivership. The courts can only act upon information from the one side, and then only by the attorney of the trustee of bondholders, or some other complaining party. The result is the appointment of a receiver, sometimes necessary, and oftentimes unnecessary, and most oppressive to creditors, and sometimes to the public. Oftentimes these receivers are men without experience with reference to the subject matter of the litigation; and oftentimes the receivers are the very officers whose inefficiency has brought about the situation requiring receivers. Sometimes it is necessary to appoint at least one of such officers because of his familiarity with the business. I have no particular case in mind, and am not criticising any particular court; but I do insist that some of these receiverships are for the sole purpose of barring just debts, and some of them are too long-drawn-out. It would be far much the better if when these applications were made and the judge sees the necessity of a receivership, and that the order must be made at once before notice given, that the United States marshal or some like person be appointed temporary receiver, and then on short notice the case be set down for hearing as to whether the receivership should be continued, and who should be the receiver, with the right of all parties in interest to appear and be heard in the open. There are too many receiverships, with attorneys for the complaining party directing the officers. The newspapers as yet, with few exceptions, do not seem to have grasped this evil, real or supposed; sometimes it is a real evil and sometimes it is only a supposed evil; but generally subjecting the courts to a harmful criticism. If this matter were given greater publicity, and the reasons for and against receivers, the result would be for the public good, as well as for the good of interested parties.

I repeat that it is the duty of all, including newspapers, to be respectful to the courts and of aid to the courts in a decorous administration of public justice. But it is idle to talk to the effect that courts in their procedure are not subject to criticism. We talk about the science of law. It is a science, but an inexact science. For instance, the Supreme Court of the United States, with reference to the monopoly created by patents and the sale of patented articles under such monopoly, has within one year handed down two decisions, the results being opposite holdings, owing to the different makeup of the court. And so it is with reference to many other subjects.

Judges, like other men of equal experience; equal in age, or equal in learning, equal in fairness of disposition, reach different conclusions. It is so in all the business affairs of life, and it will ever be so of courts. We freely discuss the President of the United States, some of us insisting with reference to great questions that the President is right, and others that he is wrong. But none of us charge the President with being corrupt. Insofar as I know there has never yet been a President of the United States subjected to the charge of corruptness or unfairness. But from the early days of the government to the present, we have charged the President with being wrong, and so it is with cabinet officers, and so it should be at least with the courts. Such criticism will not be harmful to the court, but it will be helpful. Some courts in the past have undertaken to punish as for a contempt newspaper proprietors because of articles criticising the courts. That practice is practically obsolete, as it should be. No judge has ever yet maintained his dignity and never will by bringing an editor before the court and punishing him because of animadversions made through the columns of the newspaper.

It would be helpful to the courts if editors of learning and character would in a dignified and intelligent manner discuss the rulings of the courts, whether by commendation or whether by adverse criticism. The one weakness of the newspapers lies in the fact that too many newspapers predetermine a fixed policy of such paper, and determine in advance whether the holding of the court if one way or the other shall be commended or disapproved, and then the matter is taken up by some editorial writer whose name is not known to the public. The newspapers rely too much upon sending a reporter, generally some young man without much experience, to the court, and he writes up the rulings of the court, and too often in garbled form. In saying this I make no attack upon the newspaper reporters. Generally they are well-meaning young men. It would be very much the better if someone higher up in authority from a newspaper office would get the precise views of the court for the specific purpose of giving publicity to such views of the court, and then commending or disapproving as the real editor of the newspaper believes should be done.

In speaking of courts in the main I have referred to the United States courts. There are other abuses which if fully exposed would result for the better. One of them is the treatment of jurors, making it almost impossible to get business men to serve on the juries; locking them up, depriving them of the privilege of seeing their families, thereby branding them in advance as being possibly dishonest men. None but an honest man should be drawn on juries, and when drawn he should be treated as a gentleman. There should be no greater occasion for having detectives follow jurors than to follow judges. If a judge does not reach a decision at the conclusion of the evening hour, he goes to his own home or hotel and retires for the night. Jurors should be accorded the same privilege, instead of making it appear that medieval ages are still with us. For several years, speaking for myself, I have allowed jurors to separate and go to their meals and separate and retire for the night, and never as yet have I had one case in which a juror has been suspected of having been corrupted during the exercise of such privilege.

Such in a general way are my views as to the relations that should exist between the courts and newspapers. Intelligent criticism is invited. Slang and vituperation are despised by the judge, and as I believe by the intelligent of the public. Substantial and honest and matured criticism is of great aid to the courts, as well as an educator of the public. Critiicism at random tends to make a judge careless. Criticism by a newspaper should be of the kind, and none other, than the editor would use in conversation with the judge. Then there would be no bitterness, but a useful exchange of views. And with such criticism progress will be made, because such criticism is within the limits of 'freedom of the press" and not a mere license for which there is no remedy, and no resulting good. Let editors and writers be gentlemanly towards the judges. And let judges have a due regard to the freedom of the press. The public will then be the beneficiaries.

LAWS THAT CLUB THE PRESS

By Mrs. L. R. Eastwood, Watertown, S. D.

SIGNIFICANT instances have occurred recently in many states which would lead one to believe that there is a well defined movement on the part of politicians and men occupying positions of authority to place a bar to the influence and liberty of the press. The lethargy displayed by journalists in not becoming aggressive in the fight to preserve long established rights and privileges, is a menace to the integrity of the profession.

The press cannot maintain a high standard in leadership of public thought if editors are constantly working under fear of persecution and litigation and without the moral support of contemporaries if they fall under the ban of judicial displeasure or political persecution. John Murray, the great English statesman and journalist, has said: "Every new generation is obliged to rescue the most precious of its privileges — the freedom of the press — from the insidious encroachments of power, and to stand in defense of the liberty which is the foundation of all other liberties; which is essential to everything that can with propriety be termed good government."

Recent flagrant instances have occurred in certain Western States which aim a blow at the very heart of the liberty principle of the press, and be it said to the shame of the newspaper fraternity, the incidents have created less comment than have the threatened Japanese invasion or would a sensational murder case.

Question why? Because newspaper writers are, in the true sense of the word, public servants. Their whole aim in life is to cater to the public, and thoughts of selfish interest occupy a very small part in the time of the average newspaper man or woman.

Those who have read the weird tale written by Lord Lilton entitled "A Strange Story" will remember the mystic circle of lighted lamps in the wilds of India and the untiring efforts on the part of the tender of the lamps to keep the flames bright and shining in order to keep the "Great Toe," the incarnation of the powers of darkness, from advancing.

It is necessary for those interested in preserving the power and privileges of the press to watch the lights of liberty and keep them bright and shining, and prevent the Great Political Toe from dealing out coercion and persecution.

The importance of laws by which a writer's conduct may be governed so that justice may prevail has been the subject of thought throughout the ages.

What is legitimate news and that which should be suppressed becomes a mooted question among newspaper men as well as among lawyers and judiciaries. James Keeley, editor and manager of the Chicago Tribune, said recently in an address given to the students in a journalistic course of the University of Wisconsin: "Suppression of news is more of a wrong than the printing of a piece of news that might possibly better not have been written. By improper suppression a newspaper sells its soul and betrays its readers. Suppression of the news, in my mind, is the high treason of journalism."

In the District of Columbia recently a law was proposed restricting the press and establishing a censorship of the news. The commissioners reported adversely, saying in part: "The publicity given by the press generally tends to lessen evil conditions and thus renders a useful service to the public. That dread of publicity has a deterrent influence upon those disposed or tempted to the committing of crime may reasonably be inferred from the fact that most offenders against law earnestly seek to avoid exposure of the circumstances of their misbehavior in newspaper reports of their trials," and thus they deemed the proposed law inadvisable.

However, Hon. John D. Works of California introduced in the United States Senate on April 17 of this year a bill providing for censorship of the press in the District of Columbia. This bill makes it unlawful to publish details of accidents and crimes. This bill is known as Senate Bill 496, and should be fought by every believer in a free press and will be encouraged by many misguided Christians as well as white slavers, street thugs and courtesans who shun publicity in their trades.

We find in Missouri, Editor William R. Nelson of the Kansas City Star undergoing persecution at the hands of Judge Joseph A. Gutherie, circuit judge, for the publication of court proceedings in which Judge Gutherie refused to dismiss a divorce action until the attorney's fees had been paid, though the parties had become reconciled. Editor Nelson was adjudged guilty of contempt, given a big fine and a day in jail. This occurred in February of 1913. Mr. Nelson appealed to the Supreme Court for relief from the persecution of the judge. The commissioner appointed by the higher court to investigate the case reported in favor of Editor Nelson. Note the language which we quote, as follows:

"Your commissioner finds," says Commissioner C. C. Crow, "from the evidence submitted and considered, that the article referred to was substantially true and as nearly a correct report of court proceedings as could be expected from a layman, and the experience of your commissioner has been that many lawyers would have made as many errors as appear in this article.

"The author of this article, Mr. Murphy, was a layman, and moreover had he been learned in the law, he would have been of the opinion that the order in the Clevenger case was unusual, in that it imposed conditions upon the right of the plaintiff to dismiss a suit for divorce. Your commissioner is of the opinion that under the evidence petitioner had no personal knowledge of the article complained of until after its publication, and Mr. Murphy and Mr. Karl Walter (the man who edited the article) were servants of the petitioner, and made an honest effort to report correctly the proceedings without any intention of offending the dignity of, or impeding the proceedings of the circuit court; and there is no evidence tending to prove that the agents of the petitioner had any intention of obstructing the orderly course of justice or of criticising the court."

Notice! Nothing is said of any laws protecting an editor who publishes court proceedings, nor is there any defense made in regard to the liberty of the press; the whole opinion is rather an apology to the judiciary for the article being published, and places the editor in the light of a suppliant rather than an aggrieved person seeking justice; thus placing the editor and newspaper subservient to judicial power. Mr. Nelson has been subjected to much expense, loss of time, and the humiliation of resting under a jail sentence. He has no redress.

Daniel Webster said: "The contest of the ages has been to rescue liberty from the grasp of executive power. On the long list of champions of human freedom there is not one name dimmed by the reproach of advocating the extension of executive authority." What would Webster have thought had he known that many years after the establishment of this land of freedom a supreme court of one of our great western states would fine and sentence to imprisonment three men for publishing criticisms on their judicial acts? Yet this is exactly what happened in Idaho within the past year, when Publisher Sheridan, Managing Editor Broxon, of the Evening Capital News of Boise City, and also a Mr. Cruzen, were each fined $500 and sentenced to imprisonment for ten days. Mr. Cruzen had boasted during the campaign that he controlled the political policy of the News, but later declaimed on oath that this was "untrue and just politics." The publication upon which the contempt charge was based strongly criticised the action of the Supreme Court of Idaho for not allowing petitions to be filed in nomination of progressive electors. The contempt charges also included a published communication from former President Roosevelt relative to the matter. Understand, I do not advocate freedom of the press in the literal translation of the old Norman word "freodom," which means free according to the will, but liberty of the press. Liberty is derived from the Latin word "libertas," or free according to law.

In order to preserve a proper respect for law and order newspapers should be chary of their privilege in using criticism against judiciaries, as it is right and just that courts should enjoy greater protection than other departments of public government. Upon the courts rest the peace, equity and order of society, and the perpetuation of the republic. Destroy faith in the integrity of the laws of our land and nothing less than anarchy and chaos would reign supreme. Courts and the press should work in harmony, neither subservient but each the compliment of the other. Supreme court judges lower the dignity of their high office when politics is allowed to influence them in rendering a decision. They lower still further their prestige by resorting to measures within their power to club the public press into submissive silence. Judges should understand there are limitations to their powers as well as there are well defined limitations to the boasted liberty of a free press in a free country. The right of a newspaper to report court decisions and proceedings and comment thereon is as old as the printing press and should never be abridged. However, nothing is gained by vituperation and vilification on the part of the press toward judges and courts of justice. It has long been an exploded theory that force can be obtained only by vilifying epithets. Nothing is stronger or more forcible than a calm, sane arraignment of facts which the public can easily comprehend, and from which even judges have no method of avenging; unless they take the right, as appears in the Idaho and Missouri cases. Then it can only act as a boomerang, as the public have the ultimate decision regarding the acts of public servants. The various departments of a republic have their well defined duties. Presidents and governors have advisory and executive powers; Congress and legislatures, the law creating power; while the power of judges and courts is purely administrative. When judges attempt to wield a political club, expecting to remain shielded by the impregnancy of their high positions, and further desecrate their office by attempting judiciary intimidation of the press, it is high time for the people to make future demonstrations of a like character impossible.

Newspapers have a long established duty in the guardianship of justice and liberty. From time immemorial fearless newspapers have turned the searchlight on public officials, and thousands (among whom are federal and supreme court judges) have been obliged to retire from public life.

Newspapers and magazines are helping to accomplish a grand work in clearing up the white slave traffic, and making the old tribute custom to police officers unpopular. This is one of the noble lines of work now before the public which has largely been brought about through press publicity.

The right to criticise should be extended rather than restricted in the press, and yet it seems to be the trend of the times that executives and lawmakers in various states are trying to pass laws abridging the rights of a free press.

Unless the members of the newspaper fraternity become alive to the situation the "Great Toe" will have advanced and dimmed the lights. Editors Wayland, Warren and Phifer of the Appeal to Reason, published at Girard, Kan., have been undergoing prosecution for over a year in the federal court of that state on a charge of misuse of the mail in their publication of alleged scandals said to have occurred at the federal prison at Leavenworth. Editor Wayland became discouraged and committed suicide. In April of this year Federal Judge Scott sustained the demurrer on the part of the defense and practically quashed the cases against them. They have been put to great expense and mental anxiety to fight a case in which the federal judge has practically held was brought without just cause.

The libel laws, with all their intricate ramifications, subject to various interpretations and reinforced by numberless technicalities, furnish a prolific field in furnishing clubs to the unprincipled politician or political gang who may endeavor to subsidize a newspaper.

One would infer that libel laws were of recent origin and instituted after the printing press was established, but this is not true. In the old Mosaic laws there were laws against libel and slander, and these have been handed down through the centuries, through ancient Egypt and Athenian laws to the Romans, and it is from the latter that England derives her common law upon which our laws are founded.

John Peter Zenger, who in early days of the republic made a fight for freedom of the press in Colonial New York, was the means of establishing the principle at his trial that in libel prosecutions the jury are the judges of both law and fact.

For many years this jury law was a safeguard to free journalism. The fundamental principle of press liberty and that truth alone justified publicity, was a safe rule and was recognized by jurors and proved a safeguard to the editor.

Times have changed. This is a critical age. Judges, lawyers as well as laymen, are seriously questioning our jury system. The jury system has long been looked upon as one of the sacred institutions of a free country, and that to be found questioning the justice and efficacy of such a time-honored institution will perhaps be looked upon as little less than treason.

However, when an editor publisher is called before a court of law on a libel charge and expects to get justice, let him look well to the class of men chosen to mete out justice. Men of intelligence and keen mental caliber are not wanted as jurors. A line up of "twelve men good and true," sole judges of the merits of the publication, would not find one in the bunch who would be able to tell a legal from a newspaper item, or a headed article from a chattel mortgage advertisement; yet these men are the sole judges of both law and fact that constitutes a libel suit. How are they to know that the headliner is supposed to choose few words with the least letters which will contain the gist of the article following. Necessarily these words must be strong and to the point, often sounding harsh and unwarranted, yet strictly in accordance with the recognized newspaper ethics. Even supreme court judges fail to recognize this well known rule among publishers, and sustain the findings of the jurors in the lower court because of strong headlines.

Again, no editor or publisher can tell whether jurors are prejudiced or not. Something published years before may stick in the mind of a juror who awaits his chance to get even. A case in Codington County, S. D., came under our observation illustrating this point. An old Scotch farmer was drawn on a libel case jury, and at the close of the trial the editor was judged guilty and given a stiff fine. The old Scotchman was heard to remark afterwards, "I've waited about eleven years to even up with thot mon." Where a verdict rests on the unanimous concurrence of the twelve jurors as in libel cases many compromise verdicts are the result, which are always unjust. Either an editor is entitled to an honorable acquital or the libeled party is entitled to appreciable damage. A jury should never allow themselves to assess a fine against an editor to please one or two men of a jury. It would be much better if a three-fourths majority should rule. Of the numerous libel cases in which I have had personal experience or have been an interested spectator during the past eight years, it has been found after the return of the verdict that the minority of the jury has ruled because of the indifference on the part of the other jurors to the rights of the publisher; not being familiar with his code of ethics or the stress of circumstances under which a large part of his copy is prepared or his motives in publishing news items or editorial comment. An unintelligent jury is an unprincipled lawyer's chief asset in libel cases. He works to befuddle, confuse and prejudice his legitimate prey — the jury. This can be accomplished in various ways, and easily by the use of legal phrases and citation of cases.

An editor publishing a street fight, an automobile accident, or a shooting affray, where he is not an eyewitness, runs the risk, through some inaccuracy of description, of being arrested for libel by some unscrupulous lawyer who may use one of the participants in the occurrence which furnished the news item, as a tool to further his ends.

Any word or words charging another with any crime, misdemeanor, or public offense or bring on him public ridicule or odium in the eyes of the law, is libelous per se unless proven true, and in criminal cases the truth must not only be proven but the publication must be proven made for justifiable ends.

Malice does not have to appear in the article or be proven on the part of the plaintiff. Malice is presumed by law. Actual damage does not have to be proven by the plaintiff on any words or sentences that the court judges is libelous per se. In regard to actionable language or libel per se, it would take a Philadelphia lawyer to differentiate the actionable language from the unactionable, or where proof of both damage and malice must be made. Newell, the recognized authority on libel and slander, says, on page 117, quoting from a decision rendered by Judge C. J. Shaw of the Supreme Court of Massachusetts: "The natural and most obvious import of the word 'steal' is that of felonious taking of property, or larceny, but it may be qualified by the contest. As one says of another, 'he stole apples from my trees' it imputes a trespass and not a felony and the words are not actionable. But if he says, 'he stole apples from my cellar,' it imputes a felonious taking and the words are actionable." Thus it would appear that in the State of Massachusetts only publications charging a person with a crime are actionable or libel per se.

On the question of privileged communications the law in different states varies greatly. In New York, according to Newell, no distinction is made between a public official and a private citizen. While comments may be made on his official acts his character may not be criticised. In Michigan the supreme court has decided the public is entitled to know the character of men who are candidates for office or in office, and while no one can lawfully destroy the reputation of a candidate by falsehood, yet if an honest mistake is made in an honest attempt to enlighten the public, it must reduce the damages to a minimum if the fault itself is not serious. In New Hampshire a newspaper may state in good faith and on reasonable grounds that any public officer has been guilty of official misconduct. Iowa has perhaps the most liberal laws, as the supreme court of that state has declared that newspapers may make charges affecting the moral character of any public man if the charges are made in good faith and on reasonable grounds.

Again supreme courts differ in the various states in holding what constitutes libel per se. In South Dakota, Nebraska, and many western states, language, when published holding another up to obloquy, contempt or ridicule, constitutes libel per se; and the Nebraska Supreme Court in a recent case held that not only the truth must be proven but that in civil cases as well as criminal the publication must be made for good and justifiable ends and proven so. Thus placing an additional burden on the publisher, and making it hazardous to publish the news in that state. Can you not see the "Great Toe" advancing that threatens the liberty of the press?

In all other phases of crime or misdemeanor a person may not be placed in jeopardy more than once by a court or jury trial. In libel cases an editor may be arrested and tried in criminal court and action brought again in civil court. He or she may be subject to a jail or penitentiary sentence, and again tried in civil court on the same charge, and a body judgment given which may again lodge him in jail to serve for the same offense. Even if he is acquitted in criminal court he can be brought before a civil court on the same charge. He spends time, money and patience and has no redress, as an action for malicious prosecution seldom lies.

A woman editor has not only these laws to contend with but she must meet the natural prejudice found in the average juror against a woman who assumes knowledge. Let a sweet, demure, helpless, little woman enter the court room and she makes every mother's son her champion.

Let a woman editor be arrayed in a court of law, and jurors, who are beneath her in mental strength, begin at once planning to push her back into the niche man has made for woman since might made right. This is especially true if the woman editor assumes to raise the moral standard in politics. They say, "We don't want a woman sticking her nose in our affairs and judging the morality of men candidates. We will cinch her," and they proceed to do so, no matter what are the merits of the case. A lawyer of our acquaintance once said: "How dare that woman not play the political ball as we play it? We can break her easy enough; just get her into litigation, any excuse will answer, and she will soon beg for mercy and eat the crumbs from our hands." That woman has had to defend in seven lawsuits within eight years, and is now fighting two out in the supreme court of her state. She hasn't begged for mercy or eaten crumbs, but she and her family have spent thousands of dollars defending their rights as editors and publishers. She never had had a lawsuit in her life up to the time she defied the political gang.

Endless expense can be made for the defendant in demurrers, motions, and depositions, and when one gets into the supreme court the expense accumulates much more rapidly. It's like Herb Hutchins, who hung around the mines in Arizona. One day he got too close to a shaft and fell in. He dropped one hundred and twenty-five feet, and struck with a thud. When found and patched together he was asked to give an account of himself. "Wal,' Herb groaned, "I got to expertin' around, and the first twenty-five feet was all the owners claimed, but after that I got to goin' so dummed fast I couldn't take no notes." Let the lawyers get in supreme court and get tangled up in technicalities in the case, and they get to goin' so blamed fast it's impossible to take notes, and you are mighty fortunate if you get the merits of your case before the attention of the supreme court judges. All this is in the libel suit game, and if you win, you lose time, money and nerve energy, which should have been granted you to improve your service to the public in the press. At the close you have no redress and nothing gained but experience, which may not help you in avoiding another libel suit as soon as the political powers desire to move on the chess board.

A prominent member of the bar in South Dakota said to me recently: "Mrs. Eastwood, I should think you would enjoy managing and running a motor car. There is the same element of danger that you find in editing a newspaper while defying the political gang in power." Great Caesar, No! There is no comparison, I replied. In running a newspaper we have to depend largely on help in gathering material with which to keep the public interested and the machines going. You may furnish a lot of enjoyment to the public, but to the editor it is a steady grind. You may accomplish some good, but you never know whether you will arrive. A noted religious writer has truly said, "Public sentiment is as slow to boil as a kettle, and cools much sooner." A car gets you over the ground with speed and accuracy. In case you have a spill you are not compelled to call in twelve incompetent men to pass judgment on the make-up, men who wouldn't know a cog from a carburetor, and who would insist you are criminally in possession of an incendiary torch if you stated your ignition system was out of adjustment.

What does the average juror know of libel per se. Ask him if he wished a drink of aqua pura, and he'd think you were trying to poison him. However, when supreme courts differ on what constitutes libel per se, how can you expect the poor juror to be a competent judge.

Much can be said of the splendid work President Wilson is making in New Jersey on the sheriff jury call system. The sheriff is, nearly always, the tool of the political gang in power, and upon him devolves the selection of jurymen after the regular venire is exhausted. If politics enter into the case you may be sure he does not neglect his opportunities. Newell lays down the following authority, which, however, does not apply in some western states, according to supreme court decisions:

The Extent of the Right to Publish the News

"The right to publish through the newspaper press such matters of interest as may be properly laid before the public does not go to the extent of allowing the publication concerning a person of false and defamatory matter, there being no other reason or justification for so doing than the mere publication of news.

"There can be no question at this late day but that the public newspaper has a right — whether it shall be regarded as its duty or not — to discuss those matters which relate to life, habits, comfort, happiness and welfare of the people. In doing so it may state facts, draw its own inferences and give its own views upon the facts. It may err in its deductions, and if they are false they are not actionable unless special damages can be shown. But false assertions, when they impute the commission of a crime, are actionable, and when not based upon any facts legally tending to prove the crime imputed, the publication cannot be said to be privileged. It will not do to say that such a publication was made with reasonable care, however good the motive may have been, etc."

Thus it would appear that an editor selected for political hazing prints at his peril items of wife desertion, a street embroglio or kidnaping until it becomes a matter of court record.

Under the caption of "Who Is the Proprietor?" the same noted authority says: "As it is clear that the proprietor of a newspaper is both civilly and criminally responsible for whatever appears in its columns, although the publication may have been made without his knowledge and in his absence, it may be well in this connection to make some inquiry as to who is in law held as such proprietor." Then the authority proceeds to explain that any person having any interest, except as mortgagor, is held liable.

Press associations have been in the habit of sending lobbyists to work in the interests of the newspaper profession. Would it not be far better to send members of the press as members of Congress or legislatures endowed with power to use influence with votes? Isn't it about time to make the national and state press organizations mean something besides an annual meeting and good time? Labor organizations provide funds to protect the interests they stand for. Corporations provide unlimited funds to protect their rights and privileges. Medical associations provide funds for the defense of a prosecuted member; why shouldn't press associations provide a fund to be used in protecting the liberty of the press when assailed by judicial or political power.

ADVERTISING RATES FOR THE SMALL TOWN NEWSPAPER

By J. B. Powell, Instructor in Advertising, University of Missouri, at State Press Association, Pertle Springs, Mo., June 26, 1913

A VITAL relation exists between the rate you charge and the way you handle your advertising and the future growth of your town.

It is a well-known fact that a town's retail trade territory — the thing that makes, or the lack of which breaks a town — is in practically all cases measured by the circulation of the newspapers in that town.

No town can extend its retail trade limits further than its local newspapers' circulation, and I believe that if every editor in Missouri, or in any other state, would make that fact plain to his local advertisers, he would have no trouble to get not only a living rate for his advertising but a growing rate for his advertising.

Get Full Value

In other words, it is just like this: If Merchant Jones wants you to print his full page advertisement for ten dollars, tell him you will if he will sell you a $20 suit for $10. Tell Merchant Jones you are in business for the same purpose that he is — to make a living — and you can no more afford to sell your merchandise at a loss than he can. And, if Merchant Jones can't see the light and takes his ad to the "fellow across the street," let him do it, for if it hurts you to lose business, it certainly hurts the other fellow a whole lot worse to take business and lose on it.

Simplest Way to Solve Problem

The simplest way to get at this problem is to talk to the publisher across the street and forever settle this rate-cutting business, for in the last analysis, the fight narrows down to the combined wits of the merchants against the wits of the newspaper publishers. Merchants know they can work you publishers against each other for their own benefit. Why don't you wake up to the possibilities of combination and show them a thing or two.

Every publisher knows that it is no more possible for a newspaper to sell a full page advertisement for ten dollars and make money on it, than it is for a grocer to sell forty pounds of sugar for a dollar and make money on it. But you are each afraid the other fellow will take it, and your competition combines to ruin the future of your town.

An Age of Cost-Finding — The Trade Paper

The bed-rock time has arrived in the newspaper and printing business — as it has in every other.

This is an age of cost-finding and honesty in business. Every line is waking up. Do you know that there are in New York City alone more than two thousand trade journals, each striving to better a profession or trade. Each is working to its highest ability to find better methods for helping its trade or line of business endeavor.

There are nearly a dozen trade journals in Chicago, New York, Boston and Philadelphia devoted to the newspaper and printing business. I wonder how many publishers ever subscribe for any of them.

The Farmer Is Studying

The farmer is studying his problems. He is experimenting with crop rotation and scientific fertilization. He is trying to make the dry year a profitable year. In other words, he is trying to make the dull season profitable. He is subscribing for all the farm journals he can get and he is studying them — in many cases to the exclusion of his home newspaper.

* * *

The merchant, butcher, the baker and the grocer are asking the question, "Where have my profits gone?"

And the time has arrived for the newspaper man to ask the same question about his business — it is high time that he does it! If you have been making your living off the little county printing the politicians have condescended to give you, you had better watch out — for commission government may get your town.

A Few Words About Advertising Rates

And, when you make a real investigation of advertising rates, you begin to feel that almost everybody has more horse sense about the cost of advertising and printing than the man who is in the business — the very man who is supposed to be an authority on it.

Preacher Becomes an Advertising Man

The local preacher decides to publish a church program. He goes to the local printer and gets an estimate. Then he takes it over to the other printer who is a member of his church and makes him cut to get the job. Then he takes the dummy and marks it into squares. He knows what it will cost him to produce it. So he very simply adds a little more to his squares and goes out to the merchants for advertising. The merchants all come in for their cards at $2.50 each. The program is printed and Mr. Preacher collects for his space. It cost him six dollars. He has a nice folder to pass around in church next Sunday and in the meantime has declared a dividend of six dollars for his half day's work. And he seriously considers changing his profession because he sees the possibilities of the publishing business. And, right now, I want to tell you that many of them do — and I have yet to see the one who hasn't made money at it.

These examples could be given without limit. There is Smith with his lodge program. There is Jones with his theater program, and Brown with the county fair program. They all make them pay, because they just add a little more to the cost of production.

Why in the world doesn't the local newspaper man absorb some of this business ability that seems so common elsewhere? Why doesn't he find out what his paper costs and then put his rates where they will carry it and just a little more?

The best philosophy I have heard from a Missouri editor was during Journalism Week at the University last spring. It was from the owner of the Hume Border Telegram, when he said:

"I got to studying the city papers and I found that when business is light they don't print so many pages. So when business is light in Hume I cut her down to two pages — but I make money on these two pages."

Let me tell you, gentlemen, the cashier at the bank will treat you with a great deal more courtesy if you print four pages at a profit than he will if you print eight pages with an over-draft.

Specific Cases

You can't produce a four-page paper — if you value your time at anything — with a circulation of fifteen hundred copies, for less than $30. You can't produce a six-page paper of fifteen hundred circulation for less than $40. And you can't produce an eight-page weekly newspaper of two thousand circulation for less than $65 or $70. Now if your advertising averages half the space, it shouldn't be very difficult to figure a profit on the job — for that's what your paper is. Its a daily or weekly job. Do you win or lose on it?

A Convincing, Practical Illustration

I know a man in this state who is printing a six-page, six-column daily. It is costing him, according to the above figures, in the neighborhood of $1,000 a month to produce it. He is running his advertising at the rate of a dollar an inch a month — or to be exact, at the rate of $0.038 an inch. His paper averages about half advertising, or a little better. His daily income from advertising is about fifteen dollars. His circulation income is practically nil, for the men from whom he purchased the paper had just held a contest and scraped the counter clean. But we will give him the benefit of $10 a day circulation. This makes his total income not over $25, but we will give him a little more and make it $30. It still leaves him a deficit of $10 a day, or $260 a month counting twenty-six publication days. I understand he brought $2,000 to town when he came to the state — over and above the purchase price of the plant. According to the best mathematical probabilities, he will last just as many months at $260 will go into $2,000, with a couple of months leeway for possible overdrafts the banker will allow him.

If he was getting ten cents an inch he wouldn't be more than making a living, counting the depreciation on his plant, but he has forever foreclosed his future, by cutting his rate to three cents an inch — for he will never get enough capital ahead to get sufficient circulation to justify a higher rate.

Psychology of Higher Rates

Here is where the psychology of a high advertising rate comes in: Did you ever stop to think that we don't care for nor appreciate that which comes to us free or nearly so. If we purchase a hand-saw at the ten-cent store, we don't care whether the kids saw nails with it or not. But if we pay our Keen-Cutter dealer four dollars for a hand-saw, we are careful not to let the wife saw the soup bone in two with it.

Low Rates Decrease Prestige

Exactly the same analysis holds good in advertising rates. The newspaper that cuts its space rates lower than its competitor, thereby decreases its prestige and its value in the merchant's eyes. Merchants haven't much faith in the advertising value of a low rate newspaper — for the main reason that it doesn't cost them much to buy its space. And the newspaper publisher that places a living rate on his space, immediately lifts himself above his competitors. Because — back again to the hand-saw analysis — we respect that which costs us money and effort, and we despise that which comes without much expense or effort.

A Few Words About Rate Cards

Every newspaper must have a printed advertising rate card. This card should be on file with every merchant and advertiser in your paper.

You will never build permanently for the future if you don't adhere to the rates on your card and give no one an advantage. I am a firm believer in the value of the sliding scale of rates for the small town.

For the daily, I would give my best rate to the man who would advertise with me every other day throughout the year — but I would give him no inducements to cause him to repeat the same copy.

For the weekly, I would give the best rate to the man who used a certain minimum each week — but I would charge him the same rate whether he repeated the same copy or not.

The man who advertises but once a year should have to pay his proportion of cost for your maintaining a paper for him to advertise in when he wants to.

When you go to St. Louis you pay the street car company a nickel for maintaining a conveyance for you throughout the year. The man who lives in St. Louis and rides every day, can get his tickets six or seven for a quarter. I don't believe a weekly newspaper of a thousand circulation can run advertising for less than ten cents an inch at a profit.

I don't believe a weekly newspaper of two thousand circulation can print advertising at a profit at less than fifteen cents an inch.

The Honorable President of this Association has the only printed rate card that I have ever seen from a weekly newspaper in Missouri — there may be more, but I haven't seen them. His rates are:

First 50 inches in a year, an inch	25c
Next 50 inches in a year, an inch	20c
Next 50 inches in a year, an inch	17½c

Next 50 inches in a year, an inch	15c
Next 50 inches in a year, an inch	Free
All over 250 inches in one year	15c

Here are the advertising rates that the University Missourian has found the best after five years experiment:

Space without contract	25c
200 inches	22½c
500 inches	20c
1000 inches	17½c
2000 inches	15c
5000 inches	12½c
Ten inches, one time a week	20c
Five inches, every other day	15c

These rates are based on a sworn paid circulation not falling below 1,500 copies daily.

Same Rates on Foreign as on Local Advertising Right and Obtainable

Now these rates hold good in foreign advertising as well as in local advertising and you can get every line of foreign business on them if you will hold out and make the agents pay them. And they will pay them if you present the last ditch first when you receive a piece of copy.

Just this last winter, the University Missourian received several half page advertisements from N. W. Ayer & Son for the Country Gentleman. At the first of the year we had sent the agency our rate card. In spite of this with the proof of the first ad came a check for the space at five cents an inch. Immediately N. W. Ayer received a telegram as follows: "Missourian rate is 25 cents. Refer to your files for rate card." Back came the order to run at 25 cents.

There is no wonder the agencies are continuously trying to beat the newspapers — most of them are so easy. I would do it myself if I were an agent.

And a little note here about business system: I desired some information this last winter about various Missouri newspaper rates and circulation. About forty letters were sent out. Only about half of them answered, and only a small proporition of those that did answer used a business letterhead. Most of them answered my questions on the bottom of my letter and fired it back. Three Missouri newspaper letterheads have come to my attention this last winter, that in no place mentioned the name of the town where the newspaper was published. I presumed they trusted to the postmaster to supply that when he cancelled the stamp.

If a peanut stand was run with such slip-shod methods, it would not last a week if it had any competition. The only way to make a paper grow is to use business methods and meet business men in a business way — for as stated above, the bed-rock time has arrived in the newspaper business for the man in the small town.

Salesmanship of Advertising

And this brings up a few remarks about the salesmanship of advertising that should be included in this paper.

Do you go around to your merchants about Wednesday morning, for Thursday's paper and say:

"Want to run an ad this week?" or do you say:

"Well, shall I repeat that same ad again? It won't cost you but $2 this time — you know we still have the type standing?"

The editor who solicits business this way is like the clerk who, after the customer has made a purchase, says:

"Nothing more today, Mrs. Jones?"

"No!" Mrs. Jones says, "nothing more," and goes out, leaving the clerk to resume his siesta.

If I was running a store and one of my clerks said that to a customer, I would fire him before he opened his mouth to drive another customer out of the store.

The good drummer usually steps into the grocery store, buys a good cigar, hands another across the counter, passes the time of day, asks the merchant how business is going. Compliments him on his window display, asks him how Lenox soap is selling. Then he tells the grocer how Smith over in another town sells more soap than any grocer in town by doing it this way. Pretty soon Mr. Grocer has his head buried in the samples and is buying an order, when fifteen minutes before he wouldn't have thought of it.

Expert Advertising Aids Soliciting

Why not go to your local jeweler this way:

"The school superintendent tells me there will be forty-eight high school graduates this year. Each graduate will get from two to a half dozen presents. Here is a good advertisement along this line that I wrote for you. I got these cuts from the manufacturers who were glad to lend them to you. I have left all the blanks open for you to fill in prices. Let's fix up a good window display of watches, rings, pins and other appropriate commencement gifts, and here is a good circular letter that I got up for you to send to the graduates, and another for their parents. Let's tell them these gifts are just as good as Jaccard handles in the city. Now let's send these letters, print this ad and make the window display all at the same time.

If the jeweler still holds back, show him some ads clipped from the city papers along the same line and get enthusiastic about it. Tell him he has a better chance at this business than the city merchant, because he is on the ground floor where they can examine the articles and in addition the people are all acquainted with him and have confidence in him.

Then you will see this jeweler begin to have confidence in your ability to run a newspaper. If he follows your instructions you won't have any trouble in getting him next commencements — and then it's but another step to show him that if he can pull trade for Commencement and Christmas time, he can pull it any time by the right kind of advertising — and you have done it by being of service to him — showing him how to increase his business.

Show any man how to increase his business — how to make more money — and he's your friend forever.

And now, back to the original statement:

"There is a vital relation between the rates you charge and the way you handle your advertising and the future retail growth of your town.

In proof of this, need I do more than to point to Colonel Nelson and the Kansas City Star. He started, possibly within the memory of a great many of you editors, just as humbly as you are — except perhaps he had more borrowed capital than you have. He has built a great newspaper and he has built a remarkably good advertising town. Do you know, there is not a half dozen firms in all Kansas City that do not use space in the Star some time during the year?

Your town may not be a Kansas City, and your newspaper may not be a Star, but you can make the most of your possibilities. When Kansas City out-grew the weekly newspaper, Colonel Nelson turned it into one of the most profitable agricultural papers in the West. And Colonel Nelson has seen to it that every merchant in Kansas City is a believer in newspaper advertising — yes, Kansas City Star newspaper advertising. And you can do the same thing in your town in your small way —

f you build for the future instead of "spending your time fighting the "fellow across the street."

You know, you've been doing that for the last twenty years, and you are not much further ahead than you were when you started. So why not use the new system?

✣ ✣ ✣

COST OF ADVERTISING IN DAILY AND WEEKLY NEWSPAPERS

By E. K. Whiting, Owatonna (Minn.) Journal-Chronicle, Representative Second Illinois Cost Congress, Springfield

I REALIZE that perhaps some of the figures which I shall place before you will seem almost beyond reason, but I trust that when I am done you will not say to me as did the German to Mark Twain. Mr. Twain was travelling in Germany and was one day introduced to a German who said, "Mr. Twain, they tell me that we Germans are thick-headed and cannot see a joke. I wish you would tell me a joke and I will see if I can see the point." So Twain told him of the fellow down in Kentucky who had such large feet that when he wanted to pull off his boots at night it was necessary for him to go down to the fork of the roads. The German studied awhile, scratched his head, and finally said, "Why Mr. Twain, that is no joke, that is a Tamm Lie."

Nothing the Matter With the Printing Business

The study of costs has been the one uppermost thought with the printer for the past few years and such gatherings as this one have been responsible for the great advancement made by the printers of this country along the lines of cost knowledge. It has been customary for printers to deplore conditions which exist and to look upon the printing business as the one calling of last resort. I will confess that in my moments of discouragement I have felt the same way as many others have in regard to their business but the more I have studied the subject of costs, the more I have come to feel as a friend of mine in Minnesota once aptly said in a gathering similar to this. Many present had taken occasion to depreciate the printing business when my friend rose and said, "Mr. President and gentlemen: Nearly every one seems to delight in saying unkind things about the printing business and I want to take issue with them. Show me a business which has been conducted at a loss for years and years and yet stands sixth in the industries of this great country. Gentlemen, I take off my hat to the printing business." Every careful student of conditions knows there are few, if any, better lines of business today than the printing business. What fault there is does not lie with the business but rather with the lack of business knowledge and accounting systems on the part of the individuals who are engaged in it.

Sources of Betterment of Trade Conditions

The Ben Franklin and Typothetae organizations over the country (and most certainly the trade papers that have spread abroad, enforced and preserved in permanent form the teachings, systems and results.— Ed.) have been responsible for the betterment of trade conditions and personally I wish to express appreciation of the work done by the Ben Franklin organization and to President Hartman, for it was largely through these influences that I came to see the light and was enabled to put my own business upon a proper basis and avoid what must otherwise in the end have spelled disaster. When Ben Franklin Clubs were organized in St. Paul and Minneapolis it was my good fortune to come in close touch with the members thereof and I soon caught their enthusiasm and profited greatly by the knowledge they were acquiring in the subject of costs.

A Proof of Greatness — Suspending a Paper Because It Would Not Look a Cost System in the Face

I do not know what sign of greatness I possess which should have induced your secretary to have invited me to speak to you today unless it lie in the fact that I had the good sense to suspend the only daily paper in a city of 6,000 inhabitants simply for the reason that it persistently and consistently refused to look a cost system in the face.

When a cost system was installed in our office we supposed that our prices for job printing having been placed upon a correct basis, our troubles would then be over. But, in our case we were, unfortunately, like the man who married thinking his troubles all were over, we too soon began to realize that they had just begun. We still had an appalling leak in our business, notwithstanding the fact that our job department showed a good profit. It was then that I awoke to the realization of the fact that the great percentage of the troubles of the country printer-published lay with his newspaper and not his job department. We were at that time publishing a six column folio daily and an eight and twelve page weekly. These were at first carried on one ticket as the newspaper, but as the tracers came through each month showing a loss, my curiosity was aroused to know which wheel had a flat tire. The daily and weekly were then given separate tickets and the daily at once showed up a steady and persistent loser. The weekly, too, though given the benefit of half the news composition, half the editorial salaries, etc., came far short of looking like a good thing. A careful study of the situation resulted in increased advertising rates for both daily and weekly and an extraordinary effort was made to swell the receipts to a point where the daily would be made at least self-supporting. But the cost tracers continued to tell the same sickening story and after comparing our cost sheets with the few — I am ashamed to tell you how few — fellow publishers in my own state who had a cost system, and finding our own costs far below others, we announced that the daily would be suspended at once.

That you, who conduct both daily and weekly newspapers may get an idea of what such publications cost I will give you the cost of our combined issues for an average month — the circulation of the daily at that time being 700 and the weekly 2,500:

DAILY

Stock and Total Mechanical Costs	$386.20	
Direct Expense	245.02	
	$631.22	
Daily Advertising		$275.18
Daily Foreign Advertising		23.08
Daily Subscriptions		150.00
		$448.26
Net Loss		$182.96
		$631.22

WEEKLY

Stock and Mechanical Cost	$156.08
Direct Expense	164.78
Half News Composition	71.80
Ad Composition	15.03
	$407.69

Weekly Display Advertising	$ 97.69
Weekly Foreign Advertising	37.05
Legals	58.46
Locals	4.10
Subscriptions	200.00
	$397.30
Net Loss	10.39
	$407.69

To reach the cost of display advertising per inch for the daily it is only necessary to subtract from the cost of the month's issues the subscription receipts and divide the remainder by the number of inches actually carried. To illustrate let us take the month cited above where the total cost of the month's issues was $631.22. Subtracting from this the subscription receipts, $150.00, we have $481.22. In that month we carried 4,800 inches of advertising which brings the cost per inch to 10 cents. When you stop to consider the rate charged by the average country daily do you wonder that the publishers are not classed financially as they should be?

Advertising Cost Per Inch Shown

Having buried our daily edition we have continued to make a careful study of the cost of producing our weekly edition and I doubt not but that many publishers will be little short of astounded at the costs which I will now give you for each of two issues:

TWELVE PAGE WEEKLY

Stock	$ 9.17	
Hand Composition	42.80	
Cylinder Press	16.35	
Mailing	3.52	
Linotype Composition	33.75	
Direct Expense	54.90	
	$160.49	
Receipts from legals	$ 39.68	
Receipts from locals	10.20	$160.49
Receipts from subscriptions	50.00	99.88
	$ 99.88	$ 60.61

To arrive at the cost of display advertising we subtract from the total cost of the issue the receipts from legals, locals and subscriptions and divide the remainder by the number of inches of display advertising carried in that issue. In this case $60.61 divided by 380, the number of inches of display advertising carried that issue, makes a cost of 16c per inch for display advertising.

TWELVE PAGE WEEKLY

Stock	$ 9.36	
Hand Composition	35.04	
Cylinder Press	17.23	
Mailing	3.98	
Linotype Composition	35.95	
Direct Expense	51.61	
	$153.17	
Receipts from legals	$ 33.83	
Receipts from locals	8.54	$153.17
Receipts from subscriptions	50.00	92.37
	$ 92.37	$ 60.80

$60.80 divided by 524, the number of inches of display advertising carried that issue, makes a cost of 11.6c per inch.

The total cost of the first 17 issues of this year was $2,578.21. The receipts during this period from legals, locals and subscription was $1,635.38 and this subtracted from the above leaves $942.83 to be divided by 8,228, the number of inches of display advertising carried, making the average cost for 17 weeks 11.46c per inch.

The above figures are for the fat months of a year in which our paper carried both city and county publishing and do not cover the months of July and August in which advertising receipts fall off heavily and hour costs materially advance. In view of these conditions I would predict that our average cost per inch under normal conditions will be about 17.5c per inch. And at this point I would call your attention to the fact that all of the figures which I have given you have to do with COSTS and not SELLING PRICE.

Costs Shown Are Normal

To those of you who are on the point of saying that these costs are abnormal let me state that I have the cost tracers of a widely known country weekly of my own state which corroborate my figures surprisingly well. The average cost of an eight page weekly in that office thus far this year is $128.75, while the only eight page issue we have had this year cost $127.07. The average cost of twelve page issues in the former office is $155.35, while in our office the cost thus far this year averages $152.14. This is a remarkable co-incidence and should bring any doubting Thomas to his senses and set him at work to know — mind you I said KNOW — what his OWN costs are. There is absolutely but one way in which these costs may be determined and that is by means of an adequate cost system, properly installed and carefully kept. If you have a cost system don't think when you have a few monthly summaries that you know all about it, for it is only by keeping a constant monthly average that you may be sure of your condition. The costs vary widely month by month owing to conditions and the only safe way is to keep a perpetual monthly average.

Remunerative Ad Rates for Home Papers

A year and a half ago the Minnesota State Editorial Association appointed a committee to report upon the subject of remunerative advertising rates for country weeklies based upon the cost of production. In this report papers were divided into three classes, A., B., and C. Class A. being the eight and twelve page all-home print weeklies with 2,500 to 3,000 circulation. Class B. being the eight page home print weekly with 1,000 to 1,500 circulation and Class C. being the eight page patent inside weekly with 400 to 800 circulation. The findings of this committee were as follows:

Schedule of Advertising Rates — Class A. Sliding Scale

	Yr.	6 mo.	3 mo.	2 mo.	4 wk.	3 wk.	2 wk.	1 wk.
Set once	12	13	14	15	18	21	24	30
Set 2 times	12	13	14	16	19	22	28	30
Set 3 times	12	13	14	16	22	26		
Set 4 times	12	14	15	18	24			
Set 8 times	14	16	17	22				
Set 13 times	15	16	21					
Set 26 times	16	20						
Set 52 times	20							

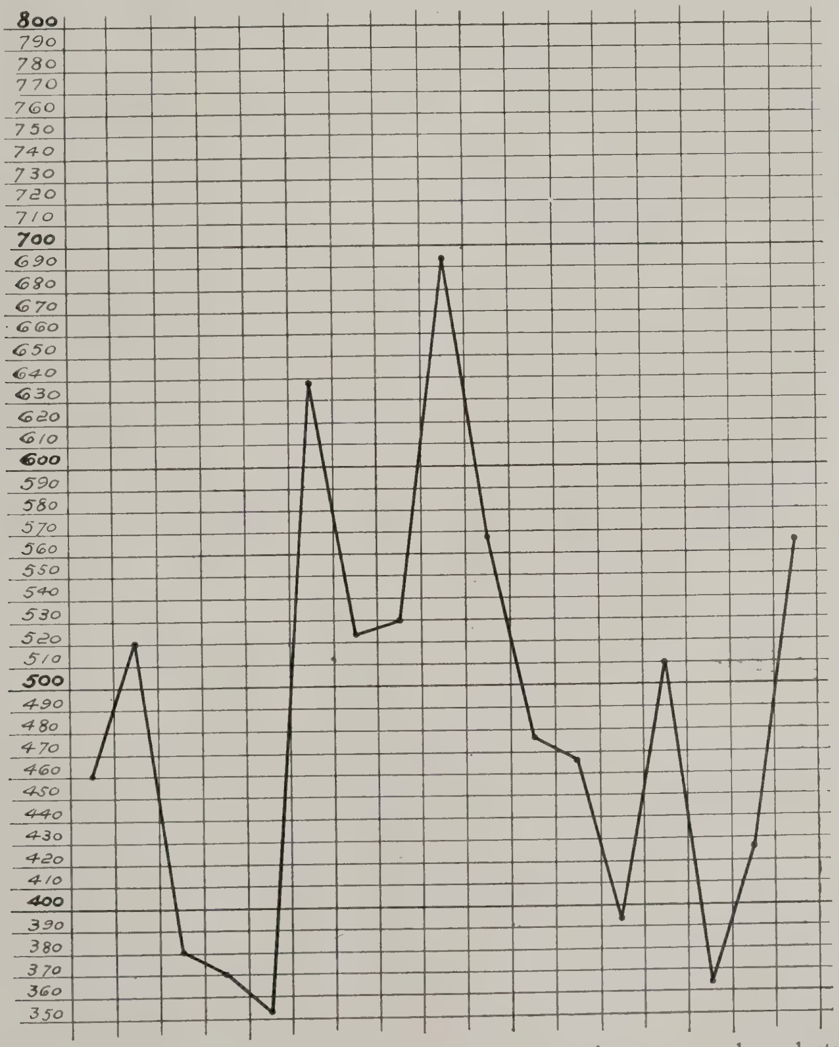
Schedule of Advertising Rates — Class B. Sliding Scale

	Yr.	6 mo.	3 mo.	2 mo.	4 wk.	3 wk.	2 wk.	1 wk.
Set once	12	13	13	14	16	17	20	25
Set 2 times	12	13	14	15	16	18	23	
Set 3 times	12	13	14	16	18	19		
Set 4 times	12	13	15	16	20			
Set 8 times	12	14	17	19				
Set 13 times	13	16	19					
Set 26 times	14	18						
Set 52 times	17							

The schedule for Class C. is practically the same as Class B. and the above table can, therefore, be taken for Class C.

Sliding Rates vs. Flat Rate That Has No Justification

Our committee reported unanimously in favor of the sliding scale of rates in preference to the flat rate so commonly used. We did so for the reason that the flat rate has no justification in the face of costs and is in fact a lazy man's invention for the benefit of the advertiser who now receives far too much for his money. It is an undisputed fact of mechanics that a given number of carloads of freight can be more economically transported where divided into loads of equal size than where a light load is hauled one time and a heavy one another, from the fact that in one instance the engine races while in the other it is laboring under undue stress. With a newspaper, where the amount of advertising is light, it is necessary to set more type or run more plate than the income warrants, and too frequently when the advertising is heavy it makes necessary additional pages which cost more than the additional advertising produces. That you may appreciate the fluctuations of advertising patronage let me show you the following chart indicating the variation of display advertising in my own paper the first four months this year: (See cut.)



Peak Load Chart

The greatest argument against the flat rate is the fact that it tends to make intermittent advertisers who come in during the busy season of the year and leave you to carry the burden of publishing your paper during the dull months. The constant advertiser secures larger returns from the money expended and is a satisfied customer, while the intermittent advertiser sooner or later comes to say that advertising does not pay and finally drops out altogether.

Reason for Sliding Rate

A Minnesota publisher in announcing the adoption of the sliding scale of rates very aptly stated the case when he said: "The flat rate is the creation of the advertising agent, who demanded the minimum of trouble in computing rates, but is not fair either to the steady advertiser or the publisher. The advertiser who makes possible the production of the paper week after week is entitled to better rates than he who demands a large amount of space for an issue or two and then probably uses none for a year."

Cost of Setting Ads

The cost of setting ads is a subject I have studied closely for the past two years and as a result of such study I have been contending, at every organization meeting where I have spoken, against the seemingly fixed rate of five cents an inch for such service. I have long believed that no publisher could produce advertising composition for five cents an inch. It is true that advertising composition varies in different towns and cities owing to varying wage scale and style of copy used. As a general thing the cost of ad composition increases with the size of the city owing to the fact that the merchants in the larger cities follow the metropolitan advertisers with heavy copy and cut-in prices. The average cost in my office is seven cents an inch and we are now charging ten cents an inch for such service. We have had but one month in which ad composition cost five cents an inch and that was one in which we had several full page ads with light copy. In March we set 1,130½ inches of advertising in 66¾ hours. This was an average of 17 inches an hour and at $1.20 per hour cost 7c an inch.

Advertisers Do Not Object to a Rate Covering Cost and Leaving Profits

It may not be amiss to say in this connection that the advertiser and the advertising agency do not object to paying a rate which includes a living profit to the publisher. They simply want to strike bottom. The manager of one of the leading advertising concerns in New York wrote me some time ago that his concern realized the educational work the Ben Franklin organizations were doing in the middle west for they had received notification of increased rates the past year from more publishers in Minnesota and the Dakotas than all the rest of the United States put together. This same friend of mine was at first somewhat alarmed by the upward trend of rates, but he recently expressed his approval of the sliding scale of rates as promulgated by the Minnesota State Editorial Association committee for local advertisers and the making of a flat rate for foreign advertising sufficiently high to provide a profit under all conditions. In my judgment, the antagonism of the publisher toward the agency and the foreign advertiser in the past has been the fault of the publisher almost altogether. Lacking the courage of conviction which comes with a knowledge of costs he has failed to make an adequate rate and stick to it, and in the second place the lack of proper accounting system has deprived him of a great deal of desirable and profitable business which would gladly have been given him under more ideal business conditions.

Exhortation for Continued Interest

I would appeal to every one of you to keep up your interest in these organization meetings for they are the salvation of our business. Do not rest satisfied to attend these meetings yourself, but make it your business to bring your competitors. I firmly believe in local as well as state organizations. In my own county we have an organization including every printer and publisher and we meet regularly every month. We have thus been able to overcome trade abuses but what is better still, we have come to know each other better and in a friendly spirit have done away with friction and made it possible for all to get a fair price, including a living profit.

Get Better Idea of Worth of Service

In closing, let me quote a Kansas publisher who replied to the questionaire sent out by the Department of Journalism of the Kansas University asking for suggestions for the betterment of the publishers' condition in that state: "Let the newspaper man get a better opinion of his own worth to the community. Let him get a better idea of the worth of his advertising space. He is doing as much for his town as the banker and the doctor. He ought to have as good clothes, work as few hours, and have as good an automobile. The newspaper publisher generally should be made to go to a newspaper business college for three months and have better business methods forced into him."

* * *

A bad business combination: An employer who tries to get the most work possible out of his helpers for the least possible pay, and employees who are content to draw their pay for the least possible work.

* * *

Men who succeed are unwilling to admit that there is any such thing as luck. Men who fail are sure that luck is against them. The truth probably is between these two extreme opinions.

SUCCESS OF GRADUATES IN JOURNALISM

Wonderful Advance of the Schools of Newspaper Making

When the University of Missouri established its School of Journalism five years ago there began a discussion from newspaper men throughout the United States of the old question of whether or not journalism could be taught outside of a newspaper office. That discussion still ensues, but now with the teaching of journalism five years old and with instruction given in thirty-five universities and colleges, a collection made of all material published and available on the subject in that time by the directors of the Missouri school shows a marked change of attitude by both the country and city papers.

The Missouri School of Journalism has sent out forty-nine graduates. Of these more than 80 per cent are employed in good positions and have been employed continuously since graduation. Ten per cent have left the newspaper field after graduation for other work in which they also specialized while in the university. From the others no word has been received. Here are the names and positions of some of those who have received the degree of Bachelor of Journalism in the last five years:

Charles Arnold, editor Rolla, Mo., Times.

Robin P. Gould, reporter El Paso, Texas, Herald.

Gussie V. Kenton, make-up editor St. Louis Star.

John B. Powell, instructor in advertising in the School of Journalism, University of Missouri.

D. R. Scott, state correspondent Detroit Times.

Claude A. Brown, reporter Muskogee Phoenix and teacher of journalism Muskogee high school.

Vaughn Bryant, literary department Kansas City Star.

Joseph E. Chasnoff, advertising, St. Louis Republic.

Jasper C. Hutto, city editor Birmingham, Ala., Ledger.

Oscar E. Riley, reporter St. Louis Globe-Democrat.

Herbert W. Smith, instructor in photo-engraving in the School of Journalism, University of Missouri.

Harry E. Ridings, advertising, St. Louis Republic.

Ralph Pruyn, advertising bureau, Chicago.

Frank W. Rucker, Jackson Examiner, Independence, Mo.

Leo Wolfsohn, copy desk, Milwaukee Journal.

Edgar S. Baskett, Grit, Williamsport, Pa.

Henry E. Birdsong, reporter, Kansas City Star.

W. E. Hall, assistant city editor, Toledo, Ohio, Blade.

Sanford A. Howard, Slater, Mo., News.

C. S. Lewis, Lincoln, Neb., Star.

Miss Sara L. Lockwood, St. Joseph, Mo., Gazette.

Hugh J. MacKay, University Publisher, University of Missouri.

Robert S. Mann, instructor in journalism, University of Missouri.

Ward A. Neff, Daily Drovers' Telegram, Kansas City.

Francis Stewart, Muskogee, Okla., Phoenix.

Richard G. Tindall, reporter, St. Louis Republic.

Buford O. Brown, editor Plainview, Tex., Herald.

E. R. A. Felgate, editor, Kirkwod, Mo., Courier.

Fred M. Harrison, Gallatin, Mo., Missourian.

Henry H. Kinyon, Kansas City Star.

L. B. Phifer, Appeal to Reason, Girard, Kan.

Walter C. Stemmons, publicity department of the Agricultural and Mechanical College, Stillwater, Okla.

Earle B. Trullinger, real estate advertising manager, Cape Girardeau, Mo.

Hin Wong, syndicate writer, Canton, China.

Maurice Hicklin, assistant to editor-in-chief of the Little Rock, Ark., Gazette.

Miss Malvina Lindsay, Kansas City Post.

Miss Ellen Foley, Nashville, Tenn., Courier.

National Editorial Association of America

Twenty-Eighth Annual Convention at Colorado Springs, Colo., June 17, 18 and 19, 1913—Routine of the Proceedings and the Entertainments

THE convention was called to order in the hall of the Commercial Club, Colorado Springs, Colo., at 10 a. m., June 17, 1913, when Mayor C. L. McKesson — after giving, in a humorous vein, the privilege to the editors of enjoying the enchanting scenery, absorbing the sunshine, inhaling the fresh, invigorating mountain air, drinking freely of the pure, cold, clear waters and viewing all the wonders of mountains and parks, including the Garden of the Gods, Manitou, Cripple Creek and all the rest — spoke earnest words of welcome to, and of highest appreciation of, the press, and extended all the courtesies so justly their due and as gladly accorded in all sincerity, with goodwill and highest esteem. He closed with the following words:

"Colorado Springs, the chamber of commerce, the printers and publishers of this city, and all our civic bodies and people are honored and delighted by your visit to our city. On their behalf and on behalf of each of them I give you sincere, cordial welcome. We shall endeavor during your entire sojourn with us to show by our acts that our welcome comes from our hearts and not merely from our lips. We stand ready to do your bidding in whatever will add to your comfort or enjoyment. We will not burden you with souvenirs, or gifts which you can carry away in your luggage. We shall strive to present you with a souvenir of good will and kindness to be carried away in your affections.

"We appreciate the splendid work you are doing for the uplift of humanity, and we want to make this rest period of yours helpful to you. We trust that the sessions of your convention will be harmonious, pleasing, inspiring and uplifting, and that we shall be able to interest, entertain and please you while your convention is not in session. Such is our wish and our welcome."

I. W. Stevens, of Denver, represented the Colorado Editorial Association, acting as a committee of entertainment for the whole state, spoke of the newspaper profession and the work, and gave the broader welcome for the whole of Colorado and for the city of Denver and all other points to be visited.

Vice-President J. Clyde Oswald, of New York, was introduced and fittingly responded on behalf of the national association, thanking the gentlemen and the cities and the state which they represented for the generous words of greeting and for the welcome with all that was included therein, with assurance that all that had been said and all that had been prepared for enjoyment and instruction yet in prospect, met with the full appreciation and understanding of the editors from all parts of the United States here in convention assembled. The kind words and generous courtesies were accepted with the sincere thanks of each and all.

After the opening addresses, Robert E. Dowdell, of Artesian, S. D., retiring president of the association, surrendered the historic gavel, presented by the state of California, to A. D. Moffett, of Elwood, Ind., who was elected president on the last day of the convention in 1912. In their addresses both men spoke highly of the reception that had been accorded their association, and of the city of Colorado Springs itself, describing its scenic advantages as well as commercial aspects.

President A. D. Moffett then presented the annual address. (See page 485, July issue.) Under motion of B. B. Herbert, duly seconded, the address was referred to the Committee on President's Address for consideration and report as to action on the recommendation made therein. President Moffett appointed the following committees:

Credentials — George E. Hosmer, Colorado; E. L. Peterson, North Dakota; E. H. Tomlinson, New Jersey; W. A. Campbell, Ohio; Mrs. L. G. Ellingham, Indiana; H. B. Terrill, Texas; Louis C. Cramton, Michigan.

President's Address — H. C. Hotaling, Minnesota; W. A. Woodring, Indiana; Mrs. L. R. Eastwood, South Dakota; E. E. Williamson, Illinois; C. E. Curtice, Missouri.

Officers' Reports — B. F. McKey, Indiana; Homer Harwood, Michigan; Caroline Huling, Illinois; E. J. Gallagher, New Hampshire; E. R. Purcell, Nebraska.

Resolutions — J. Byron Cain, Kansas; John R. Rison, Tennessee; George Rountree, Texas; H. R. Moffett, Illinois; W. B. Collins, New York; J. W. Hanhow, Iowa; J. W. Stelny, Missouri; Guy W. Hardy, Colorado; J. Clyde Oswald, New York; R. E. Dowdell, South Dakota.

Memorials — B. B. Herbert, National Printer-Journalist, Chicago; W. W. Aikens, Advocate, Artesian, S. D.; J. Clyde Oswald, American Printer, New York, N. Y.; Guy U. Hardy, Record, Canon City, Colo.; Will A. Steele, Cordova, Alaska; Mrs. Mate Palmer, Banner of Gold, Chicago, Ill.

Mrs. L. R. Eastwood, of Watertown, S. D., Herald, delivered her address on "Laws That Club the Press."

Mrs. Julia V. Strauss, country contributor of the Ladies' Home Journal, of Rockville, Ind., gave "A Woman's Experience in Journalism." See page 505, July issue.)

TUESDAY AFTERNOON

The Daily and Weekly Newspaper Sections met in separate halls in the Chamber of Commerce Building.

The Daily Newspaper Department

President Moffett called the meeting to order, and W. W. Aikens, of the Franklin, Ind., Daily Star, presided, and E. H. Tomlinson, of the Daily Record, Morristown, N. J., served as secretary.

The meeting proved most successful and helpful. A long and animated discussion ensued covering all phases of the topic, "Making a Small City Daily Pay," in which everyone participated to such an extent that it became an animated experience meeting.

The discussion was brought out by the paper on the subject by Guy U. Hardy, of the Daily Record, of Canon City, Colo. This paper was voted the best and most beneficial that those present had ever heard. (See page 504 for this paper, July issue.)

The best ways of booming advertising, keeping down expenses, controlling delivery and securing circulation were taken up.

The general sentiment seemed to be in favor of pushing local news rather than telegraph news; all "circulating" schemes were opposed, the cry "cut them out" being heard from all sides. All schemes to get advertising for nothing were tabooed. Several particularly endorsed the view that the first duty of the publisher was to make his business a financial success, with the belief that it could then be of the greatest benefit to the community.

Intelligent study of the local field, hard work and keeping down expenses were given as essentials of financial success.

An address on "Socio-Economic Development and the Editor" (see page 476), written by Charles J. Downey, of the Mining Science, Denver, Colo., proved thoughtful and suggestive and brought out favorable comment.

Country Weekly Department

Frank O. Edgecombe, of the Nebraska Signal, Geneva, Neb., chairman, presided, with J. Byron Cain, News, Belle Plain, Kan., as secretary. The following papers were presented and discussed: "The Ad Club in Our Town," by C. E. Curtice, editor Miner and Mechanic, Neosho, Mo. (see page 499); "Cash Advance System," by Will Curtis, Plaindealer, St. James, Minn. (see page 480); "The Next Step in State Organization," by E. R. Purcell, Broken Bow, Neb. (see page 502); "Uncleanliness versus Cash in the Printing Business," by Walter Walker, Daily Sentinel, Grand Junction, Colo. (see page 47.)

The "Cash in Advance" plans and ideas of Mr. Curtis, elicited profitable discussion, mostly favorable to the plan set forth by Mr. Curtis, with some dissenting views. The idea of making the paper a necessity to all, considerate to all, with news of interest to all, fair, without fear, favor or prejudice, were some of the ways named to hold circulation or to regain lapsed subscribers.

The proposition of printing all the news all the time came up in a short talk by J. B. Cain, of the Belle Plain, Kan., News, who also acted as secretary of the afternoon session. "If a rich man's son is arrested for speeding," he said, "publish his name just as you would that of a poor man's son for any offense. Treat them all alike."

His Circulation Decreased

H. W. Shepard, of Altus, Okla., told the meeting that he adopted the cash-in-advance plan, and had lost half of his subscribers. "I am running a Republican paper in a strong Democratic county. I want to know how to get my subscribers back," he said.

"Change your politics to Democratic," came the cry from several members. The plan to organize states for advertising protection proved to be the afternoon's feature. Mr. Purcell's paper, as will be seen by reference thereto, dealt with the success his section of Nebraska had had with the plan, which consisted in getting advertising rates of uniform scale, to get the merchants of the various towns to impress upon the manufacturers of goods handled by them the necessity of advertising in the country weeklies and to stick to rates. "Stick, brothers, stick," was Mr. Purcell's conclusion.

Edward Albright, who came from Tennessee to attend the sessions, said that the suggestions about the advertising organization and the cash-in-advance system were worth all his trouble and expense in coming to the meeting. George Hosmer, of Fort Morgan, also made a short speech commending the scheme.

Would Have Papers Clean

"Uncleanliness versus Cash in the Printing Business" was the subject handled by Walter Walker, editor of the Grand Junction Sentinel. Mr. Walker dealt with his plan of clean newspapers and printing offices as the best forms of advertisement. "A clean newspaper office looks like a prosperous one," he said, "and naturally people will do business under the most inspiring surroundings."

A general discussion followed the paper, in which many ideas as to newspaper office arrangement were discussed.

Past President Herbert spoke of the efforts, from the very first, to introduce the plan of business co-operation along the lines of advertising, credits, etc. Times had changed since twenty-six years ago, when he advocated incorporation for the accomplishment of the ends in view, at the Denver convention, September, 1887, and besides it is doubtless better to begin work first in the several states and then lead up to national co-operation. He favored the new plan and believed the same feasible and conditions opportune.

Going outside of the minutes for the sake of reflecting the sentiments expressed and the impressions made rather than to give the lengthy details of the discussions, the following quotation is given from the account in the Colorado Springs Gazette of June 8:

"The formation of state organizations for the supervision of advertising to aid the publisher, the advertiser and the public, all fostered under the general supervision of the National Press Association, was the important legislation of yesterday afternoon's session of the convention, held in the rooms of the Chamber of Commerce in the Burns Building. The suggestion for the organization came from the meeting of the country weekly department, in which E. R. Purcell, publisher of the Chief, Broken Bow, Neb., presented in his paper on 'The Next Step in State Organization.'

"Frank O. Edgecomb, of the Nebraska Signal, at Geneva, Neb., who was chairman of yesterday's country weekly session, is known as the 'Pulitzer of Country Journalism.' Edgecomb has been blind for many years, and his remarkable ability as a publisher and writer has attracted attention from all over the country.

"The session was bristling with 'bread and butter' facts for publishers. The men talked shop to their hearts' content, compared notes on how they did business and thoroughly enjoyed their session.

"The editors joshed each other over circulation and advertising rates and plunged into the why and wherefore of matters largely connected with the business offices of their publications."

The Denver Daily Republican said:

"Probably the most important action of today's session was the starting of a nation-wide advertising organization for the protection of the publishers, the advertisers and the public, and the proposal to form state organizations that will insist on 'square deal' advertising for all three interests.

"The suggestion came in an address by E. R. Purcell, of Broken Bow, Neb., on 'The Next Step in State Organization.' The national body took up the matter enthusiastically.

"Frank O. Edgecomb, of the Nebraska Signal, at Geneva, Neb., the only blind editor at the meeting, known as the 'Pulitzer of Country Journalism,' presided at the meeting.

"Benjamin B. Herbert, of Chicago, publisher of the Journalist, and founder of the National Press Association twenty-eight years ago, and who has never missed a convention of the organization, took a prominent part in the discussion."

WEDNESDAY, JUNE 18

The convention was called to order in regular session by President Moffett at 9:30 a. m. Mr. H. C. Hotaling, of the Mapleton, Minn., Enterprise, read a paper on "Benefits of the National Press Association to Its Members" (see page 474). The same subject was treated in a paper by G. W. Hughes, Clinton, Ill., Register (see page 501).

W. H. Lauck, County Agriculturist Agent, of Colorado

Spirngs, was introduced to speak on the topic of his work for agricultural development.

He recited his numerous experiences at the various experimental stations in the way of improvements in seed, proper selection of grain according to soil, and the benefits derived from the establishment of farmers' clubs, for greater co-operation. He impressed on the visitors the necessity of co-operating with the agricultural scientists in their own communties and thus furthering the work of scientific farming for the betterment of the entire country. Mr. Lauck told of his numerous experiments at various stations established throughout this county, in the way of improvement in seed, proper selections of grains and vegetables according to the soil of the community, and the benefits derived from the establishment of farmers' clubs for closer co-operation. He dealt also with the questions of scientific dairying, the production and care of milk, cream, butter and cheese and the proper feeding of stock, particularly in regard to silo work. The recent work of the dairymen and stockmen in the employment of a tester of milk for the purpose of weeding out unprofitable stock, was also taken up and the speaker advised the editors to suggest the formation of similar organizations in their communities.

Mr. B. B. Herbert said that he felt like exhorting after the splendid talk on the rural improvement movement that is extending all over the country under the direction of Eugene Ball, with headquarters at Chicago. It is a movement of vital importance to the whole nation and of no less value to the newspapers, especially the home press. Every county in every state should be organized.

Counties that are organized are putting in as high as twenty thousand dollars and more. Bankers are agreeing to loan money to farmers for putting in silos or the purchase of improved stock, where farmers lack the funds, simply on the recommendation of the local county farmers' organization or the county agent.

He briefly sketched his experience in the formation and maintaining of a farmers' club from 1878 to 1886 in Goodhue county, Minnesota, that had been the largest wheat producing county in the world, but the soil had deteriorated by reason of continued wheat cropping. The movement — through the farmers' club — for ratation of crops, dairying and other measures for improvement, had restored the soil and made the county the second largest dairy producing county in the United States.

The discussions and doings of the farmers at the clubs make the very best, the most useful reading matter for the home or rural papers. The fact is that a large majority of the readers of all newspapers in the United States, except in four or five of the very largest metropolitan cities of the country, are directly interested in farm improvement and all are indirectly interested.

Mr. Curtice, of Missouri, said that he had found difficulty in getting the farmers to pay attention to advice given by him on farming in his paper. Mr. Herbert replied, "Gather twenty or thirty of the best farmers of your county together in a farmers' club, and get them to talking and comparing experiences, and then report their talks and doings as live news, and there will be no trouble in securing the attention and interest of readers in both the country and the town."

There then ensued a most lively discussion, during which the editors showed that they were broadly informed and deeply interested in the rural improvement movement.

Treasurer W. R. Hodges gave an especially informing talk on what was being accomplished in Minnesota through organization and farm instruction in the schools, the funds set apart for agricultural instruction in the schools, and for farmers' institutes, make broad, intelligent, thorough work possible.

Others showed equal knowledge and interest, not second in any way to the able county agricultural agent to whom they had listened.

The Committee on Constitution and By-Laws, appointed at the meeting of the Executive Committee, made report which, after discussion, was referred back to the committee for revision, with direction to confine the amendments to Articles I and IV of the Constitution and Article III of the By-Laws, and to present the amendments in printed form for distribution among the members. The President also requested that the complete record of cost be presented.

The Committee on the President's Address submitted the following report, which was accepted and adopted:

Report of Committee on President's Address

"Your committee, to whom was referred the president's address, would recommend that this address be published in its entirety in the proceedings of this gathering. That the practical suggestions made relative to the formation of a closer organization for the consideration of foreign advertising be acted upon by the appointment at this time of a committee who shall thoroughly investigate the practicability and possibility of such advertising section or bureau being made a success. This committee to report prior to the adjournment of this association so that actual advancement may be reported towards securing this much desired end.

Respectfully submitted,

H. C. HOTALING,
W. A. WOODRING,
E. E. WILLIAMSON,
C. E. CURTICE,
MRS. L. R. EASTWOOD,
Committee.

REPORT OF CREDENTIALS COMMITTEE

Twenty-eighth Annual Convention of the National Press Association of America

Officers 1912-13

President — A. D. Moffett, Daily Record, Elwood, Ind.

Vice-President — John Clyde Oswald, American Printer, New York.

Secretary — George Schlosser, Daily Press, Sioux Falls, S. D.

Treasurer — W. R. Hodges, Herald-Dispatch, Sleepy Eye, Minn.

Past Presidents

First President — B. B. Herbert, National Printer-Journalist, Chicago, Ill. Elected February 19-21, 1885, at New Orleans, La.

Second President — C. H. Jones, Lockwood Press, New York, N. Y. Elected February 23-25, 1886, at Cincinnati, Ohio.

Third President — Gov. A. B. White, Parkersburg, W. Va. Elected September 13-15, 1887, at Denver, Colo.

Fourth President — James R. Bettis, 215 S. Main Street, St. Louis, Mo. Elected November 21-23, 1888, at San Antonio, Texas.

Fifth President — Charles A. Lee (deceased), Gazette and Chronicle, Pawtucket, R. I. Elected August 27-29, 1889, at Detroit, Mich.

Sixth President — E. W. Stephens, Herald, Columbia, Mo. Elected June 24-27, 1890, at Boston, Mass.

Seventh President — W. S. Capeller (deceased), News, Mansfield, Ohio. Elected June 14-17, 1891, at St. Paul, Minn.

Eighth President — B. J. Price, Star and Times, Hudson, Wis. Elected May 24-26, 1892, at San Francisco, Cal.

Ninth President — Walter Williams, Dean School of Journalism, Columbia, Mo. Elected May 16-20, 1893, at Chicago, Ill.

Tenth President — A. O. Bunnell, Advertiser, Dansville, N. Y. Elected July 2-6, 1894, at Asbury Park, N. J.

Eleventh President — R. H. Thomas (deceased), Farmers' Friend, Mechanicsburg, Pa. Elected January 22-26, 1896, at St. Augustine, Fla.

Twelfth President — Louis Holtman, Jeffersonian, Shelbyville, Ind. Elected February, 1897, at Galveston, Texas.

Thirteenth President — Joseph B. Maccabe, Argus, East Boston, Mass. · Elected September 5-9, 1898, at Denver, Colo.

Fourteenth President — R. H. Henry, Clarion Ledger, Jackson, Miss. Elected July 5-9, 1899, at Portland, Ore.

Fifteenth President — Matt Parrott (deceased), Reporter, Waterloo, Iowa. Elected March 1-3, 1900, at New Orleans, La.

Sixteenth President — F. B. Baillio, Review, Cleburne, Texas. Succeeded to presidency upon death of Mr. Parrott.

Seventeenth President — Albert Tozier, Pacific Farmer, Portland, Oregon. Elected June 10-15, 1901, at Buffalo, N. Y.

Eighteenth President — Garry A. Willard, Herald, Boonville, N. Y. Elected April 15-18, 1902, at Hot Springs, Ark.

Nineteenth President — P. V. Collins, Agriculturist, Minneapolis, Minn. Elected July 7-10, 1903, at Omaha, Neb.

Twentieth President — W. W. Screws, Advertiser, Montgomery, Ala. Elected May 16-19, 1904, at St. Louis, Mo.

Twenty-first President — John Dymond, Sugar Planter, New Orleans, La. Elected June 7-9, 1905, at Guthrie, Okla.

Twenty-second President — John E. Junkin, Bulletin, Sterling, Kans. Elected June 13-15, 1906, at Indianapolis, Ind.

Twenty-third President — H. B. Varner, Dispatch, Lexington, N. C. Elected June 10-14, 1907, at Norfolk, Va.

Twenty-fourth President — Will H. Mayes, Bulletin, Brownwood, Texas. Elected August 17-22, 1908, at St. Paul, Minn.

Twenty-fifth President — A. N. Pomeroy, Franklin Repository, Chambersburg, Pa. Elected July 19-24, 1909, at Seattle, Wash.

Twenty-sixth President — J. P. Baumgartner, Register, Santa Ana, Cal. Elected February 10-12, 1910, at New Orleans, La.

Twenty-seventh President — R. E. Dowdell. Elected June 17-19, 1911, at Detroit, Mich.

Twenty-eighth President — A. D. Moffett. Elected June 10-12, 1912, at Chicago, Ill.

Honorary Life Members

Mrs. Matt Parrott, Waterloo, Iowa; Mr. James G. Gibbs, Norwalk, Ohio; Mr. J. M. Page, Jerseyville, Ill.; Mr. R. M. White, Mexico, Mo.; Mr. H. C. Page (deceased), Bayonne, N. J.; Mr. Frank R. Gilson (deceased), Benton Harbor, Mich.; Mr. W. E. Pabor (deceased), Avon Park, Fla.; Mr. Wm. H. H. Judson, Bessemer, Ala.; Hon. Wm. A. Ashbrook, Johnstown, Ohio; Mrs. J. Irving Steel, Mechanicsburg, Pa.; Mr. J. W. Cockrum, Oakland City, Ind.; Mr. Will A. Steel, Seattle, Wash.

The following is a list of delegates attending the Colorado Springs Convention, June 17 to 22, 1913:

Alaska

W. A. Steel, Cordova, Daily Alaskan.

Colorado

W. C. Calhoun, Denver, Rocky Mountain Magazine.

Jennie Chapin, Denver.

C. F. Wadsworth, Denver, Weekly News.

George E. Hosmer, Fort Morgan, Morgan County Herald.

F. S. Hoag, Pueblo, Star-Journal.

W. E. Cain, Cheyenne Wells, Republican.

J. E. Hanway, Sterling, Advocate.

Alva A. Swain, Pueblo, Chieftain.

C. J. Haase, Colorado Springs, Labor News.

H. E. Hogue and wife, Eaton, Herald.

H. C. Hanson, Greeley, Tribune-Republican.

Walter Walker, Grand Junction, Sentinel.

D. P. Saunders and wife, Brush, Morgan County Republican.

Guy U. Hardy, Canon City, Record.

David Elliott, Colorado Springs, Telegraph.

S. C. Merrill, Brighton, Register.

F. B. Mason, La Junta, Tribune.

A. Z. Stirling, Hudson, Banner.

George B. Wick, Las Animas, Democrat.

Illinois

B. B. Herbert, Chicago, National Printer-Journalist.

Mr. and Mrs. W. J. Snyder, Chicago.

Mrs. H. O. Houghton and son, Carlock, Monitor.

Edward H Fox and wife, Chicago, Western Brewer.

Mrs. Mary Helm, Chicago.

Frank Roderus and wife, Chicago, American Sugar Industry.

E. E. Williamson, Griggsville, Ill., Press.

Charles Bradshaw and mother, Carrollton, The Patriot.

Mrs. and Miss Edenburn, Bloomington.

G. W. Hughes, Clinton, Register.

Miss Caroline Huling, 30 N. Dearborn Street, Chicago, Stylus.

E. M. Garlick, Hopedale, Times-Review.

Charles D. Coulson and wife, Laharpe, The Laharper.

F. S. Greenleaf and wife, Savanna, Journal.

Mrs. A. D. Hunter, Savanna.

Mrs. Mary Murphy, Chicago, Inter Ocean.

Mrs. Addie Andre-Inman, Chicago, Daily News.

Mrs. Delaney Holden, Chicago, American.

Mrs. Charles Lederer, Chicago, Cartoonist.

Mrs. William Page Eaton, Lexington Hotel, Chicago.

Mrs. Mate Palmer, 906 Rector Building, Chicago, Banner of Gold Magazine.

Mary O'Connor Newell, Chicago, Record-Herald.

Mrs. Effie Webster, Chicago, Examiner.

E. H. Childress, Fairfield, Press.

W. L. Jones, Lebanon, Journal.

H. R. Moffett, Monmouth, Review.

Indiana

J. Feudner and wife, Rushville, Republican.

J. C. Lochner and wife, Auburn, Weekly Bee.

Ben F. McKay and wife, Lebanon, Pioneer.

A. D. Moffett and wife, Elwood, Record.

W. A. Woodring and wife, Peru, Journal.

John De Prez, Shelbyville, Democrat.

W. W. Aikens, wife and daughter, Franklin, Evening Star.

Mrs. L. G. Ellingham and friend, Indianapolis, Decatur Daily Democrat.

Mrs. Sam Matthews, Tipton, Times.

Mrs. Juliet V. Strauss, Rockville, Ladies' Home Journal.

J. H. Fetter and wife, Peru, Republican.

Miss Maude Parkhurst, Peru.

Will H. Craig and wife, Noblesville.

C. H. McCormick, North Judson.

Miss Heding Bott, Tell City, Tell City Journal.

Iowa

J. B. Hungerford, wife, son and daughter, Carroll, Herald.

R. A. Stacey, Adair, News.

R. E. Lee Aldrich, Dysart, Reporter.

J. W. Hinchon, Algona, Courier.

H. E. Taylor, Traer, Star-Clipper.

Art D. Ricke, Breda, News.

Kansas

J. Byron Cain, Belle Plaine, News.

Sheridan Ploughe, wife and children, Hutchinson.

Mack P. Cretcher and wife, Sedgwick, Pantagraph.

H. C. Sticher and wife, Osage City, Free Press.

Mrs. W. R. Smith and daughter, Columbus, Advocate.

Anna M. Carlson, Lindborg, News-Record.

H. C. Stevens and wife, Sixth and Quincy Streets, Topeka, Odd Fellow.

B. L. Mickel and wife, Soldier, Clipper.

Mrs. M. C. Hemminway and daughter, Hope, Dispatch.

A. R. Hansmann, Kingman, Journal.

Charles Browne, Horton, Headlight.

Moses Porter, Hoyt, Sentinel.

Jess L. Napier and wife, Newton, Republican.

Mr. and Mrs. J. L. Papes, Mulvane, News.

S. P. Gebhart, Pratt, Union.

J. W. Sowers, Spring Hill, New Era.

H. C. Montgomery, wife and son, Junction City, Union.

Louisiana

Miss Evie Harris, 1628 Andrew Street, New Orleans, Times-Democrat.

H. M. Blain, Baton Rouge, State University, Journalism.

Michigan

O. Palmer and wife, Grayling, Crawford Avalanche.

Homer Harwood and wife, Warren, Watchman.

Louis C. Cramton and wife and daughter, Lapeer, Clarion.

A. E. Gordon and wife, Detroit, Record-Commercial.

Clarence J. Kirby and wife, Monroe, Record Commercial.

A. B. Bragdon, Jr., and wife, Monroe, Record-Commercial.

A. B. Glaspie and wife, Oxford, Leader.

Minnesota

H. C. Hotaling and wife, Mapleton, Enterprise.

W. F. Borchert, Mapleton, Enterprise.

W. R. Hodges, Sleepy Eye, Herald-Dispatch.

O. J. Rea and wife, Tracy, Herald.

W. D. Hinchon, Madelia, Times-Messenger.

Thomas L. Armitage and wife, Princeton.

A. F. Strickler, wife and daughter, Sleepy Eye, Herald.

C. W. Dillman, Blue Earth City, Post.

Mississippi

James Faulk and wife, Leakesville, Greene County Herald.

W. V. Walkins, Collins, The Commercial.

Missouri

Lewis Lamkin and wife, Lee's Summit, Journal.

T. B. White and two daughters, Warsaw, Enterprise.

Milton Fuller, Lebanon, Rustic.

J. W. Steen, St. James, Journal.

Ovid Bell, Fulton, Gazette.

Liela M. Parry, Webb City, "The Register."

C. E. Curtice, Neosho, Miner and Mechanic.

Frank Barhydt and wife, Kansas City, American Type Founders' Co.

Nebraska

F. O. Edgecomb, wife and son, Geneva, Signal.

C. E. Nevins and wife, Laurel, Advocate.

A. B. Wood, Gering, Courier.

J. C. Voline, wife and mother, Auburn, Namaha County Herald.

W. G. Purcell, Broken Bow, Purcell Printing Company.

E. G. Purcell and wife, Broken Bow, Chief.

New Hampshire

E. J. Gallagher, Concord, Patriot.

New Jersey

E. H. Tomlinson and wife, Morristown, Daily Record.

New Mexico

C. H. Raymond, Deming.

New York

W. B. Collins and daughter, Gloversville.

J. C. Oswald, New York, American Printer.

J. E. Klock and wife, Kingston, Freeman.

E. A. Higgins, Avoca, Elmira Advertiser.

A. Emin, New York, correspondent of The Ikdam, Constantinople.

A. E. McCall, Bath, Plaindealer.

North Dakota

E. L. Peterson, wife and sister, Milton, Globe.

George W. Tilton and wife, Center Republican.

Otto H. Lomen, Ryder, News.

L. L. Satterland, Washburn.

Ohio

Felix J. Koch, 325 Hearne Avenue, Cincinnati, Ills Magazine.

I. N. Heminger, Findlay, Morning Republican.

W. A. Campbell, wife and daughter, Lima, Republican-Gazette.

Oklahoma

Horace W. Shepard and wife, Altus, Times.

J. B. Campbell and wife, Waukomis, Hornet.

Sidney Suggs, Ardmore, Ardmorite.

T. F. Hensley, El Reno, People's Press.

Frank Hensley, El Reno, People's Press.

Mrs. Lucy L. Easton, Chattanooga, Times.

Mrs. D. C. Welch, Chattanooga, Times.

A. K. Ross, Claremore, Progress.

Mrs. Cora Brown, Waukomis, Oklahoma Odd Fellow.

George L. Sneed, Medill, News.

Lee Woods, Duncan, Eagle.

J. H. Anderson, Snyder, Democrat.

Lee M. Nichols, Bristow, Record.

Albert Herksowitz, Oklahoma City, Jewish Review.

Pennsylvania

J. C. Flemming and wife, Shippensburg, The News.

Harry Slep, Altoona, Mirror.

Hon. John J. McLaurin, Oil City, Daily Derrick.

J. Frank Buch, Lititz, Record.

Charles H. Welch, Mt. Union, Union Times.

South Dakota

Mrs. E. Drillon, Dupree, Herald.

W. C. Lusk, Yankton, Yankton Printing Co.

R. E. Dowdell and wife, Artesian, Advocate.

H. E. Dawes, Fulton, Advocate.

R. R. Thompson, Baltic, Minnehaha.

Bertha J. Bragstad, Sioux Falls, Posten.

Miss A. Nessa, Sioux Falls, Posten.

George Schlosser, Sioux Falls, Daily Press.

George Freiberg, Brookings, School of Journalism.

Edward Binnewies, Brookings, School of Journalism.

Mrs. L. E. Eastwood, Watertown, Herald.

Lila G. Eastwood, Watertown, Herald.

Joe Eastwood, Watertown, Herald.

M. J. Sweating, wife and son, Sioux Falls, Odd Fellows' World.

Tennessee

John R. Rison, Paris, Post Intelligencer.

Edward Albright, Galatin, News.

Texas

Hon. Sam P. Harben, Richardson.

G. G. Dunkerly, Ennis, Daily News.

H. B. Terrill, daughter and friend, West.

George Rountree and wife, Georgetown, Commercial.

Utah

I. E. Diehl and two ladies, Mammoth, Record.

Wisconsin

W. D. Hoard and wife, Fort Atkinson, Hoard's Dairyman.

WEDNESDAY AFTERNOON, JUNE 18

Cost Department

H. S. Neal, Lawrence, Kan., Chairman. D. S. Gilmore, Colorado Springs, Colo., Secretary.

The session was called to order at 1:30 p. m. by Chairman Neal, who made introductory remarks as to the cost system covering points of value and methods. In the absence of E. E. Sheasgreen, Chicago, secretary of the Ben Franklin Club of America, Past President B. B. Herbert, of Chicago, read his paper on "Cost System and Efficiency" (see page 469, July issue) — prefacing the reading with regrets as to the necessary absence of Mr. Sheasgreen, who is accustomed to illustrate his addresses with lantern slides that add much to the interest. He remarked in a general way on the value of the paper and the necessity of the cost system to honest dealing with one's self and one's customers, calling attention to the necessity and value of the system, advocated in the paper, of reducing all cost to the hour basis.

The paper, he said, might be deemed slightly metaphysical, but it was founded on sound philosophy, and such treatment of the subject showed the soundness of the principles enunciated and gave a clearness of view and understanding that could not well be reached in any other way.

The paper was well received and upon the conclusion of the reading Chairman Neal declared the paper most excellent and advised its careful reading and study.

Charles J. Brown, of the Commercial-Headlight, Horton, Kan., delivered his address on "Country Newspaper Costs," and Secretary D. S. Gilmore, of Colorado Springs, followed with a very entertaining and instructive talk, giving the results in his office of the introduction of the Standard Cost Finding System, illustrating his remarks with blanks and practical incidents.

It was brought out how leaks had been found; unprofitable jobs had been discovered, and the business saved from loss and disaster and made profitable where, under the old methods, ruin in a few years would have been inevitable. The discussion became most animated and instructive.

Frank Barhydt, of the American Type Founders Company, of Kansas City, Mo., read his thoughtful and valuable paper on "Cost Finding as a Credit Asset" (see page 499, July issue).

Another excellent paper submitted was on "What Organization and Co-operation Should Do for the Printer," by C. D. Traphagen, Lincoln, Neb. (see page 481), July issue).

The Committee on Constitution and By-Laws, submitted and distributed among the members, in printed form, the proposed amendments. The blanks showing the cost of production, with the forms for every department, were presented and explained by Mr. Gilmore, affording a most pleasing and profitable object lesson. These blanks are readily obtainable, and hence are not given here.

The job ticket, to which the entries from the blanks in the different departments were carried, showed the following entries as to the job — aside from the date and the name of the customer and by whom ordered:

Quantity and description — 150 slips, amendments.
Trimmed — 4½ in. wide by 6¾ in. high.
Scrap — Book — White.
Ink — Black.
Delivery — To desk of convention.

Stock	$0.25
Linotype, .35 hour at $1.78	.62
Hand Comp., .15 hour at $1.26	.19
Platen press, .20, platen feeder, .15; .35 at $0.73	.26
Bindery C, .5 hour at $0.38	.02
Stock clerk, .10 hour at $0.90	.09
	$1.43
Profit	.32
Charge to customer	$1.75

THURSDAY, JUNE 19 — FORENOON SESSION

The educational department was opened by President Moffett. On motion, Mr. Moffett was declared the chairman of the session. Mr. E. R. Purcell, of Broken Bow, Neb., was on motion elected secretary of the session.

Mr. George Hough Perry, an advertising specialist of New York, who is at present spending his time in San Francisco as director of the division of exploitation of the Panama-Pacific Exposition, was programmed to speak on the subject, "What Newspapers Can Do." He preferred however, to tear up the speech he had prepared on that subject and talk informally on a matter which he said he considered of greater present interest.

Mr. Perry then proceeded to wake up the meeting with an array of figures which seemed to come as a surprise to most of his hearers, although he said they were as important to them as the figures of their own bankbooks.

"Four-fifths of the population of the United States," said Mr. Perry, "live on farms or in towns of less than 25,000. This population produces about three-quarters of the wealth of the country and buys four-fifths of its products. It is, therefore, overwhelmingly the most important class for the advertiser and manufacturer to reach, and yet it stands today as the class that is the most difficult and most costly to reach effectively by advertising.

"The natural and logical way to reach it is through the local papers — the small-town papers represented by the men and women sitting here. Yet advertisers are using the magazines to reach it. I have no complaint to make of the magazines; they have their field and it is important and vast, but I can show that the same persons can be reached by local papers at about one-third the cost of reaching them by magazines, and without the tremendous waste necessarily involved in broad, magazine circulation.

"If I wish to reach the population of the small towns, I can do it at a cost of about seven cents per inch per thousand in such a magazine as the Woman's World or Ladies' Home Journal. But in using these, I must also lose that part of their circulation that goes into the bigger towns which I do not wish to reach.

I can reach the same persons through their local papers at about two cents per inch per thousand — one-third the cost, and I have the immense advantage in addition of concentrated circulation exactly where I want it and the power to take one section or one state at a time and make my advertising following the distribution of my goods."

The reasons why advertisers were not taking advantage of this situation were stated by Mr. Perry to be chiefly two: first, the physical difficulty in sending copy or plate matter to thousands of newspapers; second, the difficulty in arriving at satisfactory and reliable rates. But beyond these there was a psychological aspect which must be regarded. The magazine advertisement was certainly more effective than newspaper advertisement because the readers of magazines had learned to trust magazine advertising, and that no such faith in newspaper advertising existed.

Mr. Perry, therefore, made the appeal that the local newspapers of circulations up to 10,000 unite in forming a central advertising agency, with which advertisers could deal. Such an agency should be empowered to fix rates justly based on circulation and character and should further be empowered to "censor" advertising sent to it, throwing out all misleading or fraudulent matter. Thus the public would learn to have faith in what it read, to the benefit of public, newspapers and advertisers alike.

After finishing with this subject, Mr. Perry begged the indulgence of his audience while he said something about the matter now nearest his heart — the Panama-Pacific Exposition. His description of the plans, purposes, high ideals and of the beauty and interest of the Exposition were warmly applauded.

After Mr. Perry had taken his seat the members began to ask him questions which proved the interest taken in his remarks. Some doubt was expressed as to his ability to buy small-town newspaper space at the rate he had quoted — 2c per inch per thousand. Mr. Perry responded by saying that he had been doing it for many years and that as long as the newspapers were willing to part with space at that price he saw no reason for paying more, even though he admitted that it was, in general, worth more. Other speakers admitted that his contention was probably correct. "Your central bureau," said Mr. Perry, "will settle all that rate question." In answer to a question, he replied that of course the advertising rates mentioned were for ads furnished in plates ready for printing.

Mr. Perry's talk on advertising brought out excellent discussion by members of the Association, among those who spoke being Miss Huling of Chicago, J. B. Cain of Kansas, H. W. Shepherd of Oklahoma, Messrs. Hotaling of Minnesota, and R. E. Dowdell of South Dakota, Mr. Papes of Kansas, and Mr. Edgecombe of Nebraska.

Fred R. Marvin, of Pueblo, delivered an excellent address on "Accuracy in Newspapers." He was followed by Mr. Scribner, of Pueblo, who addressed the meeting relative to the trip to Pueblo during the coming afternoon.

The Chairman announced that Mr. Thorpe and Mr. Cobb on the program were not present at this session, and also that Judge Smith McPherson was unable to attend but had sent his address to be read to the association. It was moved and carried that owing to the press of business the reading be dispensed with, as the members could all have the opportunity of reading this excellent address in the National Printer-Journalist, on the "Liberty of the Press" (see page ..., August Printer-Journalist).

Chairman E. L. Peterson of the Auditing Committee submitted the following report, which on motion was adopted, as **follows:**

Report of Auditing Committee

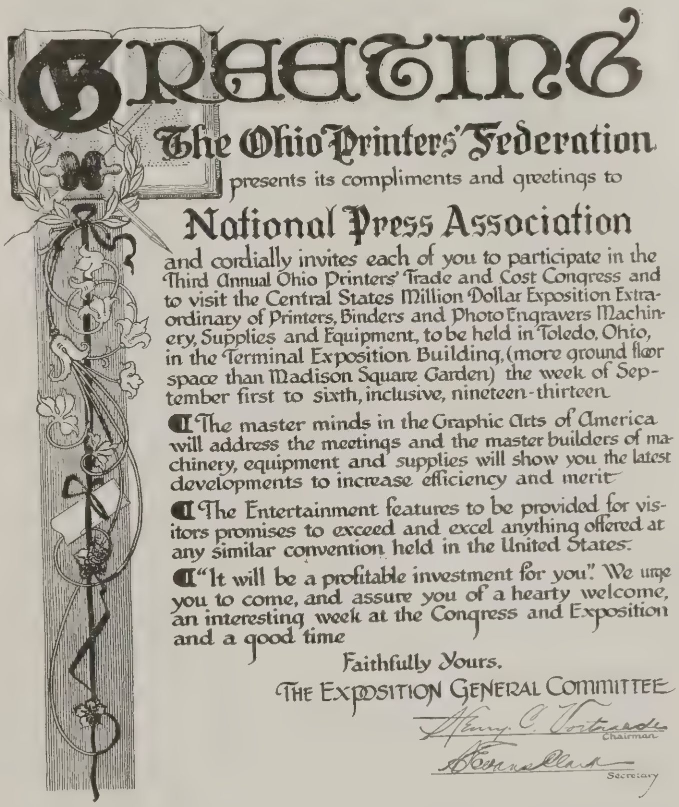
Cash on hand and received at 1913 meeting—

Checks	$166.00	
Cash	435.00	
Treasurer's check	314.37	
	$915.37	$915.37
Expenditures of every kind, including salary account		$797.34
Balance on hand		$118.03

We, the undersigned, members of the auditing committee, have checked the secretary's and treasurer's accounts and find them correct.

E. L. PETERSON, Chairman,
FRANK RODERUS,
EDW. U. FOX,
Auditing Committee.

The Secretary then read several letters and telegrams, among them being a letter from Past President Tozier and telegrams from Past Presidents A. Nevin Pomeroy, Pennsylvania, and John Dymond, Louisiana, also Charles Dillon on the program, Manhattan, Kan., expressing regrets at not being able to attend this convention.



Greeting

The Ohio Printers' Federation presents its compliments and greetings to

National Press Association

and cordially invites each of you to participate in the Third Annual Ohio Printers' Trade and Cost Congress and to visit the Central States Million Dollar Exposition Extraordinary of Printers, Binders and Photo Engravers Machinery, Supplies and Equipment, to be held in Toledo, Ohio, in the Terminal Exposition Building, (more ground floor space than Madison Square Garden) the week of September first to sixth, inclusive, nineteen-thirteen.

¶ The master minds in the Graphic Arts of America will address the meetings and the master builders of machinery, equipment and supplies will show you the latest developments to increase efficiency and merit.

¶ The Entertainment features to be provided for visitors promises to exceed and excel anything offered at any similar convention held in the United States.

¶ "It will be a profitable investment for you." We urge you to come, and assure you of a hearty welcome, an interesting week at the Congress and Exposition and a good time

Faithfully Yours.

The Exposition General Committee

Henry C. Vortriede
Chairman

Secretary

A Model Announcement

The following night telegram was also received, but went without action:

New York, June 18.

A. D. Moffett, President National Press Association,
Colorado Springs, Co.

Please announce to your association that National Conservation Congress will meet in Washington November 18, 19 and 20. I extend a hearty invitation to each member of the National Press Association to be present and assit the good cause through his paper.

CHAS. LATHROP,
President National Conservation Congress.

Mr. G. E. Hosmer of Colorado spoke on the proposition of government printing of envelopes, and at the close of his remarks made the following motion, which was adopted:

"Moved, that before the meeting adjourns today, the president appoint a committee of five to confer with the United Typothetae of America, the Envelope Manufacturers' Association, and others, relative to the prevention of a renewal by the Postoffice Department of its present contract relating to the furnishing of printed envelopes to large concerns."

On motion of Mr. B. B. Herbert of Chicago, the Memorial Committee was given time to prepare a report, said report to be published with the official proceedings. Mr. Herbert also asked that the members stand as a silent token in honor of the departed ones. The suggestion was carried out, all present rising and standing with bowed heads in silence until seated by a slight rap of the President's gavel.

Mr. A. Emin of New York, correspondent of a Constantinople paper, addressed the convention, and on suggestion of members he was asked to give his paper to Mr. Herbert for publication in the National Printer-Journalist.

Mr. Emin said in substance:

"Mr. President, Ladies and Gentlemen: I felt very homesick this spring. America is certainly an interesting place to live in. Still, I wanted to go home. I have been taking some courses in the Pulitzer School of Journalism. Dr. T. Talcott Williams, the director of the school, is quite a countryman of mine. He was born in Turkey and lived there for sixteen years. I wanted to get his opinion about my home trip. He was strongly against the idea, and urged me to spend my time studying conditions and people in this country, particularly in the Western States. He told me further that there was an opportunity to see the West under excellent auspices, and, at the same time, to come in contact with a large number of the exponents of American public opinion, belonging to various parts of the country. I was glad to seize upon the opportunity, and so I am here now, having a most interesting time.

Things which interest me so much among you, are small matters, of course, to you. In view of your common interests and common problems, it is very natural for you to come together every year, to discuss your problems, to exchange your experiences, to strengthen your sense of fellowship, and to form a deeper collective consciousness.

Well, these matters, especially the spirit in which they are done, are not matters, of course, for me. I admire you, and I envy you for the sake of the Turkish press, which has not been able, in its five years of liberty, in spite of repeated efforts, to form any organization, and any scheme of co-operation, worth mentioning.

"Moreover, it is not only the professional side of your activity I have to admire.

"You know, people have deeply-rooted popular notions of others. You imagine the Turks as blood-thirsty barbarians, who take some glasses of blood for their breakfast, who have a "harem" of innumerable women, and who have the most enviable or the most detestable life. I found that people in this country do not agree in opinion about this last point.

"Well, we have our popular notion of the Americans, too. We think in Turkey that they are the most solemn and serious fellows you can ever imagine. That they have no other purpose of life than to be eccentric and original in some way or other, that they never laugh, rarely speak, and hate to be sociable.

"I must confess that my life in New York, which amounts to more than two years, could not wholly dissipate this notion about the Americans. But, in the few days which I have spent among you, I gained the conviction that Americans are the most sociable and amiable gentlemen you can ever meet, and that they have a remarkable spirit of good fellowship which is the main secret of their success in life. I thank you for giving me this opportunity for seeing closely some very interesting phases of American life. I will certainly never forget the days I am having the privilege of passing with you."

Mr. Emin, now of the Pulitzer School of Journalism and a member of the New York delegation, is a resident of Constantinople, Turkey, where he was part owner of and an editorial writer on the Yeni Gazette and is now a correspondent of the Ikdam, another publication of Constantinople. He has only been in this country a little over two years and has been kept away from his own land partly by reason of the prominent part he had taken in political affairs, though he has longed to return.

The Committee upon Constitution and By-Laws submitted its printed report covering changes of Article 1, of the Constitution, Article 4, Section 5 and Section 6, of the Constitution and Article 3 of the By-Laws.

This report was considered section by section and as each section was read by the Secretary it was adopted as read without change; the entire report was then on motion of the Convention adopted as a whole as follows:

CONSTITUTION

Article I.

The name of this Association shall be the National Editorial Association of America.

Article IV.

Section 5. The National Council shall be composed of the President, Vice-President, Secretary and Treasurer, all Past Presidents of the National Editorial Association of the United States, all Past Presidents of the National Press Association of the United States, and one member from each Association or Club represented in this Association, to be chosen at the annual National Association meeting.

Section 6. The Executive Committee shall consist of the President, Vice-President, Secretary, and Treasurer, and six members to be elected at the annual meeting of the Association.

BY-LAWS

Article 3. Votes.— All active members in good convention standing shall be entitled to attend and participate in the annual meetings of the Association. Voting shall be in person or by proxy in writing, provided no State shall cast a total vote to exceed one-twenty-fifth of the total number of newspapers published in said State, or major fraction thereof, as shown by the official newspaper directory for the current year.

The President then asked the delegates from the affiliating associations of the different states to name the National Council selected from those states. The following were thus named:

List of Names of the National Council Handed in From the Various States

Colorado — Pueblo Press Club: Frank S. Hoag, Star-Journal, Pueblo. Arkansas Valley Press Association: Guy U. Hardy, Daily Record, Canon City. North Eastern Colorado Editorial Association: D. P. Saunders, Republican, Brush. Colorado Editorial Association: G. E. Hosmer, Herald, Fort Morgan. Democratic Editorial Association: Walter Walker, Daily Sentinel, Grand Junction. Republican Editorial Association: Alva A. Swain, Chieftain, Pueblo. (Denver office, 409 E. & C. Bldg.) Denver Press Club: Lute Wilcox, Field and Farm, Denver. Denver Woman's Press Club: Kate Russell, Denver, care Oriele Apartments.

Illinois — Illinois Press Association: Charles Bradshaw, Carrollton. Military Tract Association: Charles Coulson, La Harpe. Republican Editorial Association: W. L. Jones, Lebanon. Democratic Editorial Association: J. M. Rapp, Fairfield. Southern Illinois Editorial Association: E. H. Childress, Fairfield. Illinois Woman's Press Association: Miss Caroline Huling, Chicago. Interurban Press Club: W. B. Goodrich, Mt. Vernon. Chicago Press Club: Edward H. Fox, Chicago. Illinois Daily Newspaper Association: V. E. Joy, Centralia.

Indiana — Democratic Representative: Ben F. McKey, Lebanon. Republican Representative: W. H. Craig, Republican, Noblesville. Northern Indiana Representative: W. A. Woodring, Peru. Southern Indiana Representative: W. W. Aiken, Star, Franklin. Associated Weeklies: A. C. Hutchinson, Herald, Cayuga. Progressives Editorial Association: Charles H. Neff, Herald, Anderson. Woman's Press Club: Mrs. A. D. Moffett, Elwood.

Iowa — Upper Des Moines Association: J. B. Hungerford, Herald, Carroll. Des Moines Press Club: Claude Jarnagin.

Kansas — Kansas Editorial Association: J. Byron Cain, Belle Plaine. Kansas Democratic Editorial Association: Mack P. Cretcher, Pantagraph, Sedgwick. Southwest Kansas Republican Editorial Association: William Glenn, Republican, Tribune. First District Editorial Association: Moses W. Porter, Sentinel, Hoyt. Inter-State Editorial Association: S. P. Gebhart, Union, Pratt. Fourth District Editorial Association: O. W. Little, Enterprise, Alma.

Nebraska — Nebraska Press Association: E. R. Purcell, Chief, Broken Bow.

North Dakota — North Dakota Press Association: E. L. Peterson, Milton.

South Dakota — South Dakota Press Association: W. C. Lusk, Press and Dakotian, Yankton. League of American Pen Women: Mrs. L. R. Eastwood, Watertown.

Minnesota — State Association: H. C. Hotaling, Mapleton. North Star Daily Association: C. E. Wise, Mankato. Home Print Association: Philip Leisch, New Ulm. First Congressional District: Emil Leicht, Winona. Second Congressional District: Herman Haislet, Butterfield. Seventh Congressional District: B. J. Bjornson, Minneapolis. Ninth Congressional District, Charles Stevens, Warren.

Tennessee — Tennessee Press Association: John R. Rison, Paris. Upper Cumberland Press Association: Edward Albright, News, Gallatin.

Texas — Texas Press Association: Lee J. Roundtree, Commercial, Georgetown. Northeast District Press Association: H. P. Nelson, Greenville. Northwest District Press Association: W. A. Johnson, Herald, Memphis.

Utah — Utah Press Association: I. E. Diehl, Record, Robinson.

Oklahoma — Oklahoma Press Association: T. F. Hensley, El Reno. Republican Press Association: J. B. Campbell, Waukomis. Democratic Press Association: H. W. Shepherd, Altus. Oklahoma Advertising Club: Albelt Herskowitz, Oklahoma City.

It was moved and carried that organizations not represented in this convention be notified to name a member of the Council and report to the Secretary of the Association, and that said secretary notify them of same.

The election of officers was then called for, and the following were then elected members of the Executive Committee:

W. E. Collins, of New York.
Lee J. Rountree, of Texas.
H. C. Hotaling, of Minnesota,
Frank Roderus, of Illinois,
F. O. Edgecombe, of Nebraska.
E. H. Tomlinson, of New Jersey.

W. E. Collins, of New York, placed in nomination for President, J. Clyde Oswald, of New York City.

Past President B. B. Herbert, of Chicago, said that he claimed the honor and privilege of seconding the nomination and spoke briefly of Mr. Oswald as a true, clean man of ability who had won success and enviable reputation as an organizer and faithful worker for this and all other associations with which he was connected. He will make a worthy, working, successful executive. Upon motion nominations were closed, the rules suspended and Mr. Oswald was elected by unanimous vote.

John Clyde Oswald, American Printer, New York.
President-elect National Press Association

The following were then elected. The election in each case being unaimous:

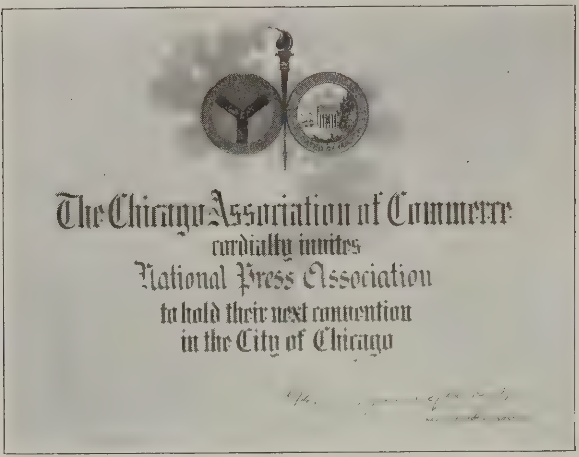
Vice-President, George E. Hosmer, Colorado.
Secretary, George Schlosser, South Dakota,
Treasurer, W. R. Hodges, Minnesota.

Secretary Schlosser then read invitations from a number of cities asking for the next meeting of the Association as follows: Richmond, Va.; Chicago, Ill.; Put-in-Bay and Toledo, Ohio; New Orleans, La.; Houston, Texas; Hamburg-Americaan Line, for cruise to the West Indies and Caribbean Ports of Central and South America; New York.

C. A. Nevin, of Nebraska, was appointed by President Moffett as member of the Auditing Committee for the period of three years.

It was moved that all invitations from cities asking for next annual meeting be referred to the next meeting of the National Council. Carried.

It was moved and carried that on the conclusion of this meeting a recess be taken and that this convention does not adjourn until evening.



The Chicago Association of Commerce
cordially invites
National Press Association
to hold their next convention
in the City of Chicago

Chicago's Invitation

Report of Resolutions Committee

To the National Editorial Association:

Your Committee on Resolutions respectfully submits the following report:

After listening to the magnificent addresses and participating in the pleasant associations, your committee wishes to state that the twenty-eighth annual convention of the National Editorial Association has been one of the best and most profitable of any in the history of the association. The program has been especially strong, the discussions interesting and the attendance at the sessions good.

Whereas, There are many cities, clubs and individuals who have bent every energy towards our pleasure and entertainment, and there are a few matters of importance affecting the organization; therefore be it

Resolved, That it is the wish of this association that the courtesies and display of good fellowship be and are hereby recognized.

That we wish to thank the good people of Omaha, Neb., for the splendid reception given us in that place.

That the thanks of the association be extended the Auto Club and Business Men's League of Belleville, Kan., for the automobile ride over that beautiful city and the most excellent luncheon afforded us. Especially do we wish to note the music for the occasion furnished by the orchestra of that city, which was exceptionally fine. So capable a musical organization is seldom found in a city of the size of Belleville. Also do we especially wish to call particular attention to the faultless service by the young ladies at the luncheon, which in itself was lovely and everything to be desired.

Resolved, further, that the many favors extended to us while in Colorado be noticed in particular. The Colorado Editorial Association, through its members, especially Alva A. Swain, secretary, and George E. Hosmer, executive committeeman, for the attention afforded us while guests in their state.

The Colorado Chamber of Commerce, for its faithful performance of the duties of master of ceremonies and the furnishing us of a place in which to hold the daily sessions. Especially do we wish to thank at this time A. W. Henderson, the efficient secretary, for his untiring efforts in seeing that we received everything that was coming to us.

The Colorado Springs and Interurban Railway Company, for the special trains run for our benefit.

The Union Printers' Home for the excellent luncheon served and the courtesies extended in showing us over the grounds and through the buildings of that most excellent institution. Mr. Charles Deacon will always have a warm welcome in our hearts for his kind treatment and generous hospitality.

The leading dailies of Colorado Springs, the Gazette and Telegraph, for the unique entertainment given us and the very liberal luncheon which followed. We are not unmindful of the splendid music furnished by the Colorado Springs band.

The following companies for the part they took in entertaining the National Editorial Association and furnishing refreshments:

The Manitou Hot Iron Club.
Manitou Mineral Springs Company.
The Manitou Cliff Dwellings Company.
The Ute Chief Mineral Springs Water Company.
The Cave of the Winds Company.
South Cheyenne Canon and Seven Falls Development Company.
Cheyenne Canon Burro and Carriage Company.
The Crystal Park Auto Company.
The Mount Manitou Scenic Incline Railway Company.

We would not fail to remember the excellent entertainment furnished us by the good people of Pueblo after such a fine auto ride over the city. And we wish to thank the Pueblo Commerce Club and the Pueblo Press Club for the prominent part each took in seeing to it that our stay in the "Pittsburgh of the West" was most pleasant. None the less prominent in the list of entertainers in that excellent city is the Minnequa Club, whose doors were thrown open for our benefit. To the Pueblo Star-Journal and the Pueblo Chieftain much credit is due for making our visit to Pueblo the success it was.

The association will not soon erase from memory the trip to Cripple Creek over the famous scenic route, the Cripple Creek Short Line Railway, nor will they forget the splendid entertainment while in that city, much of which is due the Cripple Creek District Press Club. The El Paso Consolidated Mining Company, for throwing open their mine and enabling a great many of the party to visit the subterranean passageways of their mine, an entirely new experience for a large number of the party.

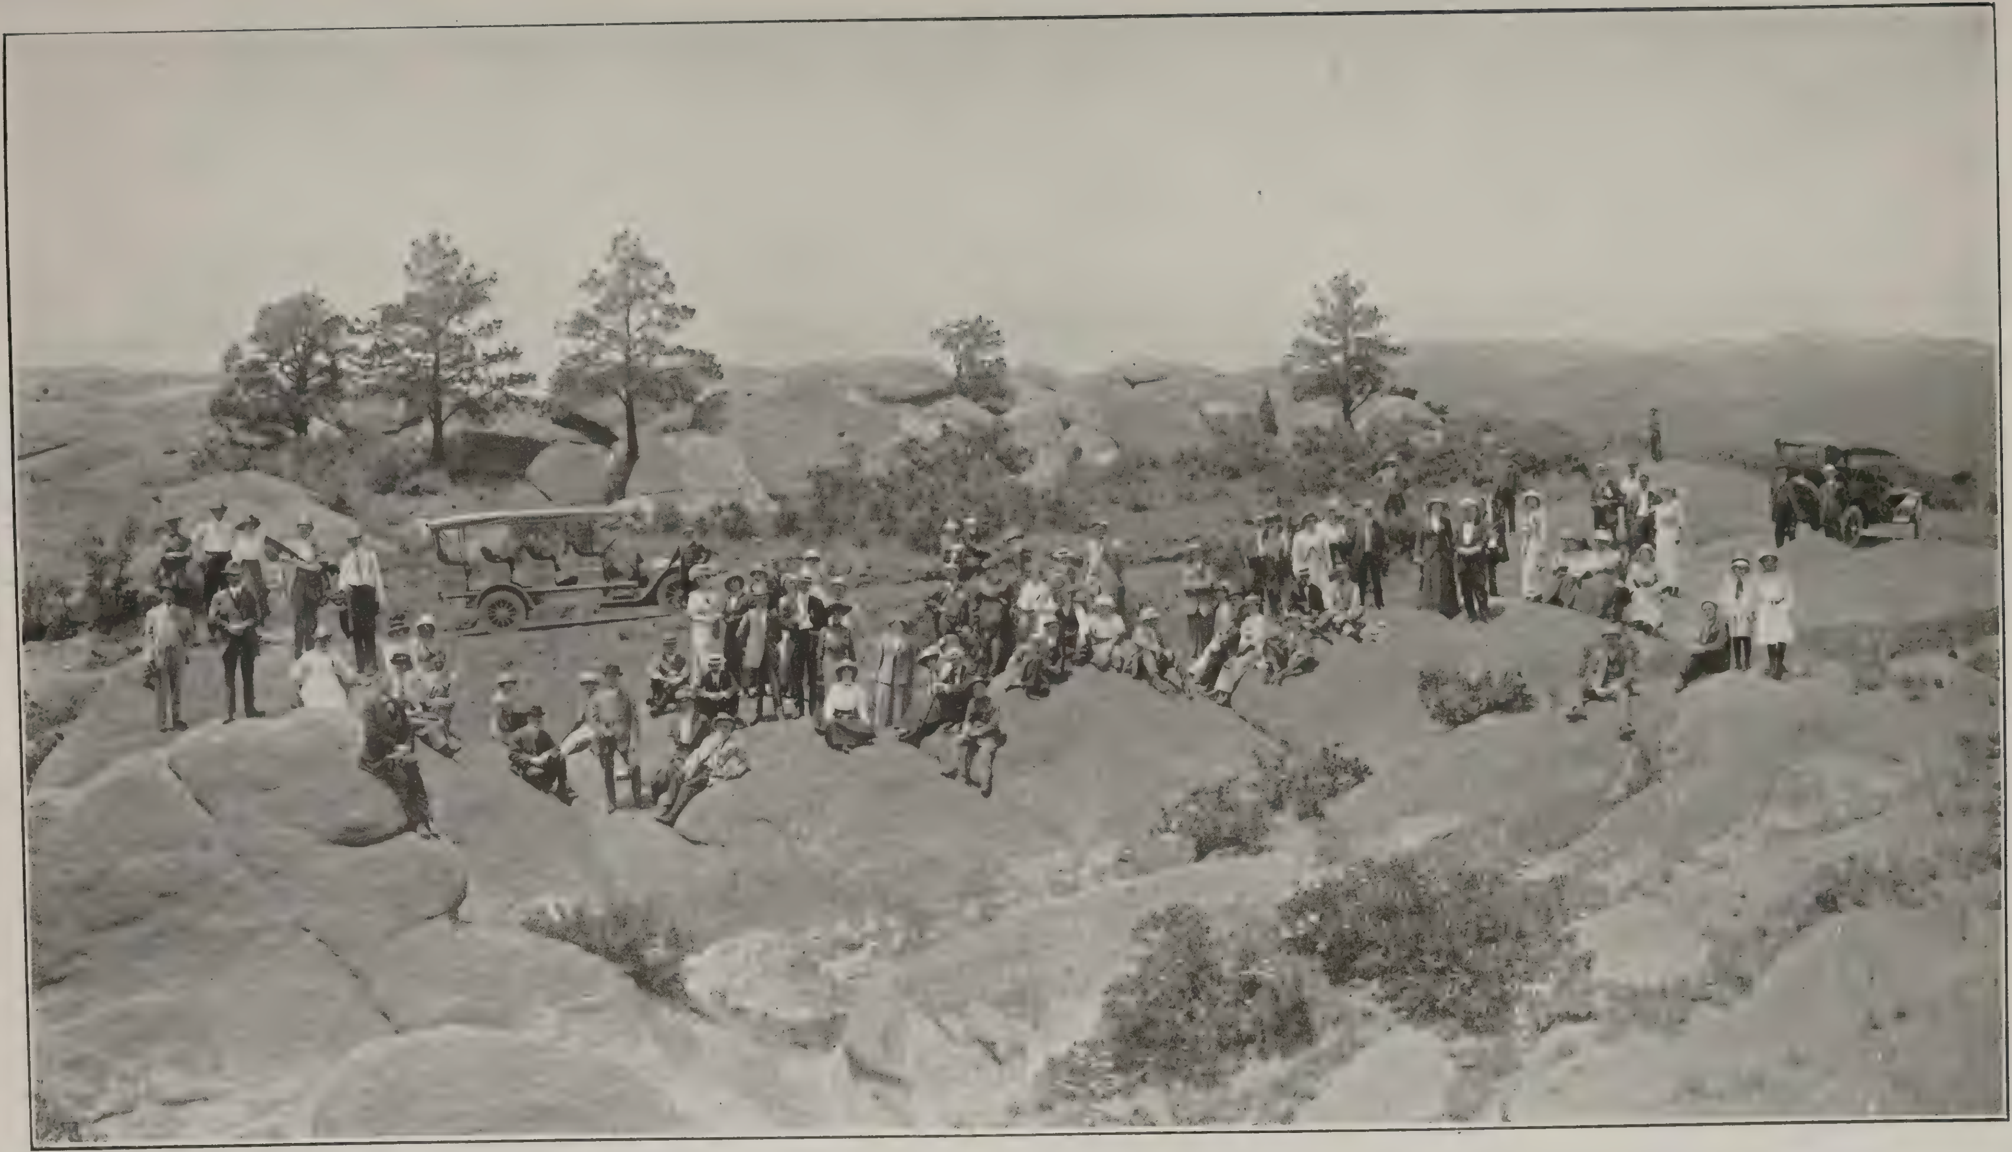
Our stay in Denver was of the most pleasant, and we feel deeply grateful to the following for the splendid entertainment there provided:

The Denver Press Club.
The Denver Motor Club.
The Denver Woman's Press Club.
The Denver Chamber of Commerce.
The City and County of Denver, publicity department.
The Albany Hotel.
Mrs. William Byers.
The Denver Omnibus and Cab Company.

And we are not forgetful of the most excellent banquet given us by the Supreme Court Judges, the Governor of Colorado and other state officials.

At Boulder we enjoyed a brief stay during which time a splendid opportunity was afforded in seeing the city from autos furnished by the good citizens of that city. We feel deeply grateful to the Boulder Commercial Association, the Boulder City Council and the Boulder Herald, Boulder Camera and Boulder County Miner.

Our visit to Greeley was noted for the warmth of the hospitality shown during our altogether too brief stay within its confines. Much credit is due to the Greeley Tribune-Republican, the City Council, the Greeley Com-



ON HIGH ROAD IN GARDEN OF THE GODS, COLORADO

Circuit Photo by A. J. Harlam, Colorado Springs, Colo. Size 9 x 26 inches. Price $1.00

mercial Club and the County Commissioners of Weld County.

We were shown many courtesies by the good people of Fort Collins. Our thanks go out to:

The Fort Collins City Council.
The Fort Collins Express Company.
The Fort Collins Courier.
The Fort Collins Review.
The Empress Theater.

The Colorado State Agricultural College, where we enjoyed such a fine outdoor dinner, and the good people of Fort Collins for their generous hospitality.

Those of us who took the Estes Park trip have cause to rejoice that this wonderfully fine outing was placed in our itinerary. It was the crowning event of a two weeks' enjoyable stay in America's great playground. The Stanley Hotel at Estes Park has the thanks of the party for their splendid treatment while guests at this splendid hotel.

It was while at this hotel the following resolutions were passed unanimously with the request that they find place in the committee's report:

"We, the members of the National Editorial Association, desire to express to George E. Hosmer, of Colorado, our sincere appreciation for his untiring efforts in making our visit in Colorado one of extreme pleasure.

"We realize that it is due to his splendid executive ability as well as his desire to add to our comfort and pleasure that has made possible the excellent arrangement of the details of the trip.

"His ever present activity for our welfare has been manifested on every trip by special train and auto and in every city where we have been so generously entertained.

"We will carry home with us kind recollections of Mr. Hosmer and fond memories of our trip, and we desire through him to convey to the press of Colorado, whose special representative Mr. Hosmer has been, our heartiest appreciation for the splendid entertainment accorded us and the many attentions shown while in your state.

"Mr. Hosmer and the people of the state have made good in every promise made to the officers of the association."

Resolved, by the National Editorial Association of America that we are unalterably opposed to the United States Government making any further contracts with private concerns to print envelopes and sell them over the country, as we believe that the proposition is contrary to business principles and a loss to the taxpayers, and urge our committee to oppose, in behalf of the association, any other contracts for printing envelopes.

Resolved, That we tender our thanks to Father Herbert for his untiring labors for the National Editorial Association and for the benefits derived through the National Printer-Journalist, in which for nearly thirty years we have had unlimited space in the promotion of the interests of this organization.

J. BYRON CAIN, Kansas.
JOHN R. RICON, Tennessee.
GEORGE ROUNTREE, Texas.
H. R. MOFFETT, Illinois.
W. B. COLLINS, New York.
R. E. DOWDELL, South Dakota.
J. CLYDE OSWALD, New York.
GUY U. HARDY, Colorado.
MRS. MATE PALMER, Illinois.
Committee.

The Business Session reconvened at Pueblo, Thursday evening, and was called to order by President Moffett.

E. R. Purcell, Chairman of the Committee appointed on Foreign Advertising Bureau, submitted the following report, which was, on motion, adopted:

"We, your Committee, to whom was referred the suggestions embraced in the President's Report relative to the formation of a Foreign Advertising Bureau within this association, beg leave to submit the following report:

"We recommend the appointment of a committee of five members whose duty it shall be to investigate this matter thoroughly, to correspond with the various states and district press associations of this country and from the material thus required formulate a report to be submitted to the next meeting of the National Editorial Association that will embody a plan for the formation of such a bureau.

"Respectfully submitted,
"E. R. Purcell, Broken Bow, Neb.
"Horace W. Shepard, Altus, Okla.
"H. C. Hotaling, Minnesota,
"C. E. Curtice, Missouri,
"John Clyde Oswald, New York."

By unanimous consent President Moffett appointed the following Committee authorized by the report: E. R. Purcell, Nebraska, chairman; H. C. Hotaling, Minnesota; John R. Rison, Tennessee; C. E. Curtice, Missouri; W. A. Woodring, Indiana.

R. E. Dowdell of South Dakota, submitted the following amendment of the By-Laws, which was on motion adopted by unanimous vote:

On Thirty Miles Auto Ride Up the Mountains in Crystal Park
Courtesy E. H. Fox, Chicago

Article 3 — Basis of Representation: Each Association or Club shall be entitled to one vote and one additional for every twenty-five members or major fraction thereof; provided, however, that the number of votes cast by any association or club shall not exceed in number the number of delegates representing such club or association who have paid their annual dues and convention fee as shown by the treasurer's books. The delegates present shall cast the votes for their Association or Club and no proxies shall be voted.

President Moffett than announced the appointment of the following committee:

Postal Laws Committee — G. E. Hosmer, chairman, Denver, Colo.; Sheridan Ploughe, Hutchinson, Kan.; Lee J. Rountree, Georgetown, Tex.; L. C. Cramton, Lapeer, Mich.; A. D. Moffett, Elwood, Ind.

An enthusiastic vote of thanks was given to the Commercial Club and Citizens of Pueblo for the royal entertainment furnished; after which the Convention adjourned.

The Journeyings of the National Editorial Association, 1913

IT is a matter of regret, on account of the real instruction, as well as the intelligent pleasures connected therewith, that space permits only giving the briefest outline of the towns visited and entertainment provided.

Travel on the splendid train of the Rock Island road, under the careful supervision of Traveling Passenger Agent Macfarlan, was a joy from the start. Never was there a finer train of palace sleepers, with all the additions and modern improvements, including diner, reading room and observation car, sent out of Chicago than that carrying the editors to the twenty-eighth annual convention.

The party was largely augmented at Omaha, and the stop in that city will ever be remembered as one of the interesting features of the memorable trip. The editors were met at the station — reached at about 10:30 a. m. — by citizens with commodious automobiles and taken over the tornado-devasted district and through the parks. The pleasant part was that then nearly all wreckage of the storm had been made to disappear; new roofs; new buildings, repairs and restorations made the portion of the city in the track of the storm appear, with the exception of a few of the larger brick buildings, more like a new than a despoiled city.

Dinner to National Editorial Association at Belleville, Kan.

It was our good fortune to occupy an automobile in company with E. V. Parish, manager Bureau of Publicity and Promotion, and J. M. Guild, commissioner, of the Commercial Club of Omaha, gentlemen especially equipped with actual experience and knowledge, to tell, most graphically and intelligently, of the great havoc that had been wrought by the storm, and of the greater work of relief and restoration that had been accomplished by the citizens. The incidents of suffering and calamity and of heroic, benevolent work were dramatically pathetic, and the lessons from what was accomplished by the business men — many of those in charge of the largest establishments leaving their own affairs for weeks and camping on the grounds or in the rescue headquarters — through perfected system, industry and thorough, intelligent organization, were both instructive and inspiring. Every sufferer by the storm was card indexed, with a statement of the losses, injuries and needs, and the work went forward without waste, omission or delay.

The park system of Omaha is one of the most perfect and extensive of any city of its size in the United States. In topography and location the parks are all that could be desired. Nature had done much, the natural beauties, in many instances, have only needed to be preserved and made more accessible by roads and walks. The editors voted Omaha a great city, with a model citizenship that fully justified and accounted for that greatness.

By reason of the beauties of the rich region passed through on that day of June, as well as of the congenial companionship and comfort of the train, the run from Omaha to Belleville, Kansas, was filled with delights, but no other pleasures were equal to the reception accorded the party at the beautiful little city of Belleville, "sweetest village of the plain" on the "Rock Island Highway."

It was six o'clock p. m., and automobiles, furnished by the enterprising citizens, were in waiting at the station, and the members of the party, who had been met at Fairbury and badged by a reception committee, were conveyed through the main streets to the hall of the I. O. O. F., where a most perfect banquet, provided by the ladies of the churches of the city, through their auxiliary committees, was in waiting.

A. Q. Miller, editor of the Belleville Telescope, who was usefully active in making the editors at home, only quoted the expressions and opinions of the members of the party when he wrote in his paper of the splendid table arrangements, the superb and unique decorations of wild flowers, the faultless and inspiring music of the orchestra and of the sweetness and beauty of the thirty-two bright and graceful young ladies of Belleville who waited on the tables and convinced the newspaper folk that no other city could claim greater intelligence and charm for her daughters, evidence of the high character of the homes, of the schools and of the people. The "belles" of Belleville will not soon be forgotten.

General View of Ancient Cliff Dwellings and Taos Indian Pueblo in Phanton Cliff Canon at Manitou, Colo.

The banquet was preceded by a welcoming address by the mayor, Dr. William Kamp, and an invocation by Rev. U. S. Brown of the M. E. church, and followed by short addresses by a number of the editors, commending the hosts, their city and its press, as well as the loyalty and service that characterize the newspapers of the whole state.

Then there was a short drive to view the pleasant homes and beautiful grounds and a return to the station, and then on again for Colorado Springs, which was reached early in the morning. An agent of the hotels had boarded the train and rooms were assigned to each, so that there was little delay, and it was found possible to open the first session of the convention at 10:30 a. m. Tuesday.

The first function at Colorado Springs was a drive for the ladies at 1:30 p. m. through North Canon. A combination of a picture show of Colorado's enchanting scenery and a vaudeville show and musical by the best local talent, in the evening, followed by a banquet on the spacious grounds of the Antler Hotel, given to the visitors by the Colorado Springs Gazette and Evening Telegraph, aided by W. S. Dunning of the hotel. Both occasions were highly enjoyable, but beyond the possibility of adequate description.

Wednesday afternoon there was a visit to the Union Printers' Home and inspection of the buildings, followed by a banquet and speeches by representatives of the Home and of the association. The editors were brought to a full realization of the work being accomplished at the Home and of the other benevolent plans and work brought into existence through the influence of this great institution, built and maintained by monthly contributions from every member of the Typographical Union.

To our way of thinking, this co-operative benevolence has had a benign influence in many ways on the unions and their members throughout America. The Home has cost a million and five hundred thousand dollars in investment and maintenance. The architecture, equipment, arrangement and the location are all that could be desired as to beauty, healthfulness and the inspiring grandeur of the surrounding scenery. The visit was a great and enjoyable occasion that proved beneficially instructive. A photograph was obtained here of the Home and the whole party, but, unfortunately, only the central part could be satisfactorily reproduced in half-tone.

Pueblo Indians from New Mexico at the Taos Indian Pueblo in Phantom Canon at Manitou, Colo.

At three o'clock Thursday afternoon the party was

GOING DOWN THE FACE OF MANITOU MOUNTAIN, COLORADO, ON INCLINE RAILWAY

Run by Electricity at an Angle of from 45 to 75 degrees conveyed by train to Pueblo, the prosperous, enterprising "Pittsburgh of the West." The members were met at the station with automobiles by citizens who acted as most entertaining guides. The beauties and growth of the city were admired; the splendid hospital of the steel company was visited, and this visit inspired Past President Dowdell to make a most eloquent speech at the banquet, following later, in which he praised the great, wise and benevolent provision for working men, and enforced the duty, beauty and grandeur of man's care of and love for fellowmen.

There was a splendid repast at the country club, followed by most inspiring welcoming addresses, musical entertainment by local talent, speeches of members of the editorial party and then the initiation of the editors into the live, industrial order of "Ants." This is a local order confined to the Arkansas Valley, with a splendid ritual that teaches community loyalty, service and enthusiasm that would be vastly beneficial to hundreds of communities and cities in all parts of the United States.

Editors at "St. Peter's Dome" on Cripple Creek Short Line, June 22, 1913.

Everything went with a joyous rush and go at Pueblo, and it is a growing wonder as to how it was possible to crowd so much into a few hours. The party returned to Colorado Springs at midnight.

Friday was given up to the following program:

9 a. m.— Automobile ride, including residence section of Colorado Springs, a portion of the Canon City state highway, Colorado City, Manitou and the Garden of the Gods.

11 a. m.— Dedication of new ridge road in the Garden of the Gods. Taking of official photograph in the Garden of the Gods.

12 a. m.— Visit to the ancient cliff dwellings in Phantom Cliff Canon; followed by the inspection of the ruins, the museum and the Taos house, the party were the guests of the Cliff Dwelling Company at luncheon, with mineral water with the compliments of the Ute Chief Mineral Water Company. Trip over the Manitou Sky Line Drive, a short ride up Ute Pass and return to Colorado Springs.

3 p. m.— The Colorado Springs and Interurban Railway Company provided street cars for a ride to Stratton Park, following which was a visit to the South Cheyenne Canon and Seven Falls, through the courtesy of the South Cheyenne Canon and Seven Falls Development Company.

6 p. m.— Outdoor beefsteak fry, served in the canon, compliments of the Colorado Springs Chamber of Commerce; mineral water, compliments of Manitou Mineral Springs Company.

8 p. m.— Dance at Stratton Park pavilion.

The editors took a great deal of interest in the drive to Rock Creek on the Canon City highway, asking many questions regarding the system of convict labor, praising the roads of Colorado and stating that their visit would result in spreading the good roads gospel with renewed vigor in their communities. This drive was provided through the courtesy of members of the Chamber of Commerce, the Royal Gorge Auto Tours Company, and by arrangements with the local auto drivers.

Saturday was Manitou day, which included a ride over the Colorado Springs and Interurban railway to Manitou; a ride on the Manitou Scenic Incline railway, ten thousand feet up the bold front of the mountain and a walk to the outlook one thousand feet further up to Outlook in Manitou Park, from which a view was obtained of villages, plains and mountains for forty miles or more. One enthusiast said he could discern Lake Michigan in the distance.

An auto ride through Crystal Park, over a most wonderfully constructed road, climbing by different inclines, a journey of thirty miles, and then came a visit to the Cave of the Winds. Luncheon was served in boxes by the Manitou Hot Iron Club and enjoyed half-way up the mountain side, where a mountain brook leaped from the mountain and furnished nature's cooling beverage.

June 22 was devoted to a trip through the unsurpassed mountain scenery to Cripple Creek, where a lunch was enjoyed at the Imperial Hotel, kept by a former Chicagoan, a Mrs. Short, who formerly operated the Indiana House in the World's Fair City, selling out and going west that year.

At St. Peter's Dome a splendid photograph was taken of the party. A run was had to Denver in the evening, which was full of delight on account of the scenery and the splendid fruitfulness and growth on every hand as the result of irrigation. Monday and Tuesday were passed in Denver; Wednesday on a tour including Boulder, Longmont, Loveland, Greeley and Fort Collins; Thursday and Friday were passed in Estes Park, and Saturday the party returned home. The hundredth part of what was seen and enjoyed has not been told, as the most interesting and useful convention was one of instruction and most promising as to results in the history of the National Editorial Association. The entertainments, the numerous tours and the sight-seeing have never before been equaled. The association has received a great impetus and greater things are in store for 1914 and greater and grander for 1915.

NEW COST COMPANY ORGANIZED

Ed. E. Sheasgreen, probably the best known cost system installation expert in the country, and secretary of the Ben Franklin Club of America for the five months prior to its amalgamation with the United Typothetae of America, has, with Theo. J. Turner of Cincinnati, another well-known cost expert, organized The Standard Cost Finding Service Company, "To standardize cost finding and business methods in every line of endeavor."

The one purpose of this new company will be that of advocating and selling a cost finding service based on natural laws of business, and has but one purpose in view — that of getting those in every line of endeavor to, in time, all use these laws and methods.

The office of the new company will be at 1603 Monadnock Block, Chicago, Ill., where the installation of cost finding systems in every kind of manufacturing plant or commercial business, the publishing of books on cost and business methods, the conducting of cost schools for all kinds of organizations and the giving of business lectures will be arranged for.

It can be seen that with the cost of every line of endeavor found by the same laws, that in time business failures would be reduced, losses and leaks checked, while all economical conditions generally and specifically would be studied more and in the right way by employers, as well as by their employes, with the result that many of the ills of society of today would be entirely eliminated.

Mr. Sheasgreen has now ready for the press a book on which he has been working for the last seven or eight years — The Profitable Wage. This book presents the labor problem from an entirely new angle and will deal directly on how to find the cost of producing the labor that is sold for a wage. The author contends that before true production costs can be had that it is absolutely necessary to know the cost of producing labor to sell into a product. He deals with the capital invested in the human machine just as, when finding the cost of a product, he deals with the capital invested in the man-made machine. This book will be ready for the fall trade.

The many friends these two gentlemen have scattered throughout the country will undoubtedly be glad to learn that they are together to continue the good work of teaching business men and the workers the value of knowing true costs.

✣ ✣ ✣

A printer, publisher or other business man may be economical and yet not be able to save much money. He may be too economical to make much money to save.

CHICAGO, AUGUST, 1913

The cost experts have reduced cost to time and stock, and time employed by nature, by farmers, by foresters, miners and manufacturers is the great element in the production of stock. Economy of time, system, efficiency and co-operation are the profit-producing forces that the cost system has brought into full play. It is up to printers and publishers, through these, to coin time into worthy service and money profits.

* * *

Co-operation that means intelligent, helpful efforts among trades people, manufacturers and brokers, in friendly rivalry to aid to greater, better and more worthy production, is no enemy to individual development or well-being. It is not a method of bearing of one another's burdens alone, but of abolishing burdens and making all work a pleasure, a strengthening, ennobling recreation.

* * *

Monopoly, when meant as taking away opportunities from others, or the controlling or exploiting of others for selfish gain, is the surest way of impoverishing and degrading a people. Monopoly in the industries, no less than monopoly in government, leads to sloth, want, discontent, and must end in strikes or revolution. No one man is wise enough, sufficiently broad, good, far-seeing or generous to rule any great industry or business or to lord it over his fellows, nor are any set of men sufficiently possessed of all these requisite qualities of head and heart, to so rule for the ultimate well-being of all or even for the final success of either a monopoly or government.

* * *

The lesson of this age is that the highest good to all, the greatest attainment and the most permanent, comes through mutual understanding, helpfulness, reliance and co-operation, all for each and each for all, everyone learning from the other and contributing his ability, skill and loyalty to the common cause or industry. That printing or newspaper office is the most successful in which every worker and the employer and directors, superintendents, foremen and all the rest are alike loyal to and interested in each other and in the establishment.

* * *

The time is coming when all men will work together with heart, mind and will for the well-being and uplifting of each and the advancement of every industry and every business. This is the truest, highest and wisest conservation — the conservation of one another and of all things that are serviceable.

* * *

Harmony is the basis of all permanent and highest well-being. Inharmony leads to loss, to increased burdens, vexations and worry for each and all. Harmony is Heaven; inharmony is Hell. It is a wonder how the great mass of selfish and unthinking human beings prefer to make for themselves and others, and to live in the latter gloomy abode, instead of the former blessed place and condition — either alike possible in this life.

* * *

Speaking of monopoly and its dire results, an instance somewhat in point is furnished by Mr. Mellen, lately resigned from the presidency of the New Haven railroad. His ability, his wide experience as a railway man, his zeal, energy and industry were unquestioned and everywhere admitted; qualities that promised great things for the great transportation line placed under his management. But instead of devoting his great powers to the building up of the road and making the same serviceable to and conservation of the interests and safety of the people — whether wholly through his own will alone or otherwise — he busied himself building up a great monopoly. The result of his course is summarized as follows by the New York Tribune, in speaking of his resignation:

"Monopoly, as Mr. Mellen planned it in New England, a section seeming to have been carved out by nature as monopoly's proper field, has been weighed in the balance and found wanting. It has proved financially gullible, or at least inefficient in protecting its own pocketbook, buying right and left whatever was offered at preposterous prices, thus laying upon itself a crushing burden of debt. It has not brought in large returns, but has left its stockholders groaning. And it has scattered the energies of its promoters and managers so that they had not enough to spare for the efficient conduct of the primary business of running a railroad.

For there can be no doubt that the New Haven's recent 'epidemic of accidents' arose from the failure to concentrate attention on efficient operation."

The New York Times gives a still fuller array of the causes that lead to disaster:

"No one will deny Mr. Mellen's ability as a railway man. His coming to the New Haven was generally welcomed; he began his work with a zeal and energy which promised to achieve notable results. Such projects as the electrification of the line from New Haven to New York or the tunnels under College Hill appealed to his executive ability as well as to his ambition. Fortunate would it have been for him and the company had he stopped there! Fortunate had he confined himself to his legitimate duties and kept his hands out of high finance! A policy of monopoly might be practical or even desirable in some circumstances; but there was never any chance for such a policy as Mr. Mellen followed. It is odd that he and the shrewd attorneys and capitalists who supported him failed to realize this.

"Mr. Mellen has always been arbitrary and overbearing, uncivil in his relations with the public, and aloof in his dealings with his immediate staff. His assertion the other day that he would not recognize the general superintendent if he walked into his office, was a shameful confession of neglect and incapacity. But even his least agreeable qualities would have been pardoned had he succeeded in his grandiose aims, or had he even made a good routine official. It is hard to explain the complete collapse of a reputation which to all appearance was deservedly great."

Herein are lessons for every newspaper maker. The newspaper is the servant of all the people and depends on the goodwill of the public even more than does a railroad. Any tendency to monopoly or any evidence of a subserviency to monopolists, political rings or bosses, is fatal to any proper influence, power or permanent success.

Success of the newspaper is ever along the line of improved service, of independence, fairness and just care for and considerateness toward all the people, as well as toward competitors in the field covered. The chief concern must be for the paper with no disposition or effort to interfere with affairs or rights of other newspapers.

Above all things must newspapers avoid the enumerated faults of President Mellen as to being "arbitrary and overbearing, uncivil in his relations with the public and aloof in his dealings with his immediate staff."

The newspaper must be self-reliant but at the same time must avoid being dictatorial. The newspaper may and should give the facts, the news, with candor and earnestness; must suggest, advocate, argue and commend, but must ever be sympathetic, forbearing, kindly and civil. Comradship and not aloofness should ever rule in the newspaper office. The newspaper must be self-respecting, but must be the friend as it aspires to be the companion and instructor of its people.

✣ ✣ ✣

The New York Press Association will celebrate its sixtieth anniversary at the convention in Elmira September 3 to 5, and will, among other matters appropriate to the occasion, review the improvements, changes and advances in newspaper making and printing, as well as the history of the press and the lives of the prominent members of the craft and of the association.

What wonders have been wrought since September 8, 1853! The telegraph and the telephone; co-operative newsgathering through associated press organizations; stenography and typewriting; power presses; web presses; automatic presses; perfecting presses; offset presses; typesetting machines; type casting machines; electric motors and electric lighting, are among the many things that have helped to revolutionize printing and newspaper making.

Nearly as important as these are the advertising agencies; co-operation in business; the new systems of efficiency and cost finding, etc. Every newspaper maker in New York should make it his business, as it will be for his interest and pleasure, to be present at the sixtieth anniversary convention.

✣ ✣ ✣

After the foregoing was in type, announcement reached this office of the sixtieth anniversary convention of the Wisconsin Press Association at Milwaukee, August 4, 5 and 6. Both associations rightly claim the honor of being first among editorial organizations in the Nation, Wisconsin taking the precedence by a month or more.

An attractive program is presented for this anniversary occasion. It is proposed, among other things, as appropriate to the completion of six decades of loyal service, to further discuss the possibilities of the greater development of the state, and to join with Milwaukee in kindling the fires of patriotism anew, through celebrating the centennial of Perry's great victory on Lake Erie, one of the chain of the great bodies of water so important to the state for commerce and recreation.

✣ ✣ ✣

Prepare for School Advertising

It will be time when this issue appears to think of the work that the opening of school should bring to local printers and publishers. The store of J. K. Gill Co., of Portland, Ore., uses both newspaper space and job work to a large extent in August and September every year to advertise school necessities — and finds that advertising has increased its school supplies business exceedingly.

The Great Uplift Convention

Ten Thousand at the Meeting of the Associated Advertising Clubs of America at Baltimore, Md.

Upon his return from the convention of the Associated Advertising Clubs of America, Arthur Capper, the Topeka publisher, wrote a signed editorial for his paper, the Topeka Daily Capital, in which he declared the Baltimore meeting of greater significance than any other meeting of business men ever held in this country. His article is as follows:

"I had the good fortune to be able to spend three days at one of the most interesting and significant conventions of business men ever seen in this or any other country — the meeting of the Associated Advertising Clubs of America at Baltimore last week. Nearly 10,000 persons were present, all directly interested as buyers or sellers of advertising — a gathering of serious-minded men, in line with the great moral forces of the country, fused into an organization with a consciousness and a purpose, and dealing earnestly with some of the greatest problems of our day. It was a convention of business crusaders, alive with burning enthusiasm which fires every man with a high ideal or a real message; and the symbols on its banners were truth and honesty and the high standards of commercial honor, not the dollar mark. Significant of the convention was the positive manifestation of the new spirit born of the quiet revolution that is permeating the whole advertising world; the definite acceptance of the new commercial philosophy that the Golden Rule pays and that truth and morality are the most profitable business tenets.

"Truth in advertising is the central idea around which this great national movement in business is organized; the principle that honesty and morality are as essential to substantial commercial progress as they are to personal character.

"Unquestionably the tendency of modern business is more and more in the direction of fair dealing and open-handed methods. An aroused public conscience which is becoming increasingly insistent demands that the business world, newspapers as well as merchants, shall deal with the public as devoted, faithful servants of that public. It has made service the dominant note in modern business; has brought about a contempt of unclean methods, and an appreciation of the great truth that more and better business can be done upon the basis of the utmost good faith between buyer and seller.

"Not so many years ago advertising was, to a more or less extent, a system of deceit and misrepresentation. The low moral standard that prevailed in business was tacitly expressed in the warning, "the buyer must look out for himself." A purchase was more like an old-fashioned horse trade, a contest of wits between buyer and seller, neither of whom had any compunctions about deceiving the other. Newspapers frequently published advertisements that were false, misleading and harmful, and it was left to the reader to sort the truth from the lies. It is different now. Conditions are not ideal, to be sure, but the best newspapers are "cleaning up." The whole character of advertising is rapidly changing. The standards of morality in the world of trade have advanced materially. The merchant has found there is a higher purpose and a better profit than misbegotten dollars; that it pays from every viewpoint to tell the truth and win a permanent customer.

"And there is a deep-rooted desire on the part of the publishers, as was constantly manifested at the Baltimore meeting, to accept the moral responsibility which unquestionably attaches itself to such a popular educator as the newspaper. They went home with a firmer conviction that the newspapers, acknowledged to be the most influential pervasive force in the country for exposing vice, for reproving recreant public servants, for exhorting the people to recognize their civic responsibilities, must themselves come before the people with clean hands; that we who seek to lead the public should be heedful of our own footsteps; that we should practice what we preach; that our ethical purposes should be high and our business methods above criticism. It was evident there is a growing determination among newspaper men throughout the country to eliminate the untruthful, the unclean and the dishonest from advertising. Conscious that it is their duty to protect the people against the designs of the advertising fakir, the bogus mail promoter, the vender of harmful remedies, or the dishonest merchant, they will no longer accept advertising that is damaging to the physical, financial or moral condition of their readers; but will give the reader the truth in their advertising columns with the same fidelity that it is given in the news columns.

"The purpose of advertising and business is to establish confidence. Public confidence is the one asset without which no merchant can succeed. Talking through the medium of the daily press to tens of thousands of people is one of the greatest of all modern privileges; therefore a man's advertising should be as sincere as his personal correspondence, as inviolable as his signed contract.

"One of the features of the program of general business uplift which stood out prominently in the new gospel of higher business ideals expounded at the Baltimore convention, was the demand upon the part of advertisers that newspaper publishers tell the whole truth in their circulation statements.

"Lying about circulation goes to the very heart of the matter. It is the crucial test, the first and most unpardonable sin of a newspaper. A newspaper which, covertly or otherwise, deceives the public in regard to the number of copies it prints will deceive it in any or everything else. By all rules of business honor, the advertiser who is buying space in my publication or any other publication, has a right to know just what he is getting for his money.

"I am rather proud of the fact that in the discussion of this question at Baltimore the Topeka Daily Capital was mentioned with the Chicago Tribune, New York World, the Kansas City Star and a half dozen other great newspapers which have at all times given definite information to the public about their actual circulations. The naming of these papers and a statement of their policy of always telling the truth about their circulation elicited enthusiastic applause from the great meeting.

"To me, the uplifting thought of the Baltimore convention was the fact that organized advertising is inspired as never before with the determination to do service; that it has become one of the most effective instruments for the advancement of American civilization through industry and commerce, and is leading in the great ethical impulse that is abroad in the world today. The world is growing better; we are upon the threshold of a grander era in which honesty and good faith and brotherhood are the controlling forces, an era in which the spirit of the Golden Rule will dominate the business world to an extent not dreamed of by the saints and prophets of the past.

"ARTHUR CAPPER."

* * *

It is poor advertising that will not bring in enough trade to pay for itself. Of course, the business that would come without advertising is not to be taken into the account.

Toledo and the Million Dollar Exposition and Third Ohio Cost Congress

A visit to Toledo, Ohio, is in itself a pleasure. Its location, on Maumee River, only eight miles from Lake Erie, is advantageous and has made the place one of the great shipping points for grain, iron ore, coal, lumber, provisions, live stock, wool and other products and manufactures. All the delights and commercial advantages of river and lake are afforded to its inhabitants as well as to the manufacturers.

It is an important railroad center as well and has historic surroundings and many points of interest.

Sixty-one years ago we passed through Toledo, September, 1852, as a boy of nine years of age, and there was one railroad then, the Lake Shore, only completed as far as Toledo. There are now twenty-three lines of roads. There was no bridge then, and we crossed the river in a row boat and rode from there to Sandusky on a flat car, loaded with railroad iron.

Our most vivid memories as to this first visit, over six decades ago, are as to the river banks and the millions of stumps along the tracks and the great forest trees. What a change sixty-one years have wrought! Now one great structure, "The Terminal Exposition Building," is large enough to easily have housed all the inhabitants of sixty years ago.

It was as to this great structure and the approaching Million Dollar Central States Printers' and Publisher's Exposition to be held therein, September 1 to 6, that we were chiefly concerned on this our recent visit. As we understood, seven great railroads united in the construction of the building, and it does honor to their enterprise and regard for the advancement of the industries of the great, rich Central States.

We are pleased to show both interior and exterior views of this building, though these illustrations carry a very imperfect idea of the largeness.

The ground floor space in the building is greater than in Madison Square Garden, New York, or the Coliseum, Chicago. There are one hundred and sixty-seven exhibition booths and the prospect is that every one will be fully occupied. One great advantage is that exhibitors can take their own time, previous to the exposition, for installing exhibits without any additional expense.

At the time of our visit, Mr. H. V. Buelow, managing director, with whom we passed a very pleasant hour in a trip through the building, informed us that many of the exhibits had already been shipped. This was on July 15, six weeks before the opening day. The character of the exhibitors insures that everything will be in readiness on this opening day, as everything is in the best possible shape for receiving and installing the very largest exhibits.

TERMINAL EXPOSITION BUILDING, TOLEDO

Two railway tracks are run through the building, so that there will be no carting to be done. The program of the Cost Congress insures highest instruction and the entertainments arranged are of the very highest order.

Machines in Operation

The American Press recently gave the following facts that were fully verified by what we saw and of which we were told:

Exhibitors are planning to show machines in full operation, so that visitors can get an exact idea of how modern printing is produced, and men in the trade will have before them, under one roof, an exhibit of all the newest wrinkles in time and labor saving equipment.

Many special exhibits will be shown of particular interest. Papermakers will show how the various kinds of paper are made, from the pulp to the finished product; inkmakers will demonstrate the various steps in producing inks, and, in short, every phase of up-to-date printing will be graphically illustrated for the interest and profit of visitors.

As this is an "up to the minute" exposition, it wouldn't be complete without a motion picture display. A big Chicago newspaper is going to use the movies to take the visitors on a personally conducted tour of a modern metropolitan newspaper plant. Other moving pictures will be shown illustrating various features of the printing trade. In short, the Ben Franklin Club of Toledo, which is spending its days and nights making plans and carrying them out, gives as its slogan "See it in Toledo next September" to anyone who wants to know what's what and who's who in the printing, publishing and photo-engraving trades today.

J. M. Thomssen, President Ohio Printers' Federation.

The Terminal Exposition Building has had a unique history. Toledo has the only complete terminal belt railroad in the world, entirely encircling the city and connecting each of the twenty-two lines that enter this great railroad center.

The building was intended as a station in connection with the terminal line, but a change of plans led to discontinuing its use for this purpose.

H. V. Buelow, the director general of the present exposition, saw great possibilities in the mammoth structure as an exposition hall.

Plans were at once made and carried out to convert it to this use, and as a result Toledo now has an exposition and convention hall with greater ground floor space than any other in the United States.

The Democratic state convention was held there last year, and many expositions have been staged in the Terminal Hall in the past eighteen months.

Railway Enters Building

The floor is solid concrete, and the vaulted roof is carried on massive steel girders. A very unusual feature is the fact that a railway track enters the building, thus enabling the disposition of exhibits with an ease and rapidity unknown to other exposition buildings. All waste time in loading and unloading is entirely eliminated.

The exhibits for which space is already reserved are of such an elaborate character that the men back of the exposition ought to have no difficulty in making good their claim that a million dollars' worth of machinery and equipment will be on view when the electric button is pushed on the evening of Monday, September 1, that will set the wheels going and flood the exposition hall with the light from a myriad number of tungsten lamps.

H. J. Vortriede, President Ben Franklin Club

Toledo has a reputation for never doing things by halves, and this spirit pervades the arrangements for the entertainment of visitors to the exposition. The plan is to combine recreation with business, and to sandwich between the sessions of the cost congress and the viewing of the exhibits some entertainment features of an elaborate nature. Among other things an all day boat trip on the Maumee River and Lake Erie to Put-in-Bay and Cedar Point is on the program.

The visit to Put-inBay alone will be well worth the trip to Toledo, as it will enable the visitors to have a view of the new Perry memorial, which will be unveiled this summer in connection with the centennial celebration of Perry's victory on Lake Erie.

A Historic Spot

Put-in-Bay is closely associated with Commodore Perry's activities. The memorial is one of unusual beauty, including a marble shaft several hundred feet high, crowned with an enormous signal light. From Put-in-Bay the visitors will continue their trip on the palatial steamer Greyhound to Cedar Point, the Coney Island of the Great Lakes. Here the printers and publishers are going to enjoy an old-fashioned good time, including a visit to the hundred and one shows for which this big summer resort is famous.

Afterward — for the printer gets hungry once in a while, like an ordinary being — a complimentary banquet of three thousand covers will be laid, following which the guests will embark for a moonlight trip back to Toledo. Many entertainment and amusement features have been planned for the return voyage.

The Ohio Printers' Federation, which has general supervision of the Toledo Printers' Expostion, is made up of representative men in the printing and publishing business in every city and town of the Buckeye State.

The officers are well-known men. Cincinnati is the home of the president, J. M. Thomssen, who is also president of the Methodist Book Concern. H. C. Vortriede, first vice-president, is at the head of the Express Publishing and Printing Company, of Toledo. Albert Scholl, of the Scholl Printing Company, of Chillicothe, is second vice-president.

Headquarters of Third Ohio Cost Congress.

S. Evans Clark, secretary of the Ben Franklin Club of Toledo, and Charles P. Carl, treasurer of the J. B. Savage Company, of Cleveland, are secretary and treasurer, respectively.

PROGRAM

Monday, September First

Registration and distribution of badges and tickets to all entertainments.

10:00 A. M. Meeting of the State Executive Committee, Hotel Secor.
11:00 A. M. Meeting of the Convention Committee, Hotel Secor.
3:00 P. M. Meeting of the State Committee on "Costs," Hotel Secor.
3:00 P. M. Meeting of the State Committee on "Credits," Hotel Secor.
3:00 P. M. Meeting of the State Committee on "Trade Relations," Hotel Secor.
3:00 P. M. Meeting of the State Committee on "Education," Hotel Secor.
3:00 P. M. Meeting of the State Committee on "Organization," Hotel Secor.
4:00 P. M. Reception to Governor J. M. Cox of Ohio.
6:30 P. M. Governor Cox escorted to Exposition Building by Troop "D," O. N. G.
7:00 P. M. Doors of Exposition open to public.
7:15 P. M. Salute by Battery "B" to Governor Cox.
7:30 P. M. Address by Governor Cox.

Toledo Art Museum.

8:00 P. M. Governor Cox touches electric button and starts machinery.
8:30 P. M. to 11:30 P. M., Instrumental and Vocal Concert.

Tuesday, September Second

8:00 A. M. to 10:00 A. M., Exposition open to Printers only.
10:00 A. M. Convention called to order by H. C. Vortriede, Chairman of the Convention Committee. Address of Welcome by Mayor Brand Whitlock. Address and Invocation by the Right Reverend Joseph Schrembs, D. D., Bishop of Toledo. Address by J. M. Thomssen, President Ohio Printers' Federation.
Reports and Recommendations of Committees.
Appointment of Committees.
10:00 A. M. to 12:00 M., O. P. F. Committee Reports and Recommendation of Committees.
12:00 M. to 2:00 P. M., Exposition open to Printers only.
2:00 P. M. O. P. F. Convention. Addresses by C. Lee Downey, Cincinnati, O., "Accounting." B. F. Corday, Cleveland, O., "Better Selling Methods." W. B. Holliday, Cincinnati, O., "The Long Price List." C. W. Wroughton, Kansas City, Mo., "Credit Science."

Steamer Greyhound, for a Day's Excursion.

5:00 P. M. to 7:00 P. M., Exposition open to Printers only.
7:00 P. M. to 11:00 P. M., Exposition open to public.
8:00 P. M. Moonlight Excursion, Steamer Greyhound. Music, Cabaret and Dancing.

Wednesday, September Third

8:00 A. M. to 10:00 A. M., Exposition open to Printers only.

10:00 A. M. O. P. F. Convention. Addresses by A. W. Finley, Boston, Mass.; A. M. Glossbrenner, Indianapolis, Ind., "Efficiency." T. F. MacManus, Toledo, Ohio, "Advertising."

12:00 M. to 2:00 P. M., Exposition open to Printers only.

2:00 P. M. O. P. F. Convention. Addresses by H. S. McCormick, New York City, "Scientific Analysis in Office Management." E. St. Elmo Lewis, Detroit, Mich., "Salesmanship." Col. E. T. Miller, Columbus, O., "Relation of Cost Accounting to Estimating."

Reports of Committees.

Selection of 1914 Convention City.

Election of Officers.

5:00 P. M. to 7:00 P. M., Exposition open to Printers only.

7:00 P. M. to 11:00 P. M., Exposition open to public.

8:00 P. M. Address by Editor Elbert Hubbard.

9:30 P. M. to 12:00 P. M., Entertainment in Grotto by "The Order of Pica."

Thursday, September Fourth

8:00 A. M. to 7:00 P. M., Exposition open to Printers only.

2:00 P. M. to 5:00 P. M., Trip around Terminal Belt. Visit to the plants of the Owens Bottle Machine Co., Willys-Overland Co., Edward Ford Plate Glass Co., and Toledo Furnace Co. Refreshments en route.

7:00 P. M. to 11:00 P. M., Exposition open to public.

8:00 P. M. Address by Hon. Josephus Daniels, Secretary of Navy, Washington, D. C.

Friday, September Fifth

10:00 A. M. to 11:00 P. M., Exposition open to public. Vocal and Instrumental Concerts by the Kilties Band (Highlanders) of the Royal 91st Regiment, Canada.

8:00 A. M. All-day Excursion to Put-in-Bay and Cedar Point. Music and Dancing.

1:00 P. M. Banquet, Cedar Point. Address by Judge John H. Doyle.

Leave Cedar Point 5:30 P. M.; arrive in Toledo 9:30 P. M.

Special Concert by the Kilties Band, 10:00 to 12:00 P. M.

Saturday, September Sixth

9:00 A. M. to 11:00 P. M., Exposition open to public. (School Children, 10 cents.)

Concerts by the Kilties Band, Canada.

LADIES' ENTERTAINMENT PROGRAM

Tuesday, September Second

10:30 A. M. Automobile Ride.

12:30 P. M. Lawn Party and Musicale, Toledo Yacht Club. Sailing on Maumee Bay.

8:30 P. M. Moonlight Excursion on Steamer Greyhound.

Wednesday, September Third

10:30 A. M. Trip to Toledo Beach.

12:30 P. M. Luncheon at Toledo Beach.

6:30 P. M. Visit to Toledo Museum of Art.

Thursday, September Fourth

10:30 A. M. Private Train around Terminal Belt. Start from Exposition. Luncheon en route.

8:30 P. M. Theater.

Friday, September Fifth

All-day Excursion to Put-in-Bay and Cedar Point. Dancing and Music. Banquet at Cedar Point.

Saturday, September Sixth

12:00 M. Luncheon at Inverness Country Club.

4:00 P. M. Private Trolley Car for Ride Around Maumee River Belt.

8:00 P. M. Concert by the Kilties Band, Canada.

* * *

TOLEDO

Toledo, Ohio, is the second transportation center of the United States. Twenty-three separate railroad divisions enter the city, in addition to twelve trolley and six steamship lines. Terminal Exposition Building, Toledo's exposition hall, has ground floor space greater than Madison Square Garden or Chicago Coliseum. Toledo's hotels are numerous, metropolitan in service and cuisine, and reasonable in charges. Hotel Secor, convention headquarters, is equal in appointments and cuisine to any hotel in New York or Chicago. Toledo's location on the direct line of soft coal and iron ore transportation has made the city an important iron, steel and general manufacturing center. Freighters from the head of the lakes discharge their cargoes of grain and ore and return with soft coal. The Toledo harbor is unexcelled on the Great Lakes. Many lake vessels make this their winter quarters. A straight channel to the lake accommodates the largest freight and passenger boats. Present dockage is twelve miles. The only all-concrete dry dock on the lakes is located here, and one of the largest ship building plants.

Toledo is the center of the cut glass, plate glass and bottle making industries. More plate glass is produced here than at any other point in the United States. One bottle in every three used in the United States is made on a machine owned or leased by Toledo bottle-making establishments. The Overland factory is the largest individual automobile plant in the country. Toledo is a leading jobbing center, especially in groceries, coffee, and boots and shoes. It is the leading clover seed market.

The Toledo Museum of Art is known throughout the United States as a building of unusual dignity and beauty. It was built by popular subscription at a cost of half a million dollars. During exposition week it will contain famous historical collections of Perry and the war of 1812. By popular subscription have also been built a Y. M. C. A. building, Y. W. C. A., one of the few in the United States, and the only Newsboys' building ever erected. The Newsboys' association idea originated in Toledo; the Toledo organization has a membership of 8,000 "newsies" past and present.

The Toledo Commerce Club has a membership of nearly 2,000, or practically one member for every 100 of the city's population. The Commerce Club recently conducted a slogan contest. From seven thousand suggestions a slogan was adopted which is typical of the confidence Toledo people feel in their city — "You'll Do Better in Toledo." Toledo also has a creed to which wide publicity has been given — "The Toledoan's Creed":

"I believe in Toledo, the city of real values — the nation's natural gateway of commerce and travel, in the heart of great resources and markets, with unsurpassed railway, dock and harbor facilities, and the near-center of population of the United States.

"I believe in Todelo, the city of real opportunities, with its great institutions of art, education, religion and business, a 'going concern' in industry, government and social uplift; a home city with rest and recreation for all, by river and lake, where it is worth while to live, rear children, invest money and life.

"I believe in Toledo, the city of real progress, modern in municipal equipment and spirit, aggressive in commercial activity and achievement, with inspiring visions and plans for tomorrow and a big chance for every man."

Finally, Toledo has one of the livest of the many live Ben Franklin clubs. The Toledo Ben Franklin Club is sparing no pains to make visitors to the Central States Exposition and Third Ohio Trade and Cost Congress come away with the feeling that the slogan, "You'll Do Better in Toledo" tells the actual truth — at least as far as printers' exposition and conventions are concerned.

* * *

Too much energy is as undesirable as too little. A cloudburst may do as much damage as a drouth.

MORE WORK THROUGH PUBLICITY

Address all samples and communications for this Dept. to Harry Albro' Woodworth, 43 St. Botolph St., Boston, Mass.

LOCAL advertisers in the smaller places, which contain the bulk of the population of the country, are looking to the local printer and publisher for advice as to advertising as they never did before.

And as the Associated Advertising Clubs of America have of late assumed so largely the work of promoting honesty in advertising, it is a good time to sound once more the warning to printers and publishers that I gave to those in Canada in the Printer and Publisher seven years ago.

Don't encourage these local advertisers in dissimulation.

It isn't right — and it doesn't pay for any length of time.

Right here it is not out of place to give an earnest hint as to the harm to advertising that irresponsible ad-writers may cause.

Some writers of advertisements indulge in extravagant statements, such as would never be made by an advertiser if he wrote his own ads.

And yet the advertiser is pleased with the adman's work.

He shouldn't be.

Flattery, the food of fools, pleases even men of wit, as an English satirist pointed out long ago.

The hyperbolical effusions of the ad-writer, though they may be just like what he would write for the advertiser's rival, flatter the advertiser, who pays him with a merry heart.

But they shouldn't.

It is a grave error to look on the ad-writer's statements about one's business as if they comprised a complimentary leader in the editorial columns of the paper.

The ad-writer's glitter and gush go into an advertisement.

And, Mr. Advertiser, it is your advertisement.

And the advertiser is the man who has to stand for the ad-writer's statements.

They are made in his name.

And if he would continue to keep in close and intimate touch with the public, he will have to, if they are not already good, make them good.

That is, he will if he's a good advertiser.

The ad-writer who, for no other reason than that he wants to please momentarily his customer, puts false statements that mislead, or false statements that do not mislead, into an advertisement, or allows them to be put into one, is doing harm both to his customer and to advertising.

And what does harm to advertising also does harm to the printer, the publisher, and the ad-writer himself, whether or not he remains in town.

Don't be afraid to tell just how good, just how cheap, the goods to be sold are.

Don't be so false to your business as even to be falsely modest.

Don't hide your light under a bushel; and don't set the bushel on fire, and thus waste your light.

The local printer and publisher may often, should often, find it possible and profitable to be the local ad-writer.

Let him recognize what a necessary factor advertising is in modern advertising, and try to get up advertisements, or help others in getting up advertisements, that tell the whole truth, but nothing more than the truth, about good goods.

I am not trying to run down the ad-writing business. Why should I? I am in it myself.

In fact, I believe the live business men of any town of any considerable size, should be able to — and should — furnish employment for a good ad-writer.

As to one field for his work, there is many a small town that should realize what important factors the work of the ad-writer, the printer and the publisher are in booming a town so that it will stay boomed.

* * *

The American public, whom a Vanderbilt was willing to let "be damned," was said by Barnum to "like to be humbugged."

This is not so now — even if it ever was.

The watchword of the American public has been getting more and more, "Never again."

Carlyle once said that the population of England was "thirty millions — mostly fools."

The population of the United States is one hundred millions — mostly anything but fools. (It would be well for all advertisers to the American public to think this is so — even if they do not believe it.)

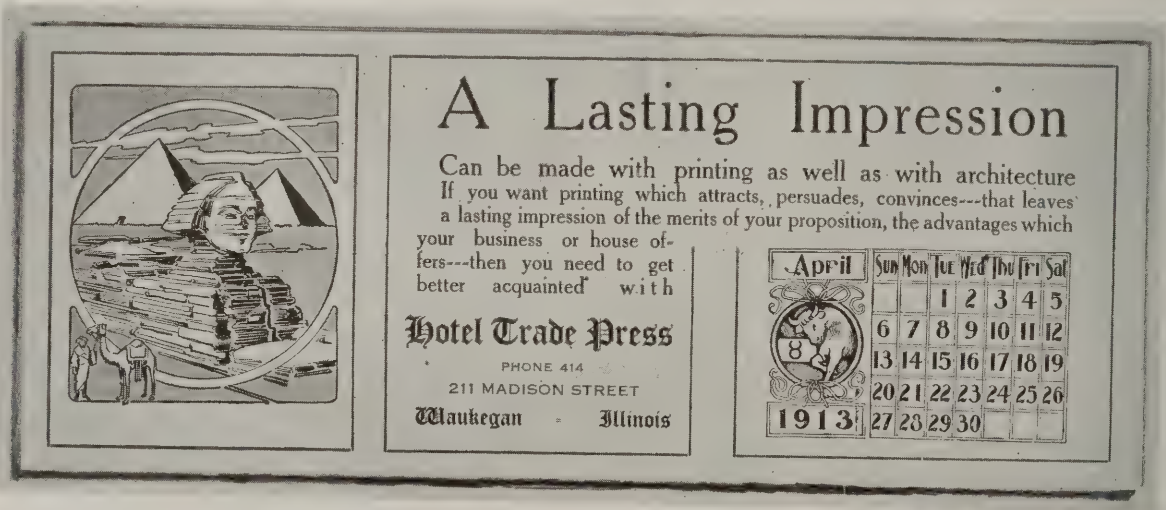
Some people can, of course, in the words of Lincoln, he fooled "all the time." But you can't fool all the American public all the time — nor many of them.

Of course the hybrid population of the United States is generous to a fault — but that very generosity is not, for the most part, utter damphool generosity. And the reputable advertiser who takes advantage of it is mean, dishonest, and not wise.

One reason that concerns in this country whose business it is to fool people flourish like a green bay tree year after year, is that the United States has a good many people. The floating population of New York City, for instance, contains a good many suckers. A sucker certainly enters New York every minute, and may never return after he has passed through a brief period of evolution there. That largely is why some big stores which sell goods at "little prices" — which, however, have littler value than these same prices should represent — manage to keep on selling them.

But in the smaller cities and towns no faker or faking can permanently flourish.

I recall the failure of one clothing firm in a city of about forty thousand inhabitants about twenty years ago — a disaster that lamentably set back the proper appreciation in that town of advertising as a business force. The firm had advertised very extensively, using both newspaper space and printed matter. The advertising was well written from the point of view of workmanship, well illustrated, well set, well printed. The concern had been well canvassed by printers and publishers, and it responded, it was thought, "not wisely, but too well."



A Lasting Impression

Can be made with printing as well as with architecture

If you want printing which attracts, persuades, convinces---that leaves a lasting impression of the merits of your proposition, the advantages which your business or house offers---then you need to get better acquainted with

Anyhow, it paid well for the advertising. And the printers and the publishers rejoiced greatly thereat.

And yet that firm was doing them an injury whose effects it took years to overcome.

For the failure of the concern was set down by other merchants to its large expenditure for advertising.

But that was not the reason.

The fact was that the firm advertised a different class of goods from that which they sold.

Such advertising does not pay a concern that expects to remain in business.

And in one way, maybe, the other merchants could hardly be blamed for not advertising largely after this fiasco. For the people of that city were afterwards naturally suspicious of much cry, fearing there was little wool behind it.

The people of the United States are adopting a new watchword as regards being humbugged — "never at all!"

Local advertising is as yet in its infancy; and it is well to know its faults — and avoid them.

* * *

The Poorest Job Is Rich

Dan M. Gross, of the Hotel Trade Press, Waukegan, Ill., sends me some work that is excellent though unreproducible, and this blotter (7), which is not so excellent as a whole, but has its excellent points. It is wonderfully bright, this being due to its whiting-out, some of which is good, and to the fact that besides the black, there is red orange and light blue, which go well together. The engraver may not care to reproduce it because of the light blue, but this is in heavy rules and masses, and nowadays engravers can reproduce almost anything. Putting the first line of the body type in a larger size of the series is all right, of course, especially as the line completes a sentence; but even if it did not the style is abundantly justified by usage. There is, however, no excuse for the cap "C," although it is often used in such a case as this. It certainly does not add to the artistic quality of the line. And the two lines beginning the sentence in the smaller size of Cheltenham should not be indented as they are — there is too much light furnished by this indention, together with the natural indention, the wide space between panels, and the space to the left of the cut within the other panel. I think it would be better to use a lower-case "c" in place of the capital, and bring the line, which is thus made of the same length of the head, nearer the head. Transpose the leads or reglets — let the space be after this line. And make the next two lines flush with the rest of the composition. I do not care for the wide spacing of the lower line, and particularly the spacing between letters of "with." There is really no need of having this line full, though, as there is so much daylight in the job, the wording could easily be changed to make a well-spaced full line. The rules between the type and the calendar are handled very cleverly. A little more care would have brought about a better closing of the heavier rules at the lower left-hand corner. The brightness of the job is so pleasing that it is a pity that it has these minor defects.

* * *

A Woman Humorist on Publishers' Advertising

Any critic who denies that a woman can become a humorist of the higher type should read some of Agnes Repplier's essays, which, like all truly humorous productions, have a deeper note than that of mere humor — an inspiration to more thinking in an age that calls for it, if any age ever did. This essayist's article in the June North American Review in which she says there is too much sentiment in this period is as strong in sense as in analytical humor, to which sense is so closely allied.

But much of what the writer calls sentiment is really sentimentality, like that of "Sentimental Tommy." What a pity we have not different adjectives to express the two ideas!

And in the June Century this real humorist shows some of the absurdities of advertising — particularly of publishers' advertising, in a letter supposed to be "From a lady who suffers from skepticism to a friend who is healthily credulous." This is headed "On the Use of Hyperbole in Advertising," and begins thus:

My Dear Eleanor:

No, Eleanor, I have not read "The Three Golden Apples." I have not even read the reviews. But I have read the publishers' notice, because they were good enough to send it to me. They say the book is the literary masterpiece of our day; that it stands unrivaled in intensity of situation; that it is an epoch-making narrative, and a masterly contribution to the [solution of the ? — H. A. W.] problems that confront the thinking world. Upon which I find myself murmuring with Sancho Panza, "Nothing else, mine honest friend?"

Various other instances of hyperbole by different classes of advertisers are given, and the letter ends in a specific reference to the highly imaginative advertising "literature" of some publishers. This shows what a task is before the reformers in that real reform started by advertising men, which has already had such an influence for good, though it naturally has much of the inconsistency attendant on all reforms, in their earlier stages, at least.

And now Massachusetts, in a spasm of integrity, is trying to restrain the exuberance of the advertiser, to clip his wings, and teach him the worth of sobriety. The State proposes to abolish fraudulent advertisements, and to construe the word "fraudulent" so that it will cover any statement that can be proved to be false. A thing must really and truly be just what the advertiser says it is. But oh, Eleanor, what a tangle for the law to smooth out! If, like the three rogues in the Hindoo legend, you sell a dog for a sheep, that, of course, is a transparent lie. But if you say that Clarence Coventry's book is "an epoch-making narrative," who can prove the contrary? We'll have to wait so long to find out the truth that our graves would yawn for us in the interval. And if in 1950 the student of social science were asked "Who wrote 'The Three Golden Apples,' and what influence did it have upon its day?" and he should answer — very naturally — that he had never heard of it, the time for investigation would be over. Clarence, and the publishers, and "The Golden Apples" would all be dead together.

Your affectionate friend,
Agatha Reynolds.

P. S.—Don't send me the book for a birthday present.

* * *

"Do You Think It Was Good Advertising?"

With a booklet advertising the Lynden Tribune came the following letter:

Dear Sir: I sent out this little booklet to advertisers and prospective advertisers last month, in absolutely plain envelopes made to fit of paper like this on which I am writing. Though May advertising was $280.70 as against $225.75 in April, but a small amount of increase was traceable to the booklet. Do you think it was good advertising?

Respectfully,
Dan Cloud.

The Lynden Tribune, Lynden, Wash.

P. S.— I have none of the envelopes left, so I enclose this in wrapper. Cost of job at regular rates, $1 an hour for printer, $1 an hour for press. Cost of paper, 30 per cent; stamps, etc., were about $35. D. C.

The beauty of the 8½ x 5 booklet sent by Mr. Cloud with this letter would not be done justice by a reproduction. Its cover is of a light brown laid stock, on which the most of the composition is square ornaments of two different kinds, most artistically designed, and making a richer effect than is observable on the covers of most bound books. On a panel near the top is the couplet, squarely set in Cheltenham, with a paragraph mark between the lines:

"Oh, wad some power the Giftie gie us
To see oursels as ithers see us."

(I have taken the liberty to change the wording somewhat, giving the lines as Burns wrote them. The square effect would have been better carried out had the words been given as above, and the cap "G" should certainly have been used for a name given to the Almighty.) The lines of the laid stock, which are not noticeable in the ornamental design, are very strongly in evidence in the panel, and the heavy impression of the red row of upright lines, which have a light rule border, gives an intaglio effect that harmonizes well with the laid effect. The cover had three printings, and from an artistic point of consideration the result was worth the expense. The book is bound with a red cord, and contains eight pages of cream deckle-edge stock. It is superbly printed in black and red, in the Cheltenham series. The first page simply says: "A newspaper is a good or bad advertising medium just in proportion as its editors listen and profit by that which is said of it by its readers." The second page is headed "As We See Ourselves," and the third page head. "As Another Sees It," being a criticism of the Lynden Tribune and certain of its ads from Mr. Copper's department of the National Printer-Journalist. Reproductions of an attractive first page of the Tribune and three excellently composed ads, are given as they appeared in the N. P.-J. Good two-line remarks about the paper appear in red at the head of each page; there is a home-written page on the results obtainable by Tribune ads, giving rates to continuous advertisers, and a few words on the last page about the job printing plant, one phrase of which has a pleasing sound — "Our type is new and in families" — although its meaning might be somewhat obscure to the general public. I don't think enough was said about the job printing plant, but the booklet appears to me to be an especially well-prepared advertisement.

But of course the final test of any advertisement is, and should be, Did it pay? Evidently Mr. Cloud, writing, I suppose, a month after the book was printed, is a little doubtful on the subject. I may say that in all the many cases where I have heard from publishers as to what a job cost and the returns it brought, I never knew of an advertisement so well gotten up that did not, in the opinion of the publishers, ultimately pay. The life of such a booklet in the smaller towns is generally much more than a month; and the influence of so good a booklet survives even after what is known in advertising parlance as "life" has ended. If I dwelt anywhere near Lynden, and wanted a good booklet any time in the next ten years, I'd think of Dan Cloud's Tribune plant because of my remembrance of the booklet — and I see many thousands of booklets. Though, as I said, the job printing idea was not played up as it should have been in connection with a book that cost so much money, for all people, naturally, do not appreciate a good booklet as well as I do — they need to be told it is good. And of course the primary object of the booklet was to get advertising for the paper.

But to get advertising for a paper in a town like Lynden, a county like Whatcom, is a process that needs more than one piece of advertising matter, no matter how good that may be. It needs more than printed advertising; personal solicitation should also enter into the equation. And there are some localities where it takes a lot of good advertising, of continuous advertising, to advertise advertising.

I do not consider that a publisher should, in most cases, figure the cost of a job he manufactures for himself on the basis of "regular rates." And any space he gives in his own publication to tell the benefits of both newspaper and job advertising should by no means be considered in the light of the use of so much space which costs the publisher as much as it would any other advertiser. An exception is the case of periodicals like the Saturday Evening Post, which doubtless sometimes uses space for advertising the Curtis Publishing Company which could be sold, without any cost for selling, to an advertiser in some particular issue, but which the company wants for itself. A paper like the Lynden Tribune is helping the business men of its community by printing articles that show the benefits of advertising; and these can be made as interesting as the most of the other reading matter, to the gain of the community, and the newspaper as a benefactor of both itself and the community. And evidently Whatcom county needs such education more than it does instruction as to tariff reform.

Act on this suggestion, Mr. Cloud, and your next booklet as good as this will bring satisfactory results; let me know Whatcom from it.

I have not seen Mr. Cloud's paper, so may not have sized up the situation correctly; maybe the county is hopeless, but I think not, from analogy with other counties that once seemed so. Perhaps it would be better to have more such jobs — as good for the size of them, but less elaborate, and consequently less expensive. I received a single sheet from Eau Claire, Mich., recently, which used a criticism from Mr. Copper's department very cleverly and inexpensively. I should like to reproduce it, but some small children who were helping me in my labors evidently thought this was one of the pieces of printed matter to which they were entitled, and destroyed the most of it, so I cannot give the name of the printer that issued it. If this catches his eye, and he sends me another copy, I will be glad to reproduce it, with favorable comment.

✣ ✣ ✣

Pioneer Editors on a Perfect Publishing Establishment

When such a paper as the Brooklyn Daily Eagle uses a book to advertise its business, there is an assurance of a dignified though eminently interesting publication. I have known journals whose columns were uncompromisingly — and often dully — dignified, which sought to get subscribers by advertising which resembled that of burlesque theaters. If subscribers were obtained by such methods, they were sure to be dissatisfied subscribers — which are a kind it were better for any paper not to have. But the Brooklyn Eagle, though dignified, is never dull; and its establishment is such a truly harmonious one throughout that its advertising is sure to be in keeping with both its dignity and its inspiration of human interest.

"How a Modern Newspaper Is Made: A Story in Word and Picture Concerning The Brooklyn Daily Eagle" is an elaborate production of forty large pages and cover, and is intensely interesting with its clear and concise explanations of the various twentieth century processes that have their parts in the making of a newspaper. Especially is such a work of educational value when it tells, by picture and text, of a modern printing establishment — one that uniformly helps the Eagle live up to the name of "The Newspaper of Today." There are many great newspapers which would be glad to have such a superior plant some day. But I will leave the proof of this to two great newspaper men whose words are quoted in the book. No other newspaper ever had two such testimonials as this, for they are tributes from the two men who have been the pioneers in the most modern form of journalism in America and Great Britain respectively. Their unqualified praise is the more remarkable because its object is so essentially a survival of the best in the older journalism — a real survival, inasmuch as the Eagle is not a newspaper of yesterday, but still of today. The following letter was sent to the Eagle at the time of its seventieth anniversary by Joseph Pulitzer, editor and publisher of the New York World. It was written but a few days before he set out for the trip in Southern waters, during which he died, and it is probably the last expression of opinion on journalism made by him:

> To the Brooklyn Daily Eagle:
>
> This is what I sincerely feel about the Brooklyn Eagle: In the first essentials of any newspaper to be respected and be respectable — Integrity, Independence and Intellect — I consider it among the foremost newspapers in the Nation — and there are very few indeed I would call foremost.
>
> Secondly — as a newspaper emphasizing the word "news" it is absolutely unique, because I do not know of any journal either in New York City or in the whole country using such lavish liberality in space and printing the local news of Brooklyn with such impartiality, non-partisanship and broad variety.
>
> Thirdly — as to the editorial page, I find it courageous, non-partisan, able and free to attack abuses in both parties. My ideal. In specially difficult situations which test courage, character and capacity, I find the Eagle rises to the importance of the occasion and brings out great latent strength in reflecting the moral sense and public opinion of the community, which it largely creates.
>
> I congratulate the Eagle upon attaining its seventieth year full of honors, strength, success and prosperity.
>
> I congratulate the people of Brooklyn in having an organ so remarkably able and representative.
>
> I congratulate Mr. St. Clair McKelway, whose versatility, labor and genius enable him to be ranked among the great editors of the Republic. I wish we had more like him.
>
> Yours sincerely,
>
> Joseph Pulitzer.
>
> Chatwold, Bar Harbor, Me.

The other pioneer — the man who revolutionized English newspaper making, Lord Northcliffe, on the occasion of one of his visits to the United States, as Sir Alfred Harmsworth, before his elevation to the peerage, inspected the Eagle building from cellar to roof. He has probably inspected more newspaper offices in the United States and abroad than any other man living. He owns several great newspapers in England, and great pulp forests in

Newfoundland, and is constantly on the watch for improvements in newspaper making. The following interview with him was published in the Eagle on the day of his departure, and is reprinted here because it sums up the impressions created on a most experienced observer by a trip through the Eagle building. His great ability to grasp not only the general significance, but also the details of a newspaper plant in so short a visit, can find no better illustration than in this statement which he dictated:

> I did not expect to find much to learn on this visit to the United States in the way of newspaper making. All that I did learn I find was in the Eagle's press room, the arrangement of your editorial and news rooms, and the generous provision of light, air and comfort for the five hundred happy-looking workers I saw engaged in your office.
>
> The Brooklyn Eagle is the only non-metropolitan newspaper — and I use the phrase to distinguish it from the Manhattan dailies — that is known in England and France. Its editorial opinions have a wide circulation in both countries. In fact, in Paris you are known as Sir Brooklyn Eagle, as I presume you have seen. Its opinions are frequently quoted there, which is a rare thing in the case of an American paper.
>
> Your paper has a simply amazing hold on Brooklyn itself. I do not speak of it from a business standpoint, but I mean a hold on the minds and hearts of Brooklyn people, such as I have never seen anywhere else. In this respect it is unique, to my mind.
>
> I suppose that the Eagle people are tired of hearing that theirs is the most perfect newspaper office. Perhaps they don't mind a repetition of the statement from one who has made the planning of such establishments his chief work in life.
>
> The unique position of the Eagle in journalism, its vast power over an intelligent population like that of Brooklyn has no doubt necessitated the building up of its many departments on the lavish lines in which I found them. I may claim to have spent many years in the newspaper buildings of all capitals of the world. Here and there I found a newspaper department outside that of editing and publishing.
>
> But I never conceived a newspaper office that should be at once a friend of the people; that should be a center of intellectual activity, an information bureau and a government weather bureau; that should be used as a means of instructing hundreds of young people in newspaper making; that should take the pains to amuse and entertain the children of its city through a department especially devoted to them; in short, a paper that had so many and original departments apart from the making of the newspaper itself.
>
> I am aware of no newspaper that has so deeply entered into the life of its readers as the Eagle. All this has been done, not at all on the line of cold business. I take it to be a return for the warm sentiment always expressed by Brooklyn people in foreign countries for their paper. The Brooklyn man who enters the Paris office of the Eagle — and a very fine department it is, by the way — proceeds to feel homesick at once. He has read the Eagle all his life, he has probably planned out his trip abroad in its information bureau, and I should not be surprised to hear that the Eagle had insured his life, invested his savings and finally buried him. I did not see those departments, but I was prepared for anything after the first half hour in the Eagle building.
>
> In the realms of practical newspaper production the Eagle press room should be dated about 1910. It is filled with devices that will not become general until that time, or thereabouts. The arrangement of its presses and the system by which the paper is fed from reels underneath, so that a new roll can be switched on when the old one is exhausted, without stopping the machinery, is unique in your city. Only one other office in the world like it, I believe. The system of electrical control of all machinery used in getting out the paper is, I believe, to be placed in the same class with your press room.
>
> The means of transportation of the paper within the building, the lighting, the rooms, everything that tends to perfection of production is there. The arrangement of the editorial rooms and news rooms, their perfect system of movable telephones, the stereotyping department, the photographic and half-tone departments, are not merely there in their best form, but also placed so as to provide the greatest amount of work in the least amount of time.
>
> There is a splendid lavishness about the palace of the Eagle that makes one regret that Brooklyn is not a city of its own instead of a part of another city. The paper has an importance in foreign countries suggestive that it is the organ of a whole metropolis and not a part of it. I do not understand why it is not called the New York Eagle or simply the Eagle. Its editorial opinions are quoted all over the world, and its editor, Mr. McKelway, is a man whose name is known to newspaper men wherever our language is spoken.

* * *

A Circulation Record

The department of circulation of the Houston (Tex.) Chronicle is charged with all expenses, such as salary for office help, salary for traveling representatives, their expenses, second class postage,, express, white paper, premiums, ink and incidentals.

During the past six months the Houston Chronicle has made a net gain in circulation of more than 7,000 daily and nearly 8,000 Sunday, notwithstanding the heavy expense of building circulation and charging the department with all expenses, there is still a net profit. This, in the opinion of C. B. Gillespie, secretary and business manager of the Chronicle, is a record standing alone, and for which he gives to Leon Van Laeys, the able director of circulation. The circulation of the Chronicle is 34,000 daily and 41,000 Sunday at this time, the subscription price $6.00 a year, and the paper runs from 20 to 100 pages. For the months of January, February, March and April, 1913, this was a net gain of more than thirty-three and one-third per cent, compared with the same months last year.

* * *

Many a critic of advertising makes the mistake of thinking that all advertisements are constructed on the same model.

rather pleasing as a whole, but is not nearly so good as the work Mr. Lewis does for customers.

The indention of the double-line head is out of the ordinary, but whether there is not a little too much white in the job is a question. There are three different series in the job, which is something perfectly allowable if the advertising idea is carried out, but the lines, "The More Printing You Buy of Us, etc.," would have been better in the same series as "These are in our regular line of work." I do not care for a plain ceriphed initial with a Gothic face.

* * *

An advertisement that would otherwise be excellent is often N. G. whatever because it lacks a follow-up.

* * *

Envelope and Letterhead Differently Composed, But Individuality Retained

The envelope corner of C. C. Chapman Company, Portland, Ore., (11a), can justly be described as "chaste." As a study in square effects it is worthy of especial consideration. The nameplate, reproduced from pencilled longhand, is especially attractive with its four capitals. "C. C. Chapman Company Constitutes Characterful Chirography"—there are the seven C's. The nameplate and the word engraving are in orange and the remainder in a slate. The rule border, with a margin, extends around the No. 10 envelope.

Phœnix Building Fifth and Oak Sts.
PORTLAND :: OREGON

No. 11a

The letterhead (11b) has a different color scheme. The double rule is light green, the nameplate dark green, and the remainder brown, with the exception of the rule border that surrounds the whole page, with a generous margin; this is in light green, bordered with one-point rules in brown. Though the type, rule and color schemes of envelope and letterhead are different, the strong pencilled signature, the chaste effect, the lightness of tone, retain the individuality of the firm. The manager, H. R. Hayck, to whom I am indebted for these specimens, signs his name in red, which, with the blue typewriting, makes a striking addition to the color plan.

The Philistine and the Devil

The ads of itself that the Philistine of East Aurora prints in its pages have a charm of their own—the hardly analyzable Roycrofic charm that has a Hubbardy convention of its own, and so is hardly conventional. Here (12a) is a two-page ad from the buff pages of the Philistine—initials "T" and "P" and the letter of the other initial, the two

"AMALGAMATION"

The Ben Franklin Club of America, and the United Typothetae of America, ceased to be July 1st, they becoming at that time amalgamated into one body under the name of the United Typothetae and Franklin Clubs of America.

The amalgamation of these stalwart organizations brings together into one the very best there is in printerdom on which to build a progressive and healthy printers' organization to better work for the uplift of the craft — which work these old organizations have been engaged in for several years back.

Secretary Sheasgreen of the Ben Franklin Club of America, after steady, persistent work, succeeded in turning over 181 applications to the new organization. The actual work of getting applications could not begin until after the vote had been taken as to whether the members wanted amalgamatiton. This result was not had until about April 15, then the membership campaign began. St. Louis came in with 52 members. Des Moines, the first city to perfect a local amalgamatiton, came in with 17. Cleveland with 37, though since the first of July they came along with ten or a dozen more. Chicago produced 46, while the rest of the 181 applications are scattering. This result means that an average of about 75 applications per month were received from the middle of April up to the first of July. If this average is kept up by the new organization, there should be gathered from the fold of the Ben Franklin Club of America by the time of the New Orleans convention about 250 more applicattions. This would mean that better than two-thirds of the membership of the Ben Franklin Club of America would become members of the new body.

This can be accomplished. In fact, it must be accomplished, if the new organization is to be the power for good that it must be. There are a few obstacles, though, which have to be overcome, and each one is a problem in itself.

Many men there are who do not like the name Typothetae because of its connection in past labor troubles. Others do not like the idea of the dollar standing before the man, as it does in the "constitutional" vote. Others seem to think they see in the new amalgamation a move to still further strengthen the old members of the United Typothetae to begin anew their activities against labor, by using the dues coming from the new members for this purpose, when these new members do not believe in opposing labor according to this method. They believe their money should be spent in educational lines rather than in warfare. Some men think that to spend the money in field men for installing cost systems is not good business; they argue that this should be done by those making a business of this particular work. Then, again, there are those who would rather see no national organization — only state and local organizations. On the other hand there are those who do not like the state organization idea at all — they think that the national way is the only way. And so from every hand come problems that must be met.

C. P. Carl, Treasurer Ohio Printers' Federation.

How to solve them is the question. The new organization, with its earnest officers, can and will in time, solve them all, but to do this those who are on the outside must get on the inside, there to show of what clean, white, true stuff they are made when it comes to the cause of battling for better educational activities for the "little" fellow and for a square deal to all men engaged in the craft, whether employer or employe.

So, Mr. Printer, if you are not already "in" get on the inside at once! Then you can do something.

* * *

The buyer of poor printing soon forgets the smallness of the price.

Wisconsin Man to Head New Journalism Department at Oklahoma

Chester Wells, who was duly graduated from the four-year course in journalism at the University of Wisconsin in June, has been appointed by the University of Oklahoma to organize its new department of journalism and to develop its publicity work. He enters upon his new duties in September.

While attending the University of Wisconsin Mr. Wells has been managing editor of the Daily Cardinal, the twelve-page, four-column morning paper published by the students; and also editor-in-chief of the Wisconsin Magazine and of the Badger, the junior annual. For his baccalaureate thesis in journalism Mr. Wells has made an historical study of the evolution of the "make-up" of American newspapers.

Chester Wells, Head New Department of Journalism of Oklahoma. Graduate of the Course in Journalism at the University of Wisconsin

Before entering the university in 1909, he had had practical newspaper experience, beginning as printer's devil in the office of the Freeport, Ill., Democrat. Later he joined the staff of the Freeport Standard, where he worked up through editorial positions and then entered the business office to become advertising manager, and finally assistant business manager. He had an opportunity to become manager and part owner of that paper in 1911, but refused the offer to continue his university work.

For several years Mr. Wells did considerable work as correspondent for the New York Herald, New York World, St. Louis Post-Dispatch, and Chicago Record-Herald.

Just before entering the University of Wisconsin Mr. Wells furnished the St. Louis Post-Dispatch and the New York World with the material that enabled them to scoop the country with their famous story proving the dual existence of John D. Rockefeller's father, who lived and died in northern Illinois under the alias "William Levingston."

He was recently elected president of the national honorary journalistic fraternity, Sigma Delta Chi.

JOURNALISM STUDENTS IN SUMMER SESSION

There are fifty-nine students in the classes in journalism during the summer session at the University of Wisconsin. They come from all parts of the country, among the states represented being California, Oklahoma, Michigan, Missouri, Kentucky, Indiana, Illinois, Iowa, Pennsylvania, Colorado, Alabama, North Dakota. Ten of the summer session students in journalism are college graduates. The total number of students in the classes in journalism at Wisconsin this year, including the summer session, is 196.

One of the unique festivals of this country is the Shan Kive at Colorado Springs. The name is Indian and means a fete, or good time. The Pike's Peak region people bring a band of one hundred Utes from the reservation and around them build their fall entertainment. This year it occurs September 2 to 4. One of the features will be the marking of a spot where the last Indian massacre occurred in what is now the center of that city, in 1868. In the famous Garden of the Gods will be staged a pageant of history of that region, including the coming of the Spanish Dons, the discoveries of Colonel Pike, the famous "Pike's Peak or Bust" gold rush and the short grass range days. Thousands of tourists who go to the mountains in their automobiles each summer are arranging to make the trip this year during the Shan Kive dates.

Albert Scholl, Second Vice-President Ohio Printers' Federation

C. W. HOLMAN, OF FARM AND RANCH, ON WISCONSIN UNIVERSITY FACULTY

Charles W. Holman, of Farm and Ranch, has been appointed editor of the University of Wisconsin press bulletin, and will take up his duties July 25.

He succeeds Prof. W. G. Bleyer, who established the University of Wisconsin press bulletin, and has been editor of it for the last nine years.

Professor Bleyer hereafter will devote all his time to the course in journalism, of which he is the head.

NEWSPAPER CRITICISMS

Address all communications to O. Byron Copper, De Soto, Wis.

I SUPPOSE a large per cent of my readers have seen copies of Clark & Crockard's "Jim Jam Jems," that unique little publication emanating from Bismarck, N. D., whose editor is up before the Federal court every now and then on trumped-up charges anent the plainness and strength of his printed language. Sam H. Clark, the editor of this remarkable little magazine, goes after everything he considers evil in such a vigorous and original fashion that the guilty ones cannot resist retaliation, with the hope of complete annihilation of the tormentor; but as a devout disciple of the American free press doctrine, especially when the purpose of that press is good and just, I, for one, do not want to see any dampers turned. But the thought with which I had intended to open this installment is something other than that absorbing one of a free press.

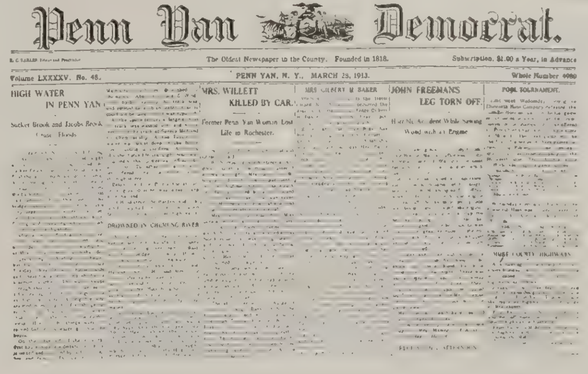
In the May number of Jim Jam Jems there is a hint that ought to be profitably absorbed by the daily (and weekly) press of the country. While reviewing one of the sensational breach-of-promise cases of the time "Jim Jam Junior," as the editor of this brave little magazine styles himself, says:

"It is just another case where a comely woman inveigles some poor fool — old enough to be her father — into calling her his tootsie-wootsie over his own signature, then when he refuses to contract a marriage with her, which will insure a life of ease, she rushes into court with a broken heart and an intact gall and poses in the public print as an 'injured woman,' demanding damages for a bleeding heart. When a woman's heart is really hurting her, the gold cure won't help a bit. And when she's truly sorry for her sin she tells her trouble to the Lord instead of to juries and newspaper reporters. And the newspapers of the country would do honest manhood and worthy womanhood an everlasting good, if they would refuse to be a party to this kind of blackmail by eliminating all reference to breach-of-promise cases from their columns."

The question which Brother Clark here raises simply resolves itself into that old, old newspaper-maker's problem of whether or not it is right to give one's readers what they demand. A druggist, we know, is not supposed to dispense poisons for suicidal purposes, and neither should an editor dish out poison promiscuously to his subscribers merely because they demand it. The question every true newspaper man should ask himself before he allows anything to go into his columns is not, "Does the public demand it?" but "Will the information benefit mankind? Will it improve them mentally or morally?" or, at least, he should ask, "Will this thing I am about to publish hurt?" If such tests as these were rigidly applied to everything that is printed, the free press of America, as a power for enlightenment, would soon increase ten-fold.

✣ ✣ ✣

Something distinct as a home newspaper is this Penn Yan, N. Y., Democrat, copies of which have been with me for some weeks. Its principal point of distinction is the fact that it is impressed on book paper instead of print, giving it at once a high class appearance. The front page is clean and very neatly made up, as the accompanying reproduction will show (Exhibit 1). It would be hard to improve upon the contents of this sheet. I have scanned the pages even a little more closely than ordinary, and have been pleased with the news and editorial columns. Only one thing have I discovered to deplore, and that is the haphazard style of arrangement of matter in the inner pages. The displayed ads are strong and forceful, but seldom artistic, due to an admixture often of uncongenial faces. Presswork is delightfully correct. The double-deck heads are not always well written nor well worded — that is, I mean the stair-step lines



Penn Yan Democrat.

The Oldest Newspaper in the County. Founded in 1818.

Subscription, $1.00 a Year, in Advance

Volume LXXXXV. No. 48. PENN YAN, N. Y., MARCH 28, 1913. Whole Number 4980

HIGH WATER IN PENN YAN

Sucker Brook and Jacobs Brook Cause Floods

DROWNED IN CHEMUNG RIVER

MRS. WILLETT KILLED BY CAR.

Former Penn Yan Woman Lost Life in Rochester.

MRS. GILBERT H. BAKER

JOHN FREEMANS LEG TORN OFF.

POOL TOURNAMENT.

are not always of equal length nor are they always properly worded. For instance, take this example:

MRS. WILLETT
KILLED BY CAR.

Former Penn Yan Woman Lost
Life in Rochester.

To practically reverse the information would be more in accord with my idea, something like this:

PENN YAN WOMAN
KILLED BY CAR

Mrs. Lucy Willett Loses Life
in Rochester

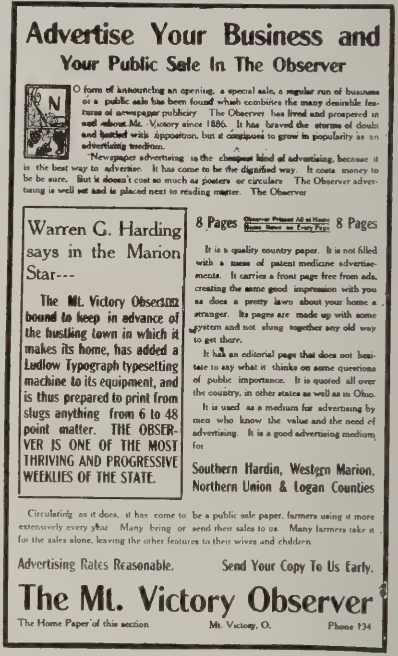
In case of an accident, the first question that arises to human mind is "What has happened?" The main fact of the story, then, is "Woman Killed." By adding "Penn Yan" and "By Car" to the headlines, the main facts of the story are fully stated. Details may then follow in the subhead. It will also be noted that I have omitted all end-line punctuation, as not only useless, but detrimental to the balance of the lines.

* * *

Not so instantly pleasing is the Herold, of Toronto, S. D., as the sheet just reviewed, not only because it is printed on news stock rather than on a fine grade of book, but also because the typography and presswork are of a perceptibly lower grade. The double-deck heads are made unsightly because they are a little too sensational in twenty-four point bold condensed Gothic combined with the deep inverted pyramid of pica poster, especially considering the tame stuff that follows. The pica poster is too large a face for the single-line headings, also; eight or ten-point is large enough. The contents of the Herald are much better generally than these other features alluded to. The locals are written up in a creditable style, and the letters from special correspondents form a feature that I'm inclined to commend. The absence of an editorial department is to be regretted; but no one realizes better than I how difficult it is to maintain such a feature in a home weekly, where space is frequently limited and in the creation of which help is as scarce as time is fleeting. The pressman evidently runs his fountain a trifle too wide open and the ad compositor is producing only mediocre work.

* * *

A long time have these copies of Joe Pennock's Mt. Victory, Ohio, Observer lain on my desk. I have kept them indefinitely, pending such day as I might find time for their proper consideration, for they contain a feature to which I have wished to devote some space in these pages of the National Printer-Journalist. Pretty nearly all newspaper publishers know something about how hard it is to induce people to advertise, and thousands of clever heads have worked overtime to create schemes for making advertising come easy. We are all pretty much familiar with a lot of these schemes, many of which are excellent. But there's an all-important angle to the problem that has escaped some of us, and that's the important necessity of educating folks to read advertisements. Now, in spite of the fact that this is an advertising age, in spite of the fact that advertising is extremely popular and all periodicals are full of it, there are yet many, many people reading home newspapers who do not give the close attention to the displayed spaces which they reasonably should. Hence, any effort to overcome this condition is highly commendable and must naturally result in an increase in advertising patronage, because it will naturally tend to create greater results for those who do advertise. Now, such an effort has Brother Pennock been making. In liberal displayed spaces in



Advertise Your Business and
Your Public Sale In The Observer

NO form of announcing an opening, a special sale, a regular run of business or a public sale has been found which combines the many desirable features of newspaper publicity The Observer has lived and prospered in and about Mt. Victory since 1886. It has braved the storms of doubt and battled with opposition, but it continues to grow in popularity as an advertising medium.

Newspaper advertising is the cheapest kind of advertising, because it is the best way to advertise. It has come to be the dignified way. It costs money to be be sure. But it doesn't cost so much as posters or circulars The Observer advertising is well set and is placed next to reading matter. The Observer

Warren G. Harding says in the Marion Star---

The Mt. Victory Observer is bound to keep in advance of the hustling town in which it makes its home, has added a Ludlow Typograph typesetting machine to its equipment, and is thus prepared to print from slugs anything from 6 to 48 point matter. THE OBSERVER IS ONE OF THE MOST THRIVING AND PROGRESSIVE WEEKLIES OF THE STATE.

8 Pages Observer Printed All at Home / Home News on Every Page 8 Pages

It is a quality country paper. It is not filled with a mess of patent medicine advertisements. It carries a front page free from ads, creating the same good impression with you as does a pretty lawn about your home a stranger. Its pages are made up with some system and not slung together any old way to get there.

It has an editorial page that does not hesitate to say what it thinks on some questions of public importance. It is quoted all over the country, in other states as well as in Ohio.

It is used as a medium for advertising by men who know the value and the need of advertising. It is a good advertising medium for

Southern Hardin, Western Marion, Northern Union & Logan Counties

Circulating as it does, it has come to be a public sale paper, farmers using it more extensively every year Many bring or send their sales to us. Many farmers take it for the sales alone, leaving the other features to their wives and children

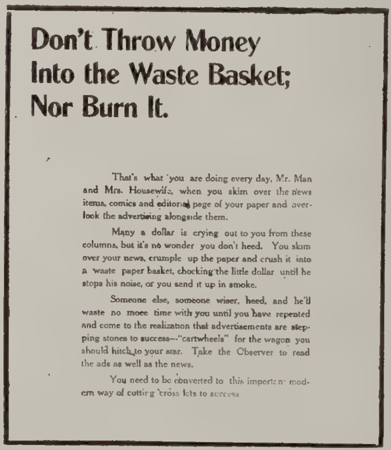
No. 2



Don't Throw Money
Into the Waste Basket;
Nor Burn It.

That's what you are doing every day, Mr. Man and Mrs. Housewife, when you skim over the news items, comics and editorial page of your paper and overlook the advertising alongside them.

Many a dollar is crying out to you from these columns, but it's no wonder you don't heed. You skim over your news, crumple up the paper and crush it into a waste paper basket, chocking the little dollar until he stops his noise, or you send it up in smoke.

Someone else, someone wiser, heed, and he'll waste no more time with you until you have repented and come to the realization that advertisements are stepping stones to success—"cartwheels" for the wagon you should hitch to your star. Take the Observer to read the ads as well as the news.

You need to be converted to this important modern way of cutting 'cross lots to success

No. 3

his Observer he has been advising his readers of the personal advantages in the habit of advertisement-reading. I will here reproduce this trio of ads, hoping that they will be large enough, even in the reduced form, to be legible. That will be the easiest way of presenting the matter to other editors who may desire to do something along the same line. So favorably am I impressed with the idea that, just the very first edition of my own paper wherein space seems to be available for the purpose, I will insert these advertisements (Exhibits 2, 3 and 4) or something similar.

* * *

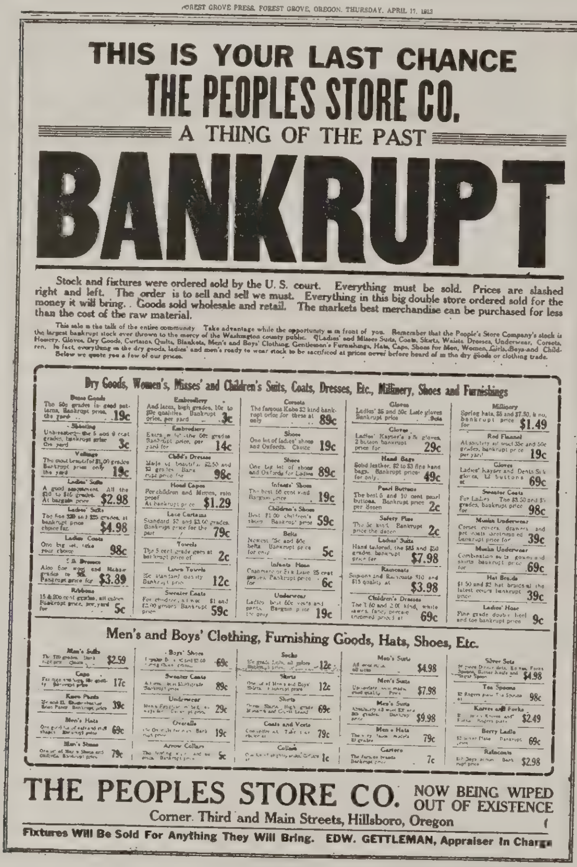
That the Oregon University school of journalism offers its students a valuable and practical course of instruction is very ably proved, I think, by this edition of the Eugene, Ore., Morning Register, which was issued without help by a staff selected from the class of sixty students. The editorial and reportorial work will compare quite creditably with that of many professionals, and the head-writing is done with extreme nicety. The job is the more remarkable and commendable when it is considered that this newspaper was issued by these students after only four and one-half months of instruction at the University — a very short apprenticeship, indeed. This idea of the Eugene newspapers placing their plants at the service of the University's department of journalism is a particularly fine one, thus giving the students the opportunity to practically apply the knowledge absorbed at class.

* * *

Thus far I have been prevented from bestowing upon this twenty-four page agricultural edition of the Rhinelander, Wisconsin, New North the proper notice which it deserves. It is an elaborate edition, and, as is so often the case with these elaborated home newspapers, several features have probably suffered through the extra work incident to the elaboration. To issue a twenty-four page edition, even in a well equipped country newspaper office, is no small undertaking, and the shop that does it with ideal results in all the various departments, is to be congratulated. For my part, I do not care for, nor do I advise, the issuing of editions of a greater number of pages than can well be handled, when it is not reasonably necessary. The result is sure to be an edition of mediocre merit, because of the overtaxed force and equipment. I cannot say that the New North strained itself in an effort to make a record in number of pages; but I know such is often the case with special editions. I have seen special editions wherein page after page of plate was run just to make a big showing. I call such action a sinful waste of ink and paper. And, while I am discussing the subject, I might as well express a conviction which I have long harbored against the Sunday press of the country. Did you ever see a Sunday paper that was half read through by its purchaser? My copy of the Sunday Record-Herald lies at my side as I write these lines. It consists of nine parts, of an average of eight pages each, I presume. Now I dare say if I should invite in three score of my neighbors today, the whole party would be provided with all the newspaper reading it might crave, using only this one Sunday paper, and I would limit my invitations only to those whom I know to be readers. We hear and read much about the imminent exhaustion of the world's paper supply; yet the way these Sunday papers extravagate in the needless use of white paper does not indicate that there is a bit of truth in the scare. To me, our modern Sunday papers are a convincing demonstration of the homely old maxim — " too much of a good thing." A copy of one of them never fails to give me a sense of weariness the moment my newsboy hands it to me. And, particularly where the work has not been done especially well, these ponderous special editions of home weeklies sometimes give me a similar emotion. As intimated above, a close examination of this special edition of the New North does not reveal that it was made unnecessarily large. A lot of good matter was collected and enough advertising to warrant the twenty-four pages. There is evidence in every page of a first class equipment, but regretably there is a striking lack of system in the paper's makeup. As is so frequently the case in country shops, too, the folder has not been properly adjusted, so that too deep a trim gives the tops of pages a docked appearance. Another deplorable fact is that the sheets were evidently run with ink too heavy to admit of running and immediate turning without offset. This gives the pages an unpleasantly smudged appearance. Aside from these features this edition is worthy of praise, the contents being excellent, the clean front page, the many fine big illustrations, the keen editorial page, etc., being among the good points that have not escaped me.

* * *

The examination of a somewhat great accumulation of copies of the Forest Grove (Oregon) Press, that delightful model of a newspaper which was reviewed not many weeks ago in these columns, tells me that something has been happening at Forest Grove — and in the Press office. I would be interested in the whole story, of which the only inkling I have is the fact that about the second issue in May the name of G. Edwin Secour as managing editor was changed to J. N. Hoffman, which a couple of weeks later was superseded by E. S. Sparks. It is not my office to make partial comparisons between the work of competitors, nor will I stoop to it here, only must I say that, as his successors know, too, I have no doubt, there are few newspaper men who could keep a newspaper up to the standards of excellence set and maintained by Brother Secour. He was giving the folks of Forest Grove an extraordinarily fine newspaper; but I surmise it was only another case of unappreciated breadth of mind — still I hope not. I am judging only from the editorials — fine, clean and strong editorials they were, too — demanding a square deal for all. The bone of contention between Editor Secour and some of those prominent in church circles seems to have arisen over the question of prospective Sunday games and races at the training and breeding park established near the city. Brother Secour could not see the wrong in those things, nor distinguish between days of the week, and naturally it made trouble with the orthodox people. Editor Secour bravely defended his stand and boldly declared that he would rather close shop and depart than to don a muzzle as an editor. I sincerely hope that the people of Forest Grove are not the narrow kind that condemn a man who happens to entertain a different opinion than they. It may be that those who differ from us sometimes occupy a higher point on the mountain side of human progress than we do, and hence they see further into the landscape than we can from a lower point of view. Especially should one stop and think about this, if the person who differs from one is advocating something different from the popular belief. Popular belief is often popular because it is old. Many popular beliefs, such as those concerning geography in the time of Columbus, have been proven wrong. And it may be that some day the human race will advance to the point which I surmise G. Edwin Secour has attained, where all days look alike sacred. Surely to me God seems no more active on a Saturday or a Sunday than on a Tuesday or a Thursday, and what we do on one of these days, if sinful, must be just as displeasing to the Father if perpetrated upon another day. It is not the day, but the deed, that counts with the man and his God. All of which perhaps has nothing to do with a department of newspaper review. In exhibit 5 I reproduce a dandy big ad from the Forest Grove Press.



FOREST GROVE PRESS, FOREST GROVE, OREGON, THURSDAY, APRIL 17, 1913

THIS IS YOUR LAST CHANCE

THE PEOPLES STORE CO.

A THING OF THE PAST

BANKRUPT

Stock and fixtures were ordered sold by the U. S. court. Everything must be sold. Prices are slashed right and left. The order is to sell and sell we must. ✣ ✣ ✣

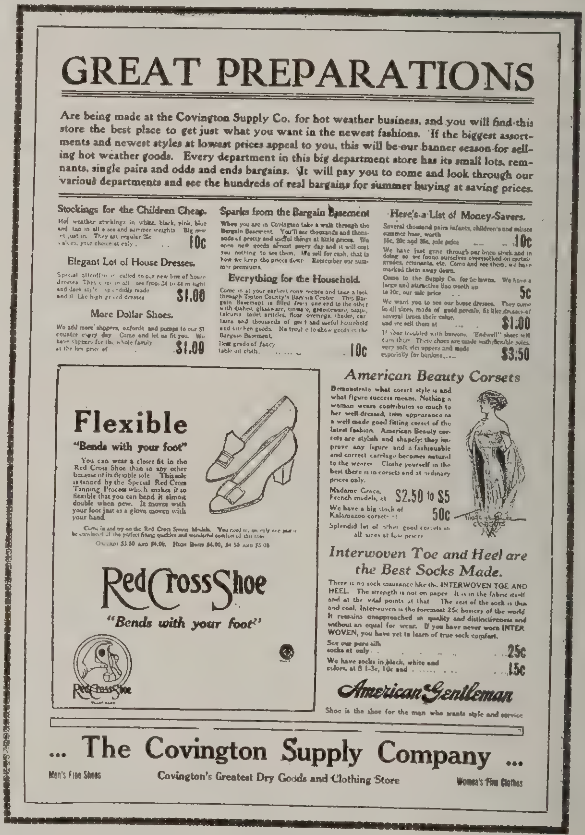
I am happy to say that I am still the favored friend of Tom McGregor, the skillful ad-man on the Covington, Tenn., Leader, as proof of which I hold out the fact that I continue to receive specimens of his creditable work. One of the best specimens Brother McGregor has produced for some time is this fine page ad shown as exhibit 6. Adequate white margins, good display and neat design are some of the good points that make this advertisement above the average in excellence.



GREAT PREPARATIONS

Are being made at the Covington Supply Co. for hot weather business, and you will find this store the best place to get just what you want in the newest fashions. If the biggest assortments and newest styles at lowest prices appeal to you, this will be our banner season for selling hot weather goods. Every department in this big department store has its small lots, remnants, single pairs and odds and ends bargains. It will pay you to come and look through our various departments and see the hundreds of real bargains for summer buying at saving prices.

Stockings for the Children Cheap.
Hot weather stockings in white, black, pink, blue and tan in all sizes and summer weights. Big new lot just in. They are regular 25c values, your choice at only 10c

Elegant Lot of House Dresses.
Special attention is called to our new line of house dresses. They come in all sizes from 34 to 44 in light and dark styles, splendidly made and fit like high priced dresses $1.00

More Dollar Shoes.
We add more slippers, oxfords and pumps to our $1 counter every day. Come and let us fit you. We have slippers for the whole family at the low price of $1.00

Sparks from the Bargain Basement
When you are in Covington take a walk through the Bargain Basement. You'll see thousands and thousands of pretty and useful things at little prices. We open new goods almost every day and it will cost you nothing to see them. We sell for cash, that is how we keep the prices down. Remember our summer premiums.

Everything for the Household.
Come in at your earliest convenience and take a look through Tipton County's Bargain Center. This Bargain Basement is filled from one end to the other with dishes, glassware, tinware, graniteware, soaps, talcums, toilet articles, floor coverings, shades, curtains and thousands of good and useful household and kitchen goods. No trouble to show goods in the Bargain Basement.
Best grade of fancy table oil cloth. 10c

Here's a List of Money-Savers.
Several thousand pairs infants, children's and misses summer hose, worth 15c, 20c and 25c, sale price 10c
We have just gone through our linen stock and in doing so we found ourselves overstocked on certain grades, remnants, etc. Come and see them, we have marked them away down.
Come to the Supply Co. for lawns. We have a large and attractive line worth up to 10c, our sale price 5c
We want you to see our house dresses. They come in all sizes, made of good percale, fit like dresses of several times their value, and we sell them at $1.00
If your troubled with bunions, "Endwell" shoes will cure them. These shoes are made with flexible soles, very soft vici uppers and made especially for bunions $3.50

Flexible
"Bends with your foot"
You can wear a closer fit in the Red Cross Shoe than in any other because of its flexible sole. This sole is tanned by the Special Red Cross Tanning Process which makes it so flexible that you can bend it almost double when new. It moves with your foot just as a glove moves with your hand.
Come in and try on the Red Cross Spring Models. You need try on only one pair to be convinced of the perfect fitting qualities and wonderful comfort of this shoe.
Oxfords $3.50 and $4.00. High Shoes $4.00, $4.50 and $5.00
Red Cross Shoe
"Bends with your foot"

American Beauty Corsets
Demonstrate what correct style is and what figure success means. Nothing a woman wears contributes so much to her well-dressed, trim appearance as a well made good fitting corset of the latest fashion. American Beauty corsets are stylish and shapely; they improve any figure and a fashionable and correct carriage becomes natural to the wearer. Clothe yourself in the best there is in corsets and at ordinary prices only.
Madame Grace, French models, at $2.50 to $5
We have a big stock of Kalamazoo corsets at 50c
Splendid lot of other good corsets in all sizes at low prices

Interwoven Toe and Heel are the Best Socks Made.
There is no sock insurance like the INTERWOVEN TOE AND HEEL. The strength is not on paper. It is in the fabric itself and at the vital points at that. The rest of the sock is thin and cool. Interwoven is the foremost 25c hosiery of the world. It remains unapproached in quality and distinctiveness and without an equal for wear. If you have never worn INTERWOVEN, you have yet to learn of true sock comfort.
See our pure silk socks at only ... 25c
We have socks in black, white and colors, at 8 1-3c, 10c and ... 15c
American Gentleman Shoe is the shoe for the man who wants style and service

✣ ✣ ✣

Few towns have a better home newspaper than Chilton, Wisconsin, in its Times, the contents of which are as high grade as they are abundant. This sheet is so nicely printed, too, that it makes a good impression at first sight. The ads are always well set, as the two reproductions (Exhibits 7 and 8) will prove. The good print alluded to is due not only to proper makeready, I judge, but also the correct regulation of the ink flow. So many home papers that come to my desk monthly are printed too heavily with ink.

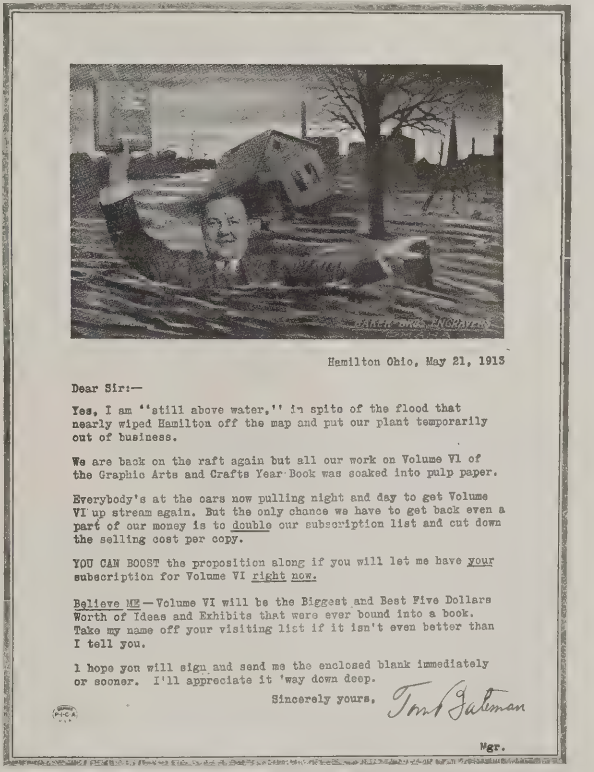
The Ben Franklin Club of Quincy, Ill., had as their guest on Friday evening, June 27, Mr. E. E. Sheasgreen, secretary of the Ben Franklin Club of America, who delivered his illustrated address on "Capital and Its Relation to Your Business," followed by a demonstration of the printers' cost system. While the meeting was planned in three days' time, and the thermometer at 98 degrees, there were over one hundred to greet him. There were present manufacturers, college professors, employing printers and their employes, including bindery girls and office force, and country editors within a radius of twenty-five miles. Hannibal, Mo., sent a delegation of three. All lines were represented, and the county attorney, who gives out the county printing, was present to learn about the Printers' Cost System. It was given out by one present, who is not in the printing business, that he did not see how a printing office could run without such a system. It was decided by all to be a most profitable meeting. Mr. Sheasgreen is a man of experience and knows whereof he speaks, placing before his audience a row of descriptive figures and facts which were indisputable as to their authenticity and truthfulness. He occupied the attention of the listeners for some two hours and never once failed to impress a point thoroughly upon the minds of the audience. The Quincy club greatly appreciated the efforts of Mr. Sheasgreen in giving them a day at so busy a time as the closing up of his affairs, prior to the amalgamation of the Ben Franklin Club and the Typothetae.



Hamilton Ohio, May 21, 1913

Dear Sir:—

Yes, I am "still above water," in spite of the flood that nearly wiped Hamilton off the map and put our plant temporarily out of business.

We are back on the raft again but all our work on Volume VI of the Graphic Arts and Crafts Year-Book was soaked into pulp paper.

Everybody's at the oars now pulling night and day to get Volume VI up stream again. But the only chance we have to get back even a part of our money is to double our subscription list and cut down the selling cost per copy.

YOU CAN BOOST the proposition along if you will let me have your subscription for Volume VI right now.

Believe ME — Volume VI will be the Biggest and Best Five Dollars Worth of Ideas and Exhibits that were ever bound into a book. Take my name off your visiting list if it isn't even better than I tell you.

I hope you will sign and send me the enclosed blank immediately or sooner. I'll appreciate it 'way down deep.

Sincerely yours, Tom Gateman

Mgr.

Andrew W. Hopkins, editor of the Wisconsin Farmer and secretary of the Wisconsin Live Stock Breeders' Association, has been appointed agricultural editor and professor of agricultural journalism of the College of Agriculture of the University of Wisconsin, by the regents in their July meeting.

REVIEW OF JOB PRINTING

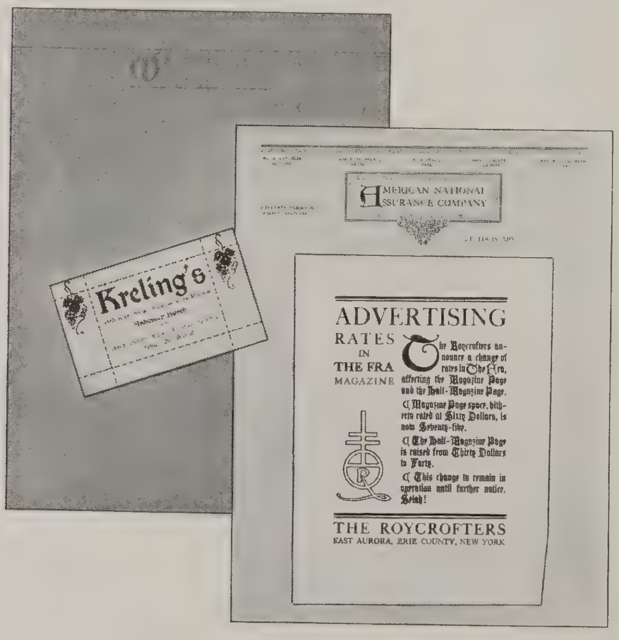
Address All Communications to E. S. HANSON, 440 S. Dearborn Street, Chicago.

AT different times I have had occasion to show title pages which were excellent examples of the handling of a large amount of matter, and here is another one. Possibly it is something of a stretch of the imagination to call this a title page, inasmuch as it contains a sort of introduction as well; but at any rate it is a first-class piece of work and ought to help materially in adding to the already great popularity of the Miehle press. Most of the pages following this one contain a list of the customers of this company.

[Note.—This page has by mistake been included in a plate showing extracts from the National Fire Proofing booklet, mentioned a little farther along.]

✣ ✣ ✣

If I were a physician, and were going to have my stationery, which by all the ethics of the profession ought to be in plain black and white, fantastically done in colors, I should want it done by Axel Edward Sahlin, of the Roycroft Shop at East Aurora. I know of no one else who could get up a creation for a medical man in gray, blue and aluminum, and put it across. And a big fancy initial in it, too. While it is a good one, I really prefer the one for the American National Assurance Company. It is a modest combination of tan stock and olive green ink.



Kreling's

AMERICAN NATIONAL ASSURANCE COMPANY

ADVERTISING RATES IN THE FRA MAGAZINE

The Roycrofters announce a change of rates in The Fra, affecting the Magazine Page and the Half-Magazine Page.

¶ Magazine Page space, hitherto rated at Sixty Dollars, is now Seventy-five.

¶ The Half-Magazine Page is raised from Thirty Dollars to Forty.

¶ This change to remain in operation until further notice. Selah!

THE ROYCROFTERS
EAST AURORA, ERIE COUNTY, NEW YORK

✣ ✣ ✣

The term efficient is in danger of becoming overworked, but it is so amply descriptive of a booklet produced by the Reincke-Kreicker Company of Chicago for the National Fire Proofing Company, that I really must use it. The booklet is a combination of white enamel stock, printed in brick red, gray tint, and black. Two sample pages will serve to give an idea of the way it is handled.

National Fire Proofing Company
CHICAGO PITTSBURGH NEW YORK

✣ ✣ ✣

A novel introduction card to be handed out at the meeting of the National Press Association at Colorado Springs is sent me by H. E. Hogue of Eaton, Colo. It consists of a miniature copy of the edition of the Eaton Herald of May 30, which was an issue of 24 pages, four columns to the page. In the miniature the pages are 2⅞ x 4 inches, and across the front page is the name and address of the editor and proprietor. It is a mighty good introduction, especially for a man who has as attractive and prosperous a sheet as Mr. Hogue.

✣ ✣ ✣

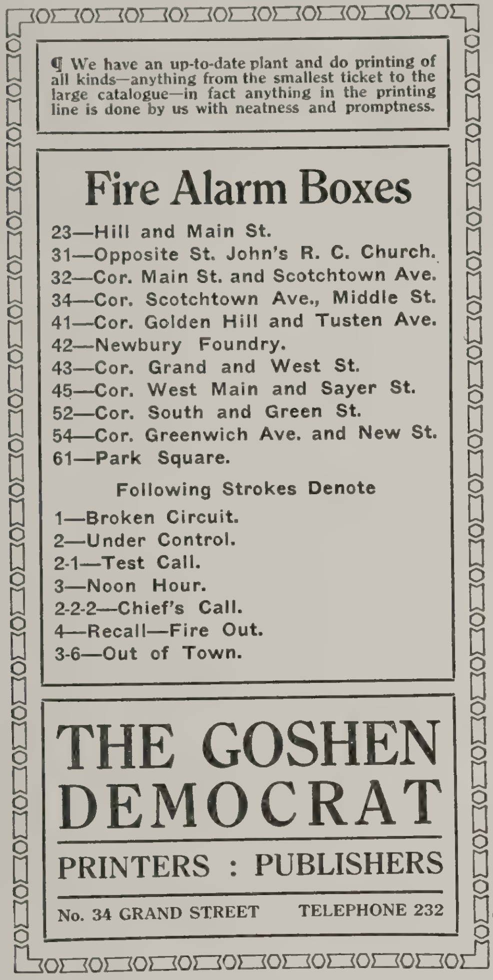
I have a program of the Wisconsin State Franklin Club's Cost Congress which goes into detail as to the hours of meeting, the various halls where the sessions are to be held, and other minutiae, but fails entirely to name the city where all this is to take place. Even the printer falls down once in a while when it comes to writing his own copy.

* * *

Am enclosing herewith two labels and a "Fire Alarm Card" for criticism in your Review of Job Printing department. The work was done by me while working in Goshen, N. Y. Am at present working for a large publishing concern in New York, ad department.

THOMAS CARRIGAN.

New York.



¶ We have an up-to-date plant and do printing of all kinds—anything from the smallest ticket to the large catalogue—in fact anything in the printing line is done by us with neatness and promptness.

PRINTERS : PUBLISHERS

No. 34 GRAND STREET TELEPHONE 232

The effectiveness of the job would have been increased if the numbers had been brought out a little stronger.

* * *

I send you enclosed letterheads, which were printed and embossed in our printery—an average country print shop.

A young nephew of the writer was the architect and he feels so proud of the job that I would respectfully invoke your criticism, lest his ambition suffer from vain glory.

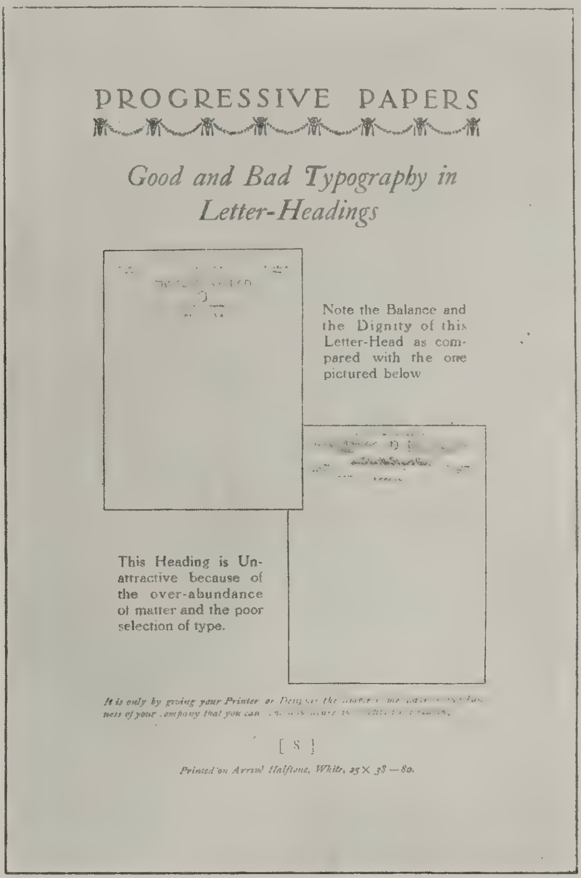
THEO. GRAF.,
President Graf Printing Co.

Hermann, Mo.

Sorry not to accommodate you, but it is really a mighty good head. I prefer the one which is printed all in green. It is too delicate to reproduce, otherwise I should be glad to do so.

* * *

A recent issue of Progressive Papers, published by the American Writing Paper Company, contains the page which I am showing here. It shows that there is some one connected with that handsome little house organ who knows what's what in typography. And here is also a little bit of printing wisdom from the same issue: "First costs count for little. Results determine values. Cheap printing is that which brings trade—if it fails it's expensive at any price. The effort and postage are the same in either case."



PROGRESSIVE PAPERS

Good and Bad Typography in Letter-Headings

Note the Balance and the Dignity of this Letter-Head as compared with the one pictured below

This Heading is Unattractive because of the over-abundance of matter and the poor selection of type.

It is only by giving your Printer or Designer the [illegible] *ness of your company that you can* [illegible]

[S]

Printed on Arrow Halftone, White, 25 X 38 — 80.

* * *

We are sending you a little program just printed by us, just as a sample of what "country printers" do. Have studied this job carefully and find that the only improvement that could be made on it is the paper it is printed on. While the paper is good, we think it is too light weight for printing on both sides. We are not looking for praise or discouragement, but just out of curiosity we send this for your inspection. What do you think of it?

Yours very truly,
CHAS. H. LAKE & SON.

Marshall, Wis.

This program could scarcely be improved on if one has a fancy for a liberal use of text type. I think the readers of this department know that I have some decided opinions along that line; and yet I am willing to concede the beauty of an occasional text job such as this. I see no reason to increase the weight of the already heavy bond stock.

* * *

W. F. P. Munsey, Lakemp, Okla., sends some work which he says he turned out in a shop whose total equipment cost $350. Gosh, man! How do you do it?

Continued in September Issue

Works of the Duplex Printing Press Company, Battle Creek, Michigan

Enjoyable, Instructive and Profitable Place to View on Going to or Returning From the Great Toledo Million Dollar Exposition and Third Ohio Cost Congress

THE NATIONAL PRINTER-JOURNALIST takes pleasure in reminding those of its readers who visit the Toledo Exposition of the nearness of the works of the Duplex Printing Press Company to the exposition. The works of this prominent concern are located at Battle Creek, Mich., and we recommend that those newspaper publishers who can travel via Battle Creek do so and make it a point to stop off and go through the plant.

A recent visit to this plant by the editor of this paper proved most instructive and gratifying. The wonderful growth of the plant and the extension of its buildings, the flower beds all along the sides of the great factory, the greensward, the grateful shade trees, the brightness, attractiveness, cleanliness and systematic arrangement, all combined to make a most favorable impression at first, and told, with silent but appealing eloquence, of the manifest thoughtfulness for the comfort, efficiency and well-being of all, and of the kindly spirit that pervaded and prevailed everywhere.

A visit to the model establishment will afford a most profitable and inspiring lesson to all workers or employers of men. What is seen, by a thorough inspection of the works and the products, will show that there is great gain in healthful, pleasant surroundings, with good light, good air, brightness, cheerfulness and orderliness everywhere.

The Duplex Printing Press Company has won its deserved prominence in the printing press field by the persistent development of new and better methods of newspaper printing. It started over a quarter of a century ago in the manufacture of web printing presses and introduced the remarkably successful Duplex Flatbed Perfecting Press when all previous attempts to build a successful machine of the sort had been complete failures. Its later history has been a repetition of similar advancements. It has been always, and is, a firm whose name is synonymous with progress and whose products are not only unsurpassed but are leaders in their respective lines.

The Duplex Tubular Plate Rotary press is the most novel of the recent inventions put out by this company, and it is destined to become the newspaper press of the future. The successful use of the tubular stereotype plate, completely surrounding the cylinder and so printing all the time the press is in operation, had never been attained by any other builders, although the patent offices are full of the records of futile attempts. Until this press was perfected the construction of rotary presses had been limited to the two-plates-around-the-cylinder arrangement, in which, of course, while one plate is printing the other is doing absolutely no work at all. The effect of the perfecting of a means of using the tubular plate is, therefore, a clean 100 per cent increase in efficiency in a press of any given page capacity. Double the product can be obtained without any increase of plates or printing speed. Incidentally the construction permitted by the tubular plate is simpler and more compact.

The latest of the presses brought out by this company is the one advertised in this issue of the National Printer-Journalist, the new Duplex Junior. This is a flatbed perfecting press on the duplex principle, simplified and redesigned to especially meet the needs of publishers who do not require the high speed of the more expensive regular duplex machine. This new press, now on the market, is what many newspaper men in limited fields have been wishing for — a speedy, inexpensive, perfecting machine — a real duplex at a moderate price.

A visit to the plant of the Duplex Printing Press Company is well worth the time of any publisher, especially so if he be contemplating the purchase of a newspaper press. To see the machines in the building, the care taken and the delicacy of measurement, is an education to those unfamiliar with the processes of machinery building at its best. Much of the work is gauged in the thousandths of an inch. The plant, comprising several large buildings, covers several acres of ground and is one of the largest printing press factories in the world, and there is none more complete. The company operates its own foundries for both brass, iron and bronze, and controls from the very start the material going into its product.

We repeat, if you are a newspaper publisher, don't fail to stop in Battle Creek at your first opportunity.

AN AUTOMATIC JOB PRESS WHICH PRINTS TWO SEPARATE JOBS AT ONE TIME .

Visitors at the Printers' Exposition in Toledo, Ohio, September 1 to 6, will have an opportunity to see the Standard High Speed Automatic Job Press in operation, equipped with the double-feeding attachment, whereby two separate jobs are automatically printed at one time. One of the jobs may be paper and the other cardboard, or paper and envelope, or two envelopes. The runs need not be the same length, as a bar chase is used, and when the shorter run is completed the form is unlocked and the matter left on the stone, the chase being returned to the press for the longer run.

The Standard is a bed-and-platen press which automatically feeds, prints to perfect register and delivers any ordinary print paper up to 120 or 140 pound card at a speed up to 3,500 impressions an hour. The Standard prints from flat forms of cuts or type, and because of its broad scope will handle ninety per cent of the job work of the average job office. It is not necessary to confine the Standard to special stock or to long runs to make it profitable, runs from 1,000 impressions up being practical.

The feeding device is so arranged that the stock is fed from the bottom of the pile, making no interruption when stock is added. The change from "single" to "double-feed," or vice versa, can be made in five minutes, and the adjustment for changing from tissue to cardboard requires less than one minute.

A form may be "positioned" on the Standard quicker than on an ordinary hand-fed job press because the forms are locked to a "head line" in the chase, and after the form is put in the press the operator has only to set four thumb-screws and the side guide.

The Standard is designed for speed and strength, and is so simple in construction that a machinist pressman is not necessary. Special private demonstrations at the exposition may be arranged for by addressing Wood & Nathan Company, Sole Selling Agent, 1 Madison avenue, New York.

* * *

THE LINOTYPE BULLETIN

As usual, the July number of The Linotype Bulletin, the monthly house organ of the Mergenthaler Linotype Company, is garbed in the national colors — red, white and blue. The ornaments used consist of flags, stars, cannons, cannon balls, etc., and give this issue quite a patriotic appearance.

It is set throughout on the linotype in a new series of Caslon just completed by the Mergenthaler Linotype Company in a variety of sizes. As the wealth of decorative material with which the pages are embellished is also all linotype product, the work as a whole affords an excellent example of the possibilities of the machine for high grade book and magazine composition.

Printers generally, whether linotype users or not, should send for this publication, as in addition to its being a fine specimen of printing it contains every month a number of special articles and considerable newsy miscellany of interest to the craft. According to the announcement on the first page, it is "mailed free to any printer anywhere."

Johnsonized Machinery

We believe we now have the largest stock of rebuilt printing machinery West of New York—have new quarters, large, airy and light, devoted exclusively to the rebuilding of printing machinery.

List of machines on hand mailed on request—it will pay you to investigate JOHNSONIZED MACHINERY—satisfactory machinery at a saving in cost— worth while— a splendid stock of practically all makes and sizes, cylinder presses for job, book and newspaper printing.

The following clipping from The Morris (Minnesota) Sun shows how users of JOHNSONIZED MACHINERY feel— we are not satisfied until the users are.

> "The press was purchased from and installed by the C. I. Johnson Manufacturing Company, St. Paul, and one of their machinists was here last week setting up the press and making the final adjustments. In this connection it may be remarked that the above firm has always been popular with the newspaper men of the northwest, as they guard their reputation for reliability with considerable jealousy and any press or piece of machinery purchased from them is sure to be if anything a little better than represented. We are printing this issue of the Sun on the new press, and each of our subscribers has proof in hand that it does most excellent work, although it is on the finer grades of job work that the perfection of a press shows itself."

Don't go after Big Game with an air gun!

IT is neither safe nor profitable to solicit printing orders when half-equipped with samples and suggestions; by so doing you simply hand your competitor the advantage—make it easy for him to defeat you.

Did you ever stop to think how many things influence the buyer in placing his printing orders? There are a a great many, to be sure, but they lie largely within the printer's power to control. A carefully thought out suggestion for a cover design with samples of appropriate stock will often win an advertiser's favor. Covers are an important factor in catalogs and booklets and the business man is always eager for practical ideas, color schemes, etc. Show samples of the Butler line of covers and you will offer an argument no advertiser can resist. Every cover in our line is a *big seller;* hence there are no slow movers to increase overhead expense and take up valuable space.

Besides many others, we offer such prominent lines of cover paper as SUNBURST, ANTIQUARIAN, ADVERTISERS, BUCKEYE and CLOTH OF GOLD. A strong collection of serviceable cover stocks patterned after the needs of both printer and advertiser.

Just to show how we can serve you with covers that will help you get business, write for samples and prices.

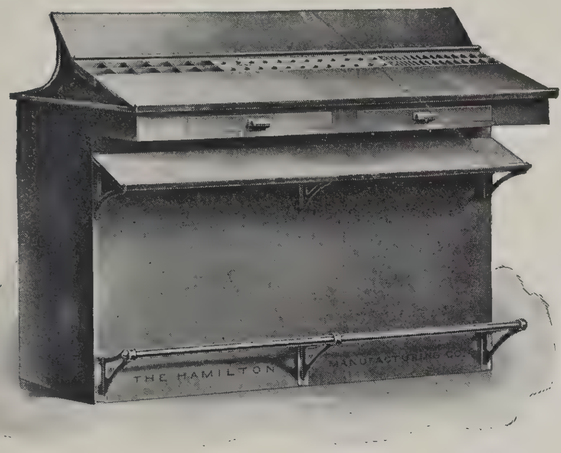
ON TO TOLEDO

When this advertisement reaches the eye of the master printer, seriously considering the problem of cost finding and cost reduction, the great Printers' Exposition will be opening in the Terminal Exposition Building at Toledo, Ohio.

Hamilton Steel Printing-Plant Equipments

They Speak for Themselves



AMERICAN STEEL CABINET No. 554
In Steel Construction

A popular cabinet. Contains 48 California job cases, having steel front protectors with brass pulls. The cabinet is equipped with auxiliary dump and cases for justifying materials, such as brass and copper thin spaces, thin leads, spaces and quads, etc.

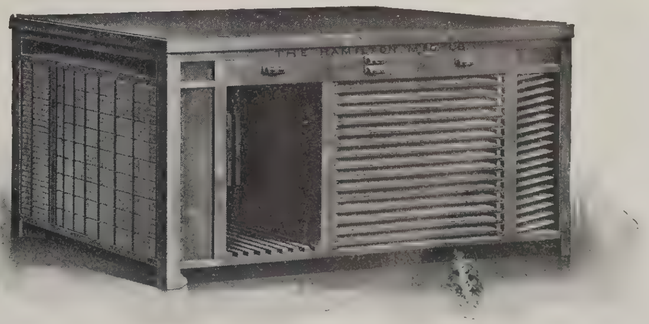
This cabinet will be shown at our exhibit in Toledo, in steel construction.

At this show for the first time we will exhibit a comprehensive line of our new steel composing-room equipments. We invite the closest inspection and criticism. We stand ready to accept the verdict of practical, hard-headed buyers of composing-room furniture who are naturally looking for the largest possible measure of return for their money—quality, of course, to be considered. That is the distinctive feature of the Hamilton equipments.

Every printer who expects to add to his equipment should attend this Exposition, where he will have an opportunity to familiarize himself with the recent development in the art with regard to working equipments, and more particularly in connection with the new all-steel, indestructible construction.

For thirty years the products of the Hamilton shops have been without a competitor so far as quality is concerned. All the experience of these thirty years is concentrated into the new line of steel equipments. There is very little of experiment involved in Hamilton steel furniture, and everything that is practical, efficient, labor-saving and space-saving.

Thirty thousand master printers in the United States and Canada have their establishments fitted with Hamilton furniture; twenty thousand foreign printers are likewise equipped. More than twenty government printing-plants are fitted out with Hamilton equipments. There must be a reason for this. The printer who cares to know can find the answer by visiting the Toledo Printers' Exposition.



METROPOLITAN STEEL IMPOSING TABLE No. 729
In Steel Construction

Equipped with labor-saving furniture and reglet, letterboards, galley racks and chase racks, a most complete imposing table of sufficient size to handle the largest forms. Takes an iron imposing surface 51 x 75 inches over all.

This table will be shown at our exhibit in Toledo, in steel construction.

Says Barnhart's Jake:

At the risk of being accused of knocking I am going to say that a lot of this talk about "Original compositions" and "unusual typographical effect" is bunk pure and simple.

The business of the printer is to dress up the written word in the most becoming and effective style. An overdressed advertisement or circular is just as bad as an overdressed man and affects the reader in much the same way.

Clearness, strength and harmony are the vital tests of any type composition. Clearness is not to be gained by fancy letters nor strength by bizarre arrangements, no matter how "striking" they may be. And harmony is secured by choosing faces that agree with the thought expressed and with each other.

Barnhart's PREFERRED TYPE FACES

—a book that contains the very cream of the best available types, conveniently arranged and indexed—is your surest guide to good composition.

Keep your copy of it handy. Use it every day.

The Babcock Optimus
The Babcock Optimus

Progressive form rollers on Optimus presses—rollers you also can use on the table, or for ductor or rider—save about half the composition bills usually paid. The economy is an appreciable profit in a season's work. The universally large size of all rollers betters distribution.

When not good enough for form, a roller is good enough for some other position—if it fits. Its service is lenghtened, and it makes a greater return for its cost.

On three and four-roller Optimus presses any composition roller can be used in place of any other, and it fits. All of the same size, a minimum number need be on hand. If accident happens to one any other takes its place. A rider is always handy for the exacting job. No lost time; no added expense; no work less good.

As a necessary factor in the perfection of Optimus distribution the ink is broken up and freely worked before it gets to plate, which it reaches pretty well distributed.

Ink therefore is not placed on table direct, as most do it. Distribution is greatly bettered by first feeding it to the vibrator on front rollers. This is done at the instant bed reverses and vibrator is still. The ductor remains as a distributor half the time; when bed is at opposite reverse it quietly returns to fountain without spin, just as it met the vibrator in the first place without spin.

In the meantime the ink is worked by ductor, vibrator and two rollers. It reaches plate as ductor returns to fountain in excellent condition for further manipulation by the table, rollers and vibrators. The form rollers now pick it up for further working between the table and their vibrators before it gets to form, which no undistributed ink can reach.

Distribution never ceases when an Optimus is running. It is continuous; position of bed does not check it. The gears for driving vibrators are inside out of the way.

Any roller can be put out of action without stopping press. It may save a roller by cooling it, and keep press going with the other three.

Tripping cylinder can be made to trip fountain at the same time.

Fountain is high; ink plate passes below it. Pushing delivery board towards cylinder uncovers fountain and table rollers. Ductor is easily taken out over fountain.

Faulty fountain blades in other presses compel a new fountain, or the return of the old fountain to the factory for repair, either expensive in time and money.

A small expense and brief time renew any Optimus fountain blade in owner's pressroom.

The ink table can be removed from an Optimus without the extra expense of taking out the bed.

Optimus interchangeable distribution is simple, fast, noiseless, splendidly thorough.

Economical in rollers and ink, it is prodigal in efficiency.

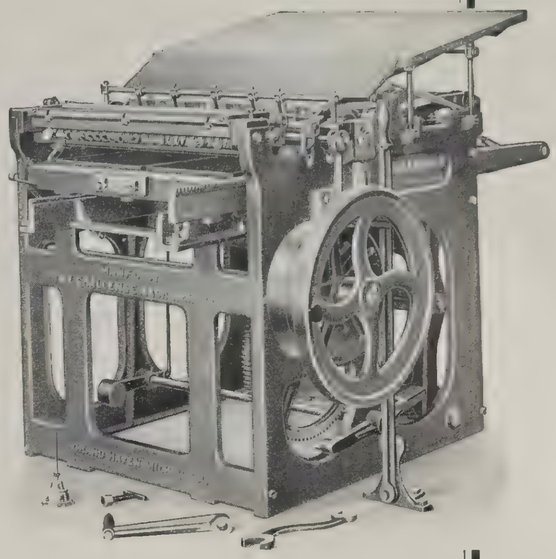
Diamond Country Cylinder Press



THE DIAMOND (Hand or Power) CYLINDER PRESS is designed and built for service—such service as should be expected of a country cylinder press. More than fifteen hundred DIAMONDS in use at the present time—actually demonstrating their ability to undergo service conditions such as are imposed in the country shop.

The Diamond will print two pages of a six column paper at a speed ranging from 600 to 900 by hand and 900 to 1200 with power. The print is all that could be desired, and the operation of the press is simplicity itself, insuring satisfactory service even when placed in the hands of unskilled operators.

The Whiting-Hotchkiss Controversy

By Ed. E. Sheasgreen

It has been with an unusual amount of interest that the writer has read, not only E. K. Whiting's article on the "Cost of Newspaper Advertising" and on the sliding scale adopted by the Minnesota Editorial Cost Committee, but also the comments on the same article by Editor Hotchkiss of Menominee, Wis., and by others.

The writer had the pleasure of hearing Mr. Whiting's article at the Illinois Cost Congress, held at Springfield. At that convention an opportunity presented itself to take up with Mr. Whiting the matter of the Minnesota methods, but was informed that since the method had been set by that association all he could do was to report his findings along that line. The writer did not care, at that time, to go into the question, he feeling sure that the matter would some time be forced to a head by the printers of newspapers.

It is not the writer's purpose to discuss at length either the Minnesota method or Mr. Hotchkiss' ideas, but to, if possible, lead the minds of these two gentlemen and others along new lines.

The blame should not be put on Mr. Whiting altogether for the wrong methods adopted by his association, but rather on its members, since they decided on certain cost finding rules without calling in outside parties who might possess greater knowledge on this question than they, to start them right.

But, let it be said in behalf of Mr. Whiting's article — it started something, a something very much needed by the printers of these United States, and that something is a thorough discussion of the distribution question, for this subject under discussion is a distribution question pure and simple, as are all the questions of cost finding.

Remember, the science of cost finding is based on the natural law of distribution.

Mr. Hotchkiss' article is also as wrong in principle, for he would, if he followed his ideas, go as far from the mark of truth as if he used the methods advocated by Mr. Whiting's association.

Herewith are presented a few facts and figures about cost of printing newspapers and of subscriptions and advertising. These have been gathered after a long experience studying these questions while doing cost system installation work. They are presented in the fairest kind of spirit to all parties concerned, and knowing full well that there is yet a great deal more to learn about the science of cost finding than the very best students of cost know today.

There are five general laws of nature that round out the whole Law of Cost, the Law of Balance, the Law of Decomposition (depreciation or replacement funds), the Law of Increase (interest), the Law of Distribution, and the Law of Co-operation.

The Law of Balance is Nature's first great Law of Cost. Nature says that after the night must come the day; after the storm must come the calm; and where there is an outgo (expense) there must be a like income, or there is a loss.

The Law of Decomposition is that Law of Nature which shows man how all matter changes its form back to its original state — the Earth.

The Law of Increase is Nature's Law of Interest.

In the Law of Co-operation Nature shows how every bit of energy should move with exact precision, so that the most may be accomplished with the least possible effort.

On the Law of Balance is based the Science of Accounting.

On the Law of Distribution is based the Law of Cost Finding.

By the Law of Co-operation we arrive at the height of efficiency and perfection — the sublimity of harmony.

It costs to maintain balance, to care for depreciation (through replacement funds), to properly distribute and to have fullest co-operation.

Whether man ever gave thought to the question or not, the cost line of all effort has always existed, still exists, will ever exist.

It is on the Law of Distribution that men differ so much when it comes to studying the cost of production. Men disagree on this law because they do not study it right. Some men fear to discuss the distribution question simply because they do not know how to properly discuss it. At the Cincinnati Exposition and Cost Congress, last fall, the writer asked a prominent member of that meeting if the distribution question was to be discussed either before the convention or in committee. The reply was, "We are not anxious to start a fight." So men went home to continue conducting their cost finding systems on a misunderstood and a wrong basis. That convention was no different than any other cost convention — in that a free discussion of this vital question is generally passed up.

But Mr. Whiting's article arouses the right kind of discussion, and so, all hail to the Minnesota Association methods.

The Law of Distribution is that great cause that has brought all things to the places where they are found. Men carry this law into effect when they "distribute" mail, when the compositor "distributes" type, when the grocery boy "delivers" packages, and when the railroad "distributes" its human freight, the produce of the land, and the products of the factory. The cost expert teaches the accountant the great difference between the Law of Balance and the Law of Distribution by showing him how to "distribute" expenses.

Because the Minnesota Association did not find the proper method of distributing expenses is why Brother Whiting and all others who worked according to the Minnesota method seem to be going wrong. Neither has Brother Hotchkiss followed the natural law of distribution. Consequently we will say he and his followers are also going just as far wrong.

A newspaper, in its mechanical production and sale, like any other product, has two elements which make up its cost — stock and labor. There are only two kinds of labor used in its actual production — hand and machine. Consequently the man who owns a paper and prints it himself finds he is in a position of one who must first make something and sell it to himself before he can sell it to another.

Each issue of a paper should be considered as an individual job. This should be done so that proper distribution of job costs may first be made. Each issue of the paper should carry either a factory number or be known by its volume number, and all the time used by the workmen be recorded on their daily time tickets as they produce either the daily, weekly, or the Sunday issues. At the end of the month these job tracers, or mechanical costs of the newspaper, must be, so to speak, billed to the editor, so he can add them to his editorial costs. When this is done he gets the total cost to the publishing department for owning a paper, for having the editorial work done on it, for having the same printed, for selling subscriptions and securing advertising contracts.

Let us look at the following "lay-out" (this time the "distribution" of the productive centers of the plant) of a country newspaper. There is an office department, no matter how small or how great, a part of which may be used by the editor. Even one desk may be used for the double purpose of editorial work and for executing the work of the printing plant proper, the work in each department being done by one man with many changes in the day from being first the editor, and next the manager of the printing business. Then we have hand composition, department or center, linotype composition, or possibly monotype keyboard and monotype caster, then the job presses, cylinder presses, possibly a Duplex or other special newspaper press, the small bindery machinery and the table bindery work. We might have a special mailing department. We are bound to have cutting and handling of stock, and the stock storage department. Each of these departments has its own floor space, its own capital investment; some departments have motors, and therefore a power expense according to the hours the motors are used. Each department must stand its share of the building expense made up of rent, heat, janitor service, and building repairs. Each must stand its share of the valuation expense — replacement funds (depreciation) on the original capital invested, the interest on the same, insurance and taxes. Each must stand its share of the general office expense, executive and clerks' salaries, postage, stationery, supplies, bad debts, organization dues, packing and shipping, etc. The selling expense must be taken care of and is made up of salesmen's salaries, commissions, traveling expenses, long distance telephones, and messages necessary to sell the product. There is the interest on all commercial investments. The spoilage is a big item and must be charged direct to the department causing it. The department direct expenses are often heavy and must not be overlooked. The pay roll is an item of expense the average plant manager thinks his greatest expense, at any rate. All expense items, more in some plants than in others, must be distributed to each and every department according to the units benefiting by these expenses. No matter how small the editorial department, a share of the building and of the valuation expense groups must be charged to it, the balance going to the general office.

Let us examine a part of the distribution record of a certain plant and see what it has to say about editorial expense and the cost of producing subscriptions and advertising. This plant is larger than some plants and has a fair sized editorial department occupying 850 square feet. There was invested in the editorial equipment $300. The "building expense" (rent, heat, janitor expense to building repairs) of this particular editorial department is $14.79 a month, and has been distributed to it according to floor space occupied. The valuation expense on the $300 editorial equipment is $5.70 per month, and has been distributed according to the capital invested. The pay roll, editorial, reporter, solicitors, carriers, etc., is $265. The department direct expense, $150, is made up of wire service, office supplies, postage, and other items of expense that can be charged directly to the editorial department. The total editorial expense for the one month was $435.49.

There were four issues printed in that particular month which cost the editorial department a total of $300. There were 300 subscriptions sold at $1 apiece, 1,000 inches of display advertising at 10 cents an inch, 500 inches of legals at 15 cents an inch and 200 inches of readers at 12 cents an inch. All of the sales for the month cost, including the editorial department, $735.49. The following tables will speak for themselves and will show how the cost of advertising and subscriptions should be found, if it is right to follow more natural laws than used by the Minnesota Editorial Association or by Mr. Hotchkiss:

Cost of Printing and Publishing a Paper

Cost of printing four issues	$300.00	
Cost of editorial department	435.49	
Total cost of printing and publishing paper		$735.49

Sales for the Month

300 subscriptions at $1 apiece	$300.00	
1000 inches display at 10c	100.00	
500 inches legals at 15c	75.00	
200 inches readers at 12c	24.00	
Total sales for the month		$499.00
Net loss for the month		$236.49

Distribution of Cost

Cost 60% to secure 300 subscriptions.
Cost 20% to secure 1000 inches of display ads.
Cost 15% to secure 500 inches of legals.
Cost 5% to secure 200 inches of readers.

60% of total cost ($735.49) equals $441.30
20% " " " " " 147.10

15% " " " " "	110.33
05% " " " " "	36.76
Total distributed	$735.49

To Find the Cost of Subscription or Inch of Advertising

Divide 300 into $441.30, equals $1.47 cost per subscription.

Divide 1000 inches into $147.10, equals 14 7-10c inch for displays.

Divide 500 inches into $110.33 equals 22 1-6c cost inch for legals.

Divide 200 into $36.76 equals 18 1-3c cost per inch for readers.

Loss by Products

300 subscriptions at 47c equals..........	$141.00
1000 inches of display at 4 7-10c equals...	47.00
500 inches of legals at 7 1-6c equals.....	36.25
200 inches of readers at 6 1-3c equals....	12.24
Total loss, and by "products"........	$236.49

Every man running a newspaper knows that the sales in a month from advertising and subscriptions must exceed the mechanical and editorial cost of his paper or he is losing or is simply swapping dollars. Since the source of his newspaper revenue is from these two classes of service — subscription and advertising — they must stand all the newspaper cost.

The method here advanced shows how much the subscriptions should stand that month of the total cost of the publication as against the amount of cost the different classes of advertising matter should stand. There is no bunching of all classes of advertising with the subscriptions against the total expense, as Mr. Hotchkiss does by his method.

When cost of advertising has first been found along right lines, associations then might adopt a sliding scale if they so desire. However, the sliding scale has put many papers on the financial rocks, more often probably, than any other thing (except a proper knowledge of cost), and, for a newspaper, is as dangerous for its welfare as are "fillers" in a print shop. The cost of subscriptions and of advertising at the end of a twelfth month should show the true average cost. This information then will put managers in a safe position regarding the quotation from sliding scales.

The method of finding the cost of subscriptions and advertising here advanced simply means that if a person had a contract to sell subscriptions for a person, and advertising for another person, that the cost of this general agency would have to be borne on the basis of the business done for the man who wanted the subscriptions solicited and for the man who wanted advertising solicited. The average cost for the year to the man who wanted subscriptions solicited would be a price below which he could not sell his commodity — subscriptions. The average cost for the year to the man who wanted advertising solicited would be a price below which he could sell his commodity — advertising.

Again, let it be understood that what has here been set forth has been written with the hope that others will take up this "distribution" question, for no one man is going to solve this question. The writer does contend, however, that there are natural laws underlying this, as well as other questions of business. If men will closely search for these laws and then, when they are found, use them correctly, any problem, no matter how intricate it may seem, may be easily solved.

Those who do not agree with the methods here advanced are asked to communicate with the writer, setting forth their ideas, with the end in view that we will all strive to find true methods. When these have been found they should then be presented to all printers and publishers so that they and all who come after may safely and honestly and with profit to themselves conduct their newspaper establishment.

CO-OPERATION AND COMMON SENSE

By Gatchel & Manning, Philadelphia

The chief distinguishing feature of modern business methods is co-operation. Not only in the case of so-called trusts, where it is sought to control a particular business, but in the pulling together, so to speak, of business men in allied, or even diverse trades, for the general betterment of business conditions, looking to the greater prosperity of all.

Naturally, where a condition of this kind develops, where material things are being dealt with from the ethical or even purely theoretical standpoints, a great deal is written and said by enthusiasts which is to be more commended as abstract ideals rather than commercial possibilities.

But setting aside the views of the extremists, and viewing things from a purely commercial angle, it would seem as though it were an extremely difficult task to get some business men to introduce into their every day practice the theories they are willing to endorse as abstract propositions.

As an illustration: Are there any two businesses, each separate and distinct in itself, that are brought closer together than the printer and the engraver? In the production of a large illustrated catalogue, for instance, their efforts are mutually interdependent. If either fails, the resulting catalogue is a failure, to a greater or lesser extent.

This is so true that many large engraving plants have added a printing department, and many printers have installed engraving plants. But in either case, the result is one business organization which takes it out of the sphere of action we are now discussing.

We have in mind the co-operation of the printer "who sticks to his last" and the engraver who believes that he cannot be a competitor of the printer and still do him justice — and so confines his ability and energy to the production of engravings calculated to help the printer satisfy his trade with the least effort and trouble on the printer's part.

When the interests of each are so bound up in the other, it should need no argument to show the necessity of constant and intimate co-operation. With positive knowledge on the engraver's part of the limitations and possibilities of the printer's plant, there are innumerable ways in which the engraving plates may be modified in treatment and finish to suit any particular order within a known limit of cost.

Where the printer has taken the trouble to acquire even a moderate knowledge of the technique of engraving, he can produce results with a minimum expenditure of his own time and energy.

But the close co-operation of the two is necessary for the maximum of efficiency at the least cost for both. Consultation when the preliminary work is planned — consideration of ways and means to save time and cost — complete understanding as to style, treatment, finish and times of delivery, will insure a catalogue satisfactory alike to the printer, the engraver and the customer.

An Estimated Hourly Cost, or Suppositious Form 9H

By Edward U. Roper, New York City

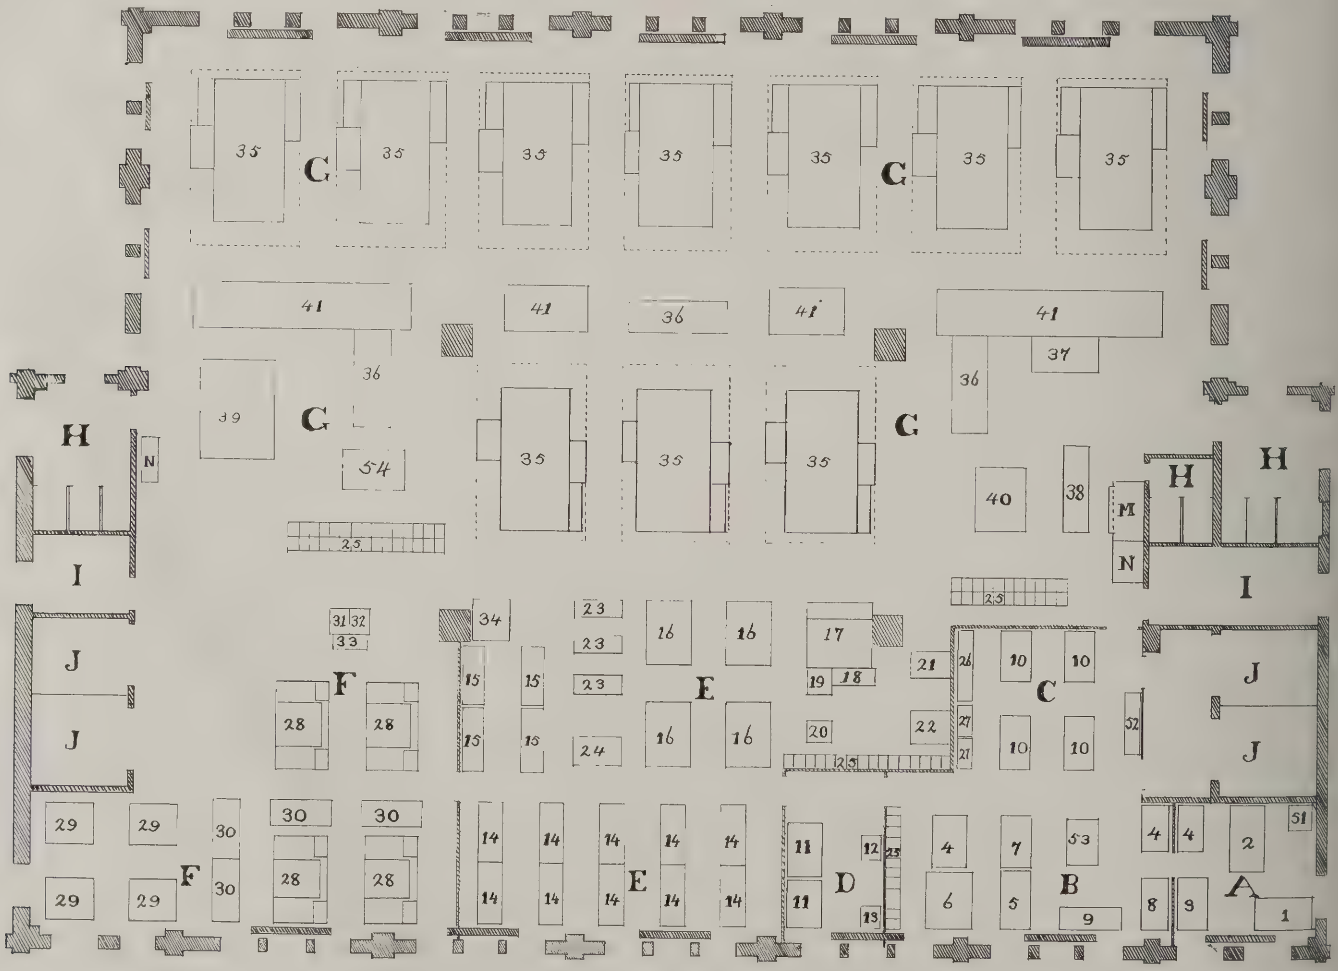
WHILE the printing office treated in this article is entirely theoretical, as far as equipment, offices and expenses are concerned, it is arranged and laid out on a plan of the floors of the Arts and Crafts Building, Twenty-fifth Street, New York City, with one exception — instead of having the floor space cut into small squares, 13 feet 6 inches by 17 feet 6 inches, and thirty-two of them, it is divided as shown in the diagram; this entails an increase in expense of 25 per cent for the building, or about 15 per cent on the total investment of land and building, and gives 40 per cent more room in the possibilities of layout of the factory.

This question should be gone into fully before you rent or build. If you are going to rent, see that the shape of the space will accommodate your plant.

Type, material, furniture and machinery in this plant have been as carefully selected as though for actual operation, even to sticks and quoins in the composing room, benzine cans in the press room, and the tables and stools in the bindery.

The type has been purchased in large fonts, though not purchased in 25 or 50-pound fonts, for that gives you too much lower-case and not enough caps.

The material, brass rule, sticks, galleys, etc., have been purchased with the same care, and in the desired quantity for the number of men employed.



All of this equipment is from the American Type Foundry, necessarily of the best quality.

The office furniture is from the National Desk Company, Herkimer, N. Y., and chairs to match.

The cabinets, stones, and all furniture in the composing room are from the Hamilton Manufacturing Company, Two Rivers, Wisconsin.

The Chandler-Price new series 10x15, and the John Thompson Press Company 17x22 Laureate, Model J.

The Premier two-revolution press of the Whitlock Printing Press and Manufacturing Company.

Brown & Carver paper cutters and Brown folders.

Boston wire stitchers and H. L. Roberts & Co. silk stitching machinery.

And the Miller Saw Trimmer and the Miller Platforms.

The general divisions of the office and factory are:

A. General Management — 1, President's Desk; 2, Directors' Table; 3, Vice-President's Desk; 4, Stenographer; 51, Costumer and Umbrella Stand.

B. Accounting Department — 4, Stenographers; 5, Bookkeeper's Desk; 6, Cost Accountant and Order Clerk; 7, Safe; 8, Secretary and Treasurer; 9, Filing Cabinet.

C. Sales department — 10 Salemen's Desks; 26, Stock and Ink Sample Books; 27, Samples of Printed Work; 52, Visitors' Bench; 53, Table for Showing Samples.

D. Proof Room — 11, Proofreaders' Desks; 12, Revolving Rack for Dictionary, Encyclopedia, etc.; 13, 1 Cabinet for Proofs and Copy Work in Process. Shelving for old proofs around wall.

E. Composing Room — 14, Tracy Cabinets — Working Tops; 15, Rule and Furniture Tops, Patent Bases, Dead Boards and Electro Cabinets; 16, Imposing Stones;

17, Form Racks, Cylinder, Gordon and Foundry; 18, Wood Furniture and Reglet; 19, Steel Furniture; 20 Miller Saw Trimmer; 21, Electro and Dead Stone Desk; 22 Cut Cabinet; 23, Page Form Storage Cabinets; 24, Foreman's Desk; 34, Proof Press; 25, Sanitary Closets for Workmen.

F. Bed and Platen Press Room — 28, Laureate Model J, 17x22; 29, Gordons, 10x15; 30, Drying Racks; 31, Imposing Stones; 32, Overlay Table; 33, Form Rack.

G. Cylinder Press Room — 35, 47x66 Prefier Presses; 36, Roller Cabinets; 37, Form Rack; 38, Ink Cabiet; 39, Overlay Table; 40, Foreman's Desk; 41, Space for Stock; 54, Register Table.

H. Lavatories.

I. Stairways.

J. Elevators.

Another diagram, which I should like to present with this article but am forbidden because of a lack of space, shows a complete arrangement for: Bindery; Cutting Machines; Cutting Tables and Waste Boxes; Folding Machines; Silk Stitcher; Boston Wire Stitcher; Folding Tables; Stock Bins; Foreman's Desk; Shipping Table; Stock Room; Miller Platforms for Stock; Electric Light

The divisions of this plant as shown in diagram are

and Power, and Sinks.

as they will appear on Form 9H, and the salaries and people employed and the apportionment thereof is shown in table "A — Apportionment of Salaries." This table also shows the number of units in each department, and the time, or wages, that must go into direct and indirect charges, and from here is carried as such into Form 9H, where the other indirect charges are distributed and added to the indirect.

A.— Apportionment of Salaries

Officers and Employés	Total Yearly Wages	Office Salaries Indirect			Composing Room		Cylinder Press Room		Bed and Platen Press Room		Bindery Machine		Bindery Hand		Stock Room

From this table you also get the possible salable hours in each department, on the ideal of full time. How this should be handled and what proportion of the time marked off, will depend largely on the class of business you are handling; this discussion is on the general jobbing office — not a daily or weekly paper, nor a publishing or magazine house — where the sold time should be at least two-thirds.

A. Apportionment of Salaries — The ability to digest facts, to form an intelligent conclusion from a mass of data put in your hands, is possessed by a very small minority of people, and if you do not realize this you will never get in a position to improve your present condition.

B. Form 9H — Apportionment of Expense — There are three things that must be done in every manufacturing plant after this Form 9H has been filled out, and a supposable hourly cost established for men and machines, before you are in a position to make an estimate or charge a job.

(1). Establish the total amount of business to be done on the present estimated expense.

(2). The amount of business to be done by each department on the present estimated expense.

(3). What is, or should be, the efficiency or output of men and machines.

From the first you will be able to tell whether the salaries of officers and salesmen are too high, and this must apply to the proprietors as well as the salesmen. If one of your salesmen was costing you much over 10 per cent on the business he brought in you would be apt to say something. If you don't know what he is costing you, or don't say anything when you do know, something should be said to you.

In the same way, from this estimated total business, you figure the too much or too little of your managerial and accounting departments. Whether you are high or low in this is a matter of opinion and has never been definitely settled, but it will do you no harm to know what the relation is, and it is certainly absurd to fool yourself by having them charged in with the selling cost.

The second gives you the only basis from which you can tell whether you have any use for a department. Can you get, or have you got, business enough to make it pay?

The third gives you the only information by which you can make a charge for work done from your hourly cost. If you do not have this standard, every improvement in the output of men and machines goes to the customer, and you lose. If you do not have this standard, but charge your work by the hour, everything that tends to reduce the number of hours, everything that makes for efficiency in men and machines, is a positive detriment to you.

How to establish this standard, and how to use it in estimating and billing will be taken up later.

Let us take A and look at the distribution of salaries and the reason therefor.

There can be no question about the salaries of officers, salesmen and accountants not belonging in the factory. They are general, or indirect, and can only be apportioned in an indirect way to one or the other side of selling; and before any one should attempt to start in business he should know the proportion they should bear to the total business done, or consult someone who does.

Take the by-laws of a corporation and see the duties of the officers, and on the basis of what they have to do fix the salaries; and then make an allowance for what they may have as salesmen, giving them credit for business brought into the house on the same basis or percentage as the salesmen. The president, vice-president, and secretary-treasurer should have no more to do with the direct supervision of work than one of the salesmen.

The rest of the office force fall into their natural places as a direct charge in one or the other departments of the office force, and not in the factory.

While the superintendent is a charge against all departments, it is the composing room that takes the most of his time, and so I have charged it.

The foreman of the composing room and the stoneman are as much a part of the pressroom and bindery in effect, though not in amount, as they are of the composing room, and for that reason I have charged a part of their time to these departments.

Aside from these items I do not think there can be any difference of opinion in regard to the apportionment of wages.

Once more I want to say: Do not pay anyone a salary that he does not earn. The officers of the company to get a good living salary, should control a percentage of the business, and everyone in the office who brings in work should be paid for that work over and above his regular wages.

I have found it very unsatisfactory to have the men in the factory act as salesmen; though this question does not belong here, I cannot help calling attention to it before taking up Form 9H.

In this preliminary, or fictitious accounting, I wish to emphasize that I am using the Standard Uniform Cost Finding System, only dividing the general expense into departments the same as the factory, and apportioning that expense to stock and material as well as labor on a percentage basis, instead of making an hourly charge against labor at the total expense.

The same is true in the stock and shipping department. All items of expense that cannot be charged to the individual job are carried as a percentage charge against stock, and do not appear against the factory labor cost. This charge is made against all stock, whether the company buys it or the customer furnishes it, as a percentage on price. I do not care to enter into an argument as to whether the cost of handling stock should be figured on its value, its weight, or the space occupied. I prefer to figure the expense on the value.

It hardly seems necessary to defend the statement that this item should be charged, and that the stock should bear the burden of cost of handling and also the cost of selling.

As a usual thing it takes as much time — expense — to sell the stock for a job as it does to sell the labor.

The making of dummies is certainly a charge against stock.

The risk of spoilage, the loss by fire, the rent, etc., appear against the value of the stock no matter who buys it, and you pay for all these items.

If the customer buys the stock, you lose the cash discount.

And it would be far more reasonable to make the stock bear a portion of the factory cost from the composing room to the bindery, than to have the labor charged with the handling. It will not tax your memory to think of many delays and items of expense caused in each department exclusively by the stock. Too small to allow reasonable margins for lockup or good trim. Flaky, un-

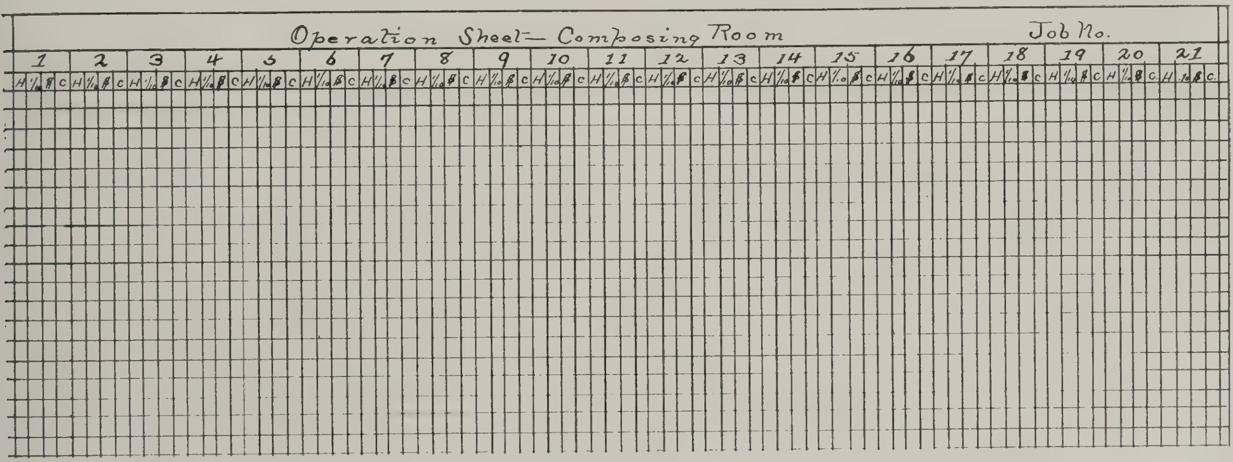
Expense handling stock														13%	

even, bad sheets, everything to make slow feeding in press room and bindery. But why enumerate?

If you want to know the cost of production only, and not the cost of each process, why not throw all your departments into one? It would not affect the total year's business, or the profits. It would be much easier to say that a job took so many hours to do, there were so many hours worked, the total cost was so much, and the cost is so much per hour; add so much for profit, and charge.

The fact of the case is, that while the cost of the job is the end in view, you want to know a great many things that take place on the road to that end.

If you want the cost of composition, why not the cost of management? The cost of press work, why not of sales? The cost of binding, why not of accounting? And as it is only a matter of more columns, and not any more work, and only a separating into three totals and three percentages instead of one, why not have these items of cost anyway? It won't do you any harm to know that your sales are costing too much, even if your salary is the cause of the high cost.



Operation Sheet— Composing Room Job No.
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21
H/10 $ c

1, Composition, Including Taking and Correcting First Proof and Revises; 2, Foreman's Changes; 3, Office Changes; 4, Author's Changes; 5, Leading-out; 6, Trim or Mortise Cuts; 7, Cutting Special Material; 8, Sorting Cuts and Copy for Job; 9, Make-up; 10, Lock-up; 11, Line-up for Register; 12, Registering Form; 13, Proofing, If More Than One on Customer's Order; 14, Preparing Copy for Compositor or Machine; 15, Proofreading—If by Compositor; 16, Copy-holding—When Done by Workman; 17, Layout or Sketch—When Done by Workman; 18, Distribution; 19, Foundry Lock-up.

If management and accounting expenses are too high you can tell whether it is because of low sales or too many people; and if the selling expense is too high, take the sales sheet (which should show the sales for each one, or better still, should be a separate sheet for each one), and look at the total. You will not have to do any talking. The lesson drawn will be as effective with the men as it is with you.

Every man in the shop, in an indefinite way, knows that his hour carries a heavy burden, and, from reading the trade papers, knows that all the expense of the office and stock room goes against his time; and from this way of figuring you are raising proprietors that think it is a good thing to have customers buy stock. The compositor does not see why he should help pay stock expense; as far as his work is concerned it makes no difference whether there is any stock or not; so we have composing rooms for the trade that can do work at a less hourly charge (?) than the regular printing shop.

One more difference from the Standard, one that is more apparent than real; that is the separation of the departmental expense into "direct" and "indirect."

This division or separation gives you the barometer by which to judge the conditions of the department. The indirect expense will not, or rather should not, vary as a total to any great extent from month to month, and the amount of that variation is the up and down of the mercury in the tube by which you judge the conditions.

Analyzing this in one department will do for all. The charge ticket of the Standard System is made up so that from the daily time ticket the "chargeable" or "direct" hour is entered against each job. The only change necessary is to add another column for "actual wages paid." When the job is complete you total these two columns, and to the "wages paid" you add the "indirect" hourly cost multiplied by the total number of hours worked. For instance: Direct wages, $45; number of hours, 94; indirect hourly cost, 78.5 cents times 94, $73.79; total cost, $118.79.

There are several advantages in this way of figuring:

First. Every direct hour carries its correct proportion of the overhead or fixed charge. Under the Standard System the high priced man carries a smaller proportion of the fixed charge than the low priced man. Take your hourly cost and take away the wages paid, and you will see the result. The worst of it is it makes your fine work, that will stand a high price, get a low one; and the work that your two-thirder, or even the errand boy does, gets a high price.

Second. It gives you the total direct expense each week or month; comparing this with your pay roll direct expense, and the amount of hours sold, you are enabled to tell whether there are too many men in the department or not.

This should be watched, as it is only in the wages of the men that constitute direct expense that any great saving can be made in department expense.

In the case of machine and hand work combined, it is necessary that each employe and each machine should have a work ticket. On the press ticket the time of commencing each operation should be entered. And on the individual ticket the kind and time of each operation. The work is charged with the wages of each operator for the time he is on the job; and the indirect expense is distributed by the press hour. This naturally gives you a higher charge for make-ready than for running time, and that is as it should be.

These two tables, A and B, may each be divided so as to give you the estimated apportionment by the calendar month, lunar month, or weekly, which ever way you wish to make the comparison, but which ever way you wish, have such a table, or tables, for comparison with actual conditions. What difference does it make whether you are higher or lower than last month or the same month last year, unless you know that the month with which you are making your comparison is right; you might as well compare with the moon.

Taking Form 9H, and dividing by 12 we have a table with which we can compare the conditions as shown by the actual monthly 9H. Is the selling expense too high? What was the total of sales? And so through each item for each department.

There is a certain amount or kind of knowledge that every employer has in regard to the various departments that govern his actions, the salaries he pays, his rent and other expenses; he may not be able to formulate or definitely tell the amount or kind, any more than he can tell how to cook a meal because he knows a good one, but they are there, and govern his actions whether he knows it or not.

And here are a few of them:

The expense of management is about 25 per cent of the total cost.

The amount of business, exclusive of stock, is about twice the capital invested.

The total cost of doing work is as 3 to 1, compared to the wages.

A salesman's salary is fixed on the basis of 10 per cent on selling price.

The amount of stock or material used is about one-third of the total cost. Reports to the tariff commission from (I think) nearly 1,500 shops showed it to be 31 per cent.

A few totals, as taken from this suppositious Form 9H, may be interesting:

Total factory expense	$135,249.42
Office expense (24.7 per cent)	38,852.63
Factory expense minus office	$ 96,396.79
Material handled — 31 per cent total expense	60,746.08
Total on which to figure office expense percentage	$157,143.87
Office expense	38,852.63
Yearly expense, including stock	$195,996.50
Ten per cent profit on sales	21,777.38
Total yearly sales	$217,773.88

I leave it for others to ask 20, 25 or 33 per cent, but as 10 per cent on sales is about 33 per cent on the investment, I think it would be wise to stop dreaming.

All this information is useful, and helps to a fair understanding of your business, and gives you the data from which to correct various evils, but as a means of charging or estimating it is next door to useless.

As I said before, you must have a standard of efficiency for men and machines established, and when you can get the factory above this it is your profit, and when it goes below, it is your loss.

The customer is not entitled to the profit in the one case, and you must not expect him to pay the penalty in the other.

The problem to be solved is: "How shall efficient management, and the increased output of men and machines, be made a source of profit to me?"

If the cry "Too much Johnson" does not come out of the West, I will try to show how this can be done.

Dean Williams of the University of Missouri Honored at Stourbridge, England

THE Stourbridge (England) Express of July 26, in giving an account of the annual summer excursion of the Birmingham and Midland Counties District of the Institute of Journalists, makes the following reference to the honored and beloved Past President of the National Editorial Association and Dean of the School of Journalism of the University of Missouri:

"The excursion was made the more memorable by the presence of Dean Walter Williams, the dean of the Faculty of Journalism in the University of Missouri, U. S. A. Dean Williams is a member of the Institute, and is on a round-the-world tour for the purpose of studying the journalism and journalistic methods of all countries.

Dean Williams and Journalism

"Dean Williams, who was accorded a hearty reception on rising, assured the members that he had not been put to any personal inconvenience to be present on that delightful occasion. He had come to Stourbridge that afternoon to commence a journey around the world, and indeed, when one was going to circle the globe, the Midlands was surely the place from which to start! (laughter). His connection with the Institute of Journalists lay officially in the central offices in London, but he felt that in being with them he was but meeting old friends. Journalists in America and their brothers in the United Kingdom were so much akin that whenever he paid a visit to this country he always felt that he was making, as Americans generally said, 'the home folks' a visit. (Applause.) Referring to American journalism, he said there was, as in England, both good and bad, but they were training up a school which, he hoped, would emphasize the best points and eliminate all that was bad. In England the Institute of Journalists was doing much in the same direction. There were in journalism so many different avenues that they were apt to forget all were brother journalists. In journalism it seemed to him that they should first of all emphasize the note of personal responsibility. No journalist should seek to shield himself in wrong-doing behind any newspaper or any man, for, in the last analysis, each journalist, to win real success, must answer to his own conscience. In the speech of Councillor Taylor that afternoon reference was made to the good and ill of journalism. Nobody recognized it more than they did themselves in America, and they were striving towards, and he thought they were attaining to, a better journalism — one which would teach all those who followed it that no journalist should write as a journalist anything which he would not write as a gentleman — (hear, hear) — and nothing should be published in a newspaper that could not be read to one's sister. Until they came into that higher field of responsibility the evils they were seeking to solve would always, to a certain extent, be with them. The other problem was how to make this personal responsibility serve not only society, but the state. In its true sense journalism was not a profession of personal aggrandizement, but of public service. (Hear, hear.) As had been well said, through the journalist's efforts fame had often come to others rather than to the journalist himself, and fortune too often came to persons other than the journalist, but however humble one's position might be, there came the reward and satisfaction of having done that which his conscience dictated, and of having served the larger interest, not journalism for one's self, but as a public service. In conclusion he expressed delight at being present, and said he would carry back with him to his own home a delightful recollection of the occasion and of the kind and courteous hospitality of Captain and Mrs. Moody. He would also carry back with him inspiration from having looked into their faces, feeling that they were seeking to make a better and nobler journalism for those who would come after them. (Applause.)"

There were several addresses made during the excursion at different points. Dean Williams spoke at Norton Close, where the journalists were welcomed by Captain and Mrs. Moody. At the council chamber of the town hall, Stourbridge, Chairman Taylor of the city council took the chair, having upon his right the town clerk and on his left Dean Williams, and in offering a welcome on behalf of the council, complimented the press and made some pleasing hits appropriate to the occasion, saying, among other good and telling things:

"The town teemed with historical incidents, but, like many other places, there were no authentic records of the incidents to be obtained. It also had its commercial importance, but he was sorry to say that as regarded its artistic side the glass-making industry was now carried on outside the district, and had been superseded by the more or less prosaic brick-making industry. So he was sure that they had not come in search of 'copy' (laughter), and as he noticed it was their annual summer excursion, presumably they had come to refresh the eye and mind. This reminded him of a little tale he once heard. A Yorkshire youth of somewhat meagre classical education became a novitiate of the Cowley Fathers at Oxford. He was conducted to his barely furnished cell, with its bed of straw, and was awakened at cock-crow by a knock at the door and a voice saying 'Dominus tecum.' Whether these words were spoken in the classical 'Dominus taycoom,' or with a more modern pronunciation, did not appear, but in either case it would be all the same to our novice, and he replied, 'Thank you, kindly set it down outside.' (Laughter.) "And I say to you," continued the chairman, "set your search for 'copy' down outside for the present, and use your visit to minister to your love of the beautiful and to invigorate the bodily powers. Carlisle once called the editors of our newspapers the true Church of England, and though some people might cavil at the description, he thought at any rate there was an element of truth in it, as they spoke in very potent words to a very large congregation monthly, weekly and daily. He trusted their gospel would ever be one of peace and good-will, of optimism and good cheer. In conclusion, he hoped their visit under the guidance of Captain Moody would prove one of profit and pleasure. What he did not know of Stourbridge or journalism was scarcely worth knowing. Might they all spend a very delightful afternoon! (Applause.)"

MONEY'S WORTH EVERY ISSUE

Office of The Laurel Advocate
Laurel, Neb., August, 1913.

Hon. B. B. Herbert,
National Printer-Journalist,
Chicago, Ill.

Father Herbert: Enclosed find check for $2.00 for ensuing year's subscription to the Printer-Journalist. I get my money's worth out of nearly every issue—so you see I am ahead all the time.

Yours respectfully,
C. E. NEVIN.

The Higher Consecration

"Fold up the banners! Smelt the guns!
Love rules!"

THE world is growing kinder every day, and wiser in its kindness. Love, the supreme conqueror, holds the field today; before its blithe battalions have fallen the ramparts of the stubborn souls of men.

The field where the bloodiest battle of the most fearful war raged just fifty years ago is the theater of the grandest spectacle of manhood and brotherhood and true freedom that has ever called Earth and Heaven and Hell to witness in the history of War and Peace. The wonder of it all is the same marvel that is working a revolution in men's souls throughout the growing civilization wherein Strife is giving ground to Unselfishness and Sense. Here on the field of Gettysburg are those that are left of the grizzled veterans of 1863, who fought with superhuman stress on that "reddest day in history." In their hearts but a half century since raged the bitter, unreasoning hate that it seemed they would carry through eternity — hate born of the lack of understanding of man's responsibility to man.

Here are the fighters on both sides who on those fatal days were triumphant over selfishness of Fear, whether they stormed the heights with Pickett or matched their strength and bravery with the lost Confederacy just at the ebb of its highest flood. Today they triumph over the selfishness of Hate, and are brought together on a serene tide of sympathy and love that has made the Union indeed indivisible.

May this most mighty victory of true Americans be the forerunner of many others to which the mere triumph of arms in the sublimest might of desperate soldering is nothing but a sad sign of the wantonness of War.

Lincoln, whose calm spirit thrills with light and life as he gazes on the scene, once felt this field was consecrated by the soldiers of the Union. Blue and gray and khaki, all are soldiers of the Union now; and this field was never completely consecrated until today. The soldiers of God who have won this truly decisive victory in Humanity's battle have on this field in these three days consecrated it more consummately than any other battlefield sown with the blood of the brave was ever hallowed since the War fiend brought the horrors of Hell to the dwellers of Earth. This evil spirit is surely retreating before the serried ranks of Brotherhood in the strength of perfect understanding and sympathy and love, and hence immortal power among all mankind.

HARRY ALBRO WOODWORTH.

A Home Newspaper and Festal Day

No. 8 of Vol. I of the Low Moor, Iowa, News looks kindly from our desk as we write. It is a handsome home newspaper of sixteen pages and cover, and the first cover page printed in black and red and containing, under the headline, three halftone views of attractive buildings and streets of the beautiful little city.

The thought suggested is that it is very pleasing and apparently profitable to make a home paper beautiful, and appealing, in illustration and matter, to the home people and to their pride in and love for the place.

Some fifty of the eighty columns of this issue, July 25, 1913, are filled with handsomely and artistically displayed advertising. This issue is a Booster Number and advertises the Low Moor Annual Kinderfest, and it is this fact that causes this article to appear here instead of the paper being sent to Mr. Copper to be commented upon in the Newspaper Criticism Department.

This plan of a special annual festive occasion promoted by the business men and the press, for a community, is becoming very popular. A score and more of cities of large size have their special annual festal days, of which they make a great deal, and the Kinderfest, appropriately, has been adopted by this beautiful little Iowa city. It would be appropriate to any city of any size.

C. W. Stone, editor and publisher, has the following instructive words as to the objects of this issue, as well as of the festival that is designed to be promoted thereby:

> It is the endeavor of the business men and citizens of Low Moor, and the hopes of the community to make this year's Fest the best the town has ever had. Prizes for sports and other amusements will be offered, and every plan is to make it an entertainment for the day for both young and old — a day of enjoyment after the hard toil of the spring and summer.
>
> It is practically an after harvest jubilee. The crops are abundant and there should be a general rejoicing of a happy, prosperous and favored people on this local holiday.
>
> The Low Moor News has issued this Booster Number to give the Kinderfest the widest publicity and advertise the town and county, at the same time presenting a number extraordinary, believing that the home newspaper should be an educator. We possess some vanity regarding the News, believing it compares very well with the general small town newspaper.
>
> Its policy is to do good. It wants to help you live better, easier, nobler, grander. It believes in a joyful, open-faced Christianity, according to the Golden Rule.
>
> It knows that the farmer works too hard with his muscle and too little with his brain. He should even it up. He does not play enough, and that is the main reason we are boosting the Kinderfest; it is a day when you can forget toil and with family and friends enjoy a holiday.
>
> We have told you our story; now come and enjoy the hospitality of Low Moor, where every amusement within the reach of the resources of the committee will be here for your pleasure.

Besides the reasons given for the festival, all worthy and highly commendable, there is business wisdom in the providing for and promoting such an occasion for a day in the dull season. It is certainly legitimate for the newspaper to put forth efforts for promotion of business, as well as goodwill, joyousness, sociability, healthful play and recreation and to help the people live saner, healthier, "better, easier, nobler, grander lives."

To double or quadruple profitable publicity or advertising in the dullest days of July, while doing a helpful service to the people, to the whole community and all the business men thereof, is certainly an accomplishment worthy of commendation, congratulation, and of imitation, as to means and methods for such signal attainment.

GLAD OF A RETURN TO OLD NAME OF N. E. A.

A Private Letter Recalling Pleasant Memories, Though Saddened by Death's Shadow—Letter from Former Vice-President A. E. Pierce

National Editorial Association members have met in convention in different sections of the Union, and journeyed over all parts of the country together as congenial fellow travelers, interested in their common calling, in each other and in all the regions visited and the inhabitants thereof. The bonds of mutual interest, of love for the great comcon country with all its wonders, resources, beauties, noble institutions and lofty aspirations in all parts thereof. Acquaintances have grown into strong and enduring friendships. It is estimated that during the twenty-eight years over five thousand different editors have joined at one time or another in these conventions, so that the circle is broad, and hardly a city or a hamlet in all the land but contains some one who has, at some time, been in attendance on some one of the conventions or excursions. Each recurring annual convention kindles kindly memories in the minds of thousands, though these may be tinged with sadness for so many have passed on to that bourne from whence there is no return.

With these thoughts, and feeling that we will be forgiven for taking the liberty, on account of the happy memories that will be awakened, we present to the readers of The National Printer-Journalist the following private letter from A. E. Pierce, for many years an active member in and one time First Vice-President of the National Editorial Association, formerly of Denver, Colo., now of Los Angeles, Cal.; and we are doing this first, because the letter emphasizes the fact as to the great usefulness of the National Editorial Association to the different states and cities that have been visited during the past years, as well as for the thoughts and memories recalled as to old members and all the experiences of these years of association, mutual counsel, helpfulness, friendly communion and comradeship.

Los Angeles, Cal., July 25, 1913.

Col. B. B. Herbert,
National Printer-Journalist,
Chicago, Ill.

My Dear Colonel: I have just been going through the pages of the July National Printer-Journalist and noting the many splendid articles it contains. Am especially interested in noting the fact that the National Editorial Association held its annual meeting once again in the grand old Centennial State. How I would like to have been with you! Didn't you miss some of the old Colorado clan? It is scattered and, alas! several have gone the long journey over the eternal range. K. G. Cooper, Wolfe Londoner, W. E. Pabor, and — oh well, we must all pay Nature's debt some day. The Grim Reaper has cut a wide swath in the ranks of the N. E. A. since the days its founders and earliest members began their annual reunions.

Say, do you realize that it is twenty-one years since the National Editorial Association visited the Pacific Coast on that memorable ocean-to-ocean excursion? Three royal trains of Pullman coaches and three weeks (and then some) of royal good time. I wrote up that trip in detail for my paper at the time, and have it in my scrapbook. Recently I went over it, and in the language of the late more or less lamented Ingersoll, "The past rises before me like a dream." I seem to live it over again.

Do you know I believe that invasion started the Pacific Coast boom. Certainly it has had a most phenomenal growth in population and material wealth since then, and there seems no let-up, at least not in southern California.

I note from my write-up above referred to that Los Angeles then claimed 60,000 population. It now lays claim to 450,000. San Francisco has been destroyed and rebuilt greater than ever. Seattle, Portland, and Tacoma have all grown apace. All the many places visited by us have prospered. And yet there are some so dull and uncomprehensive as not to believe that "advertising pays." Advertising is what has done it. No section of all our broad land has enjoyed so much free as well as paid for advertising as the Pacific Coast, and especially southern California.

Yes, my home is here now, as you know. I did not then imagine it ever would be. Have retired from the tripod, but my heart is with the "old gang," the best, whole-hearted, generous, lovable aggregation of "boys" and "girls" ever associated together. And, by the way, I am glad to see that the old name of the association has been restored. There is "something in a name."

But I am stringing this out beyond my first intention. If you, or any of our old-time associates, ever come to Los Angeles — and of course you will; everyone does sometimes — and I am still on earth, look for my latchstring. It is always hanging out.

Fraternally,
A. E. PIERCE.

LEE J. ROUNTREE COMPLIMENTED

Lee J. Rountree, editor of the Georgetown, Texas, Commercial, proved himself one of the useful members of the annual convention of the National Editorial Association at Colorado Springs, June 17-19. He acquitted himself as a well-informed newspaper man with practical, useful and worthy ideas and high ideals.

He was elected a member of the executive committee, that, under the new constitution and the plans that are in progress for business co-operation, has become one of the especially useful and responsible positions in the national organization. How highly Editor Rountree is respected as a man and as a newspaper maker is witnessed by the kind words of commendation that have been printed in the newspapers of Texas, since the convention, of which the following, from the Greenville, Texas, Daily Banner is a fair specimen:

"Editor Lee J. Rountree, of the Georgetown Commercial, is home from Colorado, where he attended the National Press Association. Editor Rountree is a favorite with the newspaper workers of the republic. He was selected as a member of the national executive committee. No better man could have been selected to fill this position. Lee Rountree is a superb fellow. He is always ready for any event. Always capable, always steadfast, and he will add luster to the place he has won. Texas has two ex-presidents of the national organization — Colonel Baillio and Lieutenant-Governor Mayes. Let us hope that Lee Rountree will be the third."

It is pleasant and profitable for editors to know how the fellow members of the national body are prized in their home states.

"Fourth Estate and Real Estate"

IN closing an address on the above topic, before the Real Estate Exchange at Winnipeg, Manitoba, Mr. James Schmerhorn, publisher of the Detroit, Michigan, Times, deals with the following parallels as to responsibility and honesty in the two callings, referring to the action of the Advertising Association of America at the recent convention in Baltimore, in the formulation of the needed, if not new, creed or code:

"We believe in truth, not only in the printed word, but in every phase of business connected with the creation, publication and dissemination of advertising.

"I bring you the Baltimore challenge, for I was there and know it was something like the great light that changed Saul, the persecutor, into Paul, the disciple, on the Damascus road.

"I challenge you, according to the advertising men's declarations for business integrity, because we cannot have too much competition in virtue.

"This is what the Baltimore code requires of the Fourth Estate in their real estate activities, for the newspapers sell and rent business-building sites just as you do.

"They might call it 'toppage' instead of 'frontage' or 'next to or following reading' instead of 'in a good business or residential district.'

"Under the new code — and not a few are already following it strictly — they cannot sell space in their columns to undesirable tenants, such as liquor dealers, gamblers, prostitutes, medical quacks, wildcat mining frauds, land swindlers and the like.

"It would not be fair to the other space-holders. It would not be building a city beautiful.

"The Fourth Estate, under the principle of treating everybody alike, cannot permit a bulky advertiser to put his inky spread over all the other advertisers on the page.

"All the space-buyers must conform to an orderly system of typographical arrangement so that equity may prevail and the reader's rights be regarded.

"There must be absolute good faith in circulation statements and uniformity in rates and commissions.

"For real estate to catch the same vision of personal accountability would mean that you would not sell or rent to medical imposters, to saloonkeepers, to gamblers, to houses of ill-fame, to anyone contemplating a building plan at variance with the general good, ethically, artistically, culturally.

"The real estate dealer is responsible at least in part for the architectural eyesores and incongruities that sadly blemish every American city. He has served too long eminently respectable property holders who don't care whether their buildings are firetraps or brothels so long as the revenues come regularly.

"A code of ethics that is good for shucks will restrain the real estate dealer from becoming the steward of Mammon.

"He will sell or rent the property-seeker only what is good for the property-seeker to buy or rent.

"So long as his customer remains where he locates him, the real estate man's picture ought to stay in the album as a time-tried and true friend of the family.

"The true citizen is rooted to the soil, but he needs your help to get rooted in the right place.

"Before you accept this interpretation of the Baltimore platform, which sounds like selling all that you have and giving to the poor, let me warn you that your returns for a time may be largely incorporeal, such as future estate, remainders, reversions, and the like, because the public is not wildly and immediately responsive to ethics.

"But inevitably you will reap the fruitage of the new code of truth and integrity, especially if you join hands with the fourth estate in an alliance offensive and defensive of the establishment of confidence and co-operation in advertising and selling.

"And you will get immediate reward from the greater effectiveness of advertising.

"Every real estate exchange, like every advertising club, will be a citadel of vigilance and courage commanding the highways of commercial activity.

"Fourth estate and real estate — twin forces these in the upward struggle of our business life. A peculiar stewardship attaches to both. It makes a great difference where one's lot is cast for life and what kind of a newspaper he takes.

"We have all one mother — the earth. You are her counsellors-in-chief. We are her ambassadors of the winged word.

"May we both, counsellors and ambassadors for Mother Earth, do our part to make life better for our brothers before we all go to slumber in her bosom."

✣ ✣ ✣

UNWISELY LOSING HOPE IN THE COST SYSTEM

Attention has been called to an article by H. C. Pigott in the publication of the Pacific Coast Employing Printers' Congress, held in Seattle, July 14-17, that presents a kind of reasoning that is too common among printers.

He wrote, "I have not contributed one dollar to the expense of the Cost Congress, for the reason that I have regarded the situation from a printer's standpoint well-nigh hopeless."

He goes on to cite the variation in the figures on a job that cost $90.00. There were twenty-three bids, ranging from $60.00 to $125.00, and four of these bids, each lower than $90,00, were from offices that used the cost system, "yet it was more than apparent from the cost of stock used that $60.00 would not produce it."

Still he favors the cost system, and reasonably asks "how can a man figure without some knowledge of costs? How acquire this knowledge without an adequate cost finding system?" He lays the trouble to over-equipment and to the existence of too many offices, and finds the only remedy, in the local field, which he has thoroughly canvassed, "is a lessening of plants or a consolidation of plants that will create shirt-sleeve jobs for some of the employers." It is hard to see how a combination of plants that will increase the number of working printers, without creating more printing, would help.

To our way of thinking the universal adoption of the Cost System and the training of all working printers in its use and thoroughly indoctrinating them with its absolute necessity, will be the quickest and most effective way to do away with over-equipment and to cause the reduction of the number of offices and turn the overplus of printers into other remunerative employments.

It certainly seems that men will not enter or continue in a business to the loss of their time and money where an accurate cost finding system will show that there must be constant loss unless proper prices can be secured. The trouble has been that printers have gone on, from month to month and year to year, in ignorance of the fact as to when or how they are losing money and imagining that there is a profit until they have used up their plants, their original investments and themselves as well. They have worked in ignorance and with an unfounded hope which, seemingly, springs eternal in the printer's breast. Where there is a great variance as to costs and prices among printers, who have cost finding systems and use them, it must be judged that some of these systems are not complete, accurate or reliable, or else that they are not carefully and intelligently used in making estimates.

The fact is that bids on binding estimates in advance should never be used where it is possible to avoid such estimates or bids, for there must always and necessarily be a measure of guesswork as to the exact time required to carry forward and complete any job of work to the full satisfaction of a customer, however thoroughly the value of each hour's time necessarily employed may be understood. The use of accurate cost finding and accounting is to inspire absolute confidence among customers. The great majority of business men are perfectly willing to pay cost with a reasonable profit added, and if they are educated to understand that they will be honestly treated, they will be ashamed to run around for cut prices in order to cheat the printer out of what is his due.

No new system can work a reform in a day or a year and sometimes many years are required. Reliable merchants, lawyers, physicians, engineers or contractors do not find it difficult to get standard prices.

One element must ever remain to be considered and must enter into cost and price, and that is efficiency. Efficiency has its limit, but it is certain that the most efficient office, with the best arrangement, equipment and workers, will always be able to keep down costs and do work more profitably at prices impossible to inefficient offices, lacking in any of the things enumerated or in harmony and zeal among all employes and between all departments.

The cost system, however, when properly carried out, tends to efficiency, harmony and enthusiasm. Its general installment must, in the end, work the reforms that have already been begun to the great improvement of conditions everywhere.

The cost finding system brings knowledge, broad enlightenment and an awakening to requirements and improving of conditions. Ignorance has been the great curse of the art that is the boasted preserver of all arts. Now that the work has been so well begun and successfully carried forward, greater and not less efforts are required that the full fruits may be reaped. Had it not been for the installing of cost finding systems and correct accounting, the conditions referred to by Mr. Pigott would never have been fully understood, so that they could be remedied. It is no time to be disheartened, but just the time for new courage and new and greater efforts.

CAN NOT AFFORD TO MISS AN ISSUE

Office of the Child Printery,
Lakeland, Fla., August 7, 1913.

Editor National Printer-Journalist, Chicago, Ill.

Dear Sir: Please change my address on your subscription list from Orlando, Florida, to "Lakeland, Florida."

Please send the July issue to me here, as I have missed it, and it doesn't seem as though I can afford to miss any of the good things that the National Printer-Journalist always contains.

Long life and continued usefulness to both you and the Printer-Journalist.

Yours truly,
ROYAL B. CHILD.

Schemes for Using the Home Press

Suggestions and Incidents Worthy of Careful Consideration

Every successful business man and manufacturer today is coming, more than ever before, to recognize the value of reaching consumers through home newspapers. Others have recognized this fact and it seems that many have conceived the idea of commercializing this recognition of the advertising value of home newspapers to their own profit. The press agent, seeking free advertising for his customers, has been pretty thoroughly exposed and well-informed newspaper men are not now likely to be deceived into the giving away of advertising space to the smooth press agent.

As is evidenced by letters and circulars that we have received from E. Lowry's Sons, of the Gibson Courier, of Gibson City, Ill., the present activity for securing free advertising is the more active exploitation of weekly supplements containing advertisements of manufacturers who wish to reach the field covered by the home paper. We have so frequently presented the numerous reasons why a publisher should control his own columns, and especially the advertising of his paper, that it seems scarcely necessary to repeat the same here.

By permitting the use of his paper for the circulation of advertisements, the character and price of which is fixed by someone else, the publisher gives up the use of his own paper to competition with himself in his own office and field. One of the greatest objections to advertising in supplements is the low prices at which the same is taken for each publication.

If a publisher permits the circulation of ads in his paper for which the advertiser pays only one or two cents an inch or less, to cover his entire circulation, and then pays for the privilege, besides paying the postage and all the cost of inserting and circulating, he not only contributes heavily to the carrying on of the business of the competitor, that he has introduced into his own paper, but he cheapens his own goods, his own commodity, advertising space, to such an extent as would be ruinous, besides turning over probable customers to his competitor — customers who, otherwise, would be compelled to advertise in the paper direct and to pay rates that would be just and profitable to the publishers, and, as we believe, to the advertiser as well. The American Press Association has done a good work in educating advertisers to the value of home papers and has furnished a large amount of advertising to home newspapers at the publishers' rates.

Besides this, other methods are already in operation or being arranged by the National and other editorial associations for securing and handling this class of advertising, and certainly every publisher should be in position to co-operate.

This much by way of introduction to the following letters, that are self-explanatory:

Office of the Gibson Courier, E. Lowry's Sons, Publishers,
Gibson City, Ill., August 11, 1913.

National Printer-Journalist, Chicago.

Dear Sirs: The accompanying literature was sent to two hundred representative country weeklies of Illinois. Possibly it will interest you.

Our only interest is the good of the advertising cause. We have hopes that ultimately the country weekly will be properly recognized by general advertisers, and we feel sure that this supplement scheme is of a nature that will delay such recognition and possibly prevent it altogether.

Educational work along this line is going to take time and patience, and we shall appreciate any aid you can give to the undertaking.

Yours very truly,
E. LOWRY'S SONS.
Per C. E. L.

Gibson City, Ill., August 8, 1913.

Fellow Publisher:

We are moved to say a word regarding advertising in the country press, and to pay the postage to pass that word to our neighbors who publish papers in the great corn belt of Illinois.

The manufacturer is just beginning to turn his attention to the columns of the weekly press. He is beginning to get behind his retailer in the small town, to help him sell widely advertised goods. The harvest to the weekly newspaper of character and business methods is only just beginning to open up.

It is the time of all times to hold to an adequate rate for advertising and to avoid all the indirect attempts to get free advertising or half-paid advertising on the part of outsiders. For this reason we have delivered ourselves of the little homily on free supplements, which you will find enclosed. The entrance of these free supplements will mean a direct loss to the country press, not only to the publisher who circulates them, but to all other publishers.

If manufacturers can find an opening through these supplements they are likely to remain out of the legitimate advertising columns of the paper. While we seriously question the value of free supplements, and while we believe this supplement scheme may be short-lived, yet we believe it will be a detriment so long as it is encouraged. Let us be careful how we contract away our greatest stock in trade, our advertising commodity. We invite you to co-operate with us in resisting such outside encroachments.

Respectfully yours,
E. LOWRY'S SONS.

These letters were accompanied by a handsomely printed four-page leaflet containing an incident in and a moral as follows:

FELLOW LABORERS OF THE FOURTH ESTATE, GREETING:

We were approached a few weeks ago by a man with a scheme. He wanted to break into our advertising columns and reap the little harvest we had been preparing for some years. He was a very pleasant stranger, with a glib tongue. He was our friend, he said, working for our mutual interests.

Our friend offered us a nicely printed little weekly supplement, a sort of imitation of the Saturday Evening Post, to be issued as a supplement to the Courier, and shipped to us every week ready for insertion. A boon to us and to our hungry readers, a right philanthropic enterprise on the part of our friend.

Glancing it through, we observed many interesting and beautiful advertisements of prominent manufacturers. We were carefully assured that these advertisements would never be objectionable in character. "How much do we get for circulating these nice advertisements to our readers?" was our natural but childish inquiry.

"Why, man," said our good friend, "you get the benefit of increased interest in your paper, you get the lasting gratitude of your subscribers for this goodly reading, you get that good feeling that comes to a man who has done a good thing, you get an increase of subscribers!" One tangible thing anyway, an increase of subscribers. (We have to be shown how many.)

"And what do you pay us for circulating this weekly paper for you over our subscribers' routes, at the rate of 1 cent per pound?" was our next fool query. "My good friend, you do not get us," says friend schemer; "you are the one who does the paying. Because you are a real sport we let you in on this thing at a nominal price. We will only charge you $5 per thousand for these matchless art supplements, and give you **exclusive** territory. Better just get in now, before we call on your competitor, or you lose the opportunity of a **lifetime.**"

Foolish we, we couldn't see it, and our competitor being a mighty agreeable fellow, we phoned him, and he couldn't see it; and we kept the manufacturer off of the free list in this town. But we couldn't have a telephone conversation with every editor in Central Illinois, and we later learned that our friend had befriended various and certain other brethren of the profession, and they are even now handing out his good dope free gratis for nothing, working their blooming heads off to meet the pay roll every Saturday night and keep the great moral stimulus of the country press a-stimulating.

MORAL: Fall for every good thing that comes your way, and fall hard. If a man wants to use **your** subscription list, by all means be accommodating, and let him in. He will appreciate it, and the manufacturers will get low advertising rates, and they will appreciate it. Philanthropy is appreciated the world around. And great is the philanthropy of the newspaper man.

Yours for the good of the cause,
THE GIBSON COURIER,
Gibson City, Ill.

✣ ✣ ✣

A PROGRESSIVE VIEWPOINT

On July 15, Ed E. Sheasgreen, formerly secretary of the Ben Franklin Club of America, and now manager of the Standard Cost Finding Service Company, gave before the combined classes in Labor Problems and Employers' Associations in the University of Chicago, a lecture illustrated by the stereopticon, on "Relations of Cost Systems to the Labor Problem." The lecture was both interesting and instructive. The speaker has a progressive viewpoint, and his lecture suggested means of solving both problems of business and of society through the installation of a proper system of cost finding. The question of the high cost of living, a shorter work day, a minimum wage, prevention of strikes and a reasonable profit to employer, were shown in their relations to an adequate system of cost finding. Many expressions of appreciation were heard from those attending the lecture.

C. E. BONNETT,
Professor, University of Chicago.

Trade Press Convention

The Program Announced for the Eighth Annual Meeting Contains Many Prominent Names and Covers a Variety of Interesting Topics

WILLIAM H. UKERS, Chairman of the Committee on Arrangements for the Eighth Annual Convention of the Federation of Trade Press Associations to be held at the Hotel Astor, September 18-20, has announced the complete program for the three days sessions as follows:

The opening session, Thursday morning, September 18, at 9:30, will be a keynote meeting having for its general subject: "Business Promotion Through Trade Press Efficiency."

After the address of welcome by President H. M. Wilson of New York Trade Press Association, the response and annual address by President H. M. Swetland and the annual report of the Secretary-Treasurer, E. C. Johnston, there will be a series of ten-minute outlook addresses by the presidents of the various local associations, viz: Frederick F. Cutler of Boston responding for the New England Trade Press Association, F. D. Porter speaking for the Chicago Trade Press Association, P. H. Litchfield of St. Louis speaking for the St. Louis-Southwestern Trade Press Association, Grant Wright speaking for the Philadelphia Trade Press Association and R. I. Clegg of Cleveland, responding for the unaffiliated papers.

After this, R. R. Shuman of the Shuman-Booth Company, of Chicago, will deliver a keynote address on the subject, "The New Force in Business," to be followed by Elton J. Buckley, member of the Philadelphia bar, and editor of The Grocery World and General Merchant, who will speak on "The Weakest Spot in Trade Press Efficiency."

Between the morning and afternoon sessions a lunch will be served at the Thirty-Ninth Street Publishers' Building, followed by an inspection of the plant and publishing offices of the Federal Printing Company.

At the Editorial Symposium

The Editorial Symposium, under the leadership of A. I. Findley of Iron Age, will be held at 2 o'clock Thursday afternoon, September 18. At this symposium will be presented papers on general editorial subjects; also on the relations of editors with other departments. Among the addresses programmed are the following: Charles Whiting Baker, editor Engineering News, New York, on "What Constitutes Greatness in a Technical Publication"; J. C. McQuiston, Publicity Department, Westinghouse Companies, on "What Should be Done to Improve the Editorial Efficiency of Trade, Class and Technical Papers?"; Edmund G. Gress, associate editor American Printer, New York, on "What Typography Means to the Editor"; J. George Frederick, contributing editor, Advertising and Selling, on "Editorial Ideals"; A. A. Gray, managing editor The Electrical Review, Chicago, on "The Relation of the Editor to the Rest of the Business"; Flint Garrison, president The Drygoodsman, St. Louis, Mo., on "The Field of the Editorial Expose"; and Ray Morris, formerly managing editor of The Railway Age-Gazette, now with White, Weld & Co., bankers, New York, on "What the Reader Wants."

Speakers at the Circulation Symposium

The Circulation Symposium, under the leadership of M. C. Robbins, will be held at 3:45 Thursday afternoon, September 18. At this symposium papers will be presented from subscription managers, canvassers and subscribers — those who read the trade press — giving their views as to its value to them, and wherein it fails to be of value to them. Among the addresses programmed are the following: R. H. McCready, Knit Goods, New York, on "Circulation Problems of the Little Trade Journals"; H. K. Fisher, circulation manager, Hill Publishing Company, New York, on "How to Organize and Direct a Subscription Campaign Through Salesmen"; H. S. Bunting, Novelty News, Chicago, on "The Law of Specific Circulation and the Law of Buying Units"; B. Meador, David Williams Co., New York, on "Getting Subscribers by Mail"; A. C. Pearson, The Dry Goods Economist, New York, on "Quality Circulation"; W. J. Ralph, The Automobile, New York, on "Subscription Problems Met and Conquered"; A Talk by a Prominent Trade Journal Subscriber, A. Zimmerman, retail hardware merchant, Baltimore; A Talk by a Prominent Trade Journal Advertiser, F. J. Low, advertising manager, H. W. Johns-Manville Co., New York, subject "Circulation from the Advertiser's Standpoint"; Frank Farrington, editor Inland Storekeeper, Chicago, on "Holding the Subscriber."

The Big Friday Sessions

Friday, September 19, will be known as "Big Friday" because it contains three big meetings and the annual banquet on Friday evening.

At the Advertising Symposium which begins the day's sessions the keynote is: "Whenever an industry is served by a thoroughly competent business paper, its advertising pages offer the most economical advertising that this industry can purchase."

At this meeting, which is under the leadership of Hugh M. Wilson, papers will be presented by educators, publishers, advertisers, advertising managers and advertising agents. The speakers programmed are as follows: Dr. H. L. Hollingworth, director of the Laboratory of Experimental Psychology, Barnard College, Columbia University, New York, on "Appeal and Response in Advertising"; Professor Paul Terry Cherington, of the Graduate School of Business Administration, Harvard University, on "Advertising as a Business Force"; George Burton Hotchkiss, M. A., assistant professor of Business English, New York University, on "The Relation of Advertising English to Good Copy"; Question, "What Can Be Done by Business Papers to Increase Their Efficiency as Advertising Mediums?" Answer by F. R. Davis, General Electric Company, Schenectady, N. Y., and Harry Tipper, advertising manager, Texas Company, New York; discussion, "The Right Relationship Between Business Papers and Advertising Agents." This will be discussed from the trade press angle by John A. Hill of Hill Publishing Company, New York; from the viewpoint of a general advertising agency by O. H. Blackman, of the Blackman-Ross Company, New York, and the Association of New York Advertising Agents; from the viewpoint of a trade press co-operative agency by C. M. Wessels of the C. M. Wessels Co., Philadelphia, advertising representative of the Grocery and Allied Trade Press of America; an address by H. E. Cleland, manager The Make-It-Pay Department, Hill Publishing Co., New York, on "The Vices and Virtues of Service Departments"; R. E. Fowler of the Printz-Bierderman Company, garment manufacturers, Cleveland, Ohio, on "What an Advertiser Expects from a Trade Paper that Reaches the Retailer"; O. C. Harn, manager advertising department National Lead Company, New York, on "Certified Circulations"; demonstration, "How to Sell Advertising Space in a Trade Paper," the Seller, H. M. Swetland, The Automobile, New York; the Buyer, John A. Hill, The Hill Publishing Co., New York.

The big business meeting will bring together in one symposium the biggest men in the trade paper publishing business in America. Here are to be told the inside stories of some of the big trade paper publishing successes. The speakers will state the fundamental principles upon which each business was builded, H. M. Swetland, president, presiding. The addresses programmed are as follows: W. H. Taylor, president of the David Williams Co., New York, will tell "The Story of Iron Age"; James H. McGraw, president of the McGraw Publishing Company, New York, will speak on "The Evolution of the McGraw Publishing Company"; Charles T. Root, president The United Publishers' Corporation, New York, will tell "The Story of the Dry Goods Economist"; E. C. Hole of Chicago will tell "The Story of the American Lumberman"; John A. Hill, president, The Hill Publishing Co., New York, will give some "Inside Facts About the Hill Engineering Weeklies"; E. A. Simmons, president, The Simmons-Boardman Publishing Co., New York, will tell "The Story of the Railway Age-Gazette and Allied Publications."

The big north ballroom at the Hotel Astor is to be given over to the mass meeting scheduled for Friday afternoon, September 19, which is expected to be the most largely attended meeting of the convention. There will be a number of inspirational addresses by representative business and professional men on subjects of live interest to editors, publishers and advertisers. The following are scheduled to speak at the Inspirational Mass Meeting: Frank Alvah Parsons, of the New York School of Fine and Applied Arts, on "The Principles of Advertising Arrangement"; William H. Ingersoll, president New York Advertising Men's League, on "Fair Competition and the Future of the Retail Merchant"; Dr. Talcott Williams, director and professor of journalism, School of Journalism, Columbia University, on "Advertising Advance and Responsibility"; Richard H. Waldo, president of the Quoin Club and advertising manager "Good Housekeeping Magazine, New York, on "The Trade Paper from a Magazine Man's Viewpoint"; Professor Walter Dill Scott, Northwestern University, Chicago, on "The Psychology of the Twentieth Century Man"; Herbert N. Casson, H. K. McCann Advertising Agency, New York, on "How to Sell a Trade Paper."

At the annual banquet in the north ball room of the Hotel Astor at 7 o'clock on Friday evening, September 19, John Clyde Oswald, of the American Printer, will act as toastmaster. Some of the after dinner speakers who have been invited and who have signified their willingness to accept are: The Hon. Albert S. Burleson, postmaster general; the Hon. William C. Redfield, Secretary of the Department of Commerce; John Kendrick Bangs; Tom Daly; Hon. Charles F. Moore, and Dr. N. M. Waters.

The Publishers' Symposium

One of the most interesting sessions of the convention will be the Publishers' Symposium, scheduled for Saturday morning, September 20, at 9:30. Here will be discussed aggressive policies, standards, and the ideals of the trade paper publishing business. The leader of this symposium will be E. R. Shaw, of Practical Engineer, Chicago. Following remarks by Mr. Shaw, there will be addresses by B. B. Herbert, National Printer Journalist, Chicago, on "The Question of Costs"; Allen W. Clark, American Paint and Oil Dealer, St. Louis, on "Standards for Business Papers"; Clowry Chapman, counsel to the Association of National Advertising Managers and to the Advertising Men's League of New York, on "What Should Be the Attitude of Trade Paper Publishers Towards Unfair Competition"; Anderson Pace, publicity manager, Butler

Bros., Chicago, on "The Trade Paper as a Constructive Force"; Emerson P. Harris of the Harris-Dibble Co., New York, on "The Larger Functions of the Specialized Journal"; E. A. Simmons, Railway Age-Gazette, New York, on "Advertising the Business Press"; J. Newton Nind, Furniture Manufacturer and Artisan, Grand Rapids, Mich, on "The Advantages of Good Printing in Trade Journalism"; C. R. Clifford, Clifford & Lawton, New York, on "A New Way to Increase Advertising."

All the regular sessions of the convention are open. Whosoever will, may come, but tickets must be secured for the Inspirational Mass Meeting. These may be obtained on application to any member of the Federation or to the Committee on Arrangements. Seats at the annual banquet are $5 each. Applications should be made to M. C. Robbins, chairman of the Banquet Committee, 239 West Thirty-ninth street, New York. For further information address William H. Ukers, chairman of the Committee on arrangements, 79 Wall street, New York.

* * *

LITTLE SCAREY WILLIAMS.

By Edward Corman, Sec. Master Printers' Association, Buffalo, N. Y.

It is an amazing thing to see how easily the average printer can be scared out of his boots, and how often he is induced to lose money on an order by listening to some story about another printer's work or prices. That such stories are sometimes true, or partially true, does not justify one in being influenced by them to attempt the same fool stunts.

A few months ago, an ignorant, half-baked printer, with one small Gordon press, sent a thousand or so circulars to the business men of a certain city, near the country town in which he lives. These circulars solicited their printing orders and offered letter heads, on "best bond paper," envelopes, bill heads, statements, etc., all at prices no competent and sane printer would think of quoting.

Straightway, there was a bunch of scared printers in that city. Some thought the circularizer must have a big plant with a battery of fast rotary presses. They said the prices he was quoting would take all the small work in sight and would probably ruin them, unless they could also get faster presses and meet the competition.

As a matter of fact, $1000.00 worth of printing, at the prices quoted, would have ruined the price cutter and put him out of business. But there was no such good luck. He never got $1000.00 worth of work, nor any other amount worthy of mention, from that city. Furthermore, the amateurish product of this ignorant boy printer and his "best bond paper" (which he bought by mail order from a snide dealer in job lots) would not have been used for the purpose intended by a reputable business house.

A number of printers were wise enough to laugh over the circular and then forget it, as a business man in any other line would treat a similar attempt at "competition"; but others were greatly worried over the prospective loss of business.

Several business men showed the circulars to their printers and tried to use them as a club to beat down prices; but few, if any, sent orders out of town because of the wonderful bargains offered. The lone 8x12 was still silent most of the time, at last account.

This is just one of a number of similar scares I have seen among the printers in various places. Each time, a lot of men who are old enough to know better get scared stiff, and, if the prices quoted are not less than 25 per cent of what the work is worth, there are some who will meet them rather than "lose the business."

There are hundreds of very ignorant people trying to do printing. Often, they do not know what a good business house requires, even in so simple a thing as its stationery. It is such shops, often run by boys, that advertise printing at the ridiculous prices we frequently hear about. Every now and then, somebody writes to one of the trade papers about these printers and wants to know why they are not taught to sell their work at fair prices. That is impossible. It is very hard for them to sell work at any price, as nobody wants it.

What real printers need is backbone enough to ignore the prices quoted by the incompetents, both large and small. If they will do that, they can all get a living profit on their work and get nearly the same amount of work as at present. Nobody whose trade is worth worrying about wants to have his printing done by an ignorant incompetent. But thousands of good business houses will let the capable printer duplicate the other fellow's prices, as long as he is foolish enough to do so.

Almost any printer you meet can give you a lot of reasons why he is doing certain work at prices which probably eat up a part of the little he makes on other business; and why he is not charging all that he should, for any sort of work. A careful examination will show that most of these reasons are either imaginary or of such a nature that the printer need not be governed by them. The financial condition of most printers can be attributed, chiefly, to ignorance of cost — and cold feet.

Quite a number of the shops which the average printer regards as competitors are fast passing out of that class. They are gradually drifting out of business, in spite of their low prices, because they do not know how to produce work satisfactory to the modern business man. They can often get one or two orders from an intelligent customer, but cannot long hold his trade at any price.

The printer, who knows how to give satisfactory service to the progressive business man of today, makes a serious mistake when he considers these back-number shops, competitors. Every time he meets their prices, he advertises himself as in their class. I have known several instances where good printers have lost the opportunity to secure desirable business, because in their anxiety they had quoted a price which caused the customer to class them with the hasbeens. Some customers, of course, search for the incompetent printer. They do it, however, not because they like his work, but because they are not willing to pay a living price for their printing. The fewer customers one has of this class, the better he is off.

Every year, the modern business man is coming more and more to require that his printer shall be a man of brains and possessed of that broad understanding of the resources of his calling which enables him to give valuable service. It is a gradual development, but it comes surely, and will soon prove a great help in eliminating one of the most hurtful classes of competition.

* * *

The Wisconsin Perry's Victory Centennial Commission has selected J. L. Sturtevant, editor of the Wausau (Wis.) Daily Record-Herald, as one of the five Wisconsin publishers who will be the guests of the state upon the trip to Put-in-Bay where the celebration will be held. The trip is to be made by boat, starting from Milwaukee on September 6 and returning on September 13.

Executive Committee of the National Editorial Association

Brief Biographies of Members, With Their Views as to the Future and Work of the Organization

CONSTITUTED of six members elected by the Association, together with the President, the Vice President, Secretary and Treasurer, the Executive Committee of the National Editorial Association will have very much to do with carrying out the new plans inaugurated, and with the usefulness and success of the organization under the Constitution and By-Laws.

In view of the importance and responsibilities of this committee, it will be interesting and profitable for the members to be more closely and fully acquainted with the members and their views in order to be ready to co-operate with them in their great work. It is with pleasure that we are able to present brief biographies of these gentlemen and some of their ideas as to the organization.

William B. Collins, Editor Leader-Republican, Gloversville, N. Y.— Mr. Collins was born in St. Johnsville, N. Y., and was graduated from that school which has turned out many of the most shining lights in the field of journalism — the country printing office. He acquired an excellent practical knowledge of the printing business in some of the best-conducted offices located in the Mohawk Valley, and for a number of years was a type-setter on the Albany Evening Journal. In 1888 Mr. Collins became a part owner of the Gloversville Daily Leader, then a very small and insignificant aspirant for favor at the hands of the reading public, and later on purchased the interest of his associate in the business, Fay Shaul. The progressive spirit of the new owner was quickly manifest, and the Leader, now the Leader-Republican, has ever since been marked by the evidences of advancement. Today the paper is one of the best published in the cities of Gloversville's class, and is properly regarded as an influential factor in Republican journalism. Gloversville is a city of over 20,000 population. In 1906 he was elected president of the New York State Press, and served in that position with honor to himself and to the entire satisfaction of the members of the association. Mr. Collins is now president and general manager of the Willam B. Collins Company, publishers of the Daily Leader-Republican. His career as a newspaper man furnishes a happy illustration of the value of an energetic, persevering spirit, and, personally, there are few men who enjoy a greater popularity among members of the fraternity.

William B. Collins, Editor "Daily Leader-Republican," Gloversville, N. Y.

Mr. Collins' Views as to the N. E. A.

In response to request sent by the editor of the National Printer-Journalist, Mr. Collins writes, under date of August 13, 1913:

"Concerning the work of the National Editorial Association, I am of the opinion that we are on the right track and that there will be a successful outcome of the present efforts to place the National Editorial Association where it rightfully belongs — at the head of the procession.

"I feel that the character of men in charge of the association indicates a heartfelt desire for its success, and that means a lot. Personally, I intend to arouse many of our old New York State friends to a renewed interest in the association, and I hope to succeed."

Lee J. Rountree, Editor Georgetown (Texas) Commercial — Lee J. Rountree, of Georgetown, Texas, was born in Hays County, Texas, November 15, 1868. He began work in a newspaper office in Kyle, Hays County, in 1879, and has continuously worked at the business since, with the exception of serving three terms as chief clerk of

Lee J. Rountree, Editor "Commercial," Georgetown, Texas the Texas House of Representatives. He was appointed by Governor Charles A. Culberson, in 1895, as a member of the State Board for the Deaf and Dumb Institute, and by Governor Thomas M. Campbell in 1909 as colonel on his staff. He entered service for the Spanish-American war and was elected captain of the Taylor Rifles in 1898, but did not get into service before war closed. He was chosen president of the Volunteer Firemen's Association of Texas in 1899 at Paris, Texas, and a member of the State Democratic Executive Committee in 1894, and was secretary of the Democratic state convention in 1892, 1896 and 1898. He was editor of the Kyle (Texas) Star-Vindicator at the age of 17, and has been editor of the Georgetown Commercial since 1898. He has attended many National Editorial Association conventions, the first at Chicago in 1893, and went to Panama on the memorable excursion in 1910. He is a member of the State Executive Committee of Texas and the National Council from the Texas Press Association. Mr. Rountree has traveled extensively in South America, Europe, Africa, Mexico, Canada, and in nearly every state in the Union. He is a man of wide information and broad views.

Statement by Mr. Rountree of His Views as to the N. E. A.

"I would enlarge the National Editorial Association on the lines suggested at the June meeting in Colorado Springs, Colo. I would suggest three full days of regular sessions of the association, with no social events to disturb the business meetings. After the association adjourns then an excursion could be taken and a few days passed in sight-seeing and social intercourse.

"Our association is one of the greatest in the world — true fraternity should characterize its work, accompanied by the introduction of purely business methods. In fact, there is a business side to our association that should be discussed and suggestions made for the general advancement of the profession. I expect to attend every meeting of the National Association in the future, unless prevented by circumstances over which I have no control. The meetings I have attended have been worth much to me, and the friendships will never be broken and will grow stronger as the years go by.

"LEE J. ROUNTREE."

H. C. Hotaling, President Blue Earth County Enterprise, Mapleton, Minn.— Herbert Cleveland Hotaling was born at Mankato, Minn. He attended common schools and state normal, and learned the printer's trade under the veteran journalist, Hon. John C. Wise, Sr., of Mankato, who established the first paper at the head of Lake Superior. After working in various Minnesota printing offices, he located at Mapleton in 1888, and for a quarter of a century has been publishing the Blue Earth County Enterprise. He is married and has one daughter. At the present time he is vice-president of the Minnesota Editorial Association and president of the Second Congressional District Editorial Association of Minnesota. Fraternally, he is a thirty-second degree Mason, Elk and Odd Fellow. His paper is noted for the completeness of its home news and for the loyal service to home institutions, and the wise exploitation of all worthy local events or undertakings, and has received frequent commendation in these pages.

Mr. Hotaling's Views as to the Association

"President Oswald says that there are nearly 25,000 publications whose editors and publishers are eligible to membership in the National Editorial Association. Our conventions are attended by from two to three hundred. This is not representative except that those who do attend are generally the 'live ones' in the newspaper profession, those who have seen the light and are making enough out of their business so that they can afford to take an annual trip away from home, which not only broadens their life and intellect, but proves a physical as well as an intellectual benefit.

There is quite a general complaint that the district, state and national editorial associations do not accomplish anything practical — that their conventions are simply outings for the pleasure of the participants. The complaint may be a just one, but how can the National Association accomplish very much with a membership of barely one per cent of the whole number of publishers in the country. If we cannot have a larger active membership, some plan should be evolved whereby we might have an associate membership contributing, say, one dollar each to the organization, and what publisher cannot afford to contribute one hundred cents annually to the advancement and upbuilding of his own business? If we could have this increased membership it would provide a fund for the accomplishment of something practical in the way of the development of local and foreign advertising. You may be surprised at my including local advertising to be developed by a national organization. With funds to work with, a central office could be established for the solicitation of advertising, said office to co-operate with various advertising agencies, more especially the American Press advertising department, which has accomplished a great deal in bringing the country editor to a realization that his advertising space has a value and that he can secure a remunerative rate if he will only adopt business methods and stand fast for the same.

H. C. Hotaling, "Enterprise," Mapleton, Minn.

"Notwithstanding all the effort which has been made, and the money which has been expended by the country publisher to increase foreign advertising, I believe that the local field still offers the better harvest. It can be developed by the National Editorial Association if given funds with which to work, and that in turn means the co-operation of many more publishers than are at the present time members of the association. With funds at its command able men could be sent out to address the state and national conventions of the hardware dealers, the dry goods merchants, the druggists, etc., and impress upon them that the local paper, the publication which reaches the homes of their patrons, is the true advertising medium, and that if they will use its columns with the same care that they use in other departments of their business, there will be no need to worry over the encroachments of the mail order houses. This work could also be supplemented by a paid secretary, who would cooperate with the country publisher in bringing about a better understanding relative to advertising between the retailer, the wholesaler and manufacturer. By co-operation between these various factors much additional advertising would find its way to the columns of the country press.

"It is the intention and the desire of the executive committee to make the program for the 1914 convention "the best ever." Whether they will succeed or not depends largely on circumstances. They hope to have a number of the ablest men in the editorial profession on the program, men who have gained distinction through their work. They not only hope to have them on the program but expect to have them present. Those who have had to do with the making up of programs for gatherings of a national character realize that there are many obstacles to prevent the fulfillment of plans, for, as the poet Burns says, 'The best laid plans of mice and men aft gang aglee.' The program will also be made a practical one, calculated to help and benefit those who attend the convention. And right here is another point, the entertainment features will be so divorced from the intellectual part that they will not interfere. It is not right or proper that those who have prepared addresses should find only empty seats to speak to, the delegates, or a large share of them, being away on some side trip.

"The most successful conventions are those held in the smaller cities. The less attractions on the outside the better the attendance and the attention on the inside. When the work is over, then hurrah, boys and girls, for a good time; but let us do our work first, then go a visiting."

Frank O. Edgecombe, Editor Signal, Geneva, Neb.— Mr. Edgecombe was born at Leipsic. Ohio, February 13, 1864. Removed with parents one year later to Richardson County, Neb. Graduated from college in 1884.

Beginning in 1886, he spent four years as bookkeeper and cashier of the First National Bank of Rulo, Neb.

In 1889 he acquired a half interest in the Falls City, Neb., Journal, retired from the bank one year later and took personal charge of the newspaper, acquiring at the same time the remaining interest.

In February, 1894, he sold the Falls City, Neb., Journal to an insistent man from Kansas, and expected to engage in other business, but twenty days later bought two newspapers at Geneva, county seat of Fillmore County, Neb., and went to work again. Altogether he has consolidated nine newspapers from various parts of this county, partly as a means of increasing circulation quickly. His office is equipped with every modern convenience for newspaper and job printing — machinery equipped with individual electric motors.

He lost the sight of both eyes August 1, 1892, through the careless discharge of a shotgun by a prairie chicken hunter, and this loss of sight is permanent. He is married and has three children.

As to the Work of the Association

Mr. Edgecombe writes under date of August 9:

"I have been a member of the Nebraska Press Association for twenty-three years. Have long believed publishers and job printers should be better organized. Two years ago I proposed a closer organization to the members of the Nebraska Press Association, then in session at Omaha. Met with some favor. I repeated the proposal one year later at the annual meeting held at Lincoln. Met with more favor. Renewed the proposal at the annual meeting held this year at Omaha, and steps were taken to form such an organization. The name chosen is 'Associated Nebraska Newspapers.' An executive committee of five was named with myself as chairman, to superintend the business of the organization without salary. The plan was for the employment of a salaried secretary, who would eventually devote all of his time to the interests of the papers and job printers entering the organization. C. C. Johns of Grand Island, Neb., has been elected as such secretary by the executive committee, and is now devoting a portion of his time to this work. The organization is open to all Nebraska publishers and job printers on payment of a small fee in the form of annual dues.

Frank O. Edgecombe, Editor "Signal," Geneva, Neb.

"It has seemed to me that the states must organize more thoroughly before stronger national organization is possible. I think I have nothing new to suggest about the executive committee. Yours truly,

"FRANK O. EDGECOMBE."

Frank R. Roderus, Consulting Editor of American Sugar Industry — Mr. Frank Roderus, of Chicago, is especially proud of the establishing and the successful building up and carrying on of one of the leading industrial papers of the country until he has reached a point where he could retire from the business and editorial grind and remain on in the honorary but none the less useful position of consulting editor, to aid with his acquired knowledge and experience those who have taken up the burdens and activities of editing, publishing and conducting the paper. How highly he is esteemed and how great his attainments, is told by the following, appearing in the Modern Sugar Planter of New Orleans, La., last September:

"The name of Frank Roderus will ever be linked most conspicuously with the advancement of the American beet sugar industry, for when he took hold of the reins of the Beet Sugar Gazette some years back (which was subsequently changed in name to the American Sugar Industry) the beet industry of this country was almost in its infancy as compared to the proportions it has now assumed. And through a persistent faith in the industry and in the future of the publication of which he was the head. to his credit is ascribed in no small measure the advancement of the beet sugar interests in America.

"In placing his journal to the front of the sugar publications of the world, which of late was widened in scope so as to embrace cane sugar as well as beet. Mr. Roderus came to be regarded as one of America's eminently successful trade paper editors, and his retirement in the prime of life is a distinct loss to sugar trade literature. In the achievement of the success that attended his efforts a large measure of credit is to be given for his wise selection of a most worthy partner in the persan of Mr. C. N. Manfred as business manager, and through having surrounded himself with a corps of most capable assistant editors, one of whom, Mr. E. A. Jones, succeeds to the editorial chair of the American Sugar Industry, while Mr. Manfred becomes the general manager, with headquarters in New York.

Frank Roderus, Consulting Editor "American Sugar Industry," Chicago

It is a pleasure to the Modern Sugar Planter to note that notwithstanding this retirement of Mr. Roderus, he is to continue to keep in touch with the American sugar industry by acting as consulting editor. With such wise counsel at their command, the present corps comprising the publishing staff will undoubtedly carry the destinies of the paper forward along the honored and useful career marked out for it by the retiring editor."

John Clyde Oswald, President of the National Editorial Association, publisher of the American Printer, New York City.— President Oswald is a member of the Executive Committee of the National Editorial Association by virtue of his office.

He has been an editor and publisher practically ever since his high school days, when he owned a weekly newspaper in a small Ohio town. For a short time he was a job printer in Chicago, and then an advertising representative in New York. In 1897 he became editor of the American Bookmaker, and as owner of the publication in 1900 he renamed it the American Printer.

Those were the days when the influence of Morris and others was changing the style of typography in America, and Mr. Oswald's publication presented each feature as it was introduced. Always advocating the best in printing, he has been largely responsible for the improvement in American typography. From the very first his publication has urged better methods of doing business in printing and publishing offices, and many of the arguments in favor of cost finding systems now so effectively used appeared in his publication a decade ago.

John Clyde Oswald, American Printer, New York.
President-elect National Editorial Association

Mr. Oswald brings to the presidency of the National Editorial Association a wide experience and an equally wide acquaintance. He has traveled much and knows many men. His experience and acquaintance includes the fields of publishing, printing, advertising and engraving. He has addressed conventions in almost every state of the Union, and has served in many important offices. In addition to being president of the National Editorial Association, he is president of the Printing Trade Press

Association and an ex-president of the American Trade Press Association. He is a member of the Aldine Club, the New York Press Club, the New York Press Association, the United Typothetae of America, the Advertising Men's League, the Booksellers' Association and other organizations.

His activities have not been confined to business matters, as he has delivered many lectures for the Y. M. C. A. and the Big Brothers. He is a student of art and literature. He has a faculty of cultivating friendship, and hundreds of persons are glad to claim him as a friend. It is President Oswald's intention to devote much of his energy to building up the National Editorial Association.

President Oswald's Views as to the Importance and Work of the National Editorial Association.

In response to the request sent by the editor of the National Printer-Journalist, President Oswald has favored this paper with the following most gratifying and encouraging views and forecasts as to the National Editorial Association and the plans for greater efficiency and broader usefulness in the future, to start at the convention of 1914, with a perfected plan of co-operation, a strong program, during which the men of greatest experience, ability and enthusiasm will present papers and join in discussions; and greater publicity, with entertainments up to the highest standard of previous years:

"I am a member of many organizations, but there is none among them in which I prize my membership more than that of the Naitonal Editorial Association. I have been a member and an attendant at the annual conventions for many years, and they have been of value to me in many ways. They have enabled me to come into close association with men who have made successes in the publishing business from whom I have learned much that I have turned to good account in my own business. I have made many friendships that I could have made in no other way, and which have afforded me great pleasure and satisfaction. The side trips that have followed the conventions regularly have given me a knowledge of the continent and of the men and women who are doing things worth while in the various localities visited that has been of great benefit to me. The association is unique in the number and variety of ways in which membership in it profits those who belong to it.

"Notwithstanding these facts, however, I am obliged to confess that I know of no industry or profession of the importance of the newspaper publishing business of this country that is so inadequately represented by a national organization. There are in the neighborhood of twenty-five thousand periodicals which are eligible to membership, and the association numbers within its ranks less than one per cent of them. It is a condition, however, which I believe can be remedied without a great deal of difficulty, and I hope within the coming year to give the remedial work at least a good start.

"In the first place, our plan of organization is not perfect. This fact has had recognition and an effort was made at the Colorado Springs convention to change the constitution so as to provide a better one. Conflicting duties on the part of those who had the work in charge, combined with entertainment too enticing to be neglected and that consequently diverted attention from more prosaic affairs, prevented the carrying out of the plans. Through the coming year a new draft will be prepared and offered at the next annual meeting in sufficient time to insure attention on the part of the delegates.

"I hope at next year's convention to have a strong program of able addresses by men of experience and ability, combined with entertainment that will be up to the standard of previous years. One thing our conventions have previously lacked, it seems to me, is publicity, principally because but little effort has been made to obtain it, and this defect I shall hope to correct. The convention and its business and entertainment program will be so well advertised that those who ought to be interested in it will know all about it in ample time to make their plans to attend.

"I hope to see the day arrive when we shall have a paid secretary and manager who shall devote all his time and attention to the interests of the association. Other organizations of less importance are so represented, and I know of no reason why the same condition should not prevail in ours. There are many ways in which a secretary could serve our members so as to be of great financial benefit to them, and a membership that numerically need be only fairly representative of the profession as a whole is all that is necessary to provide for such a step. Persistent effort will be made during the coming year to increase our membership.

"It is becoming more and more evident that great national advertisers will largely use the columns of smaller newspapers as soon as a way is found to enable them to do so expeditiously and economically. An able committee has in hand the consideration of the matter and a comprehensive report will be made at the next convention. I regard it almost as a certainty that some feasible plan will eventually be worked out and put into effect that will provide for the accomplishment of this desirable end.

"Co-operation with the Associated Advertising Clubs of America looking to the formation of local clubs in the smaller centers has already been had to a limited degree, and will be further extended. Whatever tends to impress upon local communities the importance and efficiency of newspapers as advertising mediums is sure to be of benefit to the press as a whole, and the success already achieved demonstrates the feasibility of accomplishing much in that direction. I am already in correspondence with the officers of the advertisers' association, and whatever can be done in that direction will receive careful attention.

"Many publishers who conduct job printing plants in connection with their newspapers are just waking up to the fact that printing instead of being a by-product, to be sold for whatever may be got for it, is a live commodity on which a profit can be made when it is determined what the price must be to provide a real and not a fancied profit. Many newspaper plants have installed cost systems, and the number is constantly increasing. No subject seemed to awaken more interest than did the cost system at the Colorado convention. The employing printers' organizations have done much to promote the cost finding doctrine, and they will be co-operated with by the National Editorial Association to the fullest extent possible.

"The annual conventions since the one in Detroit of two years ago have successively shown improvement. We are on the up-grade. I have a firm belief that next year's convention will show a further advance in attendance and an increase in the membership, and that the work of upbuilding will go on until the National Editorial Association will in all respects be representative of the great publishing industry of this country.

"JOHN CLYDE OSWALD."

The Newspaper Problem and the Woman

THE Woman and the Newspaper" was the subject of an address by Dean Walter Williams of the School of Journalism of the University of Missouri, before the Missouri Federation of Women's Clubs. Mr. Williams said, in part:

"The newspaper — born, as a real newspaper, when the war between the states began — so new that it has hardly yet found its place in the social scheme of things — the newspaper is an important fact in the world we know today. Its importance will not lessen in tomorrow's world.

"In circulation the newspaper is everywhere. The very skies rain products of the press. As the chief source of publicity its influence for good or ill is incalculable. It has become a social institution as the church and the school are social institutions. As such it must be considered.

"The world's first daily — of abbreviated size, its editor wrote, to save the readers half the impertinences of larger sheets — was published by a woman. Shortly afterward woman was forgotten as editor, publisher and reader. Within the last third of a century woman as newspaper reader has been discovered. And with discovery of woman as reader, the press has been transformed. "Ladies first" applies also in the newspaper — nor does this statement have reference merely to the pictures on the first pages.

"That women have been discovered as readers means doubling the circulation and quadrupling the advertising of the newspaper. Women are the buyers. To them the clever advertiser seeks to appeal. Woman is not made for the newspaper, but the newspaper is made for woman.

"The discovery of woman as a reader by publisher and advertiser is changing the content of the press. A half century ago newspapers were all head, politics and president's messages and that sort of thing. Now there's heart in the newspaper. Women readers and women writers are responsible therefor.

"Men read the newspapers because they have to; women read the newspapers — as they do most other things — because they wish to.

"The newspaper, some excellent folk profess to think, is the public's problem. In fact, the public is the newspaper's problem. How can we best please the public while at the same time preserving independence, consistency and self-respect — such is the newspaper's daily task. It is a difficult task. To please all men continuously is even more difficult thna to please one man consecutively.

"Doesn't your favorite newspaper please you? The remedy is in your hands. Write the newspaper a letter. If the letter has no result, the recall of the bad newspaper is a most effective remedy ever at hand. Try it. The newspaper which has no women readers has no men advertisers. The newspaper which has no men advertisers will not long survive.

"You object to a dive beside the drygoods store. Your objection drives the dive to the back alley or from the town. Then why not object to the advertisement of the dive — and more — beside the advertisement of the drygoods store. Your objection will drive it from the newspaper columns. Public opinion should prevent the publication of unclean, false and misleading advertising in the newspaper, and you may aid largely in the creation of this public opinion. No newspaper should print for pay in its advertising columns what it would not print without pay in its news columns. And no newspaper should print in any column what one gentleman might not with propriety say to another gentleman with ladies present.

"Never has the newspaper press been so free, so brave, so clean, so enterprising, and, to all good causes, so helpful as today. Let's make it freer, braver, cleaner, more helpful. You are silent partners in the publication of every newspaper. Don't be too silent. Speak your mind. When you speak, however, let it be with due regard for the conditions under which the newspaper must be written and published.

"Club news is valuable only when it is news. To get news into a newspaper it must have news value. If President Wilson lives happily with his wife, there's no news in that. For do not even the publicans the same? But if the President beats his wife, or, better still, if his wife beats him, there's news.

"The different, the unusual, makes for more interesting news. Returning home from that latest dinner, what do you talk about most? Not the beef and the biscuits — oh, no, but that new salad. And a salad is not a food — it is a diversion.

"The newspaper is for entertainment as well as for information. Moreover, there are others than clubwomen who read the newspapers. They must receive entertainment and information. The newspaper must needs consider many tastes.

"You do not like all the newspaper. Nor do I. For illustration, I do not commend or even defend the comic supplement. But — there's the Bulgarian blouse. The Katzenjammers do not appeal to me — yet I recall that a quarter of a million sane Americans paid the other day in Chicago perfectly good money to see the monstrosities of the Cubists and the Futurists.

"A newspaper seeks to please. Don't you? It must please to live. It cannot, it does not give the public merely what the public wants. But it cannot, without deliberate suicide, get too far away from the desires and demands of the public. And you constitute a much larger proportion of the public than you, I doubt not, realize.

"A town has just the newspapers its women and men wish it to have — and usually a little better.

"I beg of you, therefore, while recognizing the power and the potentialities of the press, to recognize also its problems. And you are one of its problems.

"With this frank recognition of problems and potentialities you will seek, I am sure, to strengthen the hands of all who strive for clean, courageous, conscientious journalism, for the journalism which seeks first the service of the public and rightly expects all other necessary and material things to be added unto it.

"With your support, counsel, kindly criticism, and encouragement, the sooner in this fair land will we come everywhere into the kingdom of good journalism, while without, through your aid, will be banished all that is filthy and unclean and every newspaper that knoweth and maketh a lie."

✣ ✣ ✣

It is a waste of money to pay for advertising that no one will believe.

MORE WORK THROUGH PUBLICITY

Address all samples and communications for this Dept. to Harry Albro' Woodworth, 43 St. Botolph St., Boston, Mass.

NOW that a class of '13 has just received a new degree in an age of many degrees — Bachelor of Journalism from the University of Missouri, the booklet "Training for Journalism," issued by the Ohio State University, is especially interesting. This institution gives a four-year course in Journalism leading to the old degree of Bachelor of Arts. I remember that a good many years ago, when I was asked by the editors of a certain college paper what collegiate studies a student should take with the intention of becoming a journalist, I lightly mentioned all the studies necessary for the acquirement of a B. A. degree, all the "optionals," and all the "special studies," in addition to all the music and drawing a student could obtain at the adjoining ladies' college, and a course in physical culture that would enable him to work twenty-six hours out of every twenty-four without injury to his health. Back of this persiflage may be discerned the fact that there is no knowledge of any kind for which some application is not likely to be found in the broad field of journalism. Still, such subjects as are specified in the curriculum of the Ohio State University course are of supreme importance.

But why not Advertising? Surely that is a very important factor in Journalism today, and Joseph Pulitzer did not seem to me to give a very good reason for ignoring this science in his plans for the use of his large bequest toward journalistic study in a great university.

Dean Walter Williams, the brilliant head of the University of Missouri School of Journalism, recognizes the importance of advertising in its connection with the modern newspaper, and already graduates of his first graduate class are receiving offers from papers which recognize that a man or a woman well trained in journalism has a very good preliminary training for advertising work. Dean Williams has written me a very flattering letter, asking for some "constructive criticism" in this department of the newspaper issued by his students, but the copies he sent must have miscarried. I should also like to see copies of The Ohio State Lantern, edited by the students of the course outlined in the booklet. Judging from the reproduction in tint on its cover, its first page compares very favorably with those reproduced in Brother Copper's department, and unlike the first pages of the New York Herald and the London Times, it contains no advertising. All the students in journalism are expected to do what is quaintly termed "laboratory work" on this paper. The Lantern has several staffs of reporters, each supervised by its own editor, an advanced student in journalism, recognized for his executive and literary ability. The instructor in journalism acts as adviser and at intervals criticises the make-up and contents of the papers published. Frequent consultations also are held with members of all the courses and regular staff meetings are appointed.

That the course is of great value even to students who do not enter journalism is considered in the booklet under the head, "Education for Efficiency," which shows that "many former students of the University's journalistic courses "have gone into Law" as well as Journalism. Well, with all their dreary detail, some lawyers miss the point in their documents, and doubtless have felt the need of what the booklet terms "a certain directness and accuracy that make for efficiency." But much as the law may need the study of a journalistic directness, still more do journalists need such constitutional knowledge as this course gives. The best political writers I know are men who have abandoned law for journalism. Besides the great advantage their knowledge of law gives them in writing of laws and their making, they have a reserve power as regards their manner of writing. They write as a good lawyer talks — anticipating any possible answer. I know young journalists who have graduated from schools of law with no other purpose than to become journalists — and they should make good journalists, particularly because their minds have been steadily bound to this purpose.

Some old-time newspaper men have their doubts as to the efficacy of schools of journalism, and cannot get over the practical belief in them of one they all admit to be one of the world's great journalists, Joseph Pulitzer. His ideas on the subject are doubtless contained in the following extract from the New York World, to which a page of this booklet is given:

> Of course, no school can make a great editor, a great war correspondent or a "star" reporter any more than it can make a Millet, a Lorenzo or a Henry Ward Beecher. But it can teach the right methods which the genius and the clod alike must observe; it can give protection against ignorant blunders, and it can show how to make use of the sources of accurate information. It is the function of a technical school to enable its graduates to handle the tools of their profession with correctness and facility—for force and originality, they must depend upon themselves.

Dot Vas All Right

The large folder, "Some Valuable Information," issued by the Review of Reviews, claims that the magazine goes into over 200,000 homes, and in order to give an idea what that means, takes a space 13x32 inches and covers it with dots. In large red outline letters over these dots are the words: "As Many Homes As There Are Dots Here!" And, further to impress the matter on the mind, these words are also printed over the specks in a red ink that does not completely obscure them. I didn't count the dots, but have no doubt there are "over 200,000."

* * *

Here is a "Baer Fact": "After it is bought is when poor printing just begins to cost real money."

* * *

"Consistency Is the Last Resort of the Commonplace"

Here is how the Kenmare, N. D., News advertises a "steamed contemporary":

> Ben Whitehead, The Williston Daily State, is a great advertiser. His paper is well sprinkled with little reminders that he has a printing office and wants printing to do. He advertises so much that one ad conflicts with another. One says: "We are giving special attention to orders for job printing from out of the city, whether it be for a business card or a full sheet poster." Another ad tells the people to get their printing done at home. Ben is no doubt after dollars.

* * *

The time to stop advertising is when you want to stop doing business.

* * *

"The Thunderer" as a Modern Advertiser

It was a distinct shock to English tradition when the London Times reduced its price to tuppence, but then Lord Northcliffe, who now controls the destinies of the world's most famous newspaper, learned more journalism in America than he tried to teach here. And as to brag! No American newspaper ever blew its own horn so lustily as the noble lord does in this first-page advertisement, which should stir the bones of some of the Walters family.

> **To New Readers of the Times**
>
> Owing to the very large demand that has been made for the Times since the price became TWOPENCE FOR EVERY PURCHASER, a great many readers are now seeing it for the first time. [Shades of St. George and the Dragon! Why, some of us who are not students of circulation were wont to think that every Englishman had the Times on his breakfast table. Anyhow, spare, oh, spare our fond belief that every Englishman writes for it as religiously as he prays!] It is to those readers that the following notes are addressed with the object of showing that the Times, in spite of the immense variety of subjects in which it deals, is better arranged and MORE EASILY READ THAN ANY OTHER NEWSPAPER IN THE WORLD.
>
> In the middle pages of the paper, where it opens naturally, will be found on the right hand a complete index and summary of all the news, together with the leading articles; on the left hand the full record of some of the more important events of the day.
>
> THE ARRANGEMENT IS ALWAYS THE SAME, and it is because of it that the Times can claim, not only to deal exhaustively with a greater number of subjects, but to present them in the form most accessible to the busy reader.

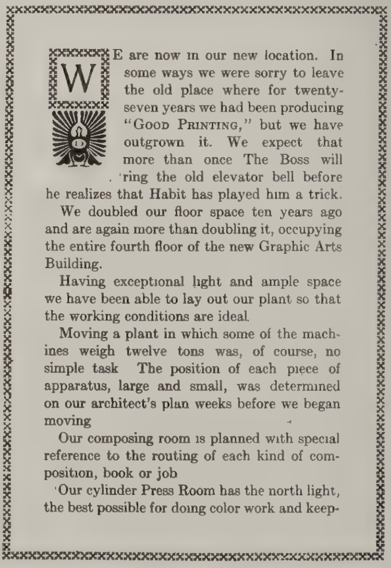
Here is hoping that Lord Northcliffe will become England's first Advertiser Laureate, and will obtain more readers through his transatlantic brand of publicity.

In Printers' Ink for June 26 a correspondent in Boston, Mass., objects to a list made up tentatively in another issue of that paper of the "twelve most famous commercial enterprises." He nominates the London Times, "on which," he says, "the most important enterprises have, indeed, depended for much of their fame today, and which represents perhaps the highest type of all human endeavor." This should make Lord Northcliffe feel good, and perhaps will cause the Walterses to continue to rest in peace.

* * *

Wish the Cover Page Were Reproducible

A job I can call "chaste" without sullying that expression comes from The Davis Press, Inc., Worcester, Mass. The white cover of the four-page-and-cover production announcing their removal to fine new quarters, has the words "The Imprint" in a handsome brown in 20-point Caslon caps and lower-case at the top, and the word "Progress" in 10-point caps of the same letter at the bottom. With an appropriate border, and the



WE are now in our new location. In some ways we were sorry to leave the old place where for twenty-seven years we had been producing "GOOD PRINTING," but we have outgrown it. We expect that more than once The Boss will ring the old elevator bell before he realizes that Habit has played him a trick.

We doubled our floor space ten years ago and are again more than doubling it, occupying the entire fourth floor of the new Graphic Arts Building.

Having exceptional light and ample space we have been able to lay out our plant so that the working conditions are ideal.

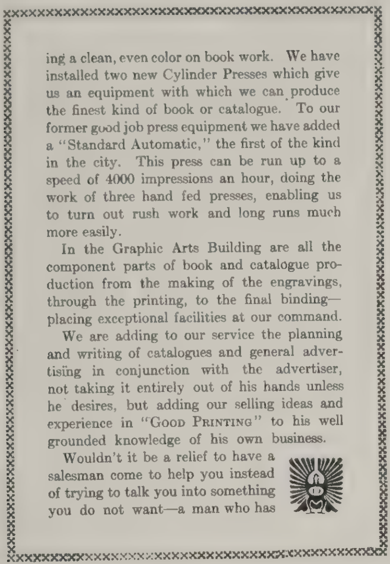
Moving a plant in which some of the machines weigh twelve tons was, of course, no simple task The position of each piece of apparatus, large and small, was determined on our architect's plan weeks before we began moving

Our composing room is planned with special reference to the routing of each kind of composition, book or job

Our cylinder Press Room has the north light, the best possible for doing color work and keep-

No. 2a

work-mark of the concern nearly two inches in length embossed and not colored at the top, the job has an effect that "chaste" really well describes. On the first body page the eight-story building is shown in brown with a surrounding green tint, and the work-mark set in the border at the top. The three other pages are shown as especially as examples of other uses of the work-mark (2 a, b and c). The border, the initial piece, and the ornaments are in a delicate green, and the text in a rich brown. The line "Good Printing" in a type not too inharmonious with the Caslon, is used on other work of The Davis Press as a sort of additional trade-mark.



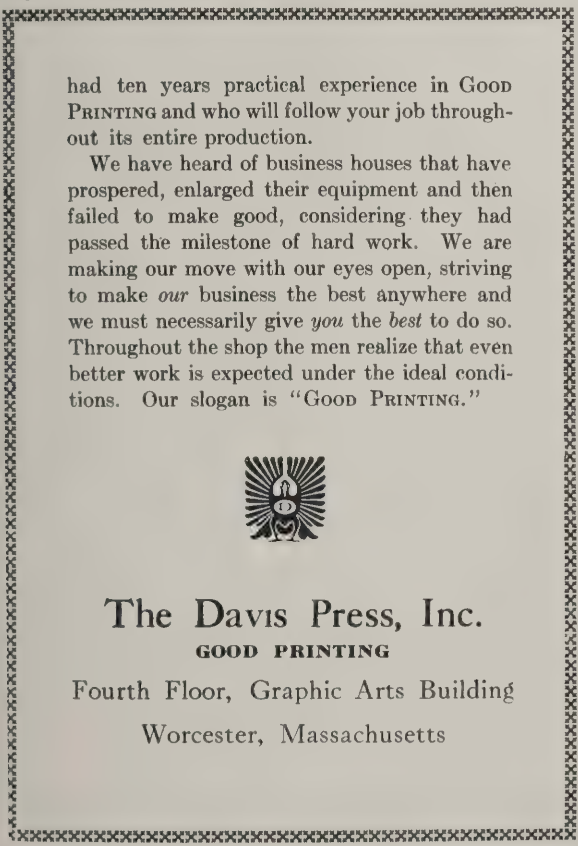
ing a clean, even color on book work. We have installed two new Cylinder Presses which give us an equipment with which we can produce the finest kind of book or catalogue. To our former good job press equipment we have added a "Standard Automatic," the first of the kind in the city. This press can be run up to a speed of 4000 impressions an hour, doing the work of three hand fed presses, enabling us to turn out rush work and long runs much more easily.

In the Graphic Arts Building are all the component parts of book and catalogue production from the making of the engravings, through the printing, to the final binding—placing exceptional facilities at our command.

We are adding to our service the planning and writing of catalogues and general advertising in conjunction with the advertiser, not taking it entirely out of his hands unless he desires, but adding our selling ideas and experience in "Good Printing" to his well grounded knowledge of his own business.

Wouldn't it be a relief to have a salesman come to help you instead of trying to talk you into something you do not want—a man who has

No. 2b.



had ten years practical experience in Good Printing and who will follow your job throughout its entire production.

We have heard of business houses that have prospered, enlarged their equipment and then failed to make good, considering they had passed the milestone of hard work. We are making our move with our eyes open, striving to make *our* business the best anywhere and we must necessarily give *you* the *best* to do so. Throughout the shop the men realize that even better work is expected under the ideal conditions. Our slogan is "Good Printing."

Egyptian Imprint of Italian Firm in American Booklet

This (3) is the imprint of a firm in Naples, Italy, that printed a handsome book on Egypt for a steamship company, with decorations that were in keeping with the subject. The design would be better were the rules and the colons omitted, but the idea is good, and the advertiser probably did not object to such a large imprint so prominently displayed in the lower left-hand corner of an otherwise blank page. Do Richter & Co. use appropriate designs on booklets describing other countries as well?

Hints as to Wording

A Chicago ad-writer who does not wish his name published, sends some ads for criticism that are very good as to their general style and layout. As to the head "Men's Shirts Laundered Satisfactory," undoubtedly you used the adverb; but "Men's Shirts Laundered Satisfactorily" is not especially euphonious. "Your Shirts Laundered to Your Full Satisfaction" would be a little better, perhaps, and it makes a personal appeal.

This sentence might please the advertisers, of course: "The well-known character and ability of our board of directors is a sufficient guarantee for the safety of your money." But is it a good advertising sentence? It would certainly not convince me that the bank was sound; in fact, it would seem to be a case of "Methinks the lady doth protest too much." Better say nothing about it, if you could not give a guarantee that would be more convincing to an entire stranger. In another ad you give a much more convincing reason.

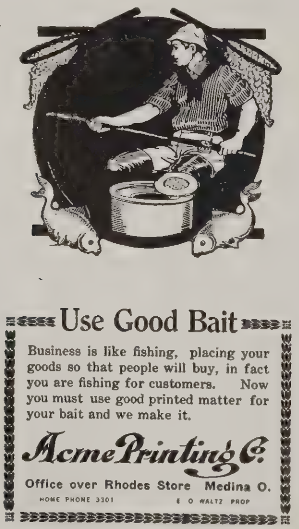
* * *

Every merchant or manufacturer should remember that the people who buy the goods have acquired the habit of looking in the papers for information concerning them.

* * *

But Don't Seek for Suckers

The "bait" idea in advertising-advertising has often been used, but is still effective, particularly in a brief reminder at the time when the rod gods call. This postcard of the Acme Printing Co., Medina, Ohio, is in several colors. I should have thought that a rule border would be more in keeping with the picture than the somewhat disjointed ornamental border. A postcard of this style and the ordinary style is not often employed in printers' advertising, and so is particularly effective.



Use Good Bait

Business is like fishing, placing your goods so that people will buy, in fact you are fishing for customers. Now you must use good printed matter for your bait and we make it.

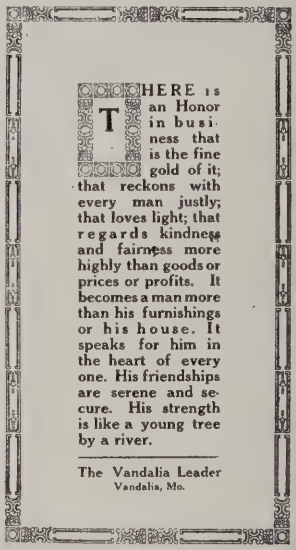
Business Literature That Is Good for the Soul

The border of this job (6) is on a light brown slip of stock to which the white paper that bears its message is pasted at the top. Border, initial, rule and signature are red.

Newspapers or other advertisers that disseminate such sentiments, especially in so attractive a form, are increasing the force that is helping to make business more spiritual, and hence more lasting a power in human progress than it ever was before. Business has its work as well as religion in bringing the millenial dawn. Advertising that is not wholly selfish is an important factor in such work, and is sure to be successful, for its results are both present and eternal, as is the case with any effort in which thought for others as well as oneself enters. Business men in this age are seeking to render service to an extent that is revolutionizing business, and is giving them not only what is generally termed Success, but also the real thing. My experience as an editor of business periodicals has been exactly that of Thomas Drier, the true philosopher who edits Character, that best of all house-organs, issued by the Griffiths-Stillings Press of Boston, as here told with reference to another writer whose Adventures in Contentment have led others into that Land of Aise:



THERE is an Honor in business that is the fine gold of it; that reckons with every man justly; that loves light; that regards kindness and fairness more highly than goods or prices or profits. It becomes a man more than his furnishings or his house. It speaks for him in the heart of every one. His friendships are serene and secure. His strength is like a young tree by a river.

The Vandalia Leader

No. 6

> In my work as an assembler and distributor of ideas that help folks grow I have discovered that my most successful paragraphs are not those filled with income-increasing ideas, but those that contain inspiration and at least a wee bit of idealism. It is, therefore, easy for me to agree with the kindly David Grayson when he writes in the American Magazine: "I have always believed that men in their innermost souls desire the highest, bravest, finest things they can hear or see or feel in all the world. Tell a man how he can increase his income, and he will be grateful to you and soon forget you; but show him the highest, most mysterious things in his own soul and give him the word which will convince him that the finest things are really attainable, and he will love and follow you always."

Mr. Drier was one of the twenty or more advertising men who delivered sermons in Baltimore pulpits during the recent convention in that city of the Associated Advertising Clubs of America. I am told that the current issue of the Outlook (this is written in the first week of July) contains Mr. Drier's sermon. I am going to get that number in the morning, and having been helped in the revision of my own Character by the inspired and inspiring paper of that name, I know that with me as with others, it will long be a "current issue."

Sparks from the Induction Coyle

I have just received a package of specimens from M. Delvaux Coyle of Frankfort, Ky.

The new package contained three numbers of Coyle's Magazine, one of the best printing-house organs I have ever seen. Two of the covers are shown (8a and b). The color scheme on a is antique red and black, and on b green, black and orange. The issue that is printed on Roycroft De Luxe tinted, with two covers, has light green borders to the pages.

COYLE'S MAGAZINE

THE MODERN LEAVEN

TO dare, in society such as ours, to disregard conventions that merely hamper life; to have done with useless and harmful luxury; to refuse to dedicate one's life to the accumulation of material things; to avoid all display dictated by selfish vanity; to cherish friendship rather than society, beauty and not adornment, reality and never appearance; to hold wealth as an obligation and all opportunity as duty; to seek only what is truly worth while and to seek that always with all one's might--that not only redeems one's own life, but contributes a moral leaven that helps, beyond our hopes, to lift the heavy and inert mass of society.--Edward H. Griggs

When you think of Good Printing and Advertising, think of the Coyle Press at Main and High

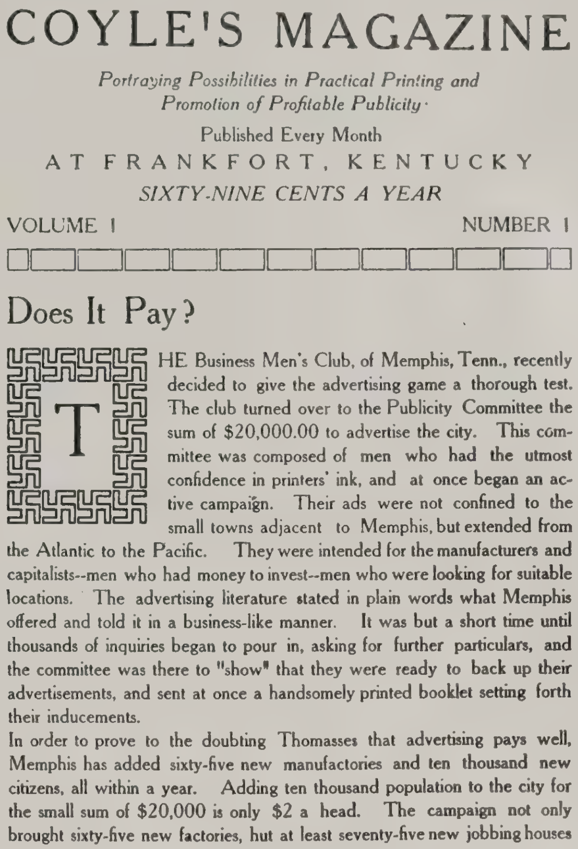
PAGE FIFTEEN

No. 8d

Here (8c) is a page in which swastika ornaments, of which Mr. Coyle is fond, are made into an inner border. The heading, with omitted hyphen, is odd, but pleasingly so.

No. 8d is a page with a square effect that is different from the ordinary square effects.

On another page (e) which has a becoming top margin, the name of the magazine and the border around the initial are orange red. The opening article tells of the success achieved by Memphis, Tenn., which by an expenditure of $20,000 obtained in one year sixty-five new manufactories, twenty-five new jobbing houses, between four and five hundred new firms, and ten thousand new inhabitants within a year. No doubt such figuring as this does not always allow for natural increase, but there cannot be any doubt that newspaper advertising, supplemented by booklets, has a tremendous influence in developing a city.



COYLE'S MAGAZINE

Portraying Possibilities in Practical Printing and Promotion of Profitable Publicity

Published Every Month
AT FRANKFORT, KENTUCKY
SIXTY-NINE CENTS A YEAR

VOLUME I NUMBER I

Does It Pay?

THE Business Men's Club, of Memphis, Tenn., recently decided to give the advertising game a thorough test. The club turned over to the Publicity Committee the sum of $20,000.00 to advertise the city. This committee was composed of men who had the utmost confidence in printers' ink, and at once began an active campaign. Their ads were not confined to the small towns adjacent to Memphis, but extended from the Atlantic to the Pacific. They were intended for the manufacturers and capitalists--men who had money to invest--men who were looking for suitable locations. The advertising literature stated in plain words what Memphis offered and told it in a business-like manner. It was but a short time until thousands of inquiries began to pour in, asking for further particulars, and the committee was there to "show" that they were ready to back up their advertisements, and sent at once a handsomely printed booklet setting forth their inducements.

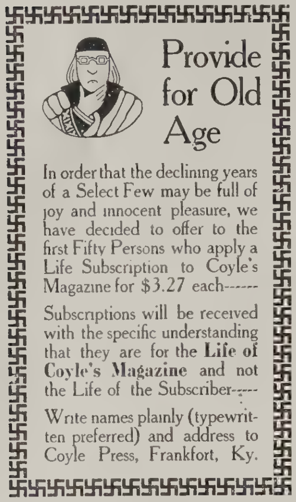
In order to prove to the doubting Thomasses that advertising pays well, Memphis has added sixty-five new manufactories and ten thousand new citizens, all within a year. Adding ten thousand population to the city for the small sum of $20,000 is only $2 a head. The campaign not only brought sixty-five new factories, hut at least seventy-five new jobbing houses

No. 8e

Mr. Coyle has the object in telling of this growth of Memphis of getting the citizens of Frankfort to advertise their city. This is a kind of work that many printers and publishers are endeavoring to do, and the unselfishness that they often inject into the plans of this kind is characteristic of them, and will some day be appreciated, let us hope and pray. But it is better business so to plan such work that it will benefit the printer and publisher as well as the city. One thing about this idea is that the public appreciate the work done by these worthies better when it pays them for it.

On the page shown as 8f the heading is orange. The wording is a delicious satire on the East Aurora Society of Immortals — but sad experience has led me to doubt whether the use of such subtle humor as this is good advertising. There are many excellent, clever, sensible people who have no more subtle sense of humor than a cow. However, if Fifty

Persons send $3.27 each, no doubt the Life of Coyle's Magazine will be so long that no one will be found in its old age, at least, to feel as if in some way Mr. Coyle was trying to flim-flam them. Of course, my doubts as to this kind of thing in advertising may sound to many of you that have a sixth sense of humor as being absurd, but I could a tale unfold — several tales — about the finer kinds of humor in advertising and newspaper making that led to enmity, hatred and all uncharitableness. I will do the unfolding some day.



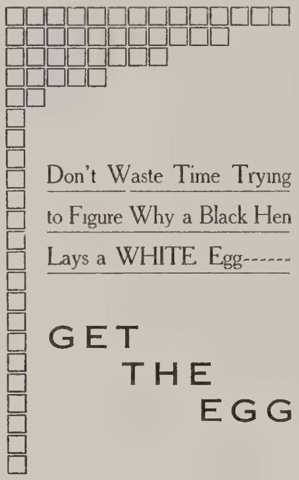
Provide for Old Age

In order that the declining years of a Select Few may be full of joy and innocent pleasure, we have decided to offer to the first Fifty Persons who apply a Life Subscription to Coyle's Magazine for $3.27 each------

Subscriptions will be received with the specific understanding that they are for the **Life of Coyle's Magazine** and not the Life of the Subscriber-----

Write names plainly (typewritten preferred) and address to Coyle Press, Frankfort, Ky.

No. 8f



Don't Waste Time Trying to Figure Why a Black Hen Lays a WHITE Egg------

GET THE EGG

No. 8g

An example of Mr. Coyle's original typography that has a charm of its own is 8g. "Get the Egg" is in orange, so the effect of the Gothic in connection with the black is much better in the original than it will be in the reproduction.

I thank Mr. Coyle for his extremely flattering mention of myself in Coyle's Magazine, but wish he had given my paper credit for the page, "No, but We Have Something Else Just as Good!"

⁂

Don't let the hot weather cause you to forget that Fall is just around the corner.

⁂

"Personality" Has It

The typography of "Personality," a magazine of good cheer and inspiration, published by Arthur Fischer, Boston, Mass., is in keeping with its name. Some of the most attractive personalities are those that have many moods. Most monotones are monotonous — always excepting the Post Monotone, of course — but even that handsome letter sometimes gives a more pleasing effect if used in various sizes. This bright magazine has many moods, typographically speaking, but there is no mistaking its individuality, open it where you may. Two pages are shown (9a and b) — one of them giving an example of a use of a large, plain initial such as made the de luxe edition of Elbert Hubbard's book "Jesus of Nazareth" so attractive. Such magazines as Personality keep think-tanks from running dry — the thoughts so cleverly expressed help one to think for oneself.

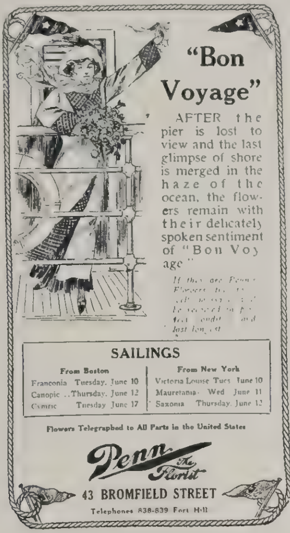
No. 9b

Timely Florists' Advertising

An ad-writer should never lose sight not only of the fact that advertising is news, but also that what is commonly known as "news" may with good effect often be introduced into advertising, because of that very fact. Here (10) is an ad that appeared in a Boston paper at the very time that the Hub was congratulating itself on its increased steamship terminal facilities, and also at the very time folk were longing — and intending — "to go on pilgrimage" in a way more in keeping with modern speed and comfort than that of the "Canterbury Tales" pilgrims to Pleasure's shrine. Florists have splendid opportunities for advertising their beautiful kind of luxuries, and local publishers should see that they take advantage of them, to the benefit of all concerned — readers as well as publishers and florists. This essentially timely ad should be a suggestion as to More Work from a class of merchants who need to be shown that with such an all-the-year-round business as theirs, Easter is not the only time they should advertise.



"Bon Voyage"

AFTER the pier is lost to view and the last glimpse of shore is merged in the haze of the ocean, the flowers remain with their delicately spoken sentiment of "Bon Voyage."

A Description that Hardly Describes

J. Warren Lewis, of the Visalia, Calif., Delta printing department, sends a number of "every-day jobs" that are of a high order of typography. The memo heads in particular are not only artistic, but businesslike in their appearance. Most of them are neatly, strongly, and inexpensively composed. Some of the panel schemes have the neatness and the strength, but they cost considerable time and possibly some material. But no doubt the customers were willing to pay for this — they should have paid for the art as well; no doubt they did. Mr. Lewis's art consisted largely of his choice of harmonious stock and ink, and knowing how to make the composition help the harmony. For instance, in a memo head which had three broken panels printed over a tint, there is a central panel stretching across the center and doing the breaking, which has "Visalia Board of Trade" in a strong Old English letter. All the wording and the rules are black; the only color printing is that of the tint-block. The center panel stands out strongly, and is printed directly on the stock, there being no tint except that of the paper beneath the Old English line and the small Gothic line "Incorporated." The ink is of a complimentary shade to that of the paper, and the effect is fine. I wish I could show the job; it would be so much easier than to describe it; but it would not reproduce. In the simply strong job that I am showing (11) the strong Old English letter used in the panel production is "in evidence." But this is not so extraordinary a job as the other; simply a good use of good type on a kind of job that is not the easiest in the world to compose.

A Newspaper in Miniature

By H. E. Hogue
We Print Anything
Eaton, Colorado

Harry Albro' Woodworth,
43 St. Botolph St., Boston, Mass.

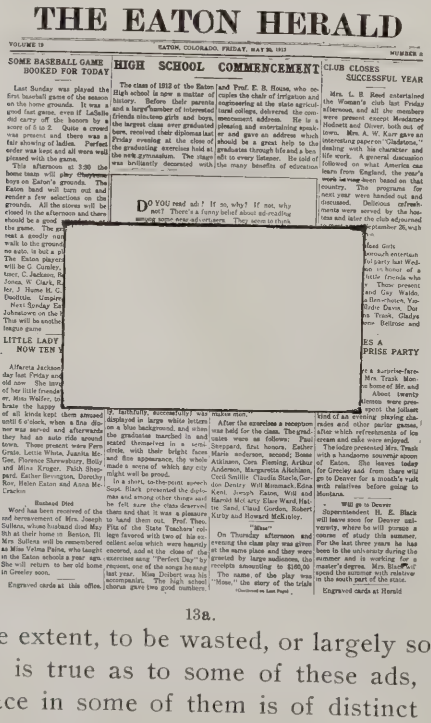
Dear Sir: I am enclosing the cards I am going to use at the National Press Association meeting in Colorado Springs next week. The small one, of course, is only to be handed to the ladies. The Miniature Herald is an exact reproduction of the issue of May 30.

Yours truly,
H. E. HOGUE.

Only one card came with this letter — presumably it was not the one intended for the ladies. How long a time was Mr. Hogue out for?

The twenty-four page miniature edition is a little less than 4 x 3 inches, but gives a good idea of the excellent arrangement and general typographical effect of a paper that is a live — I was going to put a noun here, but I'll just join the adjectives, and make another one — alive. (Some modern grammars make "a" an adjective, which it is in some cases, at any rate.) I am asking Mr. Hogue to send the cuts of twelve of these pages, which the caption man may call 13a, b, c, d, e, f, g, h, i, j, k, l, m and n, if it pleaseth him. The first page (13a) is, of course, not an exact reproduction, the card being a clever idea in consideration of the purpose of the production. The arrangement of the items next to pure advertising matter gives advertisers good value, as there is undoubtedly something in such "position." I consider these pages the best, and so good that they are well worth giving the space to. In some of the ads on the other pages, there is considerable white space that seems to the mind of an advertising man like myself who has had to consider cost to a very large extent, to be wasted, or largely so. Perhaps this is true as to some of these ads, though white space in some of them is of distinct artistic and attention-attracting value, particularly in a paper whose space probably sells for less than that in metropolitan papers.

—*a hurry-up message for the party addressed.*



THE EATON HERALD

VOLUME 19 EATON, COLORADO, FRIDAY, MAY 30, 1913 NUMBER 2

SOME BASEBALL GAME BOOKED FOR TODAY

Last Sunday was played the first baseball game of the season on the home grounds. It was a good fast game, even if LaSalle did carry off the honors by a score of 5 to 2. Quite a crowd was present and there was a fair showing of ladies. Perfect order was kept and all were well pleased with the game.

This afternoon at 3:30 the home team will play Cheyenne boys on Eaton's grounds. The Eaton band will turn out and render a few selections on the grounds. All the stores will be closed in the afternoon and there should be a good

HIGH SCHOOL COMMENCEMENT

The class of 1913 of the Eaton High school is now a matter of history. Before their parents and a large number of interested friends nineteen girls and boys, the largest class ever graduated here, received their diplomas last Friday evening at the close of the graduating exercises held at the new gymnasium. The stage was brilliantly decorated with

ly, faithfully, successfully) was displayed in large white letters on a blue background, and when the graduates marched in and seated themselves in a semi-circle, with their bright faces and fine appearance, the whole made a scene of which any city might well be proud.

In a short, to-the-point speech Supt. Black presented the diplomas and among other things said he felt sure the class deserved them and that it was a pleasure to hand them out. Prof. Theo. Fitz of the State Teachers' college favored with two of his excellent solos which were heartily encored, and at the close of the exercises sang "Perfect Day" by request, one of the songs he sang last year. Miss Deibert was his accompanist. The high school chorus gave two good numbers.

and Prof. E. B. House, who occupies the chair of irrigation and engineering at the state agricultural college, delivered the commencement address. He is a pleasing and entertaining speaker and gave an address which should be a great help to the graduates through life and a benefit to every listener. He told of the many benefits of education

makes men."

After the exercises a reception was held for the class. The graduates were as follows: Paul Sheppard, first honors, Esther Marie Anderson, second; Bessie Atkinson, Cora Fleming, Arthur Anderson, Margaretta Aitchison, Cecil Smillie, Claudia Steele, Gordon Dentry, Will Mimmack, Edna Kent, Joseph Eaton, Will and Harold McCarty, Elsie Ward, Hattie Sand, Claud Gordon, Robert Kirby and Howard McKinley.

"Mose"

On Thursday afternoon and evening the class play was given at the same place and they were greeted by large audiences, the receipts amounting to $160.00.

The name of the play was "Mose," the story of the trials

(Continued on Last Page)

DO YOU read ads? If so, why? If not, why not? There's a funny belief about ad-reading among some near-advertisers. They seem to think

CLUB CLOSES SUCCESSFUL YEAR

Mrs. L. B. Reed entertained the Woman's club last Friday afternoon, and all the members were present except Mesdames Hodnett and Oliver, both out of town. Mrs. A. W. Karr gave an interesting paper on "Gladstone," dealing with his character and life work. A general discussion followed on what America can learn from England, the year's work having been based on that country. The programs for next year were handed out and discussed. Delicious refreshments were served by the hostess and later the club adjourned

spent the jolliest kind of an evening playing charades and other parlor games, after which refreshments of ice cream and cake were enjoyed.

The lodge presented Mrs. Trask with a handsome souvenir spoon of Eaton. She leaves today for Greeley and from there will go to Denver for a month's visit with relatives before going to Montana.

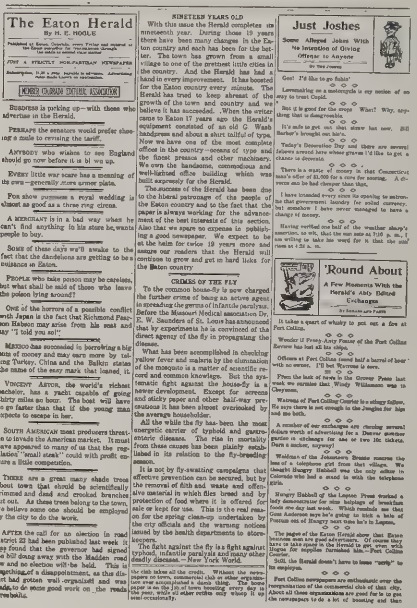
Will go to Denver

Superintendent H. E. Black will leave soon for Denver university, where he will pursue a course of study this summer. For the last three years he has been in the university during the summer and is working for a master's degree. Mrs. Black will spend the summer with relatives in the south part of the state.

Engraved cards at Herald

13a.

What pains in grading has been taken on this paper! But grading can be done very fast when one is used to it, and its appearance seems in such a case as this well worth the trouble. I dare say the advertiser gets better value who has his reading notices run promiscuously among local news items, but I am a newspaper man as well as an advertising man, and as such prefer to keep paid locals distinct from the other news. Perhaps I may have this idea as an advertising man also, as there is no doubt that some people feel a sort of irritation at being, in a way, compelled to read advertising, as in such a case. But this is, of course, a matter about which



The Eaton Herald

By H. E. HOGLE

MEMBER COLORADO EDITORIAL ASSOCIATION

BUSINESS is picking up—with those who advertise in the Herald.

PERHAPS the senators would prefer shoeing a mule to revising the tariff.

ANYBODY who wishes to see England should go now before it is blown up.

EVERY little war scare has a meaning of its own—generally more armor plate.

FOR show purposes a royal wedding is almost as good as a three ring circus.

A MERCHANT is in a bad way when he can't find anything in his store he wants people to buy.

SOME of these days we'll awake to the fact that the dandelions are getting to be a nuisance in Eaton.

PEOPLE who take poison may be careless, but what shall be said of those who leave the poison lying around?

ONE of the horrors of a possible conflict with Japan is the fact that Richmond Pearson Hobson may arise from his seat and say "I told you so!"

MEXICO has succeeded in borrowing a big sum of money and may earn more by telling Turkey, China and the Balkan states the name of the easy mark that loaned it.

VINCENT ASTOR, the world's richest bachelor, has a yacht capable of going thirty miles an hour. The boat will have to go faster than that if the young man expects to escape in her.

SOUTH AMERICAN meat producers threaten to invade the American market. It must have appeared to many of us that the regulation "small steak" could with profit endure a little competition.

THERE are a great many shade trees about town that should be scientifically trimmed and dead and crooked branches cut out. As these trees belong to the town, we believe some one should be employed by the city to do the work.

AFTER the call for an election in road district 23 had been published last week it was found that the governor had signed the bill doing away with the Madden road law and no election will be held. This is something of a disappointment, as this district had gotten well organized and was ready to do some good work on the roads hereabouts.

NINETEEN YEARS OLD

With this issue the Herald completes its nineteenth year. During those 19 years there have been many changes in the Eaton country and each has been for the better. The town has grown from a small village to one of the prettiest little cities in the country. And the Herald has had a hand in every improvement. It has boosted for the Eaton country every minute. The Herald has tried to keep abreast of the growth of the town and country and we believe it has succeeded. When the writer came to Eaton 17 years ago the Herald's equipment consisted of an old G. Wash handpress and about a shirt tailful of type. Now we have one of the most complete offices in the country—oceans of type and the finest presses and other machinery. We own the handsome, commodious and well-lighted office building which was built expressly for the Herald.

The success of the Herald has been due to the liberal patronage of the people of the Eaton country and to the fact that the paper is always working for the advancement of the best interests of this section. Also that we spare no expense in publishing a good newspaper. We expect to be at the helm for twice 19 years more and assure our readers that the Herald will continue to grow and get in hard licks for the Eaton country.

CRIMES OF THE FLY

To the common house-fly is now charged the further crime of being an active agent in spreading the germs of infantile paralysis. Before the Missouri Medical association Dr. E. W. Saunders of St. Louis has announced that by experiments he is convinced of the direct agency of the fly in propagating the disease.

What has been accomplished in checking yellow fever and malaria by the elimination of the mosquito is a matter of scientific record and common knowlege. But the systematic fight against the house-fly is a newer development. Except for screens and sticky paper and other half-way precautions it has been almost overlooked by the average householder.

All the while the fly has been the most energetic carrier of typhoid and gastro-enteric diseases. The rise in mortality from these causes has been plainly established in its relation to the fly-breeding season.

It is not by fly-swatting campaigns that effective prevention can be secured, but by the removal of filth and waste and offensive material in which flies breed and by protection of food where it is offered for sale or kept for use. This is the real reason for the spring clean-up undertaken by the city officials and the warning notices issued by the health departments to storekeepers.

The fight against the fly is a fight against typhoid, infantile paralysis and many other deadly diseases.—New York World.

Some Alleged Jokes With No Intention of Giving Offense to Anyone

Gee! I'd like to go fishin'

◇ ◇ ◇

Lovemaking on a motorcycle is my notion of no way to treat Cupid.

◇ ◇ ◇

But it is good for the crops. What? Why, anything that is disagreeable.

◇ ◇ ◇

It's safe to get out that straw hat now. Bill Barber's brought out his'n.

◇ ◇ ◇

Today's Decoration Day and there are several fellows around here whose graves I'd like to get a chance to decorate.

◇ ◇ ◇

There is a waste of money in that Connecticut man's offer of $1,000 for a cure for snoring. A divorce can be had cheaper than that.

◇ ◇ ◇

I have intended every since its opening to patronize that government laundry for soiled currency, but somehow I have never managed to have a change of money.

◇ ◇ ◇

Having verified one half of the weather sharp's assertion, to wit, that the sun sets at 7:16 p. m., I am willing to take his word for it that the sun rises at 4:24 a. m.

'Round About

A Few Moments With the Herald's Ably Edited Exchanges

It takes a quart of whisky to put out a fire at Fort Collins.

◇ ◇ ◇

Wonder if Penny-Ante Foster of the Fort Collins Review has lost all his chips.

◇ ◇ ◇

Officers at Fort Collins found half a barrel of beer with no owner. I'll bet Watrous is sore.

◇ ◇ ◇

From the lack of news in the Grover Press last week we surmise that Windy Williamson was in Cheyenne.

◇ ◇ ◇

Watrous of Fort Collins Courier is a stingy fellow. He says there is not enough in the Jungles for him and me both.

◇ ◇ ◇

A number of our exchanges are running several dollars worth of advertising for a Denver summer garden in exchange for one or two 10c tickets. Darn a sucker, anyway!

◇ ◇ ◇

Waldman of the Johnstown Breeze mourns the loss of a telephone girl from that village. We thought Hungry Hubbell was the only editor in Colorado who had a stand in with the telephone girls.

◇ ◇ ◇

Hungry Hubbell of the Lupton Press worked a lady demonstrator for nine helpings of breakfast foods one day last week. Which reminds me that Gus Anderson says he's going to kick a bale of Postum out of Hungry next time he's in Lupton.

◇ ◇ ◇

The pages of the Eaton Herald show that Eaton business men are good advertisers. Of course they have to take space in the Herald to get even with Hogue for supplies furnished him.—Fort Collins Courier.

Still, the Herald doesn't have to issue "scrip" to its employes.

◇ ◇ ◇

Fort Collins newspapers are enthusiastic over the reorganization of the commercial club of that city. About all these organizations are good for is to get the newspapers to do a lot of boosting and then the club takes all the credit. Without the newspapers no town, commercial club or other organization ever accomplished a dumb thing. The home paper is on the job of town boosting every day in the year, while all other outfits only whoop it up semi-occasionally.

different publishers have different opinions, and there are few advertisers who would not rather have their items published in this way, whether it is the best for them or not. Some, however, do not use display ads when they can get such positions for "locals," and in some cases it is well for the publishers to take this into consideration.

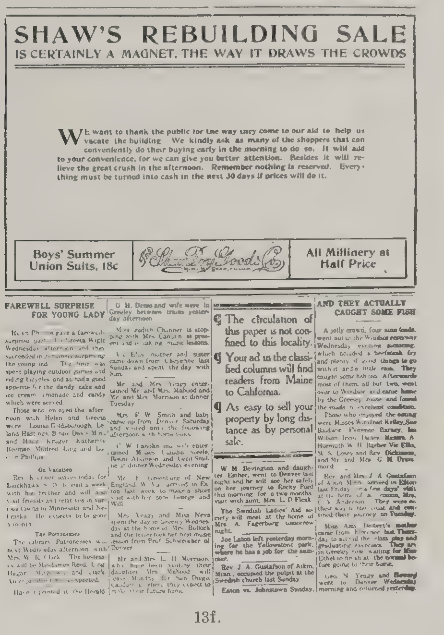
13e.

The top advertisement on page 13c is by no means handsome, but in all probability the copy, and the necessity to use the three cuts, gave the compositor next to no chance at all. A far worse ad could have been made under such distressing conditions. If the nameplate with its wide margining, had been placed above the cut of the davenport bed, there would not have been such a jumble of cuts; but doubtless this would not have suited the advertiser. What a really artistic ad is that of "Artistic Decoration"!



SHAW'S REBUILDING SALE

IS CERTAINLY A MAGNET, THE WAY IT DRAWS THE CROWDS

WE want to thank the public for the way they come to our aid to help us vacate the building We kindly ask as many of the shoppers that can conveniently do their buying early in the morning to do so. 13g.

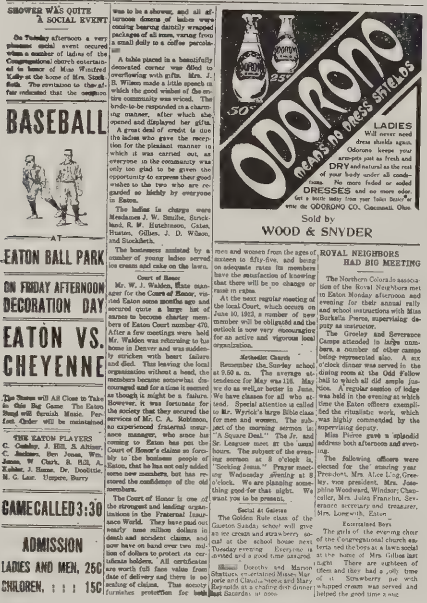
The way in which the line "Second Section" is set on page 13d, leads me to ask, Was the original paper printed in black and a color? If so, the extra expense necessary for printing the miniature could well have been incurred. This job was probably not intended as a means of bringing more business to the paper; but it was worth while, for it surely should bring the Eaton Herald and its proprietor to the favorable attention of the whole N. E. A.

Although many object to a very large nameplate, how that of Cahill's dominates the whole page (13e). although Thacker's ad, set entirely in different sizes of De Vinne, is by no means buried. What would otherwise be "long unlovely" lines in Cahill's ad are greatly helped by the repetition of the side heads.

Such ads as that of Shaw's Rebuilding Sale are hardly worth the large space except in rare instances. A whole page in such a paper, with prices, would certainly be likely to bring a good deal more than twice the business this would, and the chief message it carries — the appeal to shop in the morning — might have had more of a "punch." But here, as in other instances, it seems to be a case of the compositor doing his artistic best with an ineffectual idea of the advertiser.



SHOWER WAS QUITE A SOCIAL EVENT

On Tuesday afternoon a very pleasant social event occured when a number of ladies of the Congregational church entertained in honor of Miss Winifred Kelly at the home of Mrs. Stockfleth. The invitation to the affair indicated that the occasion was to be a shower, and all afternoon dozens of ladies were coming bearing daintily wrapped packages of all sizes, varing from a small doily to a coffee percolator.

A table placed in a beautifuly decorated corner was filled to overflowing with gifts. Mrs. J. B. Wilson made a little speech in which the good wishes of the entire community was voiced. The bride-to-be responded in a charming manner, after which she opened and displayed her gifts.

A great deal of credit is due the ladies who gave the reception for the pleasant manner in which it was carried out, as everyone in the community was only too glad to be given the opportunity to express their good wishes to the two who are regarded so highly by everyone in Eaton.

The ladies in charge were Mesdames J. W. Smilie, Strickland, R. M. Hutchinson, Gates, Huston, Gillies, J. D. Wilson, and Stockfleth.

The hostesses assisted by a number of young ladies served ice cream and cake on the lawn.

Court of Honor

Mr. W. J. Walden, State manager for the Court of Honor, visited Eaton some months ago and secured quite a large list of names to become charter members of Eaton Court number 470. After a few meetings were held Mr. Walden was returning to his home in Denver and was suddenly stricken with heart failure and died. Thus leaving the local organization without a head, the members became somewhat discouraged and for a time it seemed as though it might be a failure. However, it was fortunate for the society that they secured the services of Mr. C. A. Robinson, an experienced fraternal insurance manager, who since his coming to Eaton has put the Court of Honor's claims so forcibly to the business people of Eaton, that he has not only added some new members, but has restored the confidence of the old members.

The Court of Honor is one of the strongest and leading organizations in the Fraternal Insurance World. They have paid out nearly nine million dollars in death and accident claims, and now have on hand over two million of dollars to protect its certificate holders. All certificates are worth full face value from date of delivery and there is no scaling of claims. This society furnishes protection for both men and women from the ages of sixteen to fifty-five, and being on adequate rates its members have the satisfaction of knowing that there will be no change or raise in rates.

At the next regular meeting of the local Court, which occurs on June 10, 1913, a number of new member will be obligated and the outlook is now very encouraging for an active and vigorous local organization.

Methodist Church

Remember the Sunday school at 9.50 a. m. The average attendence for May was 116. May we do as well or better in June. We have classes for all who attend. Special attention is called to Mr. Wyrick's large Bible class for men and women. The subject of the morning sermon is: "A Square Deal." The Jr. and Sr. Leagues meet at the usual hours. The subject of the evening sermon at 8 o'clock is, "Seeking Jesus." Prayer meeting Wednesday evening at 8 o'clock. We are planning something good for that night. We want you to be present.

Social At Galeton

The Golden Rule class of the Galeton Sunday school will give an ice cream and strawberry social at the school house next Tuesday evening. Everyone is invited and a good time assured.

Misses Dorothy and Marion Shattuck entertained Misses Marjorie and Claudia Steele and Mary Reynolds at a chafing dish dinner last Saturday at noon.

ROYAL NEIGHBORS HAD BIG MEETING

The Northern Colorado association of the Royal Neighbors met in Eaton Monday afternoon and evening for their annual rally and school instructions with Miss Burkella Pierce, supervising deputy as instructor.

The Greeley and Severance Camps attended in large numbers, a number of other camps being represented also. A six o'clock dinner was served in the dining room at the Odd Fellow hall to which all did ample justice. A regular session of lodge was held in the evening at which time the Eaton officers exemplified the ritualistic work, which was highly commended by the supervising deputy.

Miss Pierce gave a splendid address both afternoon and evening.

The following officers were elected for the ensuing year President, Mrs. Alice Ling, Greeley, vice president, Mrs. Josephine Woodward, Windsor; Chanceller, Mrs. Julia Franklin, Severance secretary and treasurer, Mrs. Longwith, Eaton.

Entertained Boys

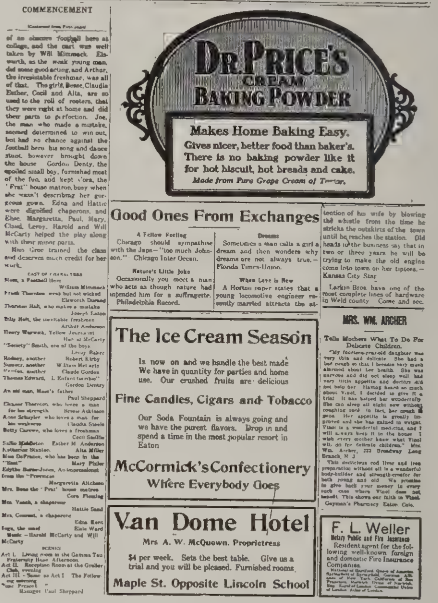
The girls of the evening choir of the Congregational church entertained the boys at a lawn social at the home of Mrs. Gillies last night. There are eighteen of them and they had a jolly time of it. Strawberry pie with whipped cream was served and helped the good time along

13h.

Though the style of arrangement shown in 13c and e is the same on many pages of the paper, the Herald is by no means "married to it," and on 13f breaks away from it and other perfectly "balanced" pages by placing an ad of its own in the third column. The ad is artistic and modern — why not have one of your job printing plant? — it must do work of high value, from the artistic point of view.

On page 14 (not shown here) is a highly artistic three-column ad of Queen Quality shoes from a cut furnished by the makers. There was, of course, a mortise in this cut for the name and address of the local dealer. The type used in the mortise is out of harmony with the display of the cut, and a space at the bottom considerably larger than one-third of the cut contains nothing but emptiness and two cuts of single shoes. There is altogether too much of this kind of thing done in connection with some of the artistic cuts sent by manufacturers. Surely the lower space could have had a few lines which would have made the ad tellingly local, and also entirely artistic — of the kind of typographical art that pays as well as looks pretty. The fault of the advertiser? Possibly. But I'd get after such an advertiser as that on the phone, if I couldn't see him personally. And I feel sure he would appreciate it.

No. 13m is page 24 of the paper — a remarkably handsome page, as to its effect as a whole — I cannot even find the fault I should with running the head of "Good Ones from Exchanges" in the same series as is used for headlines in the two ads below.



COMMENCEMENT

Continued from First page

of an obscure football hero at college, and the part was well taken by Will Mimmack. Elsworth, as the weak young man, did some good acting, and Arthur, the irresistable freshman, was all of that. The girls, Besse, Claudia Esther, Cecil and Alta, are so used to the roll of rooters, that they were right at home and did their parts to perfection. Joe, the man who made a mistake, seemed determined to win out, but had no chance against the football hero. his song and dance stunt, however brought down the house. Gordon Denty, the spoiled small boy, furnished most of the fun, and kept Cora, the "Frat" house matron, busy when she wasn't describing her gorgeous gown. Edna and Hattie were dignified chaperons, and Elsie, Margaretta, Paul, Mary, Claud, Leroy, Harold and Will McCarty helped the play along with their minor parts.

Miss Groe trained the class and deserves much credit for her work.

CAST OF CHARACTERS

Moss, a Football Hero — William Mimmack

Frank Thornton, weak but not wicked — Elsworth Durand

Thornton Hall, who makes a mistake — Joseph Eaton

Billy Holt, the inevitable freshman — Arthur Anderson

Henry Warwick, Yellow Journalist — Harold McCarty

"Society" Smith, one of the boys — Leroy Baker

Rodney, another — Robert Kirby

Sumner, another — William McCarty

Vernon, another — Claude Gordon

Thomas Edward, L'Enfant terrible" — Gordon Denty

An old man, Moss's father — Paul Sheppard

Eleanor Thornton, who loves a man for his strength — Bessie Atkinson

Anne Schuyler, who loves a man for his weakness — Claudia Steele

Betty Carewe, who loves a freshman — Cecil Smillie

Sallie Middleton — Esther M. Anderson

Katharine Stanton — Alta Miller

Miss DeFrance, who has been in the "East" — Mary Pixler

Edythe Burne-Jones, An impressionist from the "Provinces" — Margaretta Aitchison

Mrs. Boss the "Frat" house matron — Cora Fleming

Mrs. Vansh, a chaperone — Hattie Sand

Mrs. Conrant, a chaperone — Edna Kent

Inga, the maid — Elsie Ward

Music — Harold McCarty and Will McCarty

MRS. WM. ARCHER

Tells Mothers What To Do For Delicate Children.

"My fourteen-year-old daughter was very thin and delicate. She had a bad cough so that I became very much alarmed about her health. She was nervous and did not sleep well, had very little appetite and doctors did not help her. Having heard so much about Vinol, I decided to give it a trial. It has helped her wonderfully. She can sleep all night now without coughing once. In fact, her cough is gone. Her appetite is greatly improved and she has gained in weight. Vinol is a wonderful medicine, and I will always keep it in the house. I wish every mother knew what Vinol will do for delicate children." Mrs. Wm. Archer, 233 Broadway, Long Branch, N. J.

This delicious cod liver and iron preparation without oil is a wonderful body-builder and strength-creator for both young and old. We promise to give back your money in every such case where Vinol does not benefit. This shows our faith in Vinol.

I will not go into detailed comment on any of the rest of these pages; the entire production is worthy of very high praise. Some of the composition could be improved, but this only were there better copy. When advertisers in papers in the smaller places learn how they, as well as publishers, should take such papers as The National Printer-Journalist as an aid to them in that very important part of their business — advertising, they would give copy that could be admirably displayed by such compositors and make-up men as those employed by the Eaton Herald.

The Best Printers' and Publishers' Paper

Mexico, Mo., August 9, 1913.

The National Printer-Journalist,

My Dear Sirs: Enclosed find $2 for subscription to the National-Printer Journalist to August 1, 1914. We can't possibly get along without your splendid publication. It is the best printers' and publishers' paper we know of anywhere.

Respectfully yours,

R. M. WHITE & SON.

Calumet Ben Franklin Club of Chicago Outing

Members of the Calumet Ben Franklin Club and their families, with members of the Cook County Press Club as their guests, to the number of seventy in all, braved the turbulent waters of the Chicago River and the Drainage Canal on Saturday, August 2, and a most delightful trip it proved to be.

Through the courtesy of the Sanitary Drainage Commission, the steamer Robert R. was placed at our disposal, and I venture to say that roomy and comfortable little vessel never held a more jolly and congenial party.

When everything was in readiness to leave, South Chicago's German "Schulz," (with the cigars) was found to be missing. With the aid of the police department he was finally discovered, and the Robert R. cast loose on her perilous journey at 10:30 a. m.

The trip down the river and the canal was indeed delightful, the weather man having been seen by the members of the Press Club.

At 12:30 the ladies took official charge of affairs. Coffee was brewed, baskets opened and a most welcome and enjoyable lunch was served on board the boat. By the time the "inner man" and the "inner woman" was satisfied, Gerald Sullivan announced that Lockport was only "over the hill there."

On arriving at the locks the entire party, under direction of Superintendent Porter, spent a most enjoyable and instructive hour learning what a stupendous and interesting feat of engineering lies right at our door, which is of so much benefit to Chicago, and of which the average Chicagoan knows so little.

The uniform courtesy of Superintendent Porter and everyone connected with the plant at Lockport and on the steamer was freely commented on and much appreciated.

The return trip was completed at 8 p. m.

The outing was in charge of a committee consisting of Messrs. Gallion, Roberts, Phillip's and Mansfield. Refreshment committee: Will C. Smith and A. B. Schulz, and right nobly did they all perform their duties.

Those present included: Thomas Kinney, wife and son, C. O. Peterson, John Phillips, Will C. Smith, wife and daughter, A. W. Fleming, D. H. Dryburgh, George F. Roberts, A. B. Schulz, wife and son, George A. Kinney, wife and daughter, Ed. E. Sheasgreen, Frank R. Brines, W. H. Mansfield and wife, W. A. Stambach and wife.

Guests and members of the Cook County Press Club: Mr. and Mrs. C. H. Staats and son, Downers Grove; R. B. Ruth, Downers Grove; Mr. and Mrs. B. F. Stevens, Logan Square; Mr. and Mrs. D. W. Hartman, Lake Forest; Mr. H. H. Hartman, Lake Forest; Mr. and Mrs. F. B. Hartman and son, Rogers Park; Mr. and Mrs. G. E. Sullivan, Englewood; Mr Farr, son and daughter, Whiting, Ind.; Mrs. M. A. Wilson, West Pullman; Mr. and Mrs. D. H. Merrill, Hinsdale; Mr. David Herriott, Morgan Park; Mr. and Mrs. A. M. Lambert, Harvey; Mr. and Mrs. Frank Furstenheim and sons, Chicago; Mr. and Mrs. J. O. Hardesty, Melrose Park; Mr. John R. McCormick, South Chicago; Miss Sullivan, Englewood; Miss Geary, Englewood; Mrs. Edson and daughter, Miss Marguertie Edson, Springfield, Ill.; Mr. G. B. Wilson, Birmingham, Ala.; Mrs. Alice Stokes and Miss Catherine Stokes, Dayton, Ohio; Miss Mary Williams, Melrose Park; Mrs. Ward Mansfield and son, Englewood.

The Valiant Printer

A valiant Printer of Maceytown
Was working right hard, one day,
When the soldiermen with their fife and drum
Came marching along that way.

Then the valiant Printer of Maceytown
Unfastened his apron strings,
And he laid his stick and his rule away,
And all of his Printer's things.

And quick from the door of his little shop
He started upon a run
And thus to the captain, bold spoke he,
"Pray, let ME carry a gun."

"For who would not fight for his country, dear,
A coward indeed must be.
I'll gladly go where the fight is hot,
And die, if I must," said he.

"Well said, my Printer friend, well said,"
Replied the captain bold,
"But we need not guns nor soldiers, now,
Not even the miser's gold.

"Of powder, too, we have plenty to spare,
But what we need most, is shot,
So give us your types, my Printerman,
And fetch us a melting pot!"

Then the valiant Printer in silence stood,
And never a word said he,
For he'd rather have fought in the fiercest fight
Than to give up his printery.

Then the captain, losing his patience, cried:
"Come, man — dump your old trash out,"
But in answer the Printerman shooks his head
And turned straightway about.

He walked back into his little shop
And took up his rule and stick,
For he wouldn't give up his beloved types,
Though he'd go where the fight was thick.

So the captain cried to his men, "Move on!"
And they marched from the town away,
While the valiant Printer who loved his types
Worked on for many a day.

ROSCOE E. HAYNES.

SPLENDID, IN MATTER AND IN ADVERTISEMENTS

Hon. B. B. Herbert,
Chicago, Ill.

Dear Sir—I am sending you check for $2.

The National Printer-Journalist is splendid. I only regret when I get to the end and find many splendid advertisements in it, which are no doubt read by all the craft.

I shall always remember our pleasant and profitable meeting of the N. E. A. in Colorado, and trust that you will meet us in Texas in 1914. Yours truly,

LEE J. ROUNTREE.
Georgetown, Texas, Aug. 2, 1913.

CHICAGO, SEPTEMBER, 1913

As quoted elsewhere, Elbert Hubbard declares "all good or well written advertising is literature," and literature is art in writing or composition. Just the same all good printing is art which is not alone mechanical, but the expression of sentiment, emotional and inspirational. The artist printer must have understanding, but he must also have the artistic feeling.

* * *

Cost finding and efficiency are made especially prominent in this issue of the National Printer-Journalist. The two are very closely related and are interdependent. Cost that is not founded on efficiency is a delusion and a snare, it is a false cost. A cost finding that does not point out existing leaks, inefficiency and deterioration or loss, as well as the ways of speedy and permanent remedy, is lacking in its highest usefulness. The farmer who only finds out, through the finding of his costs of production, that his fields or his stock are not yielding profit, and deteriorating, and goes no further, will never avoid ultimate impoverishment. The same principle applies to printing, newspaper making and all other trades or callings. For gain or profit, there must be greater and better production, replacement or fertilization.

* * *

Intelligent, honest, effective advertising in this age of multiplied producers and consumers, has come to be an essential to success, but fruitful publicity does not mean a wild scramble for business. Success must rest on such high quality of production, such efficiency, such perfection in service, as that when once properly made known, the users, buyers or consumers will scramble to get the service or the goods instead of the printer, publisher or newspaper maker being compelled to scramble with his competitors to secure customers.

* * *

As we have indicated elsewhere in our article on the "Ad-Sell Book," analysis and study are the foundations of all effective production. We must understand all the elements, all the requirements and all the possibilities before a usefully and reasonably perfect combination can be made. An artist must know more than his colors. To paint an eagle so that it will appear a re-creation of life, of nature, of strength, poise and beauty, the artist must study the bird in its natural haunts, know its poses, its habits, the strength and poise of its wings, of its head, its neck, its beak and its claws, as well as the blending shades and colorings of its feathers., The perfect commercial printer or advertiser must know all that it is possible to know of the business that he is to serve and of its demands as well as be a master of his art. Printers are not perfect, but vastly many more approach perfection now than a score of years ago. The highest touch of art is the touch of inspired truth in all its perfections and relations. The artist printer, or advertising expert, sees and interprets those things in his subjects and their relations to the wants and desires of possible users and buyers, that are not seen at all by the laymen until interpreted by the artist.

* * *

We are gratified to present, this month, biographies and opinions of the members of the new Executive Committee of the National Editorial Association as to the work to be undertaken during the coming year. The symposium will be continued in the October issue with articles by Mr. E. H. Tomlinson, of the Daily Record, Morristown, N. J., and Mr. Frank Roderus, of the American Sugar Industry, Chicago.

The views and plans given by members of the committee and by President Oswald, promise much for future accomplishment along practical lines and open the way for suggestions by all delegates, members of the association, editors and publishers, who have at heart the future usefulness of this organization, that for nearly three decades has been working for the good and upbuilding of the American press and the improvement and advancement of all the members thereof. This association is not made up simply of the delegates who attend, but of the members of all the associations represented therein. Every delegate represents twenty-five members of the affiliating organizations, and the voting privilege is based on such representation. A change of the constitution was made at the Detroit convention, two years and more ago, providing for an individual membership, but the representative character of the association was not eliminated, and at the convention in Colorado Springs, this year, the delegate feature was emphasized and restored to its former position as the basis of the organization.

The newly created National Council of the association is made up of one member from each affiliating association, thus securing an active representative of the national body in every subordinate or affiliating organization of editors or publishers, to look after the affairs of the National Association, to see that delegates are chosen, and to give information and to help in extending and carrying forward the proposed business features that were urged at the organization of the national body nearly thirty years ago, and are now in a fair way to be adopted and carried out.

From our viewpoint, President Oswald and Executive Committeeman Hotaling are in error, when, in their respective communications, they severally speak of the membership of the association as individual, and, unintentionally, minimize its representative character. Every delegate at a convention should be figured as representing twenty-five publications. On this basis, an attendance of two hundred and fifty at a convention represents a membership of six thousand two hundred and fifty, or about one-third of the newspaper publishers of the United States. Sometimes one man represents an entire association of one hundred or more members. In the early days, the basis of representation was one delegate for every fifteen members of affiliating organizations, and the body, as was then thought, became unwieldly, in view, especially, of the extensive entertainments and extended excursions. At San Francisco, where there were over six hundred in attendance, the representation was changed from the basis of fifteen to twenty-five members. Under the interstate railroad regulations, by which every delegate was compelled to pay in cash instead of advertising for railway transportation, attendance decreased; still the aggregate representation was large. At Guthrie, Okla., in 1905, under President W. W. Screws, lately deceased, the voting strength of the convention was three hundred and eighty-nine, representing a membership of over nine thousand. At the convention at Seattle in 1909, when an excursion was taken to Alaska, involving a heavy traveling expense, the voting strength of the convention dropped to two hundred and thirty-four, and at New Orleans, only six months after the Seattle convention, the voting strength was two hundred and nine, with two hundred and sixty-three in attendance — that is, under the delegate plan, about five thousand publications were represented. At the last convention the voting strength of the convention, partly under the individual membership rule, was one hundred and seventy-six. The fact was made apparent that many of the affiliating bodies had reached the conclusion that delegates were not to be sent, and hence took no steps to be represented at the convention. It is evident that the representative plan, followed for twenty-five years, is the more efficient, and that the cause for the decrease in attendance for the past few years must be accounted for otherwise than by any fault in the representative character of the organization. Much depends upon the officers, their ability, zeal and efficiency, and much good will come from the new plans being inaugurated by the new and widely known president and the able members of the new executive committee, and especially by a thoroughly representative program and broad, persistent advertising, aided by the work of Secretary Shlosser, who has proved his ability. There should be a thousand delegates at the next convention, and no branch of the newspaper or periodical publishing business should be without full and worthy representation. The National Printer-Journalist will do its best, and we are glad of the spirit manifested by those who are to be in charge. The leading men in the newspaper field have been represented on the programs and in the conventions in the past, and we want to get back to the good old days, in this regard, and to realize all that has been hoped and waited for during all these years of practical helpfulness along all practical business lines, as well as in the matters of improvement of methods, education in newspaper making, broadening of views by interchange of experiences and by informing travel and all the inspiring, enlightening, ennobling benefits of association, acquaintance, comradeship and friendship.

* * *

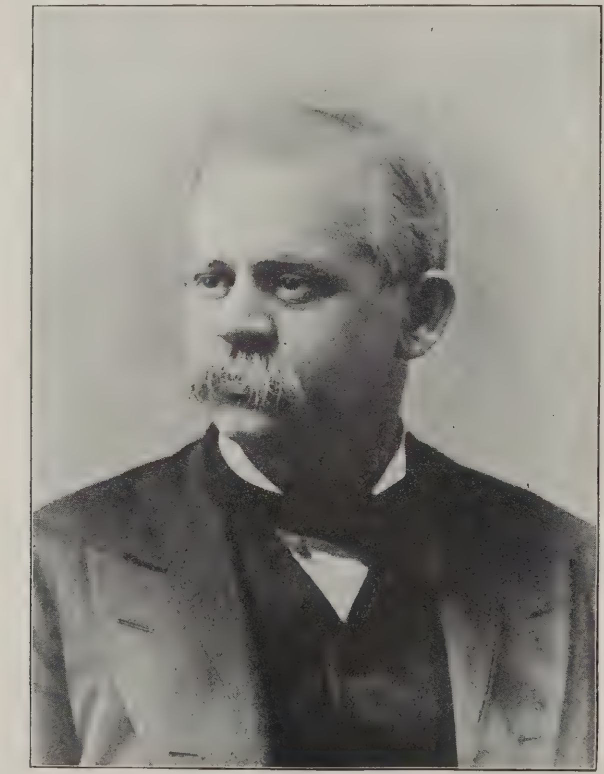
Art in printing is intended not only to please but to interpret an object or truth and to present the end or truth as desirable — the accomplishing of the latter brings pleasure and conviction. We believe in and seek those objects that bring pleasure. The revealing of our wants, and at the same time the means of supplying those wants, ever brings pleasure, and the higher and greater the wants the greater the pleasure in the revelation of the means of satisfying the same. The printer that attains to highest accomplishment along these lines has no competitor, any more than has the greatest painter or sculptor. When known, through proper publicity, which is best obtained through exhibition of his work, he does not have to seek for work among those who are informed, but he is sought after just as is the great physician or eminent advocate. Yet he is none the less subject to the law of cost, which is a law of nature. His cost, by reason of all the expenditure made in reaching perfection and all that would be required for his replacement, is higher, so that his remuneration must be greater, but the increase from his products are such as to make this higher remuneration vastly profitable.

Major W. W. Screws, Past President of the National Editorial Association, Dies at His Summer Home, Near Montgomery, Alabama, August 7

Brief Account of His Death, and Review of His Noble Life and Work and Tribute to His Character as Man and Editor, by Hon. John Dymond of New Orleans, La.

Another earnest worker in the useful field of newspaper making has passed from his labors. His work and life were known throughout the whole country, and he was honored and loved wherever known.

We were greatly saddened by the news of the sudden death of Major W. W. Screws, past president of the National Editorial Association, but accompanying the letter from Col. John Dymond, of New Orleans, bearing the sad intelligence, came such a review of the closing hours of the life and character of the deceased, who was permitted to continue in the work he loved to the very last, as to bring real consolation.



MAJOR W. W. SCREWS

No one else, outside of the Montgomery Advertiser office, at least, is so well informed and fitted to write appreciatively of the life of his friend and co-worker as is Col. Dymond, and we are pleased to be able to give the following, prepared especially for his own paper, the Louisiana Planter, to the readers of the National Printer-Journalist:

WILLIAM WALLACE SCREWS

This distinguished gentleman, perhaps better known among the editorial fraternity of the United States from Portland, Maine, to Portland, Oregon, and from Duluth to New Orleans, than any other man of the newspaper world, died at his summer home, Coosada, ten miles from Montgomery, Ala., on Thursday evening, August 7, in the seventy-fifth year of his age. His life was wrapped up in the success of his great journal, the Montgomery Advertiser, and in that vast establishment his leadership was acknowledged and friendship was all-prevailing. On Thursday afternoon, after spending the day at the Advertiser's office in Montgomery, and with a friendly "good bye, boys," Major Screws stepped into his automobile for his ten-mile trip to his country home, which he soon reached, and after dining he chatted pleasantly with his family and in his usual amiable and animated manner maintained a spirited conversation. Shortly after this he complained of some personal discomfort, but appeared to rally, assuring the members of his family that he was all right, but within another hour he was dead from heart failure.

Major Screws had been identified with the Montgomery Advertiser as writer, editor and proprietor for fifty years, and he died in the harness, right in the field of his work. The shock to his immediate coadjutors in the Advertiser came so suddenly, so unexpectedly, that his fellow editors, in their beautiful editorial tribute to his memory, as published in the Montgomery Advertiser of Friday morning, were practically overcome by their overwhelming sorrow, and yet outlined the career of this distinguished lawyer, soldier, editor and leader of men.

Major Screws went from northern Alabama to Montgomery some fifty-five years ago, as a young lawyer seeking a field wherein to develop his talents. He was a man of sterling integrity, a man who consciously would never do any wrong to his fellow man. This made it somewhat difficult for him to succeed in politics as an active partisan. He always strove to do exactly what was right. His reputation stood high among his fellow men on that account, and when he made any declaration it was believed. For four years during the civil war he served in the Confederate army. It was largely his clear brain, dauntless courage and his untiring devotion to duty that led the people of Alabama successfully through the contest against carpetbag control, scalawag and negro government. It is said and believed by those most familiar with those sorrowful days in Alabama's history that Major Screws and the Montgomery Advertiser had more to do in rescuing Alabama from the spoiler and invader than all others combined. His great journal, the Montgomery Advertiser, will stand as a monument to his memory for many years to come.

The National Editorial Association, composed of editors from all portions of the United States, organized in New Orleans at the Cotton Centennial Exposition in 1885, became a great national organization, bringing many hundreds of the editorial farternity together annually in various parts of the United States, and among all these Major Screws was a great favorite and was elected to the presidency of the organization in 1904. His gentle manner, his evident integrity, his clear memory of past events and his good judgment as to the present and future, excited comment among all he knew. He was a delightful conversationalist, and wherever he went his company was at once sought. The National Editorial Association, bringing together editors from all parts of the country, did great good in the dissemination of a friendly feeling between the various sections of the federal union, and in this Major Screws was a most prominent factor. Whether the members met at New Orleans, La., or Asbury Park, N. J., at St. Augustine, Fla., or Portland, Ore., at San Francisco, Cal., or Boston, Mass., the same set of men came together to the extent of several hundred, and there was a dissemination of good feeling that impressed itself upon all of the membership, and that feeling is maintained to this day, and nowhere will the death of Major Screws be more deplored than among these old and numerous friends of his of the National Editorial Association. We shall cherish his memory as long as we live.

✣ ✣ ✣

ANOTHER FORMER ILLINOIS EDITOR AND MEMBER OF NATIONAL EDITORIAL ASSOCIATION PASSES ON

Cad Allard Is Suddenly Stricken with Death at His Home in Chickasha, Oklahoma

WHILE sitting on his porch at his home in Chickasha, Oklahoma, the night of July 29, Mr. "Cad" Allard, a widely known newspaper man, was taken with severe coughing. His son heard him and rushed to his aid. He found his father gasping for breath and carried him into the house, but within fifteen minutes Mr. Allard died in his son's arms.

Mr. Allard had been ill for months, but had attended to his duties as editor of the American at El Reno, Oklahoma, until within a few weeks previous, when warned of his critical condition and that he must have rest and care, he returned to his home. He had seemingly gained in health and had planned to take up newspaper work at home.

The day of his death, Sunday, he had attended church and was feeling better, partaking of the evening meal with his family at six o'clock. There were no unfavorable symptoms until the last. Death was attributed to abscess of the lungs.

His name was Henry Clarence, but he was known all over the country among newspaper men as "Cad" Allard. The Shawnee (Okla.) News-Herald of July 30 gave the following brief account of his life:

"Henry Clarence (Cad) Allard died Tuesday, July 29, 1913, at 11 p. m., at his home in Chickasha, Okla., after a brief illness.

"Cad Allard was born in Virginia, Ill., August 31, 1854. He was the son of Col. L. S. Allard, who died two years ago at Hot Springs, Ark.

"Cad was connected with his father when only a boy in running the Virginia (Ill.) Courier, and since then has owned and published papers at Hot Springs, Ark.; Fort Smith, Ark.; Beardstown, Ill.; Lebanon, Ill.; Wellington, Kan.; Oswego, Kan.; Enid, Okla., and Chickasha, Okla. He was associated with and had charge of the editorial department of the Guthrie State Capital during the first state campaign, and up to a few weeks before his death was the editor of the El Reno American, which position he was forced to give up on account of illness, going to his home in Chickasha, where he passed away July 29.

"He was for a number of years the secretary of the Chamber of Commerce at Chickasha, Okla., and was also secretary of the Chamber of Commerce at Checotah, Okla. He was for several years secretary of the Illinois Press Association. Mr. Allard went to Washington, D. C., seven years ago on the statehood special, and was taken ill while there, having to remain several weeks a very sick man, and had never been a strong man since. He was known as a strong and able editorial writer. Politically he was a republican and his editorials were without fear or favor. He was a practical newspaper man and had many warm friends here in Oklahoma as well as in other states in which he has made his home.

"He was a brother of Lou S. Allard, of Shawnee, and often visited here. He leaves a wife and three children, Chester, aged 17; Merle, aged 12, and Catherine, 3 years. His mother, Mrs. S. F. Allard, of Quincy, Ill., and six sisters and two brothers."

Mr. Allard's first independent newspaper work was at Beardstown, Ill., where he settled on reaching manhood, and became editor of the Star of the West and attained a prominent place in Illinois journalism. He moved to Enid, Okla., in 1902, and became one of the founders and the editor of the Daily Eagle of that place, but he sold his interest in the paper and moved to Chickasha in 1905.

The Chickasha Express, in speaking of Mr. Allard's character as an editor and a man, sets forth the following characteristics that were ever recognized among newspaper friends in Illinois and which he maintained throughout his active and useful career:

"His capacity for work was amazing. He wrote vigorously and interestingly on a wide range of subjects and his writings were always uplifting in nature. An optimist by nature, he constantly preached hope, faith, enthusiasm, good-will and human brotherhood. A man of few faults and many virtues, his influence in every community was always for good."

The National Printer-Journalist, some six years ago, took occasion to call attention to Mr. Allard's work in Oklahoma, and to commend his methods, his enthusiasm, his optimism, his good-will and his sympathetic, earnest fraternalism, his genuine human interest, all so essential to the full, worthy success of an editor. "He loved his fellow men."

✣ ✣ ✣

CHARLES H. GALLION, DECEASED

Mr. Charles H. Gallion, editor and proprietor of the Calumet (Chicago) Index, passed away Saturday evening, August 9, after an illness of only ten days.

Mr. Gallion was long and favorably known in printing and newspaper circles, having been at one time secretary of the Chicago Ben Franklin Club. He was a highly respected member of the Calumet Ben Franklin Club, and President of the Cook County Press Club.

The funeral was held from his late residence, 11924 Yale Avenue, Chicago, Tuesday, August 12, and was very largely attended.

✣ ✣ ✣

PRINTERS' PROVERBS

A compositor is known by the window sill he keeps.

The lad with the closed mouth and open ears becomes the best workman in the shop.

A new broom sweeps clean — except in the hands of the printer's devil.

The cover of the hell-box hides a multitude of sins.

Successful printers make errors — unsuccessful ones repeat them.

Let the customer make your prices and he'll make your profit also.

ROSCOE E. HAYNES.

Fairport, N. Y.

WHEN "NEWS" IS SCARCE — SUGGESTIONS

There are but few people today who do not realize that the financial success of any periodical, whether monthly, daily or weekly, depends to a large extent upon its value as an advertising medium. It is also an accepted fact that to be of any value whatsoever in this particular, the publication must contain a proportionate amount of well-prepared matter of information, education or news interest to one or more classes of people.

In the field of home-newspaper publishing, it is the latter — the news element — which must be supplied, and with unfailing regularity, often in direct competition with the large city dailies whose glaring headlines and sensational descriptions of commonplace incidents make the truthful reports of the home paper seem tame and uninteresting to certain classes of people.

Many conditions exist in most country offices which make it next to impossible for the editor to produce a "bang-up" newsy paper at all times, and when the inevitable "dry" spells come, he is seldom loath to fill the yawning space with "boiler-plate" and — we blush to say it — even dead ads are often inserted to make the forms come together! There may be some excuse for such methods, but what can be expected in the way of advertising rates when such conditions are so frequent that even the advertisers detect the slim showing on the local pages and by a little investigation learn the truth concerning the "padded" display columns.

"But I can't MAKE the news," says the hard put editor-man. True enough, but in nine cases out of ten, the local paragraphs and small items (which are really the life of all local papers) may oftentimes be greatly improved upon by skillful handling.

Mayhap a visitor from a distant city is mentioned. Ordinarily this note might be good for two or three lines, but when news is scarce it behooves the editor to dig beneath the surface and see what may make the simple statement of more interest locally. Perhaps the city has recently been the scene of flood or conflagration. Possibly the party was a former resident or is combining pleasure with business in the trip; sometimes a few paragraphs written by the visitor describing his impressions of the town or its apparent needs or advantages may be of interest to the local readers.

Sometimes in his reportorial ramblings the editor may learn of a farmer, business man or tradesman, who, coming from another section of the country, can give an interesting account of the methods of conducting his particular line of business in his locality, comparing it with the methods in use in the section where the paper circulates.

In their efforts to "fill space," many rural editors drift off into long effusions in which the editorial "we" is found to excess in each paragraph. It is a common error in the minds of many country editors to think that they are specially designated as moulders of public opinion! However, few of such would-be leaders are really more than apprentices at the trade and could hardly expect to become regular journeymen "moulders." Of course, the majority who read this will not agree to this statement except as it applies to "the other fellow." But remember that what the readers most require is news stories of human interest; not preachy paragraphs, for advice is more blessed to give than to receive, and the less the editor attempts to give advice, the larger will his list become.

By a little effort, therefore, it would seem that at all times the wise editor-man may fill his paper with real news and thus secure a well-earned reputation for a clean, newsy paper. Under such conditions he may rest assured that his efforts in securing a proper amount of profitable advertising will not prove futile, as, if his paper is of value to the readers, the advertiser will be quick to realize the importance of placing his message where the public is accustomed to give its attention in quest of the local news.

FOR TRADE PRESS EFFICIENCY

Sixty Speakers of National Reputation on the Federation Convention Program

President H. M. Swetland of the Federation of Trade Press Associations in the United States announces that the program has been completed for the eighth annual convention at the Hotel Astor, New York, September 18 to 20.

Acceptances are in hand from over sixty speakers of national reputation in the manufacturing, selling, advertising and publishing fields. There will be fifty ten-minute addresses at the Editorial, Circulation, Advertising and Publishing Symposiums on vital questions affecting all those who have dealings with the business press of America.

Other features of the convention will be an exhibit of successful class, technical and trade journal advertising campaigns, a big business meeting at which will be told the inside stories of the big trade paper publishing successes and an inspirational mass meeting, with addresses by representative business and professional men on subjects of live interest to editors, publishers and advertisers.

All the regular sessions of the convention will be open, but tickets must be secured for the inspirational mass meeting. These may be obtained from any member of the federation or from W. H. Ukers, chairman of the committee on arrangements, 79 Wall Street, New York.

"REST ROOM"

The Low Moor News, of Low Moor, Iowa, concerning which we have had occasion to comment favorably, at some length, is up-to-date in another matter, that of providing, like the Brooklyn Eagle and a few other papers, for the comfort of its friends and patrons.

In its issue of August first we find the following notice:

"Rest Room

"When you come to town to trade, wait for a train or transact business, you can stop at the News Rest Room, where you are welcome and free to rest, wait, or meet appointments. It is free and ladies will find a comfortable place to rest and pass the time while waiting."

It is worthy of note, too, that this kind of benevolent enterprise attracts favorable attention away from home. The copy of this paper was not sent to us by the publishers, but by A. F. Wanner, the proprietor of a leading Chicago printers' supply house, The Wanner Machinery Co., with this article marked.

BUSINESS MANAGEMENT

Cost Finding, Efficiency, Business Methods and Organization

ED. E. SHEASGREEN, *Editor,* 1603 MONADNOCK BLOCK, CHICAGO, ILL.

IT is with a full and complete understanding of the honor and responsibility of the position of associate editor of this valuable publication that I begin my new work.

It will be my one aim to preach for TRUTH, HONOR, FRIENDSHIP and BROTHERLY LOVE prevailing stronger among all men.

To this end my pen has always been dedicated.

That all men, in a few years, **will** practice these virtues to a far greater extent than ever practiced before, will come as the result of the cost movement that the printers have started, a movement that is destined to spread to every line of human effort, a movement that will bring harmony among all peoples of the world.

To aid in preaching this new gospel will be a pleasure and service of delight.

* * *

HE WHO JUDGES YOUR CHARACTER BY THE PATCHES ON THE SEAT OF YOUR OVERALLS, IS INDEED A LOW MINDED FELLOW.

* * *

THE "SOUR GRAPES" ORGANIZATION MAN

The "sour grapes" organization man — you meet him everywhere in organization work.

He don't come to the meetings — because **he** can't have everything his way.

If he is on a committee — **he** won't allow certain measures to be acted on, because **he** did not make the suggestions. If he is an officer **he** throws cold water on every suggestion THAT IS MADE — because it won't do any good to try it — HE knows it won't.

As an officer, the "sour grapes" man often attempts to run a one-man organization — because **he** considers no one else has any fighting blood in their veins, or does not know **how** to play politics (?).

The "sour grapes" man is everywhere, as is the jealous man, the Doubting Thomas, the "four-flusher," the "wind jammer" and the "pin-head."

There is just one thing left for the HONEST officers and members of an organization to do when they have "sour grapes" around — JUST GO AHEAD.

If mistakes **are** made — GO AHEAD.

If **all** will NOT follow **now** — GO AHEAD.

If a committee meeting **should** have been called, and has **not** been called because of "sour grapes," why, CALL the meeting anyway — GO AHEAD.

GO AHEAD ALL THE TIME.

If you don't go ahead — then you and your organization ARE SURELY GOING BACKWARD — there is no standing still for anything in this world.

If you move your organization but the fractional part of a degree — GO AHEAD.

It is better to have PULLED a load of sleepy ones a little closer to the light than to have done otherwise.

When they **do** wake up they will be in a position to see a little more of the light than if they were back where you found them asleep.

GO AHEAD — even if Sour Grapes is squeezing the acid of his mean disposition over the landscape and into the wheels of progress.

GO AHEAD to the places where his acid cannot reach and where new oils of brotherly kindness can be found.

At all times GO AHEAD.

* * *

THE EDITOR AND THE SCIENCE OF COST FINDING

The editor of any publication, no matter how great or how small it may be, holds a most responsible position in society.

He is a shaper of morals, a shaper of the destinies of a community, aye, of a nation, or a people. He must be the defender of the innocent and the unprotected. He must be the warrior — bold, courageous, valiant, ever vigilant against the wrongdoer, the hypocrite, the scorner, the seducer of the morals and the mentalities of men. He is the guardian of the welfare of those unborn, as well as of those of his day. He must be the deep student of every question that comes before a people for their consideration — so that he may direct with knowledge, truth and power that none may be led astray.

There is one great question, a new question, in fact a new science, that but few editors have ever studied as they should. If they have studied it at all, it has generally been for their own or their own profession's selfish good.

The science is the SCIENCE OF COST FINDING, a few laws about which every editor should know, and then, taking these as a base, work out into the great fields of unexplored possibilities to which it may be applied.

The few laws are as follows:

> "COST — WHAT IS COST?
>
> "COST IS NOT A LAW OF MAN, but is that great law of Nature that accounts for all losses and wastes, and is reached through her Laws of Balance, Decomposition (depreciation), Increase (interest), Distribution and Co-operation.
>
> THE LAW OF BALANCE is Nature's first great Law of Cost. Nature says that after the night must come the day, after the storm must come the calm — that where there is an outgo (expense) there must be a like income or there is a loss.
>
> THE LAW OF DECOMPOSITION is that Law of Nature that shows man how all matter changes its form back to its original state — the earth.
>
> THE LAW OF INCREASE IS NATURE'S LAW OF INTEREST.
>
> IN THE LAW OF CO-OPERATION, Nature shows how every bit of energy should move with exact precision, so that the most may be accomplished with the least possible effort.
>
> ON THE LAW OF BALANCE is based the Science of Accounting.
>
> ON THE LAW OF DISTRIBUTION is based the Science of Cost Finding.
>
> BY THE LAW OF CO-OPERATION we arrive at the height of efficiency and perfection — the sublimity of harmony.
>
> IT COSTS to maintain BALANCE, to care for DEPRECIATION (through replacement funds), to properly distribute and to have fullest Co-operation.
>
> Whether man ever gave thought to the question or not, the cost line of all effort has always existed, still exists, will ever exist.

The editor, whose publication goes to the individual, preaching only the cause of the individual, should be so well versed in this Science that he may show the individual the absolute necessity of knowing the cost of the effort put forth for bettering society. The cost of producing the human machine, the cost value of its service to society, **the cost to all** when the **individual** human machine **does not live** according to the laws of Nature — the laws of the Supreme God.

If the publication is out as a mouthpiece and guide for the home, then the editor must get every member of the home interested in these great questions.

If in the interest of schools and churches, then the cost to these organizations in producing THEIR product should be sought.

The poor farmer has a crying need of the editors of the great agricultural papers to preach to him and for him, the Science of Cost Finding, so that all farmers may know HOW to find, ALL IN THE SAME MANNER, the cost of their products, and produce — to that end that the **vast wastes** of the present methods of producing from the land may be reduced to the minimum.

Does the publication go to the shop man, the factory manager, to the mine operator? Then to those men should be given the same lessons in cost finding so that the friction and unsafe and unsound business methods that now prevail will be abandoned.

To the labor organization man, to the man in government employ, these same laws apply, and their efforts should also be measured by them.

EDITORS COULD, IN A VERY SHORT TIME, REVOLUTIONIZE the present false, base, unsafe, insane business methods of the world if they but had the proper knowledge of this new science.

There is but **one** way for editors to get this knowledge — THAT IS FOR THEM TO HAVE INSTALLED IN THEIR OWN PLANTS A COST FINDING SYSTEM BASED ON THESE LAWS, THE SYSTEM INSTALLED BY THOSE WHO KNOW **HOW,** and then, after several months' study of the conditions in their own plant, to begin studying the needs of their readers to that end that there might be put before the people in a simple and easy way, the real necessity and reason, for **all** to take over into their home and factory these great laws by which they should work and do business.

When editors have done this they will have done for society the greatest service ever performed by any body of men.

THE SHERIFF'S HAMMER RATTLES!

By Ed. E. Sheasgreen

I

Only a Wrong Font Letter
Is found in the Great White Sheet
And a Perfect Job goes glimmering
To where the Devils meet!
The Devils meet!

II

Only a Smutted Paper,
Or an Offset dim, yet bold —
But the Printer Boss sees Trouble
Loom up in the Distance cold!
The Distance cold!

III

Only a Poor Boss Printer,
Plugging along in a Rut
So deep, he can't see Cost Light —
And both of his eyes are shut!
His eyes are shut!

REFRAIN

He steadily loses pennies
In Time, and then in Stock,
Till the Sheriff's Hammer Rattles,
And stops the Old Print's Clock!
And stops the Old Print's Clock!

* * *

"THE END OF THE RUN"

By Ed. E. Sheasgreen, Formerly Secretary Ben Franklin Club of America

Time waits for no man. Six months to Nature is just about a half a thought of a half a wink. Yet in man's measurement of time five months bring to pass in his affairs many great and vital things.

In the last five months there has happened for the printers of this country a most important event — two old master printers' organizations have passed away, and from them there has arisen a newer, and let us hope it will prove a mightier, organization that in time will become one of which every man and woman in the printing industry, employe as well as employer, will be proud to know and claim allegiance.

But to get these results means that every officer and member must work in complete harmony, that every employer must win the respect of his employes by teaching all of them everything possible about cost finding, estimating, selling and efficiency. Likewise, every employe must win the honest regard of his employer by putting forth every effort possible to attain the highest efficiency.

The new organization cannot accomplish what it has set for its task in one, two, or three years. There will have to be changes made time and time again in the law, and among officers to fit the ever changing needs of the industry — but if the organization is at all times governed by broad-minded men, PROGRESSIVE MEN, men who can see into the future and build accordingly, then, and only then will the United Typothetae and Franklin Clubs of America begin to be the right kind of an organization.

Organization work is the great work of the hour. No matter in which direction organization effort is put forth, it must be done by men honest in their endeavors and who are willing to build the organization up by hard, steady work — rather than by hot air or sky-rocket effects. Labor builds sky-scrapers and all the wonders of man. Hot-air blisters and rockets go up with a flare and come down like a stick.

To have been connected with the National Ben Franklin movement from the start, from its birth — when the fire of the new thing made men's blood surge with a zest that is beyond the telling — that was one thing.

To have been connected with that same movement when, because of organization necessities, it became absolutely necessary to see and to help the Ben Franklin Club of America to come to a point where "good-byes" had to be said as it passed out of existence — that is a point where men's minds and hearts became far different than when this old organization was first started. To have been connectd with the movement in its last days — ah, that was another thing.

As secretary, it has been my lot — and as short as has been the stay, I would not have missed the experience for anything — to have been connected with the good old Ben Franklin Club of America, in its last and somewhat trying days. There was not a moment to spend in idleness. Really the five months have gone as a day. By correspondence and otherwise new friends have been made and a chance given to study men and things from new angles.

I find that cost study is still the great crying need, and is being pursued every day by more and more printers — East, West, North and South. Estimating, selling, and plant efficiency are also topics of earnest discussion the country over. To get a newer and completer harmony between the shop and office — the employe and employer — there is also a movement on that is gradually winning, and with a few cities following the "Omaha" spirit more could be accomplished to overcome foolish prejudices than anything else.

Yes, to have been connected in this movement even for a short time at the "end of the run," so to speak, has been a pleasure through and through, and with no regrets that the work was undertaken.

The uplift of the trade — of all the trades — has been a work of intense interest to me, and viewing it from every conceiveable angle it must be said the printer does NOT know the tremendous movement he has started. To be in that movement somewhere, administering to the needs of the printer employer and his employe, or to the employer and employe of some other industry, is my own desire. And so, thanking every officer and member of the good old Ben Franklin Club of America for their more than loyal support, I wish them, and all who make up the new organization, a God-speed, and extend to them a handclasp across the miles.

AD-SELL BOOK

By B. B. Herbert

Through the courtesy of President C. R. Trowbridge of the Dodge Manufacturing Company, of Mishawaka, Indiana, we have received a copy of the Ad-Sell Book showing "who is who" of the membership of the Ad-Sell League, and containing many valuable contributions from members of the League and others on things pertinent and more or less vital to the modern profession of advertising in its various aspects and branches.

The book, designed and printed by the Sutcliffe Printing Company of South Bend, Indiana, is a credit to that establishment, and it furnishes pleasing and abundant proof that the good and artistic designers and printers of books are by no means confined to our large or metropolitan cities. The book is "copyright, 1913, by Ad-Sell League."

This league is composed of sales promoters, advertising counsellors and managers, and presidents of printing and manufacturing concerns in the cities of Lansing, Battle Creek, Niles, St. Joseph, Benton Harbor and Dowagiac, Mich.; Michigan City, La Porte, South Bend, Mishawaka, Elkhart, Goshen, Nappanee and Kendallville, Ind., and of Chicago, Ill., with headquarters at the Oliver Hotel, South Bend, Ind.

An examination as to the manufacturing and printing establishments of these cities of Michigan and Indiana, will bring a surprise in their numbers and extent, to many who have been accustomed to think that the great factories and printeries are confined to the great cities. This is merely by the way.

President Trowbridge, in a card of "Greeting," in place of a preface, on the front page, modestly states that "The book is published for distribution among those identified with the organization * * * a means for showing faces for closer relationship and a sort of reference when the present becomes the past and you and I are trotting grandchildren on our knees — simply a part of our educational plans of placing at finger tips data that may help in further development along advertising selling lines."

These pleasing and profitable objects will certainly be accomplished, but there is much more in the publication that is of the broadest and highest value to all advertisers and printers. "The collection of information and inspiration with a bit of fun and philosophy thrown in — the whole from men of wide information, furnishes a brand of practical knowledge," furnishes very much information, the value of which, for study and reference, cannot be overestimated.

The halftone portraits are excellent and convey the impression that these live men who are engaged in advancing good advertising are worthy of their high calling. The thought of the pleasure to be derived from the looking over such a work, in after years, is worth considering by the active members of all such organizations who are worthily co-operating in organizations, conventions and other good works.

We are sometimes, when engrossed with the activities of life, careless about preserving books, journals and other publications that will, in the future, awaken happy memories and bring back the friends of the past. A well-stored memory is not only a power but affords a constant feast that cheers and sustains, revives and strengthens in days of absence or loneliness. Memory, however, needs help and suggestions as to the past; with such proper aids the whole flood of past associations, endeavors, achievements and pleasures light up mind and soul and enable one to live again with the friends that have gone and to enjoy all the glad experiences glorified by the magic touch of time, of the years that have flown. This may be sentiment, but sentiment is the inspiration of life.

In a very entertaining article by Elbert Hubbard on "Literature and Advertising" the startling statement is made that "There are now upward of twenty-thousand men in America preparing advertising copy. Some of them command salaries of princely magnitude, say a thousand dollars a month, and there are a dozen or so whose figure is just an even hundred dollars a day."

Mr. Hubbard refers, of course, to more or less professional ad writers who make the preparation of advertisments a business. There are a hundred thousand people, more or less, who are preparing their own advertisements. Mr. Hubbard says, "Good literature is an advertisement, and all advertisements well written are literature."

Unfortunately for both publishers and advertisers, all advertisements are not well written. Not all advertisements are well or properly displayed or illustrated. The useful study of the Ad-Sell Book, and the application of the truths, principles, suggestions and examples contained, will help very materially in these three particulars.

The other topics covered, that afford an education in their mere enumeration and consideration and that contain a world of information and inspiration in their treatment by the able, experienced, practical men who are the writers thereof, follow:

"Trade-marks and How Not to Have One," by Hon. Edward S. Rogers of the Chicago Bar; Adscripts, Chester Reese; "The Social Service of Advertising," by Dr. Walter Dill Scott, Director of Psychology, Northwestern University; "The Human Appeal in Copy," Wilbur D. Nesbit; "Doing It Like Kelly Did" (tells by example of the power in salesmanship of pleasing personality and the gift of being entertaining), by David Gibson; "Evidence of Accomplishment," by Edward S. Babcox, "The Woman in Advertising," Alice Hubbard; "Efficiency in Advertising," Herbert N. Casson; "Use of Slang in Copy," George Ade; "Retail Advertising," Julius Schneider; "Personality in Copy," R. R. Shuman; "Horse Sense and Hard Work," Bert M. Moses, former president Association of National Advertisers; "Questionable Advertising," Harry D. Robbins, chairman National Vigilance Committee of A. A. of A., 1911-1913; "What Organized Advertising Means," George W. Coleman, president Associated Advertising Clubs of America, 1912-1913; "Definite Circulation Information," R. O. Eastman, Advertising Manager Kellogg Toasted Corn Flakes Company; "Good Business Letters," R. E. Harris; "The Past, Present and Future of the Form Letter," Tim Thrift; "Making a Market and Holding It," J. George Frederick; "Morals in Advertising," E. St. Elmo Lewis; "Advertising Light of Business Economy," Arthur Brisbane, of New York Evening Journal; "Sound Logic in the Big Spread," E. LeRoy Pelletier, advertising manager Maxwell Motor Car Company; "Picture and Lecture Publicity," Edwin L. Barker, International Harvester Company; "Vitality Copy," D. Herbert Moore, Chief of Copy, Taylor Critchfield Corporation; "Influence of Color Upon the Eye and Mind," Gustav W. Klaw, president Klaw-Van Pieterson-Dunlap Co., Milwaukee; "Organization; What It Means to Advertising," L. C. McChesney; "The Farmer and the Ads," Walter Jacks; "Wedding of the Merchant and the Manufacturer," H. Walton Heegstra; "Some New Applications of Advertising," Herbert S. Houston; "Making Advertising Science," William H. Ingersoll; "What Printing Has Done to Boost Advertising," C. E. Kimball; "From the Artist to the Plate Maker," R. L. Huehne; "Knowing How to Save a Plate," W. D. Baker; "Preparation and Correction of Copy," Ellsworth C. Hazel.

These topics can well be studied as an analysis of very much that enters into or is vitally essential to good, effective advertising. It is often not so much a lack of knowledge or ability as it is neglecting proper attention to all elements that enter into perfect product in writing, art, manufacture, architecture or advertising, that results in failure. Careful analysis and consideration are necessary to correct synthesis, or as Sir William Hamilton long since wrote, "Analysis and synthesis are only the two necessary parts of the same method. Each is the relative and correlative of the other."

In enumerating these topics, we have afforded a pretty complete analysis, furnished the elements from which the well-informed and alert may, by study, consideration, and application, make the proper construction and build up good advertising, although the study of the thoughts and facts furnished by these or other well-informed and experienced ad writers will be an almost invaluable aid to best and highest results for business-winning efficiency.

REVIEW OF JOB PRINTING

Address All Communications to E. S. HANSON, 440 S. Dearborn Street, Chicago.

MANY of us have within us the power and ability to rise to greater heights. The only thing that is lacking with most of us is the determination to elevate ourselves. This is a noticeable characteristic of the man who essays the printing art. He often remains at the straight matter case, or on the lock-up stone, or at other routine work, simply from lack of determination to reach a higher plane in the world of labor. There are some boys who surprise us, by going opposite to the custom, and it is to these sons of thrift that is due the advanced stage of the art today.

Side by side with the man who attains to a place of dignity and power drags the man who has seen no future beyond his love for idleness, and who has tacitly given his consent to let others take his place in the race of life. This is noted time and again. Many a man who has risen from a green lad without knowledge of the industry, now is the moving spirit of the organization and has his name on the door. He worked with the determination to accomplish the seemingly impossible, while others were satisfied to remain in the rut to eke out a living.

There are more than ordinary reasons that attend such a man's rise. He has been eager, and watchful, and inquiring, and this had been his reward. It had come about only with determination to do things better than the man ahead of him.

"There are so many printers who are content, and who do not care to go outside the beaten track," said one of these successful men, with a grim smile "If I may attribute my present success to any one thing in particular, it has been to the fact that I never permitted another man to outdo me, and to labor with greater earnestness than myself. I would place myself in opposition to the best man and then work to outdo him. I noted the errors others made, and sought to avoid the same on my part. I observed the careless manner of many printers and determined to make every moment count. Not only did I watch my time during hours, but at night there were many opportunities of improving myself that did not escape me."

During this period he was formulating ideas of what constituted a modern and ideal printing establishment. He noted many evils and much waste of time that was costly to the firm — wasted by men who cared only for the pay envelope. What was desired most evolved itself into a few general principles that should be the foundation of his success as an employing printer — good light, well ventilated rooms, and modern equipment. He realized that it was a waste of time and a costly operation to seek business with old and worn out type. The equipment must be good, and there must be sufficient space for the men to work without interfering with one another. He knew it would pay better to employ several good men rather than to fill up a plant with a large number of men who were in reality a dead expense. One unsatisfactory job would be more costly to him than the hiring of several competent men. A foreman who could accomplish things with the men was the man most in demand. He should be capable himself, and this would insure a larger percentage of good work being turned out.

"It is this way," he continued; "there are some printers who are simply looking for men who will work at low wages. They hope with a good man or two, who can take care of the best work, to fill in with the low priced help to care for the inferior work. In the first place the error here is that there should be no low grade work. If a man operates a printing plant for profit he should be proud to attach his name to every job that leaves the office. Some men are averse to this, thinking that if the job is not of the higher order there is no need for the firm's name. Now you will see the fallacy of this statement. Every time you send out work, there will be some people see it who have not seen any previous work from your plant, and if the work is first class there will be a mark in your favor and the name will be noted.

"On the other hand, if there has been a lack of proper care in the job, will not the contrary be true, and the possible customer turned against you? So you see that it is an important thing to have every job turned out by you excelling, even if it is only a commonplace piece of work. The printer is judged rather severely by some, and the very job that might accidentally fall into the hands of the man whose business you desire, is that which you would prefer him not to see. He will be pretty apt to judge all of your work by that sample. The argument that I have always made is that if anything is worth doing at all, it is worth doing well."

How many printers ever consider this point when turning out work? Are many of them not a little careless where the job is an inferior or low cost one? It is astonishing how artistic a commonplace job can be made where there is an effort to accomplish real results.

"The appearance of the shop, not only to the public, but as an incentive to better work on the part of the men," continued our printer "has been one of the principal aims I have had in view. Make the surroundings at least respectable, and there will be far more accomplished. You will find, unfortunately, some printing establishments that are very lax in respect to their offices. The men will not do as good work where there has been insufficient attention to this detail. With good equipment there should be light, air and healthful surroundings. This insures a better grade of printers and also a better day's work. It is environment that has so much to do with the accomplishment of the men.

"Many of the reforms that I speak of are possible even with the man who operates a centrally located plant. You will note that our plant is surrounded with other large buildings, and still we have ample light, our ventilation is good, and the sanitary measures in our toilets and wash rooms are of the best. There is not a word of complaint in this way, and there is a day's work done here by every man. This is something that we demand, and if a man cannot live up to our rules, there are others who will be glad of the opportunity to do so. You see we keep a waiting list of men who are eager to come here. Our reputation has gone forth among the men and there is an eagerness to work in a plant that looks after the welfare of the employees while exacting in turn a day's work from them.

"We have found that it makes possible a much larger profit to treat the men with human consideration. We have made rules, but these are based on the idea that there is demanded between employer and employee a clear understanding and a definite object for which to work."

✣ ✣ ✣

The Ludtke Printing Works, Maukesan, Wis., sends a high school publication which is as pretentious as the annuals of some of the colleges. Put a board cover on it and it would pass inspection anywhere. The only defect I notice is that the plates on pages 34 and 35 face the wrong way. Perhaps it might be as well to repeat here the custom in regard to plates, tables, etc., which run up and down the page. If these occur on the left-hand page (as they should preferably), they should have the bottom toward the middle of the book. If two of these occur on opposite pages they should both run the same way — that is, the left-hand one with the bottom toward the middle, right-hand one with bottom toward outside margin — though the old custom was to have both of them toward the middle, thus making it necessary to turn the book around when looking from the one to the other. In the case of a plate or table occuring on the right-hand alone, it may be placed either way.

The advertisements in this annual are unusually attractive. I have noticed especially the one for your own print shop, containing a half tone of a group of your work which, I believe, appeared originally in this department. The book would be improved by some printing on the cover.

✣ ✣ ✣

The Matthews-Northup Works of Buffalo — and other places — had produced the latest piece of work to come from the Northern Pacific Railroad. It is a delightful portfolio of views of the Yellowstone Park.

✣ ✣ ✣

I have been glad to see an effectively printed book from the P. V. Collins Publishing Company of Minneapolis, entitled "Twenty Years' Development." Mr. Collins and his Northwestern Agriculturist have become deservedly famous in those twenty years.

Will A. Borland, who used to contribute to this department from Nemaha, Neb., writes from Brush, Colo., where he is working with Edw. H. Madison on The Brush Tribune. He sends a four-page general store announcement which is rather above the ordinary for this class of work. It is in two colors, on a fair grade of book paper, and a uniform series of type is used for display throughout. All the pages are very effectively arranged.

* * *

"The Monotype" is a new house organ, devoted to that indispensable adjunct of the large print shop. The first number is dated April, but for some reason it did not get to my desk until a couple of weeks ago. It is 16 pages and cover — the latter in two colors. Of course it is monotyped — every bit of it.

The Franklin Engraving Company, Chicago, has moved into its own new building at 720-734 South Dearborn Street, and this event has been made the occasion for the issuance of a handsome souvenir booklet illustrating and describing the building itself. "The Book of the Building" is the title which is embossed in gold on the cover. In the opening page the new structure is summarized this way:

> Without, our new building is a work of art; within, a paradise in arrangement and appointment; withal, an edifice unique in design and decoration; one of the show places of Chicago; probably the only building of its kind in existence. Planned in its entirety by Franklin minds to fit Franklin needs and conform of Franklin ideals, the structure is an unusual example of commercial architecture; a work shop in a sense, but more particularly a place where Franklin heads, hearts and hands work together for your good, and ours; the idea that made the building possible and a reality.

A catalogue of high grade and yet not beyond the reach of the average business man, is one produced by the John C. Burmeister Printing Company of Chicago for the Greenduck Company, master crafters in metals. Each page has a background in green tint, which is remarkably effective in unifying the pages and reducing cuts of varying sizes and types to a harmonious whole.

* * *

Here is a cover which pleases me. It is gray melton stock, printed in dark gray with the cut of the press in black. The inside pages are also a delightful combination of high grade engraving, composition and press work.

A 52-page book about the linotype, set on the linotype and printed by the Mergenthaler Linotype Company, is one of the star specimens this month. No time or expense has been spared to get the illustrations to tell their story forcibly — and this adds much to any printed matter. The main body of the printing is in a strong black, with border rules and ornaments in olive green tint.

I feel as though I had missed much by not seeing earlier issues of The Andersonian, published by Anderson's Print Shop, Sacramento, Cal. And as this is the beginning of Vol. IX, I have missed a great many. It contains a bunch of good, live matter. The display pages are well done indeed. The reading pages adhere rather closely to the linotype, but are very good at that.

✣ ✣ ✣

The Charles Francis Press of New York is to be complimented on a little piece of publicity printing recently issued, the same being a booklet entitled "A Feather in Our Cap." This title is displayed artistically on the cover, but the feature which catches the eye is the exemplification of the title in a cap of Scotch plaid design embossed on the cover, with a genuine little, red feather stuck upon the band. This is the kind of work which does not reach the waste basket in a hurry. And the title is so appropriate, too; for the booklet is devoted principally to fac-simile letters from customers who cannot forbear to express their delight with the service of this well-known printing house.

✣ ✣ ✣

To J. W. Willis of Irvington, Ky., I would say that the card with the initials and rule in color is by far the best. The rules under the name should be of a lighter face, however. The letter head would be much improved with the larger type, as you suggest. The line "Ground to any degree of fineness," is too large and its connection with the lines above it not quite close enough. The main trouble with the check is an effort to make it conform to a stock cut. Better leave the cut out and give a neat type display.

✣ ✣ ✣

These letter head designs are taken from a sample book of Tekoa linen bond, sent out by the manufacturers, the Strathmore Paper Company, Woronoco, Mass. I do not know whether they are reproductions of actual jobs, or mere fancy creations. At any rate they deserve to be put into circulation.

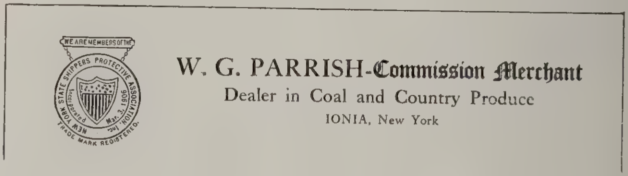
If men like F. A. VanGelder, of the VanGelder Press, Lima, N. Y., knew how I appreciate their work and enjoy looking it over, they would send in more of it. That Parrish letterhead has interested me greatly, and I believe it is a type of design which is destined to become quite popular, or at least deserves to do so. The combination of two styles of type in one line is not only an easy way out of a sometimes difficult problem, but it can be made to work for real artistic merit. If I had been doing the work I should very likely have used italic in place of the text letter, but there is no authority for declaring that this would have been any better than the present arrangement. The emphasis placed on the name of the town by setting it in capitals, while the name of the state is



W. G. PARRISH-**Commission Merchant**

IONIA, New York

in upper and lower, is also a pleasing innovation. The second thing to catch my attention has been the two program covers for the Rush Ingleside Club. I am very pleased to note that the most recent one is far and away the better of the two. In fact, the first of these covers I consider the poorest of the jobs sent in, while the later one is one of the very best. It is so well balanced and everything about it is in perfect harmony. Almost every other job sent is worthy of special mention, but I shall have to show some of them and let that suffice.

My own office is seven or eight miles from the main office of the National Printer-Journalist, so that I cannot keep my finger on the make-up of this department as closely as I should like. On this account an error will once in a while creep in, as this letter from Ernest E. Adams of Toronto will show:

> I received my National Printer-Journalist today, and when I turned to the review of specimens I got quite a shock to see my group of work on page 323 credited to "Brown Printing Company, Denver," though the text matter spoke of the work as being produced by me at the Toronto Y. M. C. A. printing department.
>
> The caption under half-tone is very misleading, as most of the specimens are Y. M. C. A. work.
>
> Now, to account for those other specimens "supposed to be from Denver and Pittsburgh." I am a student of the I. T. U. course of instruction and on different occasions send my problems in for review. These are some of them.
>
> I hope you will rectify this error in your next issue by giving me credit for the complete group, as I can assure you I feel proud of it. I might add that I was also the pressman on all this work.
>
> I wish to thank you for the most favorable comments you have given my work in this and past issues.

In another letter received previously, Mr. Adams tells some interesting things about the work he is doing. He says:

> I wish to thank you for that reproduction and most favorable comment on my specimens in the March issue of National Printer-Journalist. You may be sure I feel proud of the display.
>
> I have been in charge of the printing department of Broadview Branch of the Y. M. C. A. for about six months. Our plant consists of one 10 x 15 Gordon, wire stitcher, three double frames and one cabinet. We have only a few faces of type (and that is all that is necessary), but

plenty of each series. I work mostly with Cheltenham and Old English, together with two or three metal borders, brass rule and a few ornaments.

The work done in this department is practically all for the one branch, for (sorry to say) the Central Y. M. C. A. does not seem to see the advantage of having a printing department in Y. M. C. A. work.

I have one apprentice who does the feeding, and also works on the case. I mix all my colors and do the make-ready, and this one press is kept running on an average of about six hours out of eight.

* * *

W. Arthur Cole is a printer that any concern might be proud of. He is with the William F. Fell Company of Philadelphia, and produces some of the high grade printing for which that company is famed. One of his jobs which would attract attention anywhere is a booklet for the Sebago-Wobelo Camp, a camp for girls up in Maine. This place seems to have a decided Indian flavor, and this idea is carried out in the printing. The stock is Kraft brown, of separate sheets tied together with a leather thong, and the cover is printed in Indian design and colors. Almost every sheet carries an illustration from the camp, "staged" to imitate the life of the Indians. These illustrations are tipped on, being printed in sepia on India tint stock.

The little leaflet entitled "A Savings Bank for Incomes" would be a creditable representative of any financial institution, while the Cridland stationery has a decidedly professional touch. The Lehigh house organ is designed and made up with unusual care.

ENGRAVINGS AND ENGRAVINGS

Contributed by Gatchel & Manning, Philadelphia

Men, as a rule, are not prone to analyze their sensations. They are pleased or displeased with something. That ends it. They do not dissect their impressions to discover whether or not some one feature of the subject under consideration has produced the realized effect.

This may be proven with various illustrations. One goes to the theater to see (and hear) a comedy. He laughs heartily at the humorous by-play and the shafts of wit, and afterwards gives those uttering them credit for the cleverness of the aptly turned phrase or the unexpected rejoinder — frequently he fails to dissociate the part actually contributed by the actor from that which was furnished him by the dramatist.

At the seashore on a balmy summer night, with the moon shining, the waves lapping the shore and her beside him, he hears the band or orchestra play a certain piece of music; all the surroundings have attuned him to the proper receptive mood. Yet ever afterwards that musical selection will have a fond place in his memories, more so perhaps than its intrinsic merit justifies.

Instances might be multiplied, but our present application of the principle is this: Do printers realize that their output makes an impression as a whole? That the first glance creates either a favorable impression or the reverse? There is but little likelihood of its being given a careful analysis and the various good and bad points compared and credit given accordingly.

If it be illustrated, for instance, with halftones which are "smudgy," will the observer study out that the printing is good considering that these particular engravings were not suited to the paper? If engravings from retouched photos show evidence of hasty or inaccurate work, will he stop to figure that perhaps the limitations of price prevented more careful work?

Perhaps! But not if he is the average busy man — John Doe printed that? John Doe, therefore, is or is not a good printer, as the case may be.

Ample evidence in the shape of printed matter can be found to show that the same degree of care is not exercised in the selection of engravings as is devoted to the designing and harmonizing of the other elements entering into the completed order.

Pictures have an universal attractiveness that causes them to figure more largely in the comparative attractiveness of a folder, booklet or catalog than may seem justifiable to the printer as compared with those parts which seem most important to him — his appreciation of the little niceties of type forms, composition, etc., is not shared by the average man.

All of which simply indicates the necessity of the printer's planning the style, grade and finish of engravings with at least as much care as he devotes to those parts with the technique of which he is entirely familiar.

NEWSPAPER CRITICISMS

Address all communications to O. Byron Copper, De Soto, Wis.

Among printers and newspaper makers this is, so to speak, the cost-seeking age. So far as the printers and newspaper makers are concerned, there's a reason, as usual, and that reason is simply sheer necessity. The printer-journalist has been forced to look to the cost of production in his own business by the steady rise in price of all materials that enter into it, which has left him at the month's end without the sufficient wherewithal with which to meet his business obligations.

Newspaper makers as a rule are an intelligent class of men. They follow a vocation that requires expensive years to master. They use dear machines and employ costly materials in the manufacture of their product. And yet, for years and years, they have been supplying their fellow beings with one of the blessings of civilization at the smallest margin of profit—in fact, frequently at a positive loss.

But, thank heaven, at last their intelligence, which so long has been devoted to the interests of others, is becoming sanely engaged in the welfare of their own calling, and now the secret is coming out as to why so many who have labored long and faithfully in so honorable a profession have died poor.

They failed to count the cost.

However, although this secret is easily discerned by a thoughtful person, to find the cost, while a seemingly simple problem, seems to puzzle some folks — seems to even befuddle the reasoning powers of some members of this very wise class of men to which I have alluded, if one is to judge from the fallacious findings of Brothers Morrison, Whiting and Roe, who constitute the committee on investigation of the cost of advertising, appointed by the Minnesota State Editorial Association.

In commenting on the work of these three well-meaning gentlemen, the July American Bulletin says:

> "The committee found that all methods of computing advertising cost agree on finding the gross cost of the advertising by deducting from the gross cost the receipts from legals, locals and subscriptions. Not all methods do this in the same way, but the final result is the same in all. There is really no good reason for this, except that it gives the display advertiser the lowest possible rate."

I quite agree with the Bulletin editor, in that there is certainly no good reason for doing this — subtracting receipts from legals, locals and subscriptions from the gross cost — and I really do not consider the exception cited as a good enough reason to prove the rule. It is, in fact, no reason at all. When we start forth to ascertain a rate based upon the actual cost of production, we are bound to get lost at once, if we permit in the least degree the thought of how we can favor a certain class of customers to govern our conclusions. And we are certainly worse than lost if we try to get at the cost of a thing by considering the amount of revenue derived from some branch of the thing considered, and by subtracting those receipts from another set of figures representing a cash outlay. One is more apt to get at his profits by that process than at his costs.

When it comes to finding the cost of newspaper advertising, Brother W. R. Hotchkiss, manager of the Dunn County News, Menominee, Wisconsin, has expressed the whole truth in a simple, concise article in the Publisher's Auxiliary of July 26. It is possible that many of my readers may have seen that which Brother Hotchkiss wrote.

In short, the meat of this Wisconsin editor's logic is simply this: Finding the cost of newspaper advertising is like finding the cost of any other job of printing. One must take into account the cost of composition, stock, press and bindery work, including folding, wrapping, mailing and postage.

We find the cost of composition by the actual record of the time required. The cost of the space occupied by the advertising matter is just what fractional part it is of the whole stock used. And just so with the press and bindery work. The cost of these must be on the same ratio. For instance: In an eight-page paper, the cost of the stock, press and bindery work, in a full-page advertisement, is one-eighth of the whole cost of the one edition of the paper. And, of course, to find the cost per inch, one needs only to divide the total advertising cost by the number of inches used.

By following this sane and simple method of cost-finding, I am sure it will not be necessary to resort to any mysterious figure-juggling, such as the subtraction of receipts from any source, for receipts clearly have nothing to do with costs. Moreover, according to this method, I dare say, no one will be puzzled because the flat rate for space appears to come out practically the same in small, medium or large newspapers; for as a matter of fact, that is not so, simply because the cost of publication differs in different offices and is materially affected by the size of sheet used, and other causes, such as the speed of the compositor, wage scales, etc. This method of cost-finding, which Editor Hotchkiss has so plainly exploited in the Auxiliary above referred to, does not direct the cost-seeker to do anything without reason, and therefore the results are correct and accurate, because to seek and find the cost of any production is simply and purely a process of reasoning from start to finish.

That the aforesaid Minnesota Editorial Association committee has taken an erroneous view of the subject proves out, I think, by their own figures, when they attempt to show that the flat advertising rate, based upon their system, for the three classes of Minnesota papers, varying from a six-column quarto on ready-prints with a 400 circulation, to an all home-printed twelve-page sheet with a circulation of 3,000, varies very slightly, with that of the middle class the lowest. Brother Hotchkiss neatly exposes the erroneousness of this phase of the matter by this iluustration:

> "Is it any wonder that this same committee reported that by their system they had discovered that the cost per inch of producing advertising was practically the same on newspapers of small and large circulations? A moment's reflection on the part of any printer will be enough to convince him that this cannot be so. It certainly costs more to produce 10,000 circulars than it does to produce 1,000. Yet, by Mr. Whiting's method, this fallacy might be proven, because the method itself allows the cost of advertising to fluctuate, according to the amount received from 'legals, locals and subscriptions.' Suppose the receipts from 'legals, locals and subscriptions' should be sufficient to pay the entire cost of production. Then the cost of advertising would be 0. Divide this by the number of inches used and the cost per inch would be 00."

However, in conclusion, allow me to add that, while I am satisfied that Brothers Morrison, Whiting and Roe have come wide of the mark as yet in their findings as reported to their association, yet their efforts are doubtless honest and must eventually swing around toward the truth, and in the meantime must result in much good, too, even if it is only to arouse interest in this all-important subject of the cost of newspaper advertising.

* * *

Worth, Mo., June 26, 1913.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: Here's another bunch for criticism and a photograph of the office in which they were produced. Any criticism you may feel like giving will be appreciated, for, while I try and put out as good a newspaper as possible considering that this one is published in a town of only 200 people, I fully realize that you are fully capable of telling me wherein I am wrong, aside from the first page ad, which I know is not where it should be.

Sincerely yours,
D. C. SIMONS.

Brother Simons' paper, the Worth Tribune, is in several respects a highly creditable sheet—especially so as emanating from so small a town; but I need not look further than the first page for plenty of features that need improving, aside from the displayed ad thereon, which the brother has kindly advised me he knows is not where it should be. In the first place, the title line on this page is too widely spaced, and the period on the end is a blot that hurts my eye. It is certainly not useful and quite as certainly not an ornament. The line below the title, "A dollar a year—why pay more," is somewhat too loud to strike my fancy. The face is all right, but a type half that large would be quite as readily read and much more artistic. Then the date line and head rules occupy altogether too much space to give a neat appearance. Suppose the space above and below between the date line and the rules were reduced at least a pica, and the "Number 16" (spelled out) placed at the extreme right-hand end to balance "Volume 1" at the opposite end of the line, don't you think, Brother Simons, that the result would be well worth the trouble? Nextly, permit me to call attention to the headings on this page—those of four decks, I mean. The initial stair-step couplet should be written in lines of somewhat greater and more equal length. And I would prefer less white space between decks, and care should especially be taken that greater space is not given below a line than above it, which easily occurs where the type's shoulder is not calculated on. But in spite of these strictures, which are offered kindly, that the Tribune may improve, I must commend the tasteful agreement in evidence between the title line on this sheet and the faces used not alone in the headlines, but predominating in the displayed columns as well, which is a subject I hope to enlarge upon more fully elsewhere during the course of this

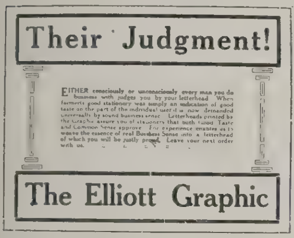
No. 1

month's installment. The Tribune surely gets a liberal advertising patronage and the ad man treats the copy creditably. First, he has a good line of type to work with and then he appreciates proper display and the value of adequate white masses and margins. One of his most artistic examples is shown herewith as exhibit No. 1. The Tribune has a good array of contents and the presswork is above reproach.

✣ ✣ ✣

And here is an interesting bunch of ads again from O. E. Booth of Elliott, Iowa, from whom we have heard before. I will reproduce a trio of them, exhibits 2, 3 and 4. The first is after a rather unusual style of design — a style in which Brother Booth likes to indulge — and truly not a displeasing one. The second is one of the architectural ads which never will go out of style, I suppose. The fact that this is an ad for the jobbing department of the Graphic makes it more than mediocre in interest.



Their Judgment!

EITHER consciously or unconsciously every man you do business with judges you by your letterhead. When formerly good stationery was simply an indication of good taste on the part of the individual user it is now demanded universally by sound business sense. Letterheads printed by the Graphic assure you of stationery that both Good Taste and Common Sense approve. For experience enables us to weave the essence of real Business Sense into a letterhead of which you will be justly proud. Leave your next order with us.

It is very neatly treated in detail. The last is a good ad, but the sharpness of the Gothic lines does not harmonize at all with the pleasing roundness of the Cheltenham. The abundant white space in these ads is their strongest feature—and they are strong in other respects, too.

✣ ✣ ✣

Carrollton, Ill., August 2, 1913.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: Last winter you gave The Patriot a very flattering notice in your department, making one criticism of the paper's heading — that it did not harmonize with the rest of the paper. Later I asked you to suggest a suitable heading, but failed to send you a paper for you to base your suggestion upon. Since then, in getting a machine and a new dress, I ventured to select a heading that I thought ought to harmonize. Under separate cover I have mailed you copies of The Patriot with the new dress and heading, enclosing also a copy of the old heading.

The new type is Century Expanded, and the paper heading is Century Expanded Bold. The various heads in the paper are also of the same family. You will notice from the comments of some of my exchanges that they do not like the new head, and I should like your candid opinion.

Wouldn't that subject of harmony in newspaper headings and of the printed page in general be a good subject for an article in the N. P.-J.?

Yours truly,
CHAS. BRADSHAW.

Brother Bradshaw should worry about what those fellow editors of his have said about his new head! His new Carrollton Patriot in the new dress and the new headings and the new title line is so far above the old that there's really no comparison from an esthetic point of view, or any other kind of point of view. In fact, the Patriot in the new outfit is just as nearly ideal as it is possible to have a home weekly, which I hope to demonstrate by reproducing the delightful front page. (Exhibit 5.) I once got into a squabble with Brother Woodworth, of another department in this magazine, by insisting that a newspaper should be a harmonious creation from front to back; but in spite of the earnest line of argument advanced to the contrary, I'm of the same opinion still—and I think this front-page reproduction is quite sufficient justification of my stand. If it is not, then let me show also this lately received copy of the Barnhart Flyer—which is little less perfect than the Patriot, although produced under the ideal conditions of a typefounder's office. (Exhibit 6.) A few years ago — when I first got my fingers into printer's ink — job compositors as well as ad men thought they couldn't produce a piece of work of any merit at all, unless they had at

least a half dozen different faces represented therein; and they would have been shocked indeed had one dared to suggest the setting of a specimen in a single series. They would have told you that the result would be extreme monotony, and that is just about what some newspaper makers think when one suggests uniformity of typography for newspapers today. And some advertising men, like Brother Woodworth, will cry that you will thus destroy individuality — but they're wrong — just as wrong as the printers of the old variety days were in their belief in the necessity of many different faces. Harmony and simplicity are the two greatest elements in good printing, I don't care whether it is a high grade job or a newspaper, and in just the degree that the various faces in an entire newspaper agree or harmonize, the paper has a high grade appearance as a whole. And in this modern age of type families the possibility of falling into the rut of monotony or annihilating the individuality of an advertiser is practically precluded. The fact that some of Brother Bradshaw's fellow publishers in Illinois do not like his taste as displayed in the new title for the Patriot is not surprising. No improvement was ever perpetrated in the world that met with everyone's approbation. Human beings are creatures of habit. They become accustomed to a thing and it is almost impossible to change them. And just so with regard to newspapers, as I have observed a hundred times during my personal experience as a newspaper maker. For years the old head (exhibit 7) has appeared on the Patriot's front page. Exchange editors have grown accustomed to it; it has become habitual with them when sorting over the exchanges to expect that homely old title. And now that things have changed, although the change is a decided improvement, every time the other editors run over their pile of exchanges and happen on the Patriot the altered aspect gives their sensibilities a sudden start or shock, just as one experiences on meeting abruptly with a strange face where an old one was anticipated. But they will all get over this in time, Brother Bradshaw, and let us hope, will live to see the day when they will wonder how in the world they ever had a preference for the antiquated old heading which you have killed.

⁂

Dawson, N. D., June 17, 1913.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: I have mailed you under separate cover copies of The Press and if you see fit and have the space to spare would be pleased to see your criticism of the same in the N. P.-J.

The issue of July, 1912, is a fair sample of the paper before I assumed the management on February 1, this year. I am somewhat handicapped in gathering local news by the animosity which the former proprietor stirred up.

I am the "whole cheese," editor to devil, and have no assistance, so go as far as you like when you start to find fault. I know there are faults, but I like to have someone else point them out.

Fraternally,
E. D. HICKS.

The improvement, particularly in a typographical way, since Brother Hicks assumed control of the Dawson Press is conspicuous. And, what is more gratifying, the Press seems to have caught the habit of improving from week to week ever since the new proprietor got hold of it. As a result at present there isn't so very many faults to be pointed out. When the issue before me was printed (last June) Brother Hicks' paper was an all-home-print folio; but since then, if plans have not "gang aglee," it has been enlarged to a quarto publication, with ready-printed interior. The first page is neatly gotten up, as the accompanying reproduction will prove. (Exhibit 8.) The editor evidently takes great care in the writing and composition of his heads and he also has a highly commendable appreciation of the beauty of balance in makeup. In fact all the mechanical work is done with apparent skill and a close attention to details. There is the Dakota spirit

of a booster breathing through the editorial columns — through every column, for that matter, and withal, the Press is a very creditable little home weekly.

✣ ✣ ✣

If one has a hired man, it isn't wise to do all the hard work oneself, I'll agree, and it must have been something of such a thought that prompted Editor B. B. Herbert of this magazine to forward me the following letter from the managing editor of the Christchurch, N. Z., Press, together with the contributions referred to therein. The job of examining such a number of such ponderous publications, critically, so that one may write intelligently about them, has taken me several hours, and yet, in spite of the interest I have felt in the scrutiny, I do not feel competent to offer an adequate review. The following is the letter: (I refrain from mentioning the writer's name merely because of the fact that I have been unable to decipher the signature, or find it printed in any of the specimens at hand or upon the stationery heading. I shall have to pass it up to the compositor:)

Christchurch, New Zealand, April 14, 1913.

B. B. Herbert, Esq.,
Editor National Printer-Journalist,
Ravenswood Station, Chicago, Ill., U. S. A.

Dear Sir: I think I recently wrote you with respect to an article in your February issue. I have since received and read with pleasure your March number. I have been reading in this your criticisms on various newspapers in the United States and it occurred to me that copies of the papers we publish might in some small measure interest you as specimens of the leading papers of the Dominion of New Zealand.

I do not think we have reached the standard in the art of advertising that exists in America, England and other older countries, but the business people of these islands are becoming educated, and the army of ad writers is increasing all the time. The result is that the style of ad carried by the ordinary daily newspaper is being bettered every day. Of course, in our special issues, such as the Christmas number of The Weekly Press, for instance, the setting of the advertisements is more closely studied.

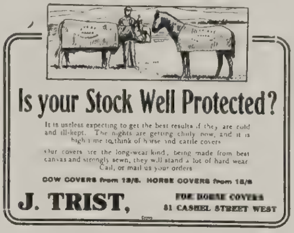
I am sending you by this mail copies of our publications, The Press, daily morning; The Evening News, daily evening (latest edition 8 p. m. on Saturdays); The Weekly Press, every Wednesday, and last year's Christmas number of that journal.

Should you care to offer any criticism such would be welcome, and should you reproduce in the N. P.-J. the first pages of any or all of our papers, I should be very glad to have the blocks (after you have finished with them) at the trade figure.

With the best of wishes for the continued success of your excellent magazine, Yours faithfully,

F. SELIG.

As I have confessed above, my interest during the examination of these specimens of New Zealand newspapers has reached a high pitch. In fact, had I been less interested (and less conscientious in this work as well) the task of criticising these contributions might have been dispensed with greater dispatch; but New Zealand as a country has itself always claimed more than an ordinary interest from me, and to have placed before me representative periodicals from that dominion is fascinating. As a consequence, I have pored over the pages, perusing even the "Country Correspondence," as it is headed, scrutinizing the want ads, and taking a look at practically everything the sheets contain. I do not seem to have received the same papers mentioned by the correspondent in the forgoing letter, that is, I have found no Christmas special, although there is a copy of a souvenir number issued last April 16. If I am not mistaken the regular edition of the Weekly Press is more like our farm journals in America — not particularly so in regard to contents, but in style, shape and size. One issue of the weekly consists of some 98 pages of five columns of about 17 inches each, including a cover and an illustrated section on coated paper. This illustrated section contains countless half-tones of noted people, places and things of interest to New Zealanders and Englishmen — and Americans, too — and it is really gotten up in attractive shape, the printing of the cuts having been well executed. The weekly is bound by wire staples, saddle-back style. Its contents are entirely too extensive to describe. They seem to cover everything from the world's news and the news of the dominion, to stories, jokes, farm and dairy notes, commercial items and the advertising, the last named, so far as I can see, being quite on a par with weekly newspaper advertising in the United States. This is true, perhaps, more as regards quality than as regards quantity. Certain it is that in a weekly emanating from a city of 50,000 to 60,000 population in the United States, there would be a greater amount of advertising than is in evidence in the pages of these copies of the Christchurch N. Z., Weekly Press. Herewith are some specimens of displayed ads from the columns of these weekly editions. (Exhibits 9, 10, 11, 12 and 13.) All must agree that in point of typography —de-



Is your Stock Well Protected?

It is useless expecting to get the best results if they are cold and ill-kept. The nights are getting chilly now, and it is high time to think of horse and cattle covers.

Our covers are the long-wear kind, being made from best canvas and strongly sewn, they will stand a lot of hard wear. Call, or mail us your orders.

sign, display, massing — these ads are creditable examples of composition. The pages of the weekly are well supplied with patent medicine advertisements, many familiar nostrums being prominent, such as Doan's Kidney Pills, Hood's and Ayers Sarsaparilla, Beecham's Pills, Cuticura, Scott's Emulsion, etc., and many other American-made articles are represented, such as Edison's phonographs, Winchester rifles, and even this little Daisy Fly Killer on my desk here, made in Brooklyn, N. Y., has a space. The daily editions of the Press look more like newspapers — especially the evening edition, which is called The Evening News, part of the front page of which is shown as exhibit 14. I think after viewing this miniature, and also exhibit 15, (the upper half of the first page of the morning edition) the average American reader of this department will agree that, typographically, the New Zealand newspaper is far behind the newspapers of Uncle Sam's domain. The headings are faulty in every respect, resembling those to be met with in some of our most inferior country weeklies, rather than those of our newspapers in cities of any size. And what would the average American think of his morning daily if it came to him each morning with its face monopolized by advertisements such as disgrace the first page of the Press, as shown in exhibit 15? I should think the New Zealand newspaper makers might derive much benefit from a study of some of the fine American newspapers, such, for instance, as the leading New York and

Chicago papers, among the latter the Tribune, being a model in typography as well as in almost anything else. These New Zealand papers remind me of some old-time sheets which I have seen published in our New England states; but they even lack the dignified taste, from a typographic viewpoint, which most of these possessed. The pages of these daily editions are even more sparsely dotted with displayed advertisements than are those of the Weekly Press, no spaces of any remarkable size being in evidence at all, although there are several that go to show, as my correspondent suggests, that the proper advertising spirit is catching on in that progressive land, too. (Exhibits 16, 17, 18 and 19.) These strike me as purely "Americanized" ads. The wording is good and the typographic treatment first-class. As yet I have not referred to the news service or editorial work in these specimens, but this is not because these features are not worthy of praise. The contents of each paper is great — giving more for the money, I think, than the ordinary United States publication of similar class. And the editorial work is high class — even the country correspondents are superlative writers, else their copy receives a far more careful editing than is ever bestowed upon such stuff in this busy land.

✣ ✣ ✣

TOURISTS' DAILY

A sprightly little daily, Glacier Park Blazer, was issued by the members of the National A. A. A. Tour on the way from Minneapolis to Glacier Park, Montana. A copy of July 6 (Vol. I, No. 6) gives the name of Hoke Smith as managing editor, with the following roll of contributing editors:

Luther Reed, of the New York Herald; Ed. Westlake, Automobile Editor, Chicago Evening Post; Ben Ferris, representing the Minneapolis Daily News and the St. Paul Daily News; Cal. Stedman, publisher Northwestern Automobile Trade Review, of Minneapolis, Minn.; J. E. Smith, Automobile Editor The Journal, of Minneapolis, Minn.; H. A. McNitt, of the Central Press Association, Cleveland, Ohio; Maurice Froelich, of the Minneapolis Tribune; C. S. Harrington, of the St. Paul Dispatch; Mrs. Frank Witt, poetess.

It is evident that their duties or labors were not arduous, so far as supplying copy was concerned.

The following, from a half a column of "Some Epigrams and Precepts" are pretty good for all tourists across the continent of time in this age and land:

Hoke Smith: We lamp the actions of our associates and find them making mental impressions better than any copyrighted motion picture film. Why go into a theater when the whole outside has a free show for us to study.

J. J. Hill's bon mot: He who makes two good spears of wheat grow where formerly one grew is a nobleman of nature.

Louis W. Hill's copyright: Step into the limelight circle and your silhoutted outline will be a sign pointing the way for a boost — the knock died before Cain felled Abel.

Eddie Westlake's philosophy: Laugh, smile, spread the confetti of optimism; love your family, pay your bills regularly, and you have a batting average in the Contentment league that makes Ty Cobb's look like a bush leaguer's.

A pleasing illustration was a half-tone of a scene in the press room of the Blazer, with half a dozen of the editor-tourists gathered around the press, examining the first copies of an issue. The press was the working model of the Osterland job cylinder press, manufactured by Smith & Hammerquist, St. Paul, Minn.

✣ ✣ ✣

THE LONG PRICE LIST

(From Ben Franklin Witness, June 9, 1913.)

KEEP IT TO YOURSELF

A chance is now at hand to really show if the printer is a business man or not — to show if he wants to run his business as any other man in a different line would, or if he will continue to be the butt and joke of the entire business world. Never before has there arisen such an opportunity to prove his worth and show that organization work has done some good at last.

There has been issued a long price list by one of the Cincinnati paper houses. This will be followed by others if printers will grasp this opportunity and treat the list like other men do in other lines of business.

Every business man has a price list, but none of them are net. There is always a discount to the dealer. Just what it is the dealer and the wholesaler alone knows. It is their business, and they do not tell the buyer what it is, should he pick up one of the price lists.

The hardware, harness, electric, jewelry, millinery, dry goods, and a thousand others have "long price lists" with their keys. Do you know the net price? Will your dealer tell you what it is? Just ask him and find out. You'll get an evasive answer every time — if not a deliberate lie, or told that it is none of your business.

Now, printers can do the same thing. If you give away the discount to a single one of your customers and will watch him closely, he will smile at the corners of his mouth, and his estimate of you as a business man will fall, and his estimate of you as a sucker will rise.

It is the giving away of such trade secrets — which are your business and no one else's — that have hurt the printing business in the past — and it is time to stop them.

The long price list is right — but it will be a failure unless the printer gets it pounded into him that what he pays for paper is none of his customers' business.

Will any merchant in any line tell you what they pay net for an article?

Not on your life.

Then why not go and do likewise? The long list is your opportunity to show business sense.

Now use it right. R. T. PORTE.

THE MEN WHO CAN

Something About the Staff of The Eclipse Electrotype and Engraving Company, Cleveland

These portraits will give an idea of the personal appearance of "The Men Who Can." Just how well they "can" will be determined after they have had an opportunity to serve you.

These men have charge of the largest and most complete printing plate-making establishment in Cleveland.

As in other lines, the finest plant and the largest business is never created by cheap methods of manufacturing. Quality and service are the prime factors in their growth, development and success.

Mr. Edward F. Hinds is superintendent of the Art Department. Mr. Hinds has served an apprenticeship in the best art departments and lithographing concerns. He knows the right way to handle your art problems. His artistic talents are beyond question.

Mr. Adam G. Kraus is superintendent of the Wood Engraving Department. Mr. Kraus is a craftsman of the highest order. For highly finished mechanical work wood engravings are the most satisfactory. He will show you why.

Mr. George E. Houle is superintendent of the Photo-Engraving Department. Mr. Houle knows nearly everything about photo-engraving and is learning something new each day. He has never done anything else. Knows just what is wanted. Keeps his promises, too.

Mr. Al. J. Wolfram is superintendent of the Electrotyping Department. Mr. Wolfram has been an electrotyper since 1897. He has a thorough knowledge of electrotyping in all its branches and he is competent in the highest sense. His ability is known and appreciated. You will find him able.

Mr. E. W. Hahn is the Sales Manager. Mr. Hahn took charge of the sales department in 1908. Prior to that date he was in business in Canton, Ohio. Realizing the larger field, he embraced the opportunity of identifying himself with the Eclipse Electrotype and Engraving Company, and has made good.

Mr. Eugene A. Fay is in the Sales Department. Mr. Fay is a thoroughly practical and experienced engraver. He is progressive, cheerful and accommodating. He handles the big orders and is widely known for his ability to meet every plate making requirement.

Mr. Earl E. Treter is in the Sales Department. Mr. Treter handles the city trade. He is a capable young man, who has built up a large following on the quality and service basis. Never worked anywhere else. He likes the game.

Mr. Charles M. Pritzker is in the Sales Department and does most of the traveling for "The Complete Establishment." His experience enables him to successfully cope with every problem in plate making. He is always on the job, too. Dependable chap.

Mr. John Keffer is the Secretary-Treasurer. Mr. Keffer has charge of the office. You will find him courteous and painstaking at all times. He carefully looks after your orders and sees that none are disappointed. You can always depend upon him.

Mr. Frank H. Clark is the President and Manager. Mr. Clark has been connected with the Eclipse Electrotype and Engraving Company for twenty-six years. He has made the concern a success. He has built a business and reputation that is favorably known from coast to coast and the lakes to the gulf. Mr. Clark appreciates that success is gained by keeping everlastingly at it. He has the assistance of an efficient and loyal corps. He knows and knows that they know. The results are certain.

✣ ✣ ✣

MOUNTING AND REGISTERING PRINTING PLATES

A very handsome booklet with the above title, just off the press, has reached us from the Challenge Machinery Company of Grand Haven, Mich. It treats of the Expansion Plate-Mounting System in text and illustration.

There is a good deal more in proper handling, mounting and securing perfect register of printing plates than many owners of offices, at least, seem fully to appreciate. There is no exaggeration in the following statement appearing on the opening page of this neat and useful publication:

> In this age of cost systems and greater efficiency in printing house methods, the electrotype ranks as one of the most important essentials of economical and profitable production. Only a few years back, to insure the highest quality in printing, it was deemed necessary (and rightly so) to print direct from type and the original engravings. Today, owing to the wonderful discoveries and perfecting of different electrotyping processes, the printer is enabled to procure results from electrotype plates equal in every way to work printed from the originals. Notable examples may be found in electrotypers' advertisements in the various trade periodicals, originals and electrotypes printed side by side, the advertisers defying anyone to designate which is which.
>
> Besides the saving of wear on costly type and engravings, the use of electrotypes provides numerous other advantages. On long runs where time is limited, duplicate plates may be utilized, dividing up the press work on two or three presses. Another great advantage of electrotypes over type forms is freedom from "pull-outs" and "work-ups." Many a fine job of printing has been ruined by one or the other of these two evils.

The directions for the making up of a register form of the Expansion Plates will be useful, and the explanation of the system is interesting and instructive. The following claims are made for the Expansion System:

> Life of plates lengthened by true, rigid base.
>
> Adaptability to any kind of printing from plates.
>
> An immense saving of time and labor in making up forms.
>
> A single outfit expansive enough to meet the needs of every printer.

A gain of from twenty-five to fifty per cent in quality and quantity of production.

A saving of twenty-five per cent of the cost of plates by eliminating the mounting.

Perfect register of each plate without removing from the press, or unlocking the form.

Narrowest possible margin (eight points between plates) effecting a great saving of stock on long runs.

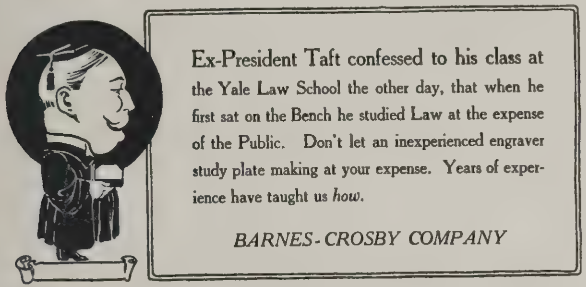
A ready response to the most delicate interlay, owing to the absolute accuracy and rigidity of the base.

* * *

EFFECTIVE ADVERTISING

From Barnes-Crosby Company comes specimens of a dozen series of advertising cards that are especially forceful and attractive in style and convincing in matter. To promote advertising work, the salesmen and branch office managers of that company were asked to put down in black and white a few of the arguments they had found the most successful in selling engravings.

Some of these were so good that the advertising manager of the company, under approval and direction, had about a dozen of the best put in type and illustrated and printed on the best stock that could be bought for the purpose.

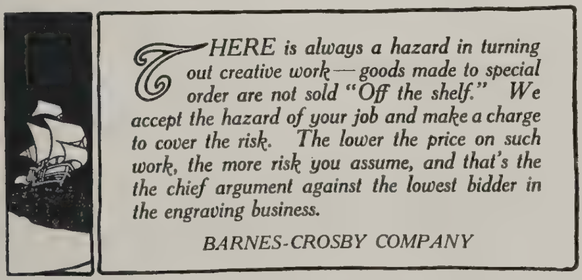


Ex-President Taft confessed to his class at the Yale Law School the other day, that when he first sat on the Bench he studied Law at the expense of the Public. Don't let an inexperienced engraver study plate making at your expense. Years of experience have taught us *how*.

BARNES-CROSBY COMPANY

They are appealingly convincing and might, by a change of wording to suit the facts and conditions, be used by printers as well as by engravers, retaining the thoughts, sentiments and designs. Two of these are reproduced herewith to illustrate what we have written and to indicate the adaptability to printing equally as well as to engraving.

In the samples shown, all that would be necessary would be to change the word "engraving" to printing in one, "engraver" to printer and "platemaking" to printing in the other and to substitute for Barnes-Crosby Company the name of the printing firm advertising.



THERE is always a hazard in turning out creative work—goods made to special order are not sold "Off the shelf." We accept the hazard of your job and make a charge to cover the risk. The lower the price on such work, the more risk you assume, and that's the the chief argument against the lowest bidder in the engraving business.

BARNES-CROSBY COMPANY

Such advertising cards are valuable in suggestions as well as for models. It would pay progressive printers to secure from Barnes-Crosby Company sets of these designs in plates with proper changes, ready for use. Though they have not suggested that they will supply the plates, we all know that the managers of the company are always accommodating and ready to help forward the cause of good advertising.

The plates are about 3x6½ inches, just the size to use on blotters, with proper margins.

NOTABLE EXHIBIT OF STEEL EQUIPMENT

The Hamilton Manufacturing Company, whose main manufacturing plant is located at Two Rivers, Wis., will, at the Toledo Exposition, September 1 to 6, inclusive, make the first public showing of their new All-Steel Composing Room equipments.

The mammoth new plant for the manufacture of steel furniture is now completed and in full running order. There are already several notable installations of Hamilsteel equipments, including the following well-known concerns:

Seattle Times, Seattle, Wash.; The Homestead Company, Des Moines, Iowa; J. W. Burke Co., Macon, Ga.; Keystone Publishing Co., Philadelphia, Pa.; Hill Publishing Co., New York City; Publishers' Printing Co., New York City; Plain Dealer, Cleveland, Ohio; Sears-Roebuck Co., Chicago, Ill.; Poole Bros., Chicago, Ill.; Blakely-Oswald Printing Co., Chicago, Ill.; Times-Dispatch, Richmond, Va.; Saults & Pollard, Winnipeg, Man.; Rous & Mann, Toronto, Ont.

The selling agents of the Hamilton Manufacturing Company were awarded the contracts for these equipments on the merits of the goods and upon the facilities afforded by this mammoth plant in the way of service to customers.

The Hamilton Manufacturing Company's exhibit of steel equipments will contain the latest designs in type cabinets, imposing tables, storage cabinets, make-up banks, form racks and miscellaneous articles. There will also be an exhibit of the latest designs in wood construction.

Beauty in design, carrying strength, absence of vibration, economical arrangement of working materials, are distinctive features of the Hamilton equipments.

This concern has back of it thirty-two years of experience in building furniture for printers. In all that time the effort has been to eliminate the useless and the impractical. Step by step the quality of the furniture has been improved until it would seem that the acme of perfection has been reached. The Hamilton Company will speak for themselves and the firm only asks the opportunity of showing interested printers what they have to offer.

This exhibit will enable printers to make a careful study of the new steel equipments. This will be a decided advantage when considering the purchase of this class of material.

The Hamilton Company makes the somewhat remarkable claim that every printing office in North America, of which there are probably over 40,000, is equipped either wholly or in part with goods of their manufacture.

In addition there are probably 10,000 offices in South America similarly equipped and not less than 30,000 printing offices in other foreign countries, including more than twenty government printing plants, are equipped with Hamilton goods.

The Hamilton Company will distribute at the Toledo show a handsome booklet with illustrations of some of the late productions in steel construction. Printers who are not fortunate enough to find time to attend the Toledo Exposition can secure one of these booklets by writing direct to the Hamilton Company at Two Rivers, Wis., or Rahway, N. J., or by making application through the regular supply house.

At the Hamilton exhibit, which will be found in Sections 34, 35 and 36, there will be exhibited large pictures of the manufacturing plant in the various stages of its development, beginning with the first little factory erected in 1881, up to the present day. There will be an attractive display of wood type, borders, and other printing office accessories manufactured by the company.

An expert will be in charge of the exhibit, who will be ready at all times to give visiting printers full information in regard to the Hamilton Company's products.

* * *

International Typesetting Machine Co.

The Intertype

In the short space of one year and eleven days the International Typesetting Machine Company designed the numerous improvements embodied in the "Intertype," completed the drawings for nearly 5,000 parts, made patterns, tools, jigs, fixtures, special machines, organized a force of 800 specially trained employes and turned out the first "Intertype." The machine was built and completed in the model factory at Brooklyn. This factory is built of concrete, absolutely fireproof, with the most perfect lighting, heating and sanitary arrangements possible, and equipped with labor-saving and special machinery, exciting the praise of everyone who has visited the factory.

Sales agencies were organized in Chicago, New Orleans and San Francisco. The Chicago agency of the International Typesetting Machine Company was organized with Charles D. Montgomery as manager. It is located in convenient and comfortable offices in the new Rand-McNally building, 108 W. Harrison street, where Mr. Montgomery and his efficient force extend a cordial welcome to all visitors and take pleasure in demonstrating the many economical improvements and advantages of the "Intertype."

CHARLES D. MONTGOMERY
Manager Chicago Agency of the Intertype

The machine has been simplified, but not at the expense of efficiency. This simplicity appeals alike to the smaller publisher requiring a machine which can be satisfactorily handled without expert attention, and to the larger publisher requiring a large output in a short time. Containing all the advantages with none of the multiple intricacies, it is not surprising to find the machine in such offices as the Cleveland Leader-News, Detroit Free Press, Detroit Journal, Youngstown Telegram and other offices of a metropolitan nature, as well as in offices of the country weekly, such as the Denison (Iowa) Bulletin, Grinnell (Iowa) Register, Princeton (Illinois) Republican, Clay Center (Kansas) Times, Ravenna (Ohio) Republican, Decatur (Michigan) Republican, and Gladstone (Michigan) Reporter. In the Chicago agency territory there are now forty "Intertypes" in commission, with as many more ordered. The machine, therefore, is well established, and Manager Montgomery has good reason for the optimism that pervades his entire force and for the declaration that the "Intertype" is the best way.

* * *

THE PHOTO-ENGRAVERS AT INDIANAPOLIS

The many years of careful consideration given by members of the International Association of Manufacturing Photo-Engravers resulted in the adopting, at the recent convention in Indianapolis, of a basic-selling scale along lines advocated by George H. Benedict, of Chicago, references to which have been frequently made in these pages and of which a fuller account will appear in an early issue.

The convention was held at the Claypool Hotel and was, as had been advertised, a "Business Convention for Business Men." It was in every way a great success. Both in the large attendance of representative delegates from nearly every important city of the country, from Winnepeg to New Orleans and Houston, and from the Atlantic to the Pacific, and in the papers read and the reports made and the work accomplished, it was pronounced the best convention in the history of the organization. The social features were not ignored and the entertainments provided by the Indianapolis members, few in number but large in hospitality, were of the highest order, though most of the time of the three days, with two sessions each day, was devoted to the splendid working program in hand, with promptness on the hour appointed and with pleasing time-saving dispatch.

President Houser, in his address, told of the association's work for the year and of the prospects of the future and urged a spirit of fraternity of mutual interest, respect, consideration and conciliation between the employers and employes, all alike working together in loyal service, and the carrying on the business worthily, honorably and efficiently, and settling any and all differences by right rather than by might. President Houser congratulated the members, in the face of the good results accomplished, on their proved wisdom and foresight in creating the office of Commissioner, and gave deserved praise to Mr. Louis Flader for his work in the office.

Among the matters presented were: "The Relationship of Local and Sectional Organizations toward the International Association of Manufacturing Photo-Engravers," by L. B. Folsom, Boston; "Practical Standardization," an address illustrated with lantern slides, by N. S. Amstutz; "Fire Insurance Policies and Riders," by F. H. Clark, Cleveland; "Photo-Lithography and Its Effect upon the Photo-Engraving Industry," by S. H. Horgan, New York. George H. Benedict, Chicago, explained the basis of the Cost Committee's report by an illustrated lecture. "The Cost of Production and Its Relation to Salesmanship and Profits," fully illustrated with lantern slides, by Mr. Flader, who concluded by explaining a simple cost system that will meet the requirements of any plant, large or small, demonstrating how the system could be installed and operated at practically no expense.

The following were elected as officers for the ensuing year: President, E. W. Houser, Chicago; First

Vice-President, L. B. Folsom, Boston; Second Vice-President, George Meinshausen, Cincinnati; Secretary-Treasurer, J. C. Bragdon, Pittsburgh. Executive Committee: F. W. Gage, Battle Creek, Mich.; Charles A. Stinson, Philadelphia; George Brigdon, Toronto; B. J. Gray, St. Louis, and Adolph Schuetz, New York.

At the banquet, held in the Claypool Hotel, President Houser was presented with a costly Swiss watch, and George H. Benedict with a beautiful sideboard set, in appreciation of the invaluable service each has rendered to the Association.

* * *

"Linotype Display Advertising Figures" is the title of a booklet, just issued, the main purpose of which is largely indicated by its title. The pamphlet is twenty pages and cover. Modern newspaper advertising calls for a display in large figures of prices, in very many lines of merchandising, as it is the most attention drawing and the most effective advertising in every way.

This booklet shows figures in 10 and 12 point faces and 14, 18 and 24 advertising figures and advertising fraction figures, and contains a great deal of information of value to linotype users. It is a wonderful improvement over the old method, that is shown.

The old way to linotype such matter was to set the small type on the machine, quadding out that part of the line where large figures were desired. The blank portion of the slug was then cut off, and the display figures inserted by hand.

Such work is now done more rapidly and neatly by means of overhanging advertising figures. Large figures, as well as the body type, are set on linotype slugs, the matrices from which the figures are cast being assembled from the magazine in the usual manner. The display figures are placed at any desired point in a line of text matter. When the cast is made, the top of the large figure attaches to the slug, the bottom overhanging, as shown in the booklet by illustration. This overhanging portion of the figure then fits over a blank space left in the next line for that purpose.

For example, if 10-point text matter is being used a 24-point advertising figure can be placed at any point in any line, to overhang a blank space left at a corresponding point in the succeeding line. Similarly, an 18-point figure can be used in connection with two 8-point lines or three 5½-point lines. The face of an 18-point figure (typefounders' size) actually measures only 16 points, so the bottom of the large figure will align with the second of two 8-point lines or the third of three 5½-point lines.

An equipment is furnished that will fit on any linotype machine except No. 10. However, it is not necessary to go into details here. Every linotype owner can secure the booklet that gives all information that can be desired.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order

A COLD SIMPLEX STEREOTYPING OUTFIT, $19 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage, for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

THE VAN BIBBER ROLLER CO., Sixth and Vine St., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

OLD TYPE WANTED—Cash or exchange. Empire Type Foundry. (Not in the Trust), Buffalo, N. Y.

FOR SALE—One Goss Clipper Press, with full stereotype equipment, printing from four to eight page papers, seven to eight columns, at an average speed of eight thousand per hour. This press is in first-class condition, and for quick sale will make a bargain price; terms satisfactory to purchaser. Glens Falls Publishing Co. C. V. Furness, General Manager.

STEEL DIE EMBOSSING

Our Price List shows 92 styles of Engravings for social and business plates and dies, gives prices on cutting dies and embossing all complete so you can easily figure out your orders. All prices quoted are subject to 40% discount to the trade.

The Illustrated News Section of THE AMERICAN PRINTER

is a feature of that printers' magazine. A score or two of portraits appear in each number, and twelve issues of the magazine form a veritable "Who's Who in Printerdom." There is also a variety of other news illustrations. Business and technical departments, however, occupy three-fourths of the entire number of text pages and a wide range of information of interest to employers, executives, head workmen, and others, is to be found in each issue. A number of fine color prints are also included, and each number has a new cover design. The September number of The American Printer is especially attractive.

Send 30c for a copy of the September number, or $3.00 for a year's subscription.

The Printing Trade News

The Printing Trade News, 64 pages, is published weekly and has a very comprehensive business news service from all sections of the country. It deals entirely with the affairs of the business office and the executives. It collects weekly beside printing house news, that of the binders and rulers, the electrotypers, engravers, trade composition houses, the supply trade paper houses, lithographers, etc., has a business fiction story each week, patents of interest to printers, and editorially reviews important doings of printers and publishers during the week.

The Printing Art Suggestion Book

This is a monthly publication issued by the University Press, Cambridge, Mass., containing examples of typographic and other designs intended to assist the printer and those who are printing in the choice of color schemes, inks, and papers. It contains samples of standard papers, as well as novelties which are brought out from time to time by the various mills. It is full of ideas and suggestions for typographic design, display, and color schemes.

Selling Engravings to the Nation

Because of the detail and the individual attention involved in the production of illustrations and engravings it was long supposed that no engraving concern could satisfy more than a local demand.

Back in 1902 *Barnes-Crosby Company* took the first step in shattering this fallacy by installing a branch office at Detroit. Since that time not a year has passed that has not seen a new B.-C. office established.

Today, with two immense manufacturing plants located in Chicago and St. Louis, eleven permanent branch offices and a force of traveling salesmen, Barnes-Crosby Company stands as the highest type of business organization.

Our experience in meeting the varying needs of so many customers is part of the intrinsic value you secure in dealing with us. The above map will help you to locate our nearest branch office.

BONDS

that build for the Printer — *for Us*

Where does the responsibility of the paper house end? With the safe delivery of paper to the printer? Many say yes, probably they're right, but we doubt it. At least we don't operate on that basis. Our contention is that to hold the printer's business we must study his customer's requirements. We must make our papers to best serve the ultimate consumer. There you have the secret of our success in paper merchandising. "Butler Brands" satisfy the ultimate consumer, therefore build for the printer and us.

If you buy Bond papers, here's a suggestion; write to us for samples of our line and prices. Compare them with others and you'll see just how our policy of studying the consumer's requirements works to the printer's advantage.

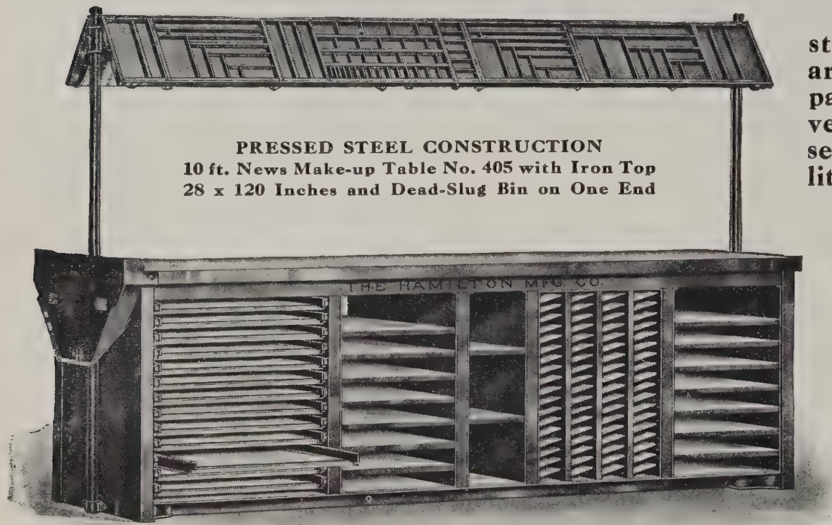
ESTABLISHED 1844

AN ECHO FROM THE TOLEDO CONVENTION

Our showing of steel equipments at the Toledo Exposition was an exemplification of the superior quality of the Hamilton product.



PRESSED STEEL CONSTRUCTION
10 ft. News Make-up Table No. 405 with Iron Top 28 x 120 Inches and Dead-Slug Bin on One End

In originality and beauty of design, stability of construction, economical arrangement of working materials, compactness and superior finish the general verdict as expressed by visiting printers seemed to be unanimous that there was little chance for improvement.

We feel that we have no excuses to offer. We are satisfied in LETTING THE GOODS SPEAK FOR THEMSELVES, as we flatter ourselves was the case at Toledo. The verdict seemed to be that the Hamilton line of steel equipments is without a competitor, quality considered, and we will try and maintain that position.

Five new equipments are now under construction in the Hamilton shops. These goods will be installed in the composing-rooms of five leading newspaper plants in the United States and Canada.

Public announcement of these installations will be made in a later advertisement. This will add five new members to the family of more than 80,000 satisfied users of Hamilton goods.

All the experience required in building these 80,000 equipments will enter into these new outfits coming from the Hamilton shops.

We have the equipment for building the goods right. We know the printers' requirements. We have the facilities necessary in giving prompt service. We keep our promises as to quality of product and time of delivery.

Every new user of Hamilton goods in pressed steel or wood construction is a booster for the Hamilton product. We can not afford the questionable luxury of dissatisfied customers.

Hamilton's composing-room equipments in wood and steel construction are sold by prominent typefounders and dealers everywhere.

Ask your supply man for information or write us direct and we will send the supply man and the efficiency engineer to you.

The Babcock Optimus
The Babcock Optimus

Some time ago a manufacturer had complaints of the noisy gears he was putting on his machines. The inaccuracies that developed this noise prevented his machines from properly doing their work; the noise meant, as it always means, excessive friction and wear besides. He called in one expert after another, and was finally told by a noted engineer that he must cut his gears as the Babcock Company cut theirs.

It cost us much in time and money to cut a humanly perfect gear. It has cost never-ending supervision of specially trained men and specially made machines ever since to maintain our standard. We have even improved it, and set it higher. It is not at all a small accomplishment; we are justified in mentioning it oftener. It is a rare achievement, you will acknowledge, if you look about you and note the needless noise due to ignorant, careless and cheap construction.

Silence, or near silence, is a great merit in the Optimus press. It shows harmonious relations between moving parts. Every bearing fits its journal with precision; every gear is correctly cut and engaging accurately. This fine agreement compels certain parts to be ground to exactness; certain others to be scraped to size and smoothness. All of it is quality before profit. It insures long service, with least wear and smallest expense.

Noiseless operation more forcibly than any other thing exhibits pre-eminent design and painstaking construction; it insistently shows that every detail is regarded important and exactly finished; that the ability to take pains is constantly invoked.

Quiet operation is a distinguished quality of the Optimus. Even an old-time Optimus after years of use runs with little noise. No other works as quietly. The presses themselves are the best evidence.

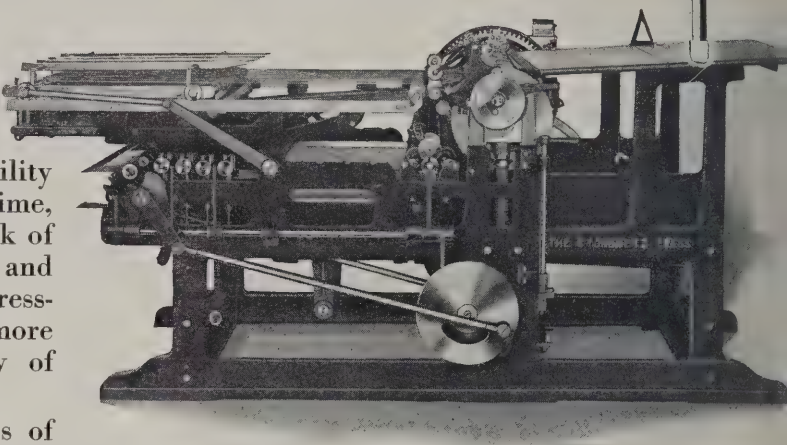
The "Hit" of the Show

Stonemetz
Two-Revolution

THE two STONEMETZ TWO-REVOLUTIONS in operation at the Toledo Printers' Exhibition proved the big hit of the Show. These two machines by their perfect performance—by demonstrating their perfect printing qualities and their ability to stay on the job every minute of the time, day in and day out, during the entire week of the exposition, won the unstinted praise and approval of every visiting printer and pressman. This approval has since been more forcibly expressed by orders from many of these men for STONEMETZ PRESSES.

The Stonemetz appeals to both classes of buyers, the man who wants the best press at the lowest price—the man who wants the best press regardless of price.



Let us send you complete description, samples of work, prices and terms. A beautiful souvenir mailed free to every inquiring printer.

STOP THE LOSS BY FIRE

THE statutes of New York and other states and the rules and requirements of Insurance Underwriters are such that inflammables must be provided with a receptacle and the danger from gasoline, benzine and naphtha must be minimized. These objects are attained by using a fireproof steel paper baler, costing $22, $24, $38 or $40, according to size, which easily, quickly and safely bales the vast accumulations of waste paper in your place, thus converting danger, cost and waste into profit, since the old stuff sells on the spot for thirty to fifty cents per 100 lbs.; also by using the Justrite Oily Waste Can ($2 and $3) and the Justrite Safety Benzine Can ($2, $4 and $5.) Carried and sold by

Special Announcement

WE are pleased to announce that we have closed arrangements with The H. C. Hansen Type Foundry, Boston, Mass., for the sale in Chicago and the Middle West of their Type, Borders, Rules, Machinery, and all Supplies furnished by them. This old reliable THE HOUSE OF HANSEN is too well known the world over to more than mention their forty-one years of strictly honest dealings, unquestionable fairness and complete satisfaction given in all transactions in connection with the high standard of their product.

We believe this announcement will interest all printers, embossers and paper box manufacturers, knowing that now Hansen Type and all their supplies may be secured immediately on receipt of order at our store.

Our organization includes men who thoroughly understand all requirements in connection with the wants of the printer, and why and how the best results may be obtained by the use of the HANSEN PRODUCT.

We hope to be favored with your orders, and believe the attention you will receive from us through our highly developed SERVICE DEPARTMENT will warrant a continuance of your kind patronage.

A complete line of "LAUREATE' and "COLT'S ARMORY" PRESSES, also parts for same in stock ready for immediate delivery.

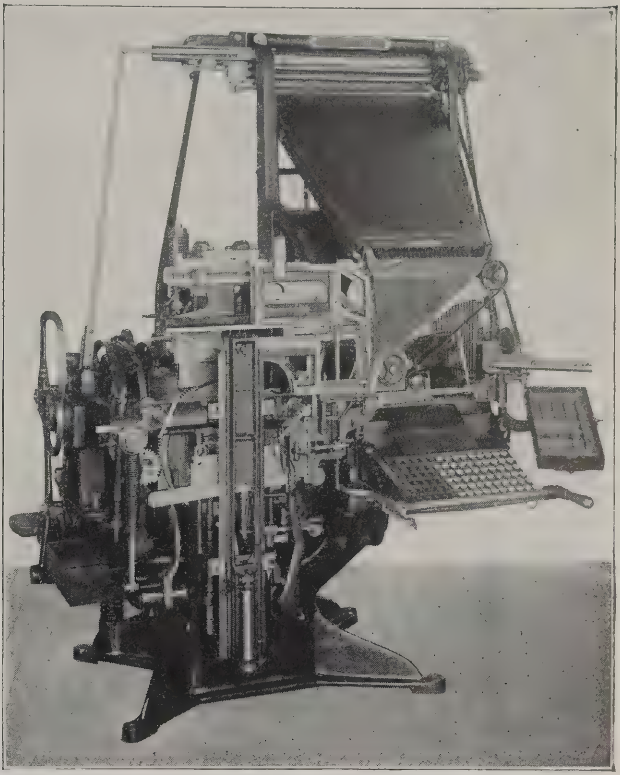
INTERTYPE
VERSUS
LINOTYPE



THE second patent suit brought against us by the Mergenthaler Linotype Company shows that they still think they can bluff and intimidate the printing trade as in the old monopoly days.

Unable to meet the INTERTYPE successfully on the basis of merit, and unwilling to meet our prices, they are attempting to frighten printers into thinking that it is unsafe to buy and use our machine.

Their first suit names three patents which they claim we infringe. The absolute absurdity of this claim is exposed in our booklet, "INTERTYPE versus Linotype," a copy of which will be mailed to anyone interested.

This suit failing to deceive, they have tried another. This time they name twenty-five separate suits. Their purpose in naming so many is obviously to prevent our exposing the absurdity of all of them in detail, as we have the three named in their first suit. Most of the twenty-five are as far-fetched and irrelevant as the first three.

This second patent suit is merely another attempt to intimidate prospective INTERTYPE purchasers.

Write us for other facts about the present composing machine situation.

Every INTERTYPE purchaser is fully protected from any danger of suits for patent infringement.

AN AMERICAN WHO KNEW THE SOUTH AND MADE IT BETTER KNOWN

Who that had even the slightest introduction has not a warm place in his heart for "Uncle Remus?"

To be gentle and kind; to give much time to the pleasing of children to teach them consideration for their little brothers of the field and air; to draw the minds of older folks toward young folks and dumb folks; to blaze a new and delightful path in literature; to live simply; to act sincerely; to love generously—was the gracious mission of Joel Chandler Harris.

Mr. Harris was himself a printer and the fact that his great popularity depended largely on the printed page, will, it is hoped, show the fitness of giving his name to the beautiful face of type shown on the reverse.

PHILADELPHIA NEW YORK CHICAGO DETROIT ATLANTA KANSAS CITY SAN FRANCISCO

NATIONAL PRINTER JOURNALIST
A JOURNAL FOR PRINTING AND ALLIED TRADES
Volume Thirty-One Chicago, October, 1913 Number Ten

Mr. Grondahl in Defense of Mr. Whiting

In recent issues of printing trade papers there appeared an article from the pen of W. R. Hotchkiss, manager of the Dunn County News, Menomonie, Wis., which bitterly attacks the position of E. K. Whiting, of the Owatonna, Minn., Journal, in an address delivered recently at the Illinois Cost Congress on the subject of newspaper costs.

Before discussing the main points in controversy, I wish to say that discussions of this character should be more cordial and more designed to find out the real truth, for which we are all seeking, than to lambast somebody else because he entertains opinions with which we may not agree.

Mr. Whiting made two points principally, which are:

1. That a sliding scale of advertising rates is preferable to the flat rates.

2. That the cost of display advertising in a newspaper is the amount remaining after subscriptions, paid locals and legals are deducted from the total cost.

The first point I will dismiss briefly. There are many publishers who would have continued with a sliding scale rate card unless the flat rate had been forced upon them for the convenience of the foreign advertisers and the advertising agencies acting for them. There is still a goodly number of publishers, whom we have no right to characterize as antedeluvians and mossbacks, who cling to the sliding scale of rates. Personally, I have abandoned the sliding scale of rates, mainly because the flat rate makes it easier to handle advertising and results in less friction with advertising agents, who are all opposed to it. Even some of the foremost metropolitan papers have, in effect, a sliding scale of rates, discounts for frequent insertions and large space being given. For instance, the latest rate card of the New York Tribune makes a sliding rate of 25 cents down to 20 cents per agate line, the price being based on the number of insertions in one month. The rate card in any newspaper office is usually the result of long experience, and whether to use the sliding rate or the flat rate is largely a matter of personal opinion and preference.

Inasmuch as Mr. Whiting's address dealt with cost finding, the problem of a rate card was simply incidental, while the cost of producing advertising space was the main question. We cannot arrive at the truth in such a matter simply by shying brickbats at one who may have views different from our own, nor meet the arguments of another by belittling them. Mr. Hotchkiss says that in figuring cost we should forget the selling price, which may be very well, but it should not be forgotten that we try to arrive at the true cost of production mainly to ascertain at what price to sell the goods we manufacture, and incidentally to learn how to manufacture at as low a cost as possible, by finding the leaks which a cost system lays bare.

Mr. Whiting contended that one should deduct from the total cost of the paper the amount received from subscriptions, legals and local readers, and that the balance of the cost must be borne by the display advertising. Mr. Hotchkiss says this is all wrong, and ridicules the idea. He says that it is a simple matter to figure the cost of newspaper space. All one has to do is to charge up all the expenses against the paper and divide it by the total number of inches of space contained in the paper, reading matter, advertising and all, and you get the price per inch, which cost naturally should be a guide in placing a selling price on a newspaper, the same as any other piece of job printing.

The writer of this article was probably the first one to suggest a plan, somewhat similar to that of Mr. Whiting, for figuring the cost of display advertising, and his views were expressed in a paper at one of the cost congresses. A considerable number of newspaper men with whom the writer has come in contact since then have, after due deliberation, shared these views, which have been given in somewhat modified form, and perhaps somewhat more definitely, by Mr. Whiting in his recent address.

We must not overlook the fact that there are several distinctive elements in the newspaper business, some of which are practically fixed as to price and some of which are more elastic, which must be reckoned with in considering newspaper price-making. The subscription price of a newspaper is fairly permanently fixed, so are legals and reading notices. Most of us will probably agree that it is easier to change the rates of display advertising than anything that a newspaper has to sell. Also, it will be admitted generally that much of the expense of publishing a newspaper is incurred for the purpose of making it a first-class advertising medium. The amount received from subscriptions will not warrant these expenditures and they could not be incurred merely for the sake of giving subscribers a good newspaper. The publisher has an eye to the advertising revenues when he makes expensive improvements to his paper.

Mr. Whiting, in his discussion, gives an illustration of his method of cost finding. He cites an issue of his twelve-page weekly paper, the total cost of which was $160.49. The receipts from legals, from locals and from subscriptions amounted to $99.88, or $60.61 less than the edition cost. The edition carried 380 inches of advertising, and Mr. Whiting figures that the display advertising must necessarily take care of this amount, because in no other way can it be taken care of. This idea Mr. Hotchkiss and others ridicule, and possibly they are right when they say it is all wrong, but I would like to have some reasonable argument or proof why the cost of a newspaper, after the money received from subscriptions and legal and other notices has been credited, should not be placed against the display advertising. In figuring the newspaper as a job, without taking into account the elements that go to make up the business of a newspaper, the theory that one inch of a newspaper should cost the same as every other inch may be good, but in practice this may need modification, at least at the selling end of the proposition.

A real estate man buys ten lots on a certain street at the uniform price of $500 a lot, total $5,000. Some of the lots are worth considerably more and some of them considerably less than the average price. One of the lots will only bring $300, three others will bring only $400 apiece, and the fifth will bring $500, at which prices he necessarily disposes of them, realizing $2,000 for five of the lots. The others, which constitute the choice of the property, on which he expects to make a profit, " stand " him $3,000. He figures that they cost him $600 a lot and must get his profit accordingly. Is his logic faulty, and if so, why?

Another homely illustration, taken at random, and possibly open to the charge that it is not a true analogy: A meat dealer buys a live beef. He pays 6 cents live weight. The hide is removed, the carcass is dressed, the tallow, etc., removed, the waste discarded and the marketable meat placed on the counter. Are not the waste and the losses sustained on some of the products added to the cost of the meat? And is it to be presumed, notwithstanding the fact that the work of preparing the beef has been uniform over the whole carcass, that the fine cuts of porterhouse cost the dealer no more than the round steak and the soup bones? Of course, he can figure any way he wants to, but there is one thing that stares him in the face, namely, that he must get enough from the fine cuts to give him a profit on the whole product, regardless of how he may get at his cost.

This may be readily admitted: That a page of advertising costs no more when it comes to composition, paper and press work than another page, but inasmuch as the publisher expects to receive three or four times as much for advertising as he does for subscriptions, and probably expends money in that proportion for the sake of making the paper a good advertising medium, why should not this fact be taken into consideration in figuring the cost of advertising space?

A suggestion for figuring newspaper costs, quite in harmony with Mr. Whiting's idea, presented to a cost congress a year or two ago by the writer, and referred to previously in this article, which has been accepted by at least some good newspaper men as logical, was as follows:

Figure the cost of the newspaper as you would a job. Divide the total cost by the total number of inches and you obtain the average cost per inch. Add the profit you think you ought to have, and arrive at the average selling price per inch. Ascertain how many inches at that price can be bought with the subscription receipts. Deducting this from the total, you will find how many inches remain for the advertising to pay for. Generally, it will be discovered that the subscription money will not begin to pay for the space occupied by reading matter, and the reading matter that is not paid for by the subscriptions naturally must be borne by the advertising. Add the price of the space occupied by reading matter, and not already taken care of by the subscription money to that of the space occupied by advertising, and divide the amount by the number of inches of advertising carried, and you will find at what price it will be necessary for you to sell your advertising per inch in order to make an average profit for the whole newspaper.

To illustrate: Suppose you publish a newspaper that contains 1,000 inches of space. Of this, 400 inches are devoted to advertising and 600 inches to reading matter. The total cost of production is $100, or 10 cents an inch. Your purpose is to make $25 on the edition, equivalent to 25 per cent on the cost price. Accordingly, the entire edition, subscriptions, advertising and all, should bring $125. This is equivalent to 12½ cents per inch. Receipts from circulation for this edition we will figure at $30, which will pay for 240 inches of space at 12½ cents per inch. Deducting the 240 inches of space taken care of by receipts from circulation, from the total of 1,000 inches, we find that 760 inches of space, 400 inches of advertising and 360 inches of reading matter, is yet to be paid for, all of which should bring 12½ cents per inch, or $95. Since there are but 400 inches of advertising, the same must bring 23¾ cents per inch in order that the publisher may get an average price of 12½ cents per inch for all the space in the paper. Now, whether you add the amount which the 360 inches of reading matter must on the average bring the publisher to the 400 inches of advertising space, and call that the cost of the advertising space, or whether you forget all about the space for reading matter which is carried in excess of space paid for by the receipts from the circulation, for the benefit, really, of the advertising department, there is no quarrel between us on that point; but, the 400 inches of advertising must yield at least 23¾ cents in order to bring an average price of 12½ cents an inch for the entire paper, which is a profit of 25 per cent on the cost price. Whether you figure your profit on the cost price, which many do and should not, or whether you figure it on the sale price, as everybody should, the proposition is the same. The even numbers used in this illustration are taken not because they represent any specific newspaper edition, but because they explain the theory in figures easily understood at a glance. In this hypothetical case I have not taken into account legals and local readers, as Mr. Whiting has done, and you will notice I have approached the matter from just a little different angle. However, the idea is about the same, namely, that the advertising columns must bear the burden after the circulation and incidentals have been applied to the cost of a newspaper.

If someone has a better way to suggest for finding what advertising should sell at, the writer would be greatly obliged to be informed, by sound, calm and courteous reasoning for the benefit of the craft, and not by jibes and brickbats, although the writer must confess that he is not in the least sensitive. But unless the discussion is calm, unimpassioned and fair, it will do nobody any good.

JENS K. GRONDAHL.

* * *

Cost and the Human Element

By B. B. Herbert

(Before Convention of Trade Press Association of the United States of America, September 20, 1913)

Civilized men through all the centuries have been concerned as to accomplishment, and anxious for gain. However, in the printing and publishing world, at least, little intelligent attention has been paid to cost, on the knowing and regulating of which all certainty as to gain or profit depends. The religionist has sung of the great payment "of all the cost I owe" but has been somewhat oblivious as to the cost in his daily occupation.

Many printers seem to have depended on Providence or chance to take care of their "overhead" costs. The science of cost has come, at last, for our business salvation. Cost finding has received the attention and study of the ablest and most experienced men in the callings of printing and publishing. Systems have been developed that are well nigh perfect. The discovery of the laws of cost has been the most beneficial to intelligent, honest business — insuring security and just profit — of any discovery of the century.

It has been found that laws and science of cost are founded in nature and pervade all the relations, activities and dealings of life. One of the scholars in the new science has philosophically and rightly declared: "Cost is a great law of Nature, that accounts for all losses and wastes and is reached through her laws of balance, production, depreciation (or decomposition), increase (or interest), co-operation and distribution." There is naught that exists in this living world without cost. No plant that grows but that has cost the preparation of the soil through the ages; no growing thing but that draws from the earth elements that must in some way be restored in order that the soil's fruitfulness or plant productiveness may be restored and Nature's balance be maintained. The wise husbandman counts the cost and makes full and liberal repayments by intelligent fertilization.

Man — the crowning work of creation — considering time and expediture required to reach maturity, with all the attendant risks, losses, accidents and cares — is the most costly of any known product. It is interesting, if not amusing, to know that the old and now obsolete meaning of the word was "rib," indicating, possibly, the origin of the costliness and preciousness of the better half of the human race.

While the human element, the man, is the first and the most necessary agency or device — the very handiwork of Divine power and wisdom — in all our production his cost has been largely ignored. Considering the risks, the wear on the delicate nerves, on the brain, and muscles, the liability to accident and disease, twelve per cent would not seem too much to allow on the cost of a human life, and a thousand dollars at twelve per cent, compounded annually, amounts to a million dollars in sixty years. A perfect man, equipped with knowledge and skill, merely as a delicate, perfected device, prepared to perform all required work skillfully, efficiently and profitably, costs many times one thousand dollars. In this viewpoint of dollars, many of our parents made a poor investment as to earning and increment. They would have been wiser to have loaned the money, or to have invested it in bank stock.

The cost of a printing press, the interest on the investment therein, at six per cent, and the wear and tear at ten per cent, are all taken into account, but the investments in oneself, in his associates in manufacturing or business, and in each and every employe, have been too little considered in any intelligent manner.

The new science calls attention to these as well as to all other legitimate and necessary expenditures and is establishing these as the just and required chargeable outlays of business. The human upkeep charges, that have been too often ranked as benevolences or charities, are being rightly provided for as charges on the running plant, by the way of allowances for safety devices, for means of preserving health, preventing injuries, keeping the workers in full vigor of body and mind, active, alert, vigorous, joyous, with all the senses and faculties at their best, and by insurance to meet losses by accidents, sickness, old age and death.

More perfect means will be provided against accidents as the more general application of the science increases. Indifference, ignorance and neglectfulness of all the cost of the human machine has been one of fruitful causes of failure to be remedied by scientific study.

It is not too much to believe and hope that through a thorough understanding of this science, showing all items of necessary cost and the earnings on the necessary outlay of capital and labor, and the systems of work and efficiency founded thereon, both employers and employes will be able amicably to solve many of the questions of labor and employment, wages and profits, and to remove the misunderstandings, frictions and discontents resulting in strikes, lockouts, sabotage or destruction of property, that now increase cost and cause the the loss of millions of dollars to wage earners, to employers, and to the public — the innocent bystanders who have no means of escape.

What has come to be called the "Omaha Spirit," recently manifested by friendliness, association and co-operation between organizations of employers and employes, at Omaha, Neb., is an earnest or token of what is to come throughout the whole industrial world, by thorough understanding of cost by all and its proper distribution.

The new system of understanding cost enables one to be honest to himself, to his business, to his employes, and to his customers. Legitimate cost, with just profits added, is recognized as the right of the producer by all honorable business men. It is related in the Great Book, that after ten centuries and more is still the best seller of the year, that King David, some four thousand years ago, refused to accept oxen and fuel without buying it for the full price, even for a burnt offering to the Lord without cost.

Commercial honor is no less today, it is hoped, than it was four thousand years ago. If such honor is lacking, the trade press has the great duty, resting upon every editor and publisher, to teach common honesty, for that which a man receives without returning an equivalent he steals or secures as a mendicant.

The ability to show cost does away with bickering betwen buyer and seller, eliminates the demand for and the seeming necessity at times, of price cutting. The fight for lower prices comes very largely from ignorance and fear of being cheated or not receiving full values. The showing of actual cost satisfies all honest, reasonable customers and those that are lacking in understanding and honesty, no one needs or wants, for they are sources of direct loss and destroyers of that valuable asset, goodwill, and are a weariness to the flesh. They wear out the human machine, as sand and dirt wear out the delicate bearings of the printing press.

Cost finding is the key to efficiency. It opens the door for the discovery of all leaks and waste, whether of time or material, all defects of machines and appliances, of arrangement and lighting, all the means for bodily comfort and health. The way is also opened for weeding out all the careless, indifferent, incompetent workmen or the bringing them up to the standards of efficiency. The way to remedy comes with the discovery of the defects, their location, extent and cause. It opens up the way to proper co-operation between the different departments and the workmen therein. Cost without reasonable efficiency is false cost, so that the two are interdependent in the carrying on of business successfully.

The cost science is doubly important to the members of the trade press, who are not only producers but also teachers of producers. One cannot teach until he understands, and to know how to apply the system, rules or science in one's own business better fits one for the intelligent, effective teaching of others.

Every editor and publisher of a trade paper should be a cost system evangelist. Mr. Ed. E. Sheasgreen, one of the ablest, most thorough scholars and teachers of this science, on which, as applied to profitable wages for labor, he has written a most valuable, practical book, recently wrote:

"The editor, whose publication goes to the individual, preaching only the cause of the individual, should be so well versed in this science that he may show the individual the absolute necessity of knowing the cost of the effort put forth for bettering society. The cost of producing the human machine, the cost value of its service to society, the cost of all when each individual human machine does not live according to the laws of Nature — the laws of the Supreme God.

"If the publication is out as a mouthpiece and guide for the home, the editor must get every member of the the home interested in these great questions.

"If in the interest of schools and churches, then the cost to these organizations in producing their product should be sought.

"The poor farmer has a crying need of the editors of the great agricultural papers to preach to him and for him, the science of cost finding, so that all farmers may know how to find, all in the same manner, the cost of their products and produce — to that end that the vast wastes of the present methods of producing from the land may be reduced to the minimum.

"Does the publication go to the shop man, the factory manager, to the mine operator? Then to those men should be given the same lessons in cost finding so that the friction and unsafe and unsound business methods that now prevail will be abandoned.

"To the labor organization man, to the man in government employ, these same laws apply, and their efforts should also be measured by them.

"Editors could in a very short time revolutionize the present false, base, unsafe, insane business methods of the world if they but had the proper knowledge of this new science."

The field and the opportunities for service, as described and set forth, seem full of promise. It certainly would be a grand work to bring all business and employment down to an intelligent, honorable basis, so that there would be no longer deceit, secretiveness, suspicion and misunderstandings among men in their dealings with one another.

* * *

A New Book for Employers and Employes

"The Profitable Wage" is the title of a new book which will be out about November 20. It will contain about 200 pages, will be cloth bound, and will sell for $2 in the United States and $2.50 in foreign countries.

The author is Ed. E. Sheasgreen, of Chicago, Ill.

To find the cost of producing labor, Mr. Sheasgreen has perfected three or four very simple forms which show, first, how to get the records of the amount of capital invested in each human machine, then the living expense of producing human machine labor (family expenses and all), including the expenses of the depreciation of the human machine according to occupations, on the capital invested, and the interest on the same, and then from another form the number of hours, tons or pieces that are produced by a worker in a month, which, when divided into the total expense, gives the cost of producing the labor for that one man.

When records from the many men of one occupation are had, with all the varying conditions that must come in where thousands work at the same thing, we then have the cost of that occupation for producing its labor.

When this information is known, by both the employe and the employer, a right basis can be arrived at that will allow all parties to meet and intelligently discuss and settle questions that ordinarily would be fought over. Great losses now existing in society would annually be saved. That this can be done has been conceded by business men, college professors, labor leaders and workers who have read parts of the original manuscript of this remarkable book.

Mr. Sheasgreen not only had seen service as an editor and employer for several years prior to his long experience in this new science, but he served for over fifteen years in the cab of a locomotive. Hence he has a big knowledge of both sides of the wage question. He served also as secretary for the last five months of the existence of the Ben Franklin Club of America, an organization of employing printers that studied business educational questions only, and he has recently been appointed associate editor of the National Printer-Journalist of Chicago. In addition to his duties as manager of the Standard Cost Finding Service Company, he will conduct for that publication a monthly department of education in this new science.

Science of cost finding is based on the natural law of distribution, and the law of distribution is the whole wage question pure and simple. This law lived up to intelligently will give us the cost of labor, then we can have a more equitable distribution of the products of labor.

One of the great world problems is the wage question. As the complexities of civilization increase, so the perplexities of the wage question increase.

How to have more of the wealth of the world get back to the producer has been the great problem that men for centuries have tried to answer. As each generation advanced in knowledge and understanding a little more of science crept into the way of doing things — into the way of conducting business.

Within the last few years the science of cost finding has been discovered and successfully applied to bring about scientific business management.

One of the best known students in the new science, Ed. E. Sheasgreen, has succeeded in applying its principles to the solving of the wage question. His findings have been set forth in "The Profitable Wage," to be issued this coming November.

The author has for years been installing cost finding systems in many large and small plants in different parts of the country. He knows plant conditions from the head office to the rear of the shop, probably better than other men, because he has made special studies of conditions found there.

In "The Profitable Wage," he argues that if it is possible to find the cost of a man-made product or machine — it is just as possible, and just as needful to find the cost of the human machine. If it is good business to know positively, accurately, the cost of a man-made machine, then by the same reasoning it is as good business to know the cost of producing labor to sell. In making his studies he has looked to Nature and been guided in his work by her five great laws of business. He reasons as follows:

"Cost — What is cost?

"Cost is not a law of man, but is that great law of Nature, that accounts for all losses and wastes, and is reached through her laws of balance, decomposition (depreciation), increase (interest), distribution, and co-operation.

"The law of balance is Nature's first great law of cost. Nature says that after the night must come the day, after the storm must come the calm — that where there is an outgo (expense) there must be a like income or there is a loss.

"The law of decomposition is that law of Nature that shows man how all matter changes its form back to its original state — the earth.

"The law of increase is Nature's law of interest.

"The law of co-operation. Nature shows how every bit of energy should move with exact precision, so that the most may be accomplished with the least possible effort.

"On the law of balance is based the science of accounting.

"On the law of distribution is based the science of cost finding.

"By the law of co-operation we arrive at the height of efficiency and perfection.

"It costs to maintain balance, to care for depreciation (through replacement funds), to properly distribute, and to have fullest co-operation.

"Whether man ever gave thought to the question or not, the cost line of all efforts has always existed, still exists, will ever exist."

He argues further that these laws are as applicable to finding the cost of producing labor, as to finding the cost of the products of labor. When these laws are applied to the wage question, wages will be placed on a real business basis. Then the same results will be had for labor as are now secured by business, when it applies these laws to finding the cost of the products of labor.

Everyone who has read books on the wage question, and on the reasons for the high cost of living, knows that authors generally are only reciting old facts in a new way. No practical, workable, easily understood plan for settling these questions has yet been advanced by any leader of thought.

The way to settle any question right is to first find its cost.

Work for the Executive Committee of the National Editorial Association

By E. H. Tomlinson, Daily Record, Morristown, N. J.

I feel that the National Editorial Association has a great and imperative duty to perform if it wishes to justify its continued existence; one which calls for the devoted endeavor and the united efforts and energies of the members of the executive committee.

Mr. Oswald, the new president, I know, realizes the work that is cut out for the Association, if it fulfills its mission, and it will be through no fault of his if we fail in what we are undertaking. Moreover, I do not hesitate to say that the Association has such an appeal for the support of the individual publishers and of the local and state associations as should win their earnest and instant attention, to be followed, I am sure, by their hearty and full co-operation.

There is, the most casual observer must know, a great and growing need for a strong national organization of the newspaper publishers—particularly of the owners of the "home papers," as I term the rural weeklies and small city dailies. Our rightful prosperity depends upon it, and our independence, if not our existence even, may suffer from lack of it.

If our Association does not measure up to this need it should give way to some organization which will. But it is the intention of the executive committee that it shall.

The time has come when our papers stand not only to gain greatly in prestige, power and profit by collective action, but even to lose from our present position without it.

The many attempts made last winter in various states and at Washington to pass measures restricting newspapers in the free publication of news and advertisements were generally unsuccessful and were not usually given serious attention by us. We were satisfied to refer to the bills as "fool" or "freak" legislation, but there is nothing to be gained by disguising the fact that the trend of the times is toward legislation affecting newspapers and curtailing what we have always alluded to as the "liberties of the press." I don't say it will, necessarily, be harmful, but some of it surely will be if we are not ready with organized opposition to give force and direction to our efforts. On the other hand, some legislation may prove actually helpful if we have an organization powerful enough to guide the legislators in framing their proposed acts.

Such an organization can also strengthen our prestige and power by working to relieve us of the stigmas which make legislation seem necessary to so many.

Financially we can benefit greatly by it. There is not a single newspaper, no matter how restricted its field, provided it is reasonably well filling that field, which is not entitled to a net income from foreign advertisers of fifty to two hundred per cent more than it now receives. It is not unreasonable to expect that they will get at least a good part of this increase in time, but one of the essentials in securing it is the assistance of such an organization as we are working to perfect. This is but one instance of the financial benefit. Another is to be found in educational work that will lead to the job departments conducted by most papers being more profitable adjuncts.

Without going into the possibilities of service in more detail, I hope I have made it clear that there is enough and plenty at stake to spur on the executive committee to do its best.

Agrees That N. E. A. Should Be More Representative

Chicago, September 11, 1913.

Mr. B. B. Herbert,
Editor National Printer-Journalist.

Dear Sir: Initiative, force and energy are qualities that should be possessed by the head of any organization. These essential attributes are fortunately combined in the person of the newly elected president of the National Editorial Association, Mr. J. Clyde Oswald.

At the first meeting of the present executive committee, held at Colorado Springs, Colo., following the convention of the National Editorial Association last June, Mr. Oswald outlined plans for building up the organization and increasing its membership that excited the interest and enlisted the support of every member of the committee.

I agree with Mr. Oswald in the opinion expressed by him that the most important work to be undertaken is that of making the National Editorial Association a more representative organization of newspaper men and publishers. It has the machinery and experience required to accomplish the work expected of an organization that is regarded as truly "national" in character, but it has not, in my opinion, sufficiently exploited the numerous advantages it has to offer to attract, as it should, people connected with the newspaper business from all parts of the United States. A vigorous campaign for new members will, therefore, be likely to be the first thing to engage the attention of the new executive committee.

With a large membership, paying annual dues, the National Editorial Association will be able to help and benefit its members in many ways and at a small expense to each individual. It could employ a competent and experienced man in New York and Chicago, where all of the big advertising agencies are located, and where the nation-wide publicity campaigns are originated and carried out, to go after a share of the business for publications conducted by members of the National Editorial Association. Through the co-operation of its members the man or men paid to secure advertising contracts can also act as purchasing agents to buy paper and printing house machinery and supplies at the lowest possible prices.

In the acquisition of a large number of new members, the National Editorial Association will also be sure of a larger attendance at its annual conventions. New ideas will be discussed at the meetings and more knowledge and benefit will be gained from the experiences related by others in the same business as ourselves.

In my opinion, at least three days of the annual convention of the National Editorial Association should be devoted exclusively to the discussions and business of interest to the organization. The entertainments and social functions, which are such delightful features of our annual reunions, will be all the more enjoyable if these are arranged to follow the practical and serious work of the convention. It would be a strong feature, and one that would attract a big attendance at the final meeting, if it could be arranged to have a newspaper man or writer of national fame, like Arthur Brisbane, William Allen White or Col. Henry Watterson, deliver an address at the last session of the next convention. A speech by one of these eminent journalists will be sure to interest the general public as well as the members of the N. E. A., and should be given in some large public hall, capable of accommodating a big audience.

As to the program for the next convention, arrangements will be made by the president and officers of the National Editorial Association, to prepare one that will be attractive, interesting and educational.

I am in hearty accord with the officers and with my fellow members of the executive committee, and join with them in their ambition to increase the membership of the National Editorial Association, broaden the scope of its work and to bring added benefits to each of its members.

Yours fraternally,

FRANK RODERUS.

New Features of 1914 Printing Exposition

Those who witnessed the National Printing & Advertising Exposition at the New Grand Central Palace in April, pronounced it a great success, but it has been announced by Mr. Harry Cochrane the producer of this Show, which will be held again in 1914, at the New Grand Central Palace, April 18th to 25th, that the 1914 Exposition will be wider in scope, and more of an actual Graphic Arts Exposition than was the 1913 Show.

The new features of special interest will be: Competitive exhibits of Printing, Lithographing, Advertising, and all other Allied Branches of the Graphic Arts. This feature has been determined upon not only as a logical supplement to the exhibits of machinery and materials, but as the strongest possible factor in stimulating nation-wide interest in this event. A large section of the New Grand Central Palace will be reserved for these exhibits, and only a nominal charge will be made for the space and equipment required.

The competitive exhibits will be grouped under the following headings: Photography: Design: Illustration: Color Work: Book Printing: Catalogue Making: Binding: Lithographing: Maps: Steel Plate and Photogravure Work: Advertising Composition: Advertising Novelty Exhibits.

These exhibits by the way, consist of walled-in booths 6 x 6 feet which will be alloted at the rate of $70. each, and includes in addition to the lighting of the building, a special drop light over each booth. Exhibits may be either as framed displays, or attached directly to the backgrounds or side walls.

The committee acting as jury of awards is as follows:—F. L. Parsons, Pres. N. Y. School of Fine and Applied Arts; G. B. Wadsworth, Pres. Eastern Division Associated Advertising Clubs of America; J. C. Oswald, American Printer; H. L. Johnson, Graphic Arts; W. Prescott, Inland Printer; W. B. Hait, Master Printer; C. F. Whitmarsh, Printing Art; Chas. G. McCoy, Printing Trade News; Chas. Paulus, Sec. Typothetae of New York, and Printers Board of Trade.

The paper section of this exhibit is another feature that is being developed, and an advisory committee has been chosen, which comprises some of the most representative men in the paper trade.

C. W. Deardon, Mgr. Strathmore Paper Co.; J. A. Briggs, Paper House of New England; D. E. Paris, Hampshire Paper Co.; Fritz Lindenmeyr, H. Lindenmeyr & Sons; Maxwell Howard, Aetna Paper Co.; G. E. Greene, Sec. Niagara Paper Co.; C. A. Hubbard, Bryant Paper Co.; T. N. Fairbanks, Japan Paper Co.; W. C. Nebling, L. DeJonge & Co.; J. Andrew, Stone & Andrew; P. W. Gridley, Crocker & McElwain; S. Robert Hart, U. S. Envelope Co.; W. C. Powers, Great Northern Paper Co.; Chas. Drury Jacobs, Chairman, Paper Committee.

The Boy and the Waste-Basket

By Roscoe E. Haynes, Fairport, N. Y.

BACK in the years when we were the official care-taker of the office waste-basket and its contents — when we burned the paper on a big stone pile back of the country shop where we "learned the trade"— the boss used to kick when he caught us spending our precious (?) time examining the kaleidescopic array of catalogues, folders, mailing cards, etc., which poured from the depths of that oft over-flowing receptacle.

But then, as now, we wanted to learn all we might of the art preservative — not only where the "e" and "a" boxes were and how to properly wash a press for "color"— but also how the other fellow did it in other shops and with different tools and machines. The thirst for knowledge was strong upon us, as it is indeed with most boys who are really anxious to learn all they can of the trade they have decided to make their life work, and in our youthful opinion the kicks of the boss were not founded on justice. Therefore, whenever the opportunity offered, we took advantage of the "printing exhibits" displayed in the over-gorged waste-basket and often preserved such specimens as appealed especially to our boyish tastes.

And, Mr. Printerman, when you see **your** apprentice up to similar tricks, don't be hasty in your criticism. Rather criticise yourself that, whereas you have taken upon yourself the duty of instructing and educating a printer worthy of the trade and of his teacher, yet you have failed to supply the youngster with that which he craves — i. e., new and artistic examples of typography and illustrated and descriptive literature of machinery and trade devices.

Can't you see that a lad who pours over the good things in your waste-basket is just the sort that will watch all sources of information and enlightenment along trade lines? How can he help but progress if he continues in such methods? Would it not be worth while to keep track of certain literature which you in superior judgment know would be good reading for the boy and lay it aside for him instead of throwing it away when it comes to hand? The lad will appreciate your thoughtfulness and courtesy even if he is "only a boy!"

And don't confine the work to the showing of samples of "art printing" either. Call his attention to the new mechanical devices and tools as they are placed on the market, when the advertising matter comes to your desk. He may not understand it all but he will get many ideas therefrom. When he asks questions (as he is sure to do) let someone take the time to explain them as well as possible. Help the boy learn all he may in such ways. It will pay mutual dividends some time.

No doubt you receive numerous "house organs" from machinery and supply dealers. Let the boy have a chance to read these from cover to cover and if possible arrange so that he may read at least one good trade magazine regularly. Some proprietors are so progressive that they keep the current numbers of several of the trade magazines in a rack in the workrooms for the use of the men. At the end of the year the volumes are bound and placed upon shelves for reference.

But whatever you may or may not be able to do in this direction, you may at least allow the youngster the privilege of gleaning whatever information and interesting facts he may from the depths of that capacious gormandizer of all classes of printing — the waste-basket.

The Law of Specific Circulation

By Henry S. Bunting, Publisher The Novelty News, Chicago

Among the many interesting papers read before the convention of the Federation of Trade Press Associations of the United States, in New York, September 19, none were more interesting nor instructive than that read by Mr. Henry S. Bunting, publisher of The Novelty News, Chicago.

Among other things he said:

"The selling power of publicity varies with the radius of the specific circulation of the medium.

"If the radius of specific circulation be great, the selling power will be great: if small, the selling power will be small.

"As a corollary of this law we may say that the waste of money in advertising varies with the radius of the general circulation of the medium.

"Let me give you an example of a trade paper of the highest conceivable specificity. The American Architect is typical, with its circulation of 4,200 — an insignificant circulation compared with that of many well advertised general publications. Of this 4,200, ninety per cent, they claim, is absolutely specific, and the specificity of the journal is so well guarded that nobody but architects, and certain high grade kinds of architects at that, could be induced to read it. It is said that 2,500 architects direct practically all the important construction in this country. These specify precisely what materials are to go into the buildings erected. What a powerful mouthpiece, therefore, this journal must be for the man who wishes to advertise special building material of any kind! The specificity of this journal is double-distilled. But how quickly it would lose its specificity did it crowd its pages with advertisements of automobiles, pianos, jewelry, household furniture, boots and shoes, hats, caps and gloves! Let media now specific in their publicity as well as in their circulation open their columns to the general advertiser, and they will only be making room for new journals, operated with the laws of specificity in mind — journals that, in the long run, will do the business.

"The selling power of publicity varies according as the buying units in which buyers buy are large units or small.

"The medium, therefore, which circulates to buyers using the largest buying units is the most valuable medium for the advertiser, no matter what its radius of circulation may be or what may be the geographical distribution of the medium.

"My law of specific circulation applies here with peculiar force. Mere greatness of numbers in general circulation are here no indication at all of selling power, any more than in the case of the journal represented by the circles on the chart. A journal with an exceedingly small circulation — a trade paper that circulates only to individuals who buy in the largest units — may have a selling power infinitely greater than another journal with a circulation a thousand times as great. Yet the advertiser will sometimes pay the exorbitant rate with cheerfulness to a medium of comparatively insignificant selling power, when were the really powerful medium of small but highly specific circulation to ask a similar rate — he would faint.

"I do not like to be invidious, but I could name cases in which advertisers have taken as a matter of course the million circulation rate and paid it, who, were they asked to pay one-twenty-fifth of that rate to certain journals that circulate only to the highest buying units — they would fall dead. This, remember, when the selling power of the specific journal was many, many times as high. The fact is that there is a great deal more of superstition in business than we are apt to imagine. Publicity in journals with vast general circulation is, in many cases, like praying for rain. People pray for rain, and the fact that no rain comes in answer to their prayers does not stop them at all from praying for rain on the next occasion. They would do better by considering the automatic and inevitable working out of the law of specific circulation, and the law of buying units when they are selecting the media in which to advertise.

"Therefore it should be regarded as the utmost duty and the best business policy of the publishers of trade or special journals to seek circulation only among readers who will add to the value of the journal as a medium. Every one such specific subscriber whose attention and trade are wanted by the advertisers in the journal is worth (to the publisher) one hundred subscribers who do not buy the goods advertised, or who buy only in insufficient quantities, and every one such subscriber is worth (to the advertiser) ten thousand subscribers who do not buy his goods at all. Let publishers see to it that every one of their readers is, if possible, a buyer of the goods the journal advertises. Then let publishers charge rates in just and equitable proportion to this excessively high value of their journal as an advertising medium. As the situation stands at present many highly specific journals are receiving for their space much less than their high selling power is actually worth to those who receive the benefits of their uses."

THE TRAVELING PRINT OF OLD

Oh, what has become of the Traveling Print
We knew in the days gone by,
Who asked for a job in a husky voice
Suggestive of "rock and rye"?

How well we remember our erstwhile guest
Who hung up his coat on the door,
And never had use for the towel or soap
Though he needed a cuspidor!

And we haven't forgotten the deal we made
When he traded a one-eared rule
For an old felt hat which was quite passe —
We still have the battered tool.

Though never again we may see that print,
Who wandered from place to place,
And showed the apprentices how to "jeff,"
And wore his hat at the case.

Yet, as memory prompts, we smile once more
As we think of the tales he told,
And still in our heart there's a tender spot
For that Traveling Print of Old.

ROSCOE E. HAYNES.

Fairport, N. Y.

"MONEY WELL SPENT."

Canfield, Ohio, February 14, 1913.

Dear Father Herbert: Here is my N. P. J. renewal. Money well spent. Continued success and many more years of useful life.

Cordially,
C. C. FOWLER.

NEWSPAPER CRITICISMS

Address all communications to O. Byron Copper, De Soto, Wis.

I GOT a letter some months ago from Messrs. Randall Bros., publishers of the News, Prairie City, Iowa, which I laid aside at the time, intending to give it an early personal reply, but, unfortunately, my time has been so closely and constantly occupied with other things, that days, weeks, and even months, have slipped by, one after the other, without my having been able to carry out the good intention. Thus has another flagstone been manufactured for that sordid region below.

The subject on which the letter touched, and that which I would have to say in answering it, must prove of so much interest to newspaper publishers generally, that today, on consideration of the matter, I have decided to make my remarks public, as an introduction to this installment of Newspaper Criticisms.

The gist of Brothers Randall's letter was to the effect that, in the aim to improve their publication and business they had come at length to the subscription problem — the problem of getting their list upon a cash-in-advance basis, and of keeping it there, as advocated in these columns of the National Printer-Journalist of July and September, 1911, and a request for further information and advice.

Regretably, I have no form letters on hand, as used by myself when I put my own paper on a pay-in-advance-stop-at-time-of-expiration basis, since that has been two years ago and more; but the making of these letters is an easy matter, just what they may contain being decided not only by general conditions, but by the conditions peculiar to each individual case.

For instance, in my own case, I took the need of a new press as an excuse for the plan's inauguration. However, there are abundant reasons for the adoption of the plan, on general principles, without the necessity of conjuring up special reasons.

A publisher about to adopt the cash-in-advance system, should compose a polite circular letter, presenting a good, sound argument for the innovation (points for which will occur readily enough to any thoughtful newspaper man) and mail a copy of it to each of his delinquents, together with subscription blank and self-addressed envelope for reply and remittance.

A fortnight afterward, or possibly in less time, it is an excellent plan, I believe, to send out a second letter to all from whom a response has not been received, calling the delinquent's attention to the fact that as yet he has not been heard from and again urging him to pay up all arrearages and come back in on the list of the "saved and sainted," as poor "Bill Barlow" used to call it. This letter No. 2 should be stronger, if anything, than the first. If I remember rightly, when I was adopting the plan, I followed letter No. 2 up with a third letter, briefer but strictly to the point, and then after a reasonable lapse of time I employed a solicitor to call personally, so far as was practicable, upon every one of the delinquents who had thus far withstood my earnest appeals by post.

Of course, during the meantime, it must be remembered, the new system was featured up strongly in the news columns of the paper, from week to week, so that all readers might learn how the new plan would be made to work. Every phase of the innovation was explicitly exploited and a list of those who responded was appended, the type being help up and the names added thereto, from week to week, as new remittances were received. Then, when the list was straightened up as well as possible, it was announced through the paper that the new cash-in-advance-stop-when-up plan would be in effect on and after the first of the succeeding month.

At first I followed the plan of checking up my list on or about the middle of each month and mailing postals out to all subscribers whose subscriptions expired during the month, calling their attention to the fact and cordially inviting them to renew.

But some months ago I discontinued this practice, for the reason that, in spite of the fact that the card itself assured the recipient that it was not a "dun," else it could not be transmitted through the mails, many rural readers insisted upon treating it as such and proclaiming more or less offense at its receipt. Nor was this all. Other subscribers complained that they never received our notices, and, as there was no way of proving that we had sent them such a notice, it placed the office in an embarrassing position. Therefore, I simply announced through the paper that no more notices of expiration would be sent to subscribers and by keeping my readers reminded from time to time to keep acquainted with the figures on their address-labels, monthly remittances on subscription account are about, if not entirely, as prompt and liberal as formerly under the notice plan.

In conclusion, I want to say that, after two years' strict adherence to the innovation, I deem it the only safe and sane system for the subscription department of a newspaper business. Where an adequate price is put upon the product, it makes the subscription department of a newspaper a paying department. It makes the settling of current bills easier, because it means a steady income of cash, not periodical nor spasmodical, as under the old plan, but constant and regular.

But it is a matter of importance that, while the maintaining of a healthy circulation for a good newspaper is not more difficult under the pay-in-advance-stop-at-time-of-expiration system, still it is somewhat of an uphill undertaking where competing newspapers work under the old never-stop-pay-when-you-please plan (as they all do in my own field) and to increase a circulation under such a state of affairs requires constant attention to business, including ceaseless personal solicitation.

* * *

Kiron, Iowa, June 11, 1913.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: I have just read your fine boost in the current issue of the National Printer-Journalist, and I desire to express to you my sincere appreciation of the splendid boost you have given and the suggestions made.

For your personal edification, in case it should be of any interest to you to follow up publications to note what they are doing to progress, I send you the last few issues, taking a couple from the files so as to give you an idea of how this shows up flat.

The last thing I did after changing from print to book paper was to buy the best news ink at an advance of three cents a pound, and it has pleased me a dollar's worth a minute.

I certainly have them going here and wherever the paper is read, judging from what I am being told and the letters being shown me.

A few weeks ago I made a three-day trip with a farmer and a silo manufacturer and spread on that in two issues.

Please note the road grading contest and result of it. I attended personally.

Also note the road articles and rule suggestions. I personally went to the county seat to argue our case.

Likewise note the death of C. E. Engberg and funeral follow-up, which partially meets your objection along that line, but I appreciate suggestions, because I aim to make this the star publication in a town of this size and welcome any ideas that will improve on my obsolete knowledge.

I sometimes skimp a headline because the type is short, but aim as a rule to make them symmetrical.

Having too much to do makes one careless, though.

You will notice that I have reduced the first page advertisements to two and a line across, which does not mar the page as much as I thought it would. The advertiser demanded such a line and I could not bring myself to put it on the editorial page, and the other two were at the time carrying two quarters the length of the page, so there was no other page to put it on. I am limiting the first page advertisements to what you see now.

When I get my family here in the near future I shall make a feature of limericks and nonsense to the extent of half a column a week, as my wife and daughter can do it to perfection, and add some home features like new recipes and fancy work dope.

The subscription list is averaging a gain of ten a month without solicitation.

Again thanking you for your kinds words, I am,

Sincerely yours,
DAVID PHILLIPS.

These later copies of this wide-awake little sheet from Kiron show that Editor Phillips' wit, enthusiasm, hustle and great capacity for work have not diminished perceptibly since I looked at the paper first and wrote about it in last June's National Printer-Journalist, but, if anything, it has increased a shade. The News is sparkling in its every column with bright, enticing, irresistible paragraphs on news subjects, on current topics, on pure nonsense. And the advertising patronage is liberal, showing that the improvements that have been inaugurated are steps in the right direction and are being appreciated by the local patrons. The displayed ads, like Poe's persistent raven, "still are sitting" on the front page, and the little witty squibs at either side of the heading are still borderless, but the heads are better, I believe, and the print and typography are much improved, the better grade of ink and stock telling as no cheaper materials can. Some folks even in the same calling sometimes wonder what a live editor is — what it is that distinguishes a really live newspaper from one who is in a rut — and by taking note of the work of this David Phillips (not David Graham Phillips, but one almost as clever with a pen) as hinted at in his letter quoted above, they may have all their questioning satisfied. Here is a truly live editor. His work does not consist alone in the performance of the routine work of the print-shop, it does not consist alone in writing copy, gleaning news, setting type, cussing a gasoline engine, or running off a printed job — but it means making news, taking an interest in one's town — in one's field, if you please — taking an interest in the welfare of the folks who dwell in that town and field, and personally boosting their interests whenever the opportunity offers. Such a man will seldom have the least difficulty in finding stuff with which to fill his chases, and, while, if not blessed with a superabundance of diplomacy, he may make a lot of enemies, he will make friends, too, who will stand by him through thick and thin.

* * *

Worth, Mo., June 7, 1913.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: Under separate cover I am mailing you copy of The Worth Tribune for May 28, in which there is from one man a four-page ad that I desire to have criticised, and as to what kind of equipment a paper must have — extra good or what — in a town of less than 200, as is this one, to put up this ad and the others in this issue, between Monday morning to Wednesday evening. And please "tear it out" in criticising.

Sincerely yours,
D. C. SIMONS.

The foregoing letter is from the same man and the same newspaper of which I was moved to write favorably in last month's installment of this department. Half of the wonderful four-page advertisement is exhibited herewith as No. 1, and shows how well the mechanical work was done. The other half of the big ad was set in the shape of two separate page-ads, and besides these the Tribune of this week carried still another full-page ad and a number of smaller ones which in ordinary country print-shops would be considered good sized ads. The pages of the Worth Tribune nicely demonstrate the importance and advantage of a liberal equipment of a single type family, and in other respects, too, this is really a wonderful newspaper specimen. To imagine such a live, large, prosperous, progressive, newsy paper emanating from a little country hamlet of but 200 souls, seems almost improbable; yet here is the paper and the editor's testimony to substantiate the old claim that "truth is stranger than fiction." There's a reason, of course, why Worth, a town of only 200 people, should enjoy the distinction of possessing a newspaper live enough, large enough (six-column quarto regularly), prosperous, progressive and newsy enough to do credit to a town of 2,000 population. And just what that reason really is is of sufficient importance and interest to provoke inquiry. In the first place the newspaper man himself must be alive and up-to-date, else there could be no live, up-to-date newspaper; and the newspaper man's fellow townsmen must be alive and up-to-date, too — alive to the advantages of having a good newspaper in their town and up-to-date in the matter of publicity — else even though the newpaper man's ability were ever so great, there could hardly be the fine publication coming from a little town as this one of D. C. Simons's as coming from Worth, Mo. Now, by saying that the Tribune is a remarkable newspaper, I do not mean to intimate that it is perfect. A thing is often praiseworthy that is yet far from the point of perfection. The Tribune is all that I have implied above, has an excellent news service, is good in typography, etc., but there is often an evidence of too much work for the force to creditably handle. For instance, in this copy with the huge ad, there are bad blunders in the headlines, numerous typographical errors, and other evidences that the paper went to press under rushing circumstances, in which proofs were slighted, a condition often unavoidable in small offices, but nevertheless deplorable. And just before closing with this review, there is one other feature in this big advertisement (Exhibit 1) to which I particularly wish to call the reader's attention, and that is the advertisers' strict guarantee of all the price quotations in their ad. "We want you to know," say these advertisers, "that these prices are genuine . . . and not 'typographical errors.'" In such an ad, containing such a guarantee, the proofreader ought to feel double responsibility.

No. 1

✣ ✣ ✣

Eagle River, Wis., July 26, 1913.

O. Byron Copper, De Soto, Wis.

Dear Sir: I am mailing you a copy of this week's Review that I would be glad to have you give a written criticism on. I am not able enough in the printing art, that I would relish having my mistakes publicly commented on. If you will kindly give me a few pointers, will appreciate it.

Yours truly,
VERNE RICHARDS.

The Eagle River, Wis., Review is published by Charles Richards & Son, my correspondent, whose name is recorded above, evidently being the junior member of the firm. Brother Richards may feel at first as though my thus making public his personal letter to me, and likewise this public comment that is to follow, is a gross abuse of his confidence; but upon second thought I trust he will appreciate my position in the matter. I am employed and paid by the publishers of the National Printer-Journalist to write this department each month, as a matter of extending such advice and assistance to fellow members of the calling as my humble abilities may permit, but I have not the time, even if I had the inclination and were paid for it, to offer such advice and assistance through personal correspondence. Some day I hope to be able to establish such a correspondence bureau of help to printers, but until that time, if I am of any benefit to my fraters in newspaper-making, it must be confined to the opportunity afforded through these columns of this excellent trade journal. I wish to assure my correspondent, too, ere I begin with the review of his specimen, that it is never my aim in my work here to ridicule a contributor solely for the sake of displaying imagined wit, in other words, I never desire to make my paragraphs in these columns funny at the expense of those who patronize this department, hence no one need hesitate to contribute specimens for review under the fear of being made idle fun of. It should be borne in mind that it is not alone the work of the novice in this intricate vocation of newspaper-making that is full of faulty defects, but that the work of many of those who consider themselves master printers is often quite as faulty. With this understanding, I think it entirely safe to proceed: Brother Richards' sheet is a six-column quarto, the front and back pages being the only two that are produced in the home office. Under this limit of space, it would be unfair to censure the ads on the first page, perhaps, although I observe that the advertising patronage of the Review is not so great but that all displayed spaces could be nicely and easily arranged exclusively on the back page. This would leave the front page to be made up exclusively of pure reading matter, in which case a higher degree of perfection could readily be attained. The news-service offered by this sheet is creditable, as is also all editorial work, and while the ad compositor has some conception of the art, he will find great improvement growing out of a careful and studious scrutiny of the trades journals and all specimens of high grade printing, such as that being constantly sent out by the great type manufactories. One peculiar error in evidence in this specimen is the placing of a fancy brass news dash before each article, even though such article may be at top of column. Brass dashes should be placed only at the ends of articles, rather than at the beginning, which is the rule in composition; but in making up, the only office of the dash is to separate one article from another following in the same column. Where a story ends with the end of a column, no dash is required, nor is one required at the top of a

column where a new story begins. In making up a newspaper page it is well to arrange all ads to the right-hand side, and I favor and recommend the style followed generally by the great newspapers of this country, which consists simply of placing the largest ad on the page in the lower right-hand corner, and building up above and at the side of this with the other ads, arranged in accordance to size, with the smaller ads on top, as illustrated perfectly in the page of my own paper shown herewith as Exhibit 2. How the first page of the Review might be made more attractive by clearing it of all displayed ads is illustrated by the reproduction of a front page of my own paper in Exhibit No. 3.

✢ ✢ ✢

A critic, especially one who has long been retained in the work, as, for instance, myself for eleven long years on this journal, is in danger of becoming imbued with the idea that he is IT, in caps. I have always fought against such a self-exalting opinion, and have had to administer many a course of the proper mental suggestions to keep my conceit subdued. A critic is very apt to forget that his own work is often open to criticism; but one who desires to improve will find improvement slow indeed unless attended by ceaseless personal inspection of whatever the product may be. But the principal point which I wish to bring out is that a critic's work is inevitably criticised by the very folks whose work he is elected to criticise. And in the following esteemed letter from a well-known contributor to this department, may be seen a criticism so kindly and honest that it moves me to the deepest appreciation, because to be "fair, helpful and encouraging to printers" who communicate with me has even been my only aim.

Covington, Tenn., June 30, 1913.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: In a separate wrapper I send you a copy of the Covington Leader, with a recent ad-creation of mine. It has been some time since I have sent in anything for your department — in fact, had received such favorable criticisms at your hands in the National Printer-Journalist some time back that I had almost allowed myself to become contented, but somehow it struck me that you might "take a shot" at this "stunt"; and knowing that your criticisms are always fair, helpful and encourage the printer in his work, I send it, even if you see fit to "hand me a lemon." One thing that makes the criticisms in the National Printer-Journalist interesting is that they are always lengthy enough to point out the defects and explain how the composition of type work can be improved, and these are the things the printer wants to know.

With best regards, I am,

Yours truly,
TOM McGREGOR.

✢ ✢ ✢

To continue with the thought introduced during the introduction of the above letter, it must be remembered that, while the common use and understanding of the word implies that criticism of a thing means to examine with a view to judge with respect to faults, only, the true sense of the term, and the true duty of the critic, is to notice beauties as well as blemishes. As a rule in this true sense only has it been possible, or proper, for me to have said that I have criticised the work of Tom McGregor. For in Tom McGregor's work there is always more of beauty than of blemish to see. Or, possibly I should have said, to be more correct, that there is always more of the wonderful, the unusual and extraordinary in Tom McGregor's advertisement composition than any other quality. Now, the average employer has a tendency to fear this sort of composition, because it savors of much consumption of time, as a general thing; but this is true only because the average compositor fails to think accurately enough before he acts. The average printer, knowing the fearfulness with which his employer views his conduct while on duty, lest some of that very valuable stuff called time be wasted (or "killed," is the more modern appellation), at once not only assumes the appearance of getting busy, throwing up the type, regardless of, or at best only vaguely conscious of, what the result is going to be. Naturally many mistakes grow out of such by-guess-and-by-rush methods, and the whole job has frequently to be done over because of some consequent miscalculation, or lack of calculation. The result is a greater consumption — a greater waste — of valuable time, than if the compositor had coolly studied his copy and layout before he

No. 4

touched a type. I'll wager that Tom McGregor, of Covington, Tenn., is a rapid compositor, and I'll wager, too, that he never has such extraordinary advertisement conceptions as this one represented in Exhibit No. 4, as a sudden inspiration while madly assembling the various integral parts; but, on the contrary, I dare say, like a good architect, he has his structure carefully planned out ere he makes a move toward its construction. Thus the result of his labor is extraordinary without necessarily being extravagant, and the great value of this quality in an ad is that it will attract attention more readily than ads of an ordinary or common design. Notwithstanding the objections of authorities on advertising, as for instance Edward T. Page of the Page-Davis school, and others, who strongly disapprove of much heavy rule work in newspaper advertisements, I pronounce this specimen of Brother McGregor's as an excellent example of publicity literature — excellent, too, it must be understood, more in point of its typography than in point of its wording, for it is only with respect to the former quality that I have given it close inspection. Here is an ad so striking in its design that there can be no doubt as to its chances of being seen and read, and that surely is one of the first essentials in any advertisement, for of what value is an ad if people do not read it?

* * *

"Just to keep in touch with you," says Brother A. B. Wood of the Gering Courier, Gering, Neb., by way of explaining the receipt by me of a copy of the Courier and also a copy of the brother's "latest venture," as he terms the Scottsbluff Star-Herald, a fine, prosperous paper which he recently acquired control of. The Courier is apparently just as fine as ever, well edited, well patronized and well treated in the mechanical departments, as the accompanying reproduction of a half-page ad will demonstrate. This ad is creditably done, and its most striking feature is that it was run in a half-page space crosswise of the page. The new acquisition, The Star-Herald, is a mighty thrifty looking proposition, this copy consisting of ten home-printed pages, several of which were entirely given over to advertisers' use. The front page of this publication is made up pretty creditably, the workman having appreciated good balance of head-masses and cleanness of display. One bad feature, however, which can be remedied in a jiffy, is the fact that the title-line has slipped to one side of the page, making it appear as if all the quads were on the other side. H. J. Wisner is the managing editor of this progressive sheet, and he is evidently no less a wit than Mr. Wood himself, whose clever paragraphing has

The FREE Sewing Machine

MR. WILLIAM C. FREE

PRESIDENT of the FREE SEWING MACHINE COMPANY, CHICAGO, will some day have a marble bust or an heroic figure occupying a niche in the hall of fame if the voice of the people is heard.

He is indeed a philanthropist who lightens the labors of the masses and thus contribute not only to the purse but to the physical and mental welfare of humanity. The FREE Sewing Machine is an inovation, it is no more like the ordinary machine, than is an electric light to a candle. What Mr. Free will do for the people through his agents, who sell the FREE machine is best told in Mr. Free's own words. Mr. Free writes a booklet on the subject, which booklet you may have from us for the asking. We cannot publish his whole story here, but we quote from the booklet as follows

Should you through accident in moving or otherwise, break any part of or the whole machine, I will furnish the part or an entire new machine gratis. Should you break a belt or should the belt wear out, or should you break any attachment I will replace these parts absolutely without cost, in other words, in the FREE Sewing Machine, you always have a Sewing Machine that is right and in perfect condition, irrespective of the use abuse or accident.

Now I do not know how I can express my honesty of purpose and my faith in the FREE Sewing Machine any better than by fully warranting it.
If you knew as much about sewing machines as I do, you would know positively that the FREE Sewing Machine is the one that you really and truly ought to buy.
I do not ask you to buy it but I do ask you to see it because the FREE machine will sell itself

$40.00 On Easy Terms

And now good people, remember that as agents for the FREE Sewing Machine we will back up every statement made by Mr. Free and Mr. Free will back up every statement made by us. Respectfully

been fully lauded before in these criticisms of mine. Brother Wisner heads his editorial squibs as "Job Lots," and just to show you fellows what clever stuff they are made of, I will quote a sample or two, as follows:

> "We wouldn't mention any names — but Tom Bucy sure has some hat."
>
> "If the fellow over at Gering, who recently addressed a letter to us as 'Rev. H. J. Wisner,' was having a little fun at our expense, why, he had it all right."

Besides its liberal number of linotyped columns of first rate reading matter, its able editing, its creditable print, etc., the Scottsbluff Star-Herald is remarkable for its high grade typography, as in evidence in its displayed advertisements, a full page specimen of which is presented herewith as Exhibit No. 6. And that there are other pretty ads in this sheet I prove by showing a few more, clipped almost at random, Exhibits 7, 8, 9 and 10.

✣ ✣ ✣

R. D. Rogers, foreman of the Egan Express, Egan, S. D., favors me with a copy of what, in the main, is a very creditable advertisement for one of his local firms, namely, Messrs. Hendrickson & Underwood, on which he invites criticism. This specimen is shown as Exhibit No. 11. As intimated, in the main, this is a very pleasing example. Its chief merits are its strength of display, neat layout, excellent type faces and border and tasty treatment of details. With a few deft touches here and there, to my notion, this ad could have been made practically faultless: To begin with, the matter in the first panel at the top is wrongly spaced. The two couplets within the boxes at either end of this panel ought to have occupied a more central position within the box, with less than half as much space between the two lines. And the main signature line ought to have had a trifle more space above it. The next glaring error is in the extremely wide spacing between words in the main display line, "Sale of White Goods." There are two ways of overcoming such a defect: First, by letter-spacing, which, despite the undesirability of such treatment of a condensed face, would look much more pleasing than does such extremely wide spacing between words. Or, a word might have been thought of with which to fill the line and thus avoid letter-spacing. In large cities the ad-writers spend much time making their display lines fit the measure, and, if in the smaller places the authors of the ads refuse to do as much, then it is usually up to the compositor to make the lines fit. The same criticism will apply to the date line, which, however, is not so bad in respect to over-spacing as the first line mentioned. I wish to call attention, nevertheless, to the fact that it was not necessary to the beauty of effect to make this date line fill the measure. A shorter line centered here would have given quite as pleasing a result, although, of course, it was not wrong to make it a full line, which could have been accomplished with more pleasing results, however, by inserting from two- to four-point spaces between each letter. Next, considering the matter comprising the price lists in the two outer of the three panels below the date line, here, also, it would have been wise to have added enough matter to each item to make two lines of it, as for instance, "at this special white goods sale," or something like that. Still, I do not mean to imply that these panels had to be filled up; on the contrary, a panel is often far more effective, if lined on the interior with a wide margin of white space, the type matter occupying only a small portion in the center; and in fact, in an ad of mine, I would prefer the panels fixed that way, wherever practicable to do so. Mr. Rogers' rule work is neatly done and the excellent print on this advertisement adds materially to its beauty.

SATURDAY, AUG. 23, 1913

HENDRICKSON & UNDERWOOD

No. 11

✣ ✣ ✣

Garland, Texas, August 28, 1913.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: I'm enclosing you, under separate cover, copy of our annual "Trade Soliciting" paper — otherwise our regular edition containing the fall invitation of our merchants.

This ad was laid out, copy solicited, set, and put on the press by one man in exactly fifteen hours. For rush work I think it not badly balanced. The only local objection is the failure of about a dozen people to get in. They were too slow.

Any criticism you may give will be taken in good part.

Fraternally,
W. A. HOLFORD, Publisher.

Garland has a population of 1,000, sixteen miles from Dallas.

Brother Holford's paper, the Garland News, is one of these great, cumbersome eight-column quartos, that make a man's arms ache to examine — there's but one way to do it with ease and that's to wheel your chair to the center of the room, move all furniture back to the four walls, spread the News out upon the floor and from your chair gaze at it as best you can. If your eyes are a little bad, I would suggest a reading glass. And Brother Holford is one of these publishers who believes that folks won't read advertisements in a newspaper unless those ads are forced upon their attention by making each of them a veritable island within a sea of pure reading matter, and spreading them over the front page, and this method of makeup is always carried out so far as possible in the News. An effort is always made to have the ads strong and forceful in display and so placed about the page to balance up — happily this Texan editor has one good idea — "balance." An eight-column paper is ponderous enough, even if only a folio, but the News is regularly a quarto publication, and for this very commendable "Fall-Trade-Soliciting" number four extra pages were added to the regular edition. The big ad (a double-pager) to which I suppose Brother Holford meant to refer in the foregoing letter, is reproduced as Exhibit 12. It shows the bold, daring style of typography employed and represents an idea worth remembering by other publishers and trying out at such times as the scheme seems practicable. It proves that the newsmaker at Garland is alive, and more than that, that he is backed up by a live bunch of associate business men. Such a job of work as the setting of such an ad I would consider a good two days' work, so the man who set it can pat himself on the back as having done well. But it was a very sad mistake, that insertion of the lower half-tone upside down — I see the idea, of course, but consider it very poor.

The Progressive Harness and Shoe Shop

GARLAND INVITES YOU

To market your cotton and do your fall trading here and assures you of her full intention to see that you get a square deal in every transaction. Our town is the acknowledged leading cotton market of this section. This distinction she has held many years. This season we will have more local buyers and more spinners' buyers than ever before. This insures the highest market price — and frequently above the market price.

YOU WILL MAKE NO MISTAKE — IN FACT, YOU WILL MAKE MONEY IN THE LONG RUN — BY SELLING YOUR COTTON IN GARLAND!

OUR MERCHANTS

Have put in larger and better stocks than ever before, and will be in position to supply your every want at prices to compete with any town anywhere. They are experienced buyers, and selling in large quantities enables them to sell at a small profit. They treat you right because they want your future business and are sensible of the fact that a "skinned" customer seldom comes back. Their customers are the year-to-year come-back kind. This is evidence sufficient to convince the skeptical that they are honest in their dealings and make the right prices.

OUR BANKS

Have capital and connections which enables them to furnish all the money necessary for the prompt handling of the South's greatest crop. They are courteous and accommodating, and have the financial and business ability to take care of your needs.

OUR GINS

Garland has four of the best equipped and most accommodating gins in the state. They run day and night when necessary to handle the cotton and can be relied upon to give the best of service.

REST ROOM

Garland has just completed a Ladies' Rest Room for the comfort and convenience of visiting ladies and children, where they are welcome at all times. It is furnished for their exclusive use, and they are urged to use it.

FINALLY

Every citizen of Garland wants you to come and feel at home, and every one of us will do our best to make you "feel at home" and enjoy yourself.

OTHER MARKETS

We will also have a live corn market, and will buy, sell or trade you a horse, mule, wagon, buggy, pocket knife, or anything else. Garland is an all round town and can supply your every want.

RELIABILITY

The News appreciates the fact that several thousand people read its columns each week, and for this reason we are exceedingly careful as to the

A $10 SUIT SALE!

Now is the only time you will have to get any suit in our store for $10. We need the money and need the room. All expensive Cravenettes, Mohairs and Styleplus suits, worth $15 to $25, in this sale at $10.

Come early while we have your fit. Some of these bargain clothes are mid-summer goods, others are early fall weights and some of them are heavy enough for winter. It will be worth your while to come for miles and miles to this big clothing sale. Ask for premium tickets when you trade for cash at the Supply Co. This is the greatest clothes-buying and money-saving proposition you have ever had before you and we want you to take advantage of it.

White Slippers at $1.

Here's a white footwear opportunity. We have hundreds and hundreds of ladies', misses' and children's white oxfords, pumps and slippers to close out cheap — less than wholesale cost, but we need the money and need the room. Fresh new clean styles now on sale during the remainder of the summer at the low price of only . . . $1.00

Pretty Dollar Slippers.

We just want you to see our dollar footwear for the ladies and children. We have gone through the shoe stock this week and put on the dollar counter a great collection of oxfords, pumps, sandals and other low cuts to close out before fall shoes arrive. Fortunately some of the first-style models are in this collection and you get your choice at $1.00

Five-Cent Dress Goods.

The 9c sale is over and we had a number of good things left in lawns, voiles, ginghams, white goods, etc. We can't afford to carry over to another season, so we are going to make quick work of them by offering the entire lot at, per yard 5c

Five-Cent Stocking Sale.

We have about twenty-five dozen stockings for little and big children in white, black and tan; some of them are worth up to 25c; in this sale they are going at only 5c

Lace and Embroidery Sale.

Come to the Supply Co. and see what good lace and embroidery we are selling cheap. You get pick from a rich collection for only . . . 5c

Cheap Pants.

Too many pants in summer weights bring the price down. Come and let us fit you in a pair of seasonable trousers at one-third off the regular price. This means less than factory cost. Note prices below

$1 50 pants in summer weights	$1 00
$2.00 pants in summer weights	1.35
$3.00 pants in summer weights	2.00
$4.00 pants in summer weights	2.65
$6.00 pants in summer weights	4.00

We need the money and need the room for fall goods which are now being shipped from the mills.

Wash Skirts at 50c.

A few dozen wash skirts left to close out at a very low price to effect a quick clearance. Some of them are from $1 to $2.50. Come and take any in the lot at 50c

Men's and Boys' Slippers $1.50.

When you come to the Supply Co. don't forget to see those good leather low cut shoes for men and boys we are closing out at $1.50

The Covington Supply Company

No. 13

By way of exemplifying the fact that Tom McGregor also sets some very clean, sane and simple ads for the Coving Supply Company, of Covington, Tenn., I am reproducing a full page specimen as Exhibit No. 13. There's probably a superfluous underscore or two in evidence, but otherwise this ad is all right.

EDITOR-PROMOTER OF CLEAN-UP, PAINT-UP CAMPAIGN

Editor Allen W .Clark, of the American Paint and Oil Dealer, St. Louis, has had a wonderful success in promoting "Clean-Up and Paint-Up" campaigns throughout the country. Many local publishers have had satisfactory financial returns as a result of following the plans outlined by Editor Clark.

In May, 1912, the idea was publicly suggested to the whole American paint trade. The question was asked:

"Why not arouse and organize into one national movement the 'clean up' spirit that stirs in every normal human being every spring, and that, with a little local organization, has manifested itself occasionally — but always effectively and creditably — in the various community campaigns that have been described in the newspapers and magazines, and especially in the paint trade journals?"

The dealers in paints, and the painters, started several such campaigns, and were active in co-operating with women's clubs, civic organizations, and city and school officials, and local publishers, etc., who have launched clean-up campaigns. It was contended that the paint man is the natural and proper advocate and organizer of the movement for homes and towns beautiful, for cleanliness, thrift and civic pride — the three graces of the paint gospel.

The idea was instantly and enthusiastically accepted by representative men throughout all the branches of the paint and varnish and allied trades; and more — it was greeted with the warmest expressions of approval and gratification by the leaders in community betterment efforts, by officials in the various national and state and city civic organizations, by school and health, and food and drug officials, and by mayors, and publishers, and, of course, by paint dealers, and painters everywhere.

In a statement recently made Mr. Clark said:

"The primary object of the 'Clean Up and Paint Up' campaign is to establish that five-word slogan everywhere; to create in the public mind that sense of intelligent association that will realize the inadequacy of the first two words and that sub-consciously will link together inseparably the five words in any mind informed on sanitation, conservation and beautification.

"The methods through which this is to be achieved are comprised in an active and thorough national campaign from season to season and year to year, for the organization of local campaigns 'For Homes and Towns Beautiful'— under whatever name or local auspices may be chosen for the movement.

"The meaning of the campaign and the motives of its supporters may be various and manifold, according to circumstances and personal temperament. Let us see if all these motives are proper and practical and laudable; and whether they are hurtful to any, or helpful to every devotee of the community improvement cause, to every citizen — and to every child that is growing up into the better conditions for the saner living and the higher aspirations of the new civilization toward which the efforts of practical organized altruism are focalized today as never before in the world's history.

"This campaign will bring some personal credit — yes, and some business rewards — to paint men and newspaper men, and to the officials of states and towns and civic and commercial and other organizations — who lead, and to those that follow with their helpfulness in starting these campaigns and making them successful.

"The campaign will bring financial benefit to every houseowner who cleans and paints his property — protecting it against deterioration and increasing its value as a home for himself or others by making it sanitary and presentable. Such conservation and increase of value of that large portion of the national wealth represented in the paintable, but sparsely painted, property within the United States, as would result in such campaigns waged everywhere from year to year, would stop a present national loss amounting to millions everywhere.

"And that approaches the truly 'altruistic' motive. For those interested in social service not only recognize all these as proper and laudable motives, but they also see in them the sound basis for practical community work in effective co-operation with a representative section of the business community that has initiated, and is conducting and financing this campaign.

"The altruistic spirit is as prevalent among paint men as among any other element of the general business community. I believe it is rather more prevalent and intelligent and practical among paint men, perhaps because their products appeal to the home and neighborly and civic — the altruistic — sentiments; and the mere psychology of salesmanship (of 'putting one's self in the buyer's place') would imbue even the clod with some social instinct — though of course no 'clod,' no man devoid of the humanities readily developed into definite expression through social service, could be a successful salesman or could himself achieve success in any field.

"Therefore, in this work, let there be no criticism because it enables various people to gratify their desire to do their share in community improvement; to idealize their chosen professions or trades; to better their business and its rewards, and to enjoy whatever respect, or credit, that honest folk ordinarily accord straightforward effort and methods and motives."

* * *

TEN RULES FOR APPRENTICES

1. Be neat — There is a great deal of so-called dirty work about the printing business but it is not necessary to leave tools, work-clothes, wiping rags or waste paper lying about promiscuously.

2. Be careful — Always be as careful of stock and tools as if they were your own. You are never too busy to pick up stock which has fallen to the floor and is in danger of being soiled nor to replace tools after using same.

3. Be punctual — Not only should you be careful to be on time morning and noon, but likewise when you are expected to have work done at a certain time, see to it that you complete your "stunt" in the time allowed. Never fail to keep appointments or to send word if it is impossible for you to go in person.

4. Be studious — The man never lived who could "learn the business" in an ordinary life-time and if you are going to keep up with the trade, you must put in a good share of your spare time studying trade magazines, high-class printed matter, type and machinery catalogues, etc. You cannot remember every page you read but you can't forget them all either.

5. Be courteous — Not only should you show proper respect for customers and outsiders but be habitually courteous to all with whom you come in contact. Not only is this a duty on your part but often by this means will the doors of the storehouses of knowledge be opened to you. If your habits are those of the perpetual grouch your fellow-workers will not put themselves out to help

you or explain the difficult or intricate problems of trade work.

6. Be loyal — When you accept a position you are taking an obligation to think, act and speak in the interest of your employer at all times. To do otherwise is worse than to help yourself out of the till, though many employees acquire the habit of "knocking" their employers — possibly through ignorance or thoughtlessness. If you cannot "boost" all the time — both in and out of the shop — look for another place at once. You'll never be any good where you are, either to yourself or the firm.

7. Be industrious — Don't imagine that because you are working for low pay that you should do less than you are capable of at all times. The time is coming when you will no longer be a "boy" and will be expected to earn a man's pay. You must acquire speed, accuracy and workmanlike methods while a boy or you will never hold a man's job successfully.

8. Be quiet — It is admitted that it seems natural for boys to make plenty of noise and of course nobody admires a "dead one," but you should learn to control your desires to sing and whistle and clatter your tools upon your frame or your feet upon the floor. You will yourself observe that the best workmen are those who make the least **unnecessary noise.**

9. Be patient — Perhaps this is the hardest task for a real ambitious, industrious lad. Most all boys wish to get to the top in a few months' time but it takes years — and a good many of them too — before you can get there, or anywhere near it for that matter. All the best printers in the business and those in authority on trade subjects had to go through the mill some time and in all probability saw "type-lice" before you were born.

10. Be honest — The boy with an honest heart will wish to follow as closely as he may, all the foregoing rules, that he may render the best possible service at all times to his employer, his fellow workers and to himself.

The foregoing rules are suggested for adoption by the apprentices for the reason that they embody the fundamental principles, the code of ethics, yes the very essentials which enter into the make-up of the efficient and successful master printer, for as the poet says:

"Men are only boys grown tall:
Hearts don't change much, after all."

ROSCOE E. HAYNES,
Fairport, N. Y.

✣ ✣ ✣

STOP THE LEAKS

By Walter Jack, Pierpont, Ohio

"I would like two copies of your paper of April 2," I remarked to an editor. "All right, I will find them." After going through files of his publication he secured the copies. "How much?" was the query as I took the papers. "Nothing."

I took occasion to hint that giving away papers did not pay light, heat, stock and other bills. This is one of the greatest leaks that creep into country offices. Everyone who ask for copies of the local paper is given from one to three, and oftentimes I have seen bunches of a score or more of papers given without any remuneration.

The editor would not think of going to the bakery and expect that a five cent loaf be given him. He would not think of going to the grocery and ask for a small bill of groceries to be sent up to his home, and expect the groceryman to donate the goods. Papers are part of the product of the print shop. Except for advertising purposes it would be just as logical to give away a job of printing as to give copies of a paper. There is a certain expense against each paper printed, and by giving out papers gratuitously, can the editor convince himself that he is doing the right thing by himself and by those who have already subscribed?

I am acquainted with a certain editor that does not allow a single copy of his paper to leave the office without receiving some remuneration for it. He charges the public library for their copy, he carries no gratuitous subs, and he is making good in a financial way. He declares that it is his aim to make his paper worth its price to his patrons, and demands cash from all.

Many newspaper men will give an extended write-up of a wedding or funeral, and when a patron asks for a half dozen or more copies, they are given to him. A charge for these copies could be made, and every week there is sufficient demand of the small country newspaper for copies containing special articles, to make the returns balance the light or repair bills or go a nice way toward paying interest on investment.

I have noticed about country offices, the giving away of scrap paper, of card board, of sheets of various kinds of printing stock constitutes a big leak. Every sheet of paper that leaves the office should be valued at a figure which will cover its initial cost, that of transportation, and leave a fair profit besides. Regardless of how small the piece of scrap paper, it should be bundled, and laid in the stock cabinet, and before many weeks a job may be "lined up" which will handle the waste. One printer I know puts every piece of waste to use, by printing on it some attractive advertising for his business, and distributes it among his customers.

Children prove a bother to printing offices. We had considerable experience with children going to the stock room for waste. They would not confine their picking to the waste box, but would dip into piles of cut stock and jobs that were waiting for delivery. For a few weeks we tried keeping the "kids" out, but we finally figured they were future patrons of the office, and by telling them to show us the stock they took before leaving the office we secured the good will of the youngsters, and maintained the friendship of their parents.

✣ ✣ ✣

BRITISH MILLIONAIRE PILL MANUFACTURER BIG ADVERTISER

Sir Joseph Beecham, millionaire pill manufacturer, of St. Helen's, England, who is making a tour of North America, accompanied by Edward Glover, export business manager, said in the course of an interview at Edmonton, Alta., on September 6, that he is planning an extensive advertising campaign in the United States and Canada.

"We have expended more than a million pounds sterling ($5,000,000) in newspaper advertising during the last ten years," Sir Joseph added, "and it is likely this will be increased largely in the next ten years. We also use magazines and other media. My father, who organized this business, told me when a youth that there was only one advertising medium — the newspaper. During his lifetime he used no other; in fact, he never saw any reason why he should. For that reason ninety-eight per cent of our total appropriation goes to the newspapers. the other two per cent is for supplementary work and detail."

Sir Joseph is mayor of St. Helens, which office, he said, costs him $10,000 a year for entertainment and other expenditures. There is no salary connected with the office. He has crossed the Atlantic ocean fifty-eight times to visit Canada.

BUSINESS MANAGEMENT

ED. E. SHEASGREEN, *Editor,* 1603 MONADNOCK BLOCK, CHICAGO, ILL.

TO THE SCIENCE OF COST-FINDING—OR A NEW BUSINESS CREED

If the Science of Accounting could have been the only rule in the business game, we would have had no business failures. If the effort put forth, and the knowledge had by accountants, all these years back, had made up the sum total of the entire business game, then why all the many failures each year?

If the Science of Salesmanship and Service, in the securing of tons upon tons of contracts, was all there was to the business game, then, again, failures could not well have been.

If the Science of Credits, used in protecting a business, could have held all the business virtues, then, once more, failures in business could not well have happened.

But it is in the Science of Cost Finding that the great virtue lies. This science can harmonize and bring about a very healthy business condition after all other forces have failed — in fact, if the Apostle Paul lived these days he might speak of these business principles, as he spoke of the fundamentals of religion:

"If I conduct my business by the Science of Accounting only, but knoweth not the Science of Cost Finding, my business soon passeth away, it becometh as a shell, as a wreck in the sand and again a part of the earth. It giveth me many a pain and sleepless night.

"And if I have the gift of, and the power to properly understand and use the Science of Salesmanship and Service, and can secure contracts by the ton and knoweth not the Science of Cost Finding, my business is as nothing. And whether I care to analyze or not all the moral qualities and all the business and home affairs of my customers, and extend to them a limited or an unlimited credit, according to the Science of Credit, but knoweth not the Science of Cost Finding, it profits me nothing.

"The Science of Cost Finding taketh account of all things, good or evil, it speaketh the truth always, it showeth all things, it bringeth all things in business, even harmony between labor and capital. It striveth always against a failure. Wherever there are incompetencies, gross mismanagements, unwise laws, or inaccuracies of any kind or descriptions, its fingers pointeth them out.

"When I first began in the business game I was a child, I spake as a child, I thought as a child, I acted as a child. But now that I have become a man in business, because of the knowledge I have acquired by and through the study and application of the Science of Cost Finding to my business, I have put away all childish things, for in my days of ignorance I looked at business through the wrong end of the glass, I knew only in part the laws of the business game.

"But now I see fully, I understand fully, that there exists the Science of Accounting, the Science of Selling, and Service, the Science of Credits, and the Science of Cost Finding, these four — but the greatest of these is the Science of Cost Finding."

* * *

TILL NEXT VACATION TIME

Vacation time is over!
So now returns the Rover,
From fragrant fields of clover,
From lake, and wood, and stream.
The hours by the brook-side,
And those spent on the hill-side,
And all those walked by **her** side,
Have vanished like a dream.

Ho! Now you tanned old Rover,
Home from great fields of clover,
From haunts of trout and plover—
Keep up that happy smile!
'Twill cheer us as we bustle!
'Twill nerve us in our tussle!
The better can we hustle,
Till **next** vacation time!

—E. E. S.

Yes, vacation time is over.

Back to office chair, shop stool, machine feed board, bindery table, the devil's hell-box, there have streamed the thousands who were fortunate enough to be able to spend a few days or weeks out under God's blue skies, or by some fair lake or whispering stream, to there forget the wildness of city canyons and immense wildernesses, and to drink in the pure country air, remembering that God is over all.

Yes, vacation time is over.

What is vacation, any way?

Just a little change from the daily grind.

Why not have vacations oftener than we do?

It can be done!

First just let the smile **now** on your face **stay** there until "next vacation time."

Just remember how a little change from the office or shop helped out. Smile over it. Then try and find a moment once in a while during each day, for each of your comrades, to do something a little different from the steady grind of what in time is bound to become monotony — say, if nothing more than to only stand up and exercise the arms in a few light calesthenics or gymnastics.

Above all, play for the **sunny smile** as you would play for **profits.**

Be sure the smile goes out into your product, and that it emanates from your desk, stool, machine or table, to be radiated throughout the entire establishment, so that the costumer will feel and know the smile, and then, himself smile, and reorder.

Smiles make honest, successful products.

✠ ✠ ✠

THE "OMAHA SPIRIT"

The "Omaha" Spirit — that spirit that is bringing the employer and the employe closer together out in that western city, is slowly working wonders.

First, the entire membership of the Typographical Union voted to help financially the Missouri Cost Congress, held last spring, and gave, without a single vote against, twenty-five dollars to the Ben Franklin Club and the Typothetae of Omaha for carrying on the convention.

Next, the members of the union were in constant attendance at the sessions of the convention.

Again, the employers and the employes began to meet together and to discuss trade questions as both parties understood and viewed them.

Then the report has it, that the union men invited all employers to come out to union meetings, where they all could better discuss trade, wage and shop conditions, with much satisfaction to both sides and honor to the craft.

At the late convention of the International Typographical Union the delegate from Omaha, backed by the sentiment that has been prevailing there, succeeded in having a resolution passed creating a technical department in their Journal.

The "Omaha" spirit is great.

Some day we will hear that it has urged the printers — employers and employes — to insist that the Manual Training and Domestic Science Departments of the Omaha public schools install in those institutions a **real cost finding system,** so that the students may not only be taught how to use tools, and to do things, but may also be taught the **real, true, fundamental** principle of business. THE SCIENCE OF COST FINDING, so that when they in turn become business men and women, they will be fairer competitors.

We also expect to hear that the "Omaha" spirit will compel the International Typographical Union to **compel** its members to study, not only the cost of production as it is applied to the production of printing — BUT TO STUDY THE COST TO THEM OF PRODUCING THE LABOR WHICH THEY AS COMPOSITORS SELL.

And speaking of this matter of the cost of producing labor to sell, makes us think about those

Stolen, Profitable Wage Forms

It happened at Toledo.

Who stole them no one knows, or why, unless the party was so fascinated with them, and the idea of trying TO FIND THE COST OF PRODUCING LABOR TO SELL, they could not resist the temptation.

The facts in the story are these:

At the booth of The National Printer-Journalist there was on display by the Standard Cost Finding Service Company, of Chicago, not only the cost forms used in the printing and metal trade plants, but also the forms which have been devised for use in THE PROFITABLE WAGE, written by your associate editor, and which will appear this Fall.

Whoever stole them no one knows, but may those forms do the fellow who did steal them — if they were stolen — a world of good. He should have waited a little while longer and stole a copy of THE PROFITABLE WAGE — then he would have had the WHOLE story.

If the guilty party will return them to 1603 Monadnock Block, Chicago, the author of THE PROFITABLE WAGE will give him an autographed copy of the book, also an autographed copy of THE PROFITABLE WAGE, TIME AND COST BOOK.

✠ ✠ ✠

AUTOMOBILE ECONOMICS

With the advancement made in inventions there has come the horseless carriage. With the passing of each day new speed records for this machine is being made — likewise new accident and death records, by the score — aye, by the hundred.

The number of accidents and deaths are steadily increasing, due in a great measure, to the carelessness shown by the drivers of these hurricane wagons. Inexperience in judging speed, inability to properly handle these machines on crowded streets, real mean cussedness displayed by many drivers in monopolizing all road rights, joy rides piloted by jag artists, are a few of the causes which have led to the building up of many a new green grassy mound, and undertakers' fortunes.

Suppose that on tonight's limited the engineer was some young chap fifteen or sixteen years of age, or a woman, or even a girl, whose only training, so far as judgment of speed and the handling of machinery was concerned, had been obtained in the swift waltz or in criticallly watching some poor woman run a sewing machine — and what would the general comment of the great traveling public be? Supposing even that the engineer was a man of years, but who had never had experience in controlling machinery running at high rates of speed — how long would the road keep its name as a safe one over which to travel? How long would it be before laws would be passed prohibiting these conditions to exist and compelling all who would handle such equipment to pass high standards of examination and to be of most sober characters?

And yet — the line is set with telegraph offices, there is a block system, the track is protected by right-of-way fences, at every road crossing there are not only signboards reading LOOK OUT FOR THE CARS, but there is often the extra precaution of a flagman or gates, and oftentimes both. There are all of these safeguards with no terribly crowded streets over and through which the run is to be made for its entire length.

Men in charge of engines and trains, no matter how thoroughly the road is equipped with safety appliances, or how light the traffic, must have had long experiences as firemen, or brakemen; must have been examined rigidly as to hearing and sight, judgment and knowledge of speed, and must have received this knowledge by long years of actual experience and not have gained it from a book, a college course, or from verbal instructions given by others.

But when it comes down to the automobile, the modern, joyous, death-dealing machine, we find that the young and the old alike, all practically with no experience as to how to properly judge speed, are allowed to run their machines hilter-skilter to and fro along our crowded streets, where there are thousands of people and hundreds of teams. Recklessness of all kinds is indulged in on straight drives to say nothing of the terrible chances taken in making the corners at a high rate of speed.

The worst feature of all is that of the "yellow streak" which many drivers show when they run away after having run down some poor soul!

Many drivers, in approaching railroad crossings with their engines running on high gear, slow down when they find that the crossing is a rough one, so that they can take the bumps a little easier. Failing to put their engines in low gear, they very often find that it goes "dead" right on the crossing. Just about this time along comes a train, and another automobile accident, with a probable heavy loss of life, is reported.

It is about time that the authorities in all cities and towns, and even in the counties, take this matter in hand from the standpoint of the economics that enter into the automobile game.

Have every person who is owner or driver understand that they are dealing with a transportation question that is as serious as that of railroading, so far as "safety first" is concerned.

Have closer examinations of eyesight, stability of character, good common sense, and as to whether or not booze or "yellow" are in the person's make-up.

Compel the drivers to serve long apprentices as chauffeurs before they can be considered as able to assume the responsibility to run cars.

Compel the serious side of the game of owning or driving a machine to be better understood by those who are fortunate enough to own or drive one.

Stop the payment of fines — imprison for periods not shorter than sixty days.

Send up for life, when they are caught, those who, after injuring someone, wheel away in the crowd and for the time are lost.

Find out the right kind of lights to use in the city streets at night — lights that will not blind those on the street, but yet will show the true position of the car.

Make all understand that each human machine costs about $5,000. That when five or six people are killed in one of these accidents, there is an economic loss for society to bear, besides the property loss in the car, of approximately thirty thousand dollars.

Men must be made to understand that they are playing a serious game when autoing, and that they are not attending a pink tea affair, and we will see less slaughtering of the innocents.

✣ ✣ ✣

ECONOMICS OF THE TOLEDO EXPOSITION

Throughout the country for a year back great interest was manifest in the Million Dollar Exposition which the printers of Ohio and other Central States recently held.

With a strong state organization, the printers of Ohio, headed by the best brains the industry could supply, began, right after the Cincinnati convention, to plan and to carry into being those plans for a monster meeting. September 1 to 6, 1913, were the dates set. Every energy of every man on the job was bent toward the object in mind — to have at Toledo the greatest combination exposition and cost congress ever held in printerdom.

September 1 to 6 has come and gone — the great show is a thing of history — the gigantic proportions of the exposition cannot be doubted, neither are the gigantic proportions of the Cost Congress doubted, for there was nothing gigantic about that part of the show. The Cost Congress and Schools fell flat, not because the managers of the great event did not do their work well, not because they had not pushed hard enough from the start, but because they attempted the impossible — the mixing of business and pleasure together into big doses. To have a cost congress and an exposition mix — well, one should first solve the problem of thoroughly mixing oil and water.

Resolutions were passed by the various bodies attending the Toledo meet that no more expositions and cost congresses should be held at the same time and place.

In that move we believe the right action was taken.

Let us look at the economics that enter into such meetings as the one recently held at Toledo.

First, in order to hold such affairs the supply men must be induced to take part in the show, this means they must spend large sums of money.

From far and near the show must pull like an immense magnet.

Second, to satisfy the supply men, the crowd must be brought and entertained for a week; this means an immense amount of money has to be gathered and spent by the local committees for advertising the show. To meet all the expenses, the space in the exposition building must be sold at a stiff enough rate so that the committee managing the affair can, with the registrations of the individual visitor, get back enough money with which to pay all bills. But, after all, the biggest part of the cost of the exposition is borne by the supply men.

Now, how do the supply men get even? By "passing the buck." To whom? On to the poor printer who always has about all he can do to meet his regular expenses. But the "buck" must be passed, and so that printer "gets his," in the shape of advertising expenses passed on by the supply men. If the printer knows cost and how to handle cost items, he will in time pass the "buck," through his expense column of "advertising" or "selling expense" back to the consumer of printing.

The loss and extra expense that comes from these expositions and cost congresses is very heavy, and may this department offer the following suggestions:

Choose some central point in the United States, easy of access to every printer in the country, be he little or big. Have a corporation formed to buy real estate and to build a twelve or fifteen story office building, one of two-floors of which should be equipped with convention halls and committee and reception rooms, and one floor equipped for exposition purposes. To this place would come once a year, and all within one month, those who would take part in the conventions of the lithographer, printer, binder, photo-engraver, steel and copper plate engraver, stationer, rubber stamp and stencil maker, editor and paper maker. Three days a week could be given over to the exposition when it would be closed for three days of cost congress or convention for the several bodies meeting. This method would reduce the traveling expenses in many cases eight or nine times. It would cause the supply men to show but once a year, and thus, with a saving on their part, a smaller "buck" by far would be passed to the printer, who in turn would pass a smaller one to the consumer — the results all around being a reduction of effort which is always equivalent to reducing the cost of production.

The floor space in such a biulding rented for office purposes would bring a good revenue, while the three or four floors given over to convention and exposition purposes would be busy nearly the whole year round taking care of not only the conventions for the printing and allied trades, but for all metal trades, wood-working, automobile manufacturers, clothing manufacturers, millers, horticulturists, etc. Such a concentration of effort, such eliminations of all unnecessary efforts, would tend to greatly reduce production costs all around.

The duplication of effort at all times throughout society is not good economics, and the sooner we begin to put a stop to duplications the better off we, the people, will be, for lower costs will prevail.

Think this plan over, brethren, and let this department hear from you.

✣ ✣ ✣

"CAN'T GET ALONG WITHOUT IT."

Amsterdam, N. Y., August 15, 1913.

Mr. B. B. Herbert,
Chicago, Ill.

Dear Brother Herbert: The letter asking you to discontinue the National Printer Journalist was sent by mistake. I knew nothing about it. I enjoy reading your excellent Journal very much, and can't get along without it.

Wishing you success, and hoping this finds you hale and hearty, I am, with kindest regards,

Sincerely yours,
WM. J. KLINE.

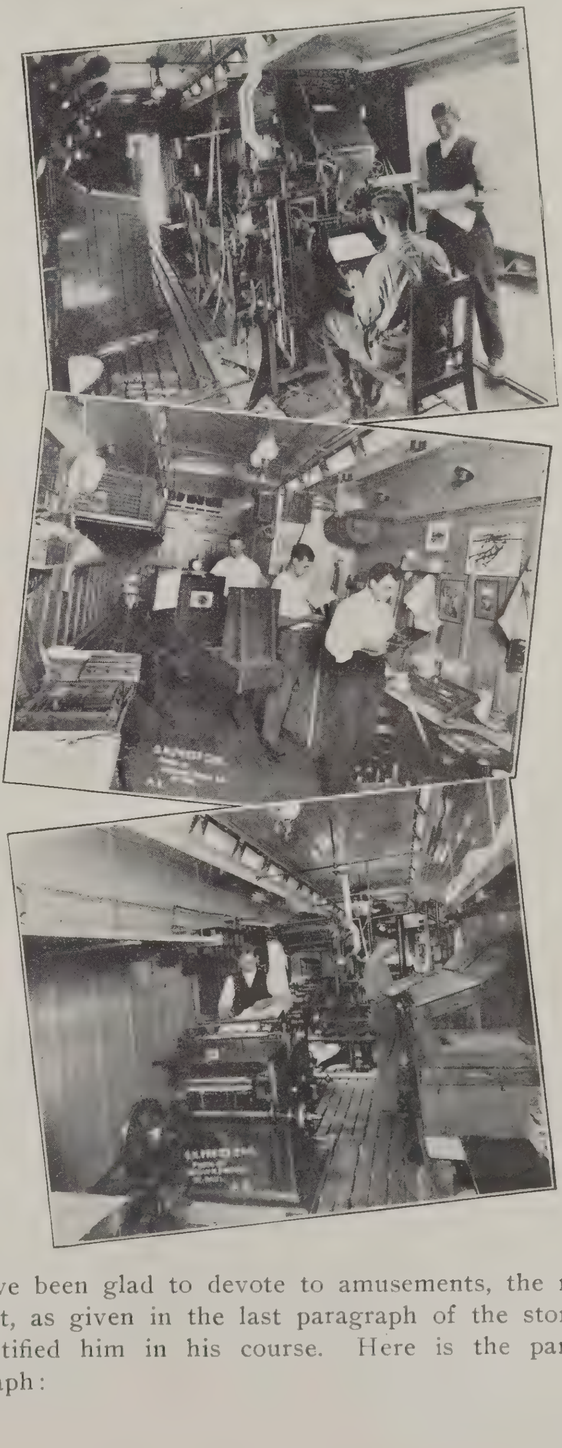
REVIEW OF JOB PRINTING

Address All Communications to E. S. HANSON, 538 S. Dearborn Street, Chicago

IT IS a pleasure to be able to show these illustrations of a printing office located on board a railway train. This plant was installed in a baggage car on one of the trains of the Great Northern Railway, this being termed a hotel train, which accompanied an automobile tour from Minneapolis to Glacier National Park. This train furnished eating and sleeping accommodations for the motorists, and printed as well the Glacier Park Blazer, the first daily automobile newspaper ever printed on a railway train. The equipment of this unique newspaper plant included a linotype machine, cylinder press and engraving outfit. The press was a working model of the Osterlind patent, loaned for this purpose by the inventor. The daily story of the tour was enlivened by photographs taken by the staff photographer each day, from which half-tones were turned out in the engraving plant on the train by experts from the Buckbee-Mears Engraving Company of St. Paul. The composing room was installed by the McGill-Warner Company of St. Paul. A four horse-power motor attached to the car dynamo furnished the power for operating the plant. The contributing editors to this daily were the correspondents to various automobile publications and daily newspapers who accompanied the tour. The publication committee consisted of Asa Paine, fifth vice-president of the American Automobile Association, and Dr. C. E. Dutton, chairman of the touring board of that association.

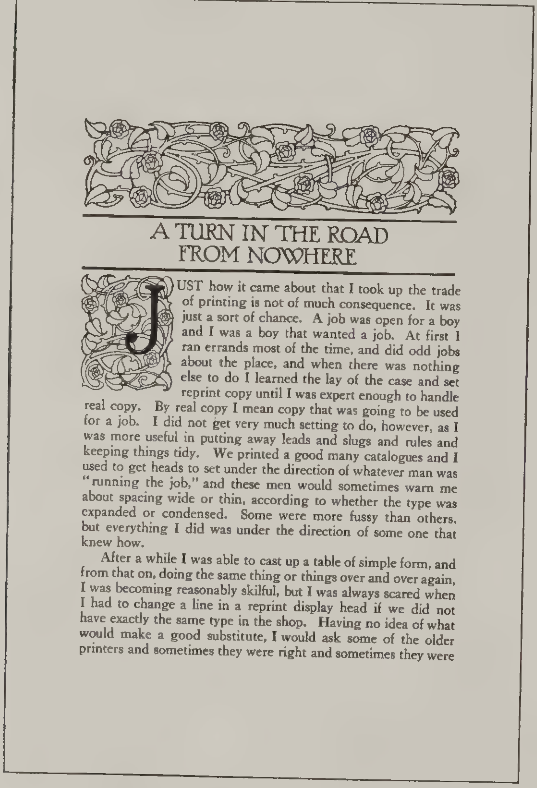
✢ ✢ ✢

"A Turn in the Road from Nowhere" is the title of a handsome piece of work just issued by the committee having in charge the course of instruction in printing for the International Typographical Union. The first six pages of this booklet are given as a chapter from the life experience of an ambitious young printer; and while it may not coincide entirely with the biography of any particular person, it is even more true than as though it did, for it is something of a composite and may be said to be characteristic of ambitious printers in general. The gist of the whole story is that this printer took up the work of the course of instruction of the International Typographical Union, and while it occupied considerable of his time which he should very likely have been glad to devote to amusements, the result, as given in the last paragraph of the story, justified him in his course. Here is the paragraph:



Almost imperceptibly I began to get a reputation for knowing a good deal about display work. I suppose I had a good deal to say one way and another, and quoting the lessons, I was able to hold up my arguments about display work and design; and it came about that I had a chance to design a little job, and did it so well that I went ahead after that pretty steadily, until now I have charge of the new department in our place, where we design and lay out jobs.

The booklet goes on from this point to give in some detail a history of the course of instruction and the methods followed. To give an idea of the excellence of the printing it need only be said that it is the work of Henry O. Shepard Company of Chicago. It has an excellent cover design by Mr. F. J. Trezise, illustrations by Mr. J. T. Nolf, and the composition is by Messrs. John Stanesco, M. Kramer, and Noble Coolman. Other ambitious printers throughout the country can get a copy of this booklet by addressing the International Typographical Union Commission, 624-632 Sherman street, Chicago.



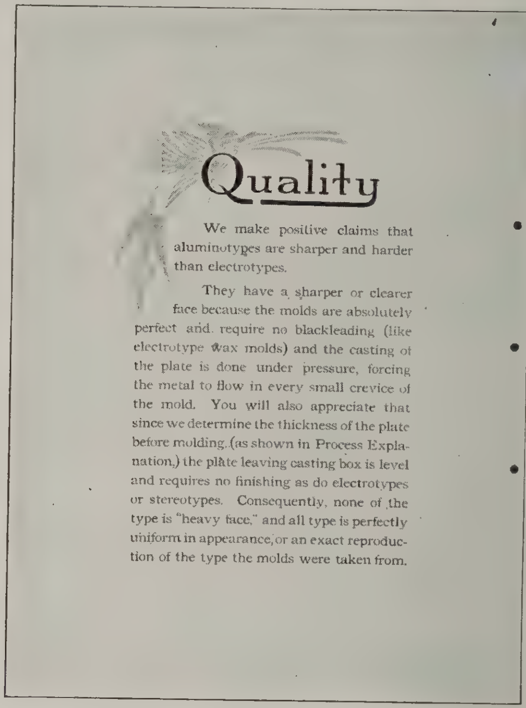
A TURN IN THE ROAD
FROM NOWHERE

JUST how it came about that I took up the trade of printing is not of much consequence. It was just a sort of chance. A job was open for a boy and I was a boy that wanted a job. At first I ran errands most of the time, and did odd jobs about the place, and when there was nothing else to do I learned the lay of the case and set reprint copy until I was expert enough to handle real copy. By real copy I mean copy that was going to be used for a job. I did not get very much setting to do, however, as I was more useful in putting away leads and slugs and rules and keeping things tidy. We printed a good many catalogues and I used to get heads to set under the direction of whatever man was "running the job," and these men would sometimes warn me about spacing wide or thin, according to whether the type was expanded or condensed. Some were more fussy than others, but everything I did was under the direction of some one that knew how.

After a while I was able to cast up a table of simple form, and from that on, doing the same thing or things over and over again, I was becoming reasonably skilful, but I was always scared when I had to change a line in a reprint display head if we did not have exactly the same type in the shop. Having no idea of what would make a good substitute, I would ask some of the older printers and sometimes they were right and sometimes they were

✢ ✢ ✢

I have from the Rapid Electrotyping Company of Cincinnati, New York and Chicago, a piece of work which is interesting both from the matter which it contains and the manner in which this matter is set forth. It is descriptive of the Aluminotype process and is intended as a follow-up for the personal work of a salesman, and sent to those whom he has not been able to sufficiently interest in the process to secure their orders. It may be of interest to state here, briefly, that the aluminotype process is a perfected stereotype process allowing the use of metal at high temperature. It is totally different from electrotyping and a radical departure from the old plaster and matrix stereotype processes. In aluminotyping, forms are locked in chases, the furniture used in locking up being of a height equivalent to the difference between plate thickness and type height. After it is ready it is placed on an imposing slab and the moulding frame placed on top of the form so that the frame will rest evenly on the furniture. The face is then sprayed with a special releasing compound, which insures release and dispels all air from the face of the form. A composition including plaster, clay, asbestos, and other ingeredients is poured on the form and allowed to set for about ten minutes. The frame containing the mould is then released from the type frame and placed in a drying chamber. After forty-five minutes it is taken out, covered with a frame of like composition, locked in a specially constructed casting machine. The plate is then cast instantaneously by injecting aluminum alloy into the mould. The printing of the booklet is in three colors, the body matter being in a soft tone ink which blends with the light gray tint of the stock.



Quality

We make positive claims that aluminotypes are sharper and harder than electrotypes.

They have a sharper or clearer face because the molds are absolutely perfect and require no blackleading (like electrotype wax molds) and the casting of the plate is done under pressure, forcing the metal to flow in every small crevice of the mold. You will also appreciate that since we determine the thickness of the plate before molding (as shown in Process Explanation,) the plate leaving casting box is level and requires no finishing as do electrotypes or stereotypes. Consequently, none of the type is "heavy face," and all type is perfectly uniform in appearance, or an exact reproduction of the type the molds were taken from.

✢ ✢ ✢

One of the best expositions of double-tone inks which I have seen is a folder of twelve pages recently issued by the Sigmund Ullman Company of New York. This folder not only gives some excellent examples of the use of doubletones and Ullmanines, but also includes some valuable suggestions in regard to the use of this class of inks. The work is done on white cameo plate book paper and two classes of ink are used, Doubletone Art Shade No. 4 and Ullmanine No. 27. The reproduction of a sample page will show the handsome typographic display given to this folder, though it will not show the faultless excellence of the press-work.

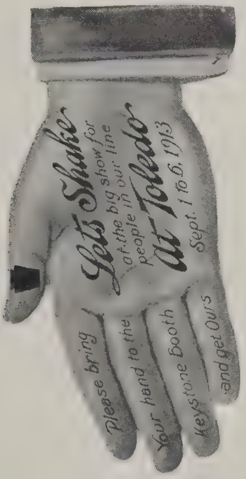
✣ ✣ ✣

The Keystone Type Foundry celebrated Independence Day by issuing a booklet regarding the flag, which has just come to my attention. It takes up in considerable detail the history of the flag, and also the history of "The Star Spangled Banner" and other songs which have been written about it. It is a delightful piece of printing, as well as worthy of preservation because of the historical facts contained. It was set and printed in the printing department of the Keystone Type Foundry of Philadelphia. The type used is their Harris Roman. I am also showing here an attractive cut-out card which this company sent out prior to the Ohio Cost Congress at Toledo.



Stevens, Maloney & Co. of Chicago recently turned out for the Thomas Moulding Brick Company a booklet of thirty-two pages giving an exposition of brick fireplaces. This is a topic which lends itself charmingly to artistic illustration, and the artists who made the illustrations have made the most of it. The fireplaces shown are given historic names, such as the Longfellow, Ruskin, Tennyson, Fielding, Byron, Hawthorne, etc. Some of these are really intended to follow, in their design, fireplaces which have appeared in the homes of these noted men. The printing is in doubletone brown with a brick red underlying it for the fireplaces themselves, and also for the initial and initial ornamentation on each text page.

I have a very attractive booklet containing an article by Mr. James T. Alling entitled "Paper — A Brief Account of How It Is Made." This is published by the Alling & Corey Company of Rochester, N .Y., and seems to be published to show the advantages of Best Patent Finish book and Check Finish Rhododendron cover for booklet work. This it does to excellent advantage. The title page is also very satisfactory in composition, although possibly the author's name might be in type a size smaller.

The W. B. Conkey Company of Hammond, Ind., sends me a booklet entitled "Composing Room Efficiency," being a description of the company's new process of hot metal justification. This is a process which is intended to greatly facilitate the justification of forms containing large numbers of cuts of irregular size, in place of leads, slugs and metal furniture. The booklet shows a large number of illustrations of forms justified in this manner as well as a complete description of the method and the apparatus. I am showing a page of this booklet. The type matter and illustrations are in black while the border is in chocolate brown. This border I consider rather heavy for the size of the pages, otherwise the work is extremely satisfactory.

I shall again, as on several former occasions, clip out the motto page from the Apprenticeship Bulletin of the North End Union School of Printing of Boston. I think this page might have been improved by the elimination of the periods. They seem to me to mar the symmetry of the production. A point at the end of the sentence would, of course, not be necessary for its correct reading; and the capital letter at the beginning of the second sentence ought to be sufficient to separate the two.

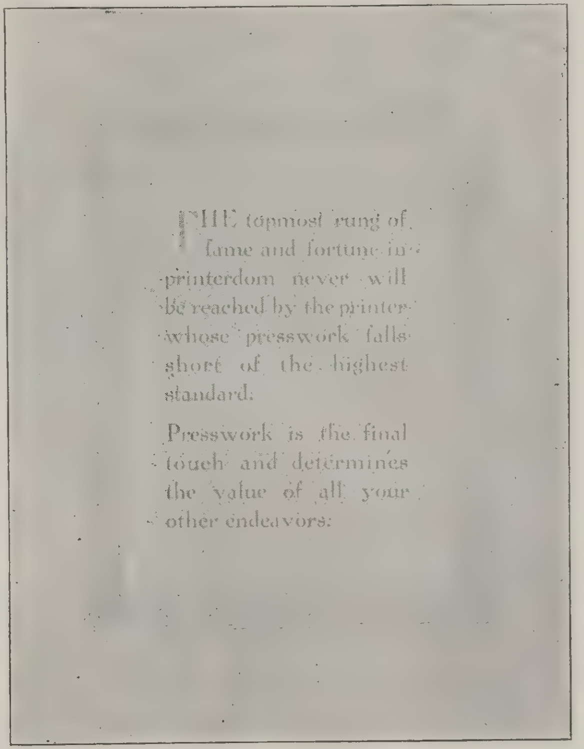
dear.

The Western Engraving Company of Seattle, Wash., sends a souvenir program of Stag Night at the Pacific Coast Employing Printers' Congress. The cover is from an engraved plate, but the eight inside pages are set in type, the composition and printing being done by the Sherman Printing and Binding Company of that city. It is a very satisfactory piece of program composition and is done entirely in Cheltenham old style and Caslon old style.

✣ ✣ ✣

There are several things of interest in a recent catalogue sent out by the William Thomson Printers' Machinery Company, 426 S. Dearborn street, Chicago. One of these is the introductory page which I am showing here. It is an unusually harmonious piece of composition, aside from the value of the sentiment expressed. The catalogue is descriptive of this company's Laureate and Colt's Armory presses. The catalogue itself was printed on a Laureate, Model J, four-roller press, and is, in itself, with its combination of type matter and half-tones, sufficient evidence that this press can do excellent work. The cover is attractively embossed, this work also having been done on the same press.



THE topmost rung of fame and fortune in printerdom never will be reached by the printer whose presswork falls short of the highest standard.

Presswork is the final touch and determines the value of all your other endeavors.

✣ ✣ ✣

A little booklet comes to me from the Department of Journalism, University of Kansas, Lawrence, Kan. It is in two colors, and entitled "A Fable: The Gentle Editor Who Cast His Bread Upon the Waters." It is an interesting little story of eight pages on the relations of the advertising and editorial departments, and closes with this moral: "Honor thy ad and thy advertisers, but remember that the first syllable of newspaper is news."

✣ ✣ ✣

The National Printer-Journalist is well known in Red Wing, Minn., a fact which makes me particularly glad to get a bunch of the better class of printing from that town. This is sent in by Clarence L. Larson, who is with the firm of S. N. Gibson & Son. The work includes quite a variety of different kinds of jobs, on none of which it would be possible to pass any severe criticism. Among those which I like particularly are the letterhead for the Red Wing Yacht Club and the letterhead for the Family Theater. The envelope which goes with the latter letterhead is given much more attention than an envelope usually gets, and I think it is safe to say that it has repaid the extra effort.

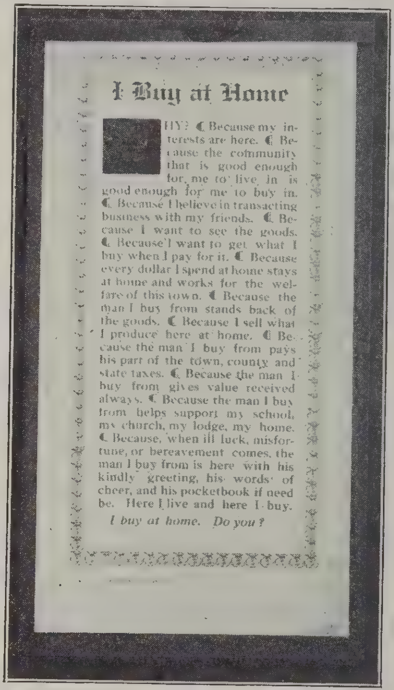
✣ ✣ ✣

I have a copy of The Scarab, the monthly magazine of the East Technical High School, Cleveland, Ohio, which is a special print-shop number. The drawings for the cover design, the headings, initial letters and cartoons were made by the boys in the print shop. The articles, poems, stories, and editorials were also written by these boys, and in addition, they set the type, read proof, printed, bound and distributed the edition of 1,200 copies. It is carefully set in Caslon old style, with text heads and initials for the larger articles. The copy which I happen to have seems to be a little bit carelessly printed, but possibly this is an unusual copy. I notice that two different shades of ink seem to have been used on the two sides of one of the forms. This is something which should not happen; but this, too, may be only because I got a first copy.

✣ ✣ ✣

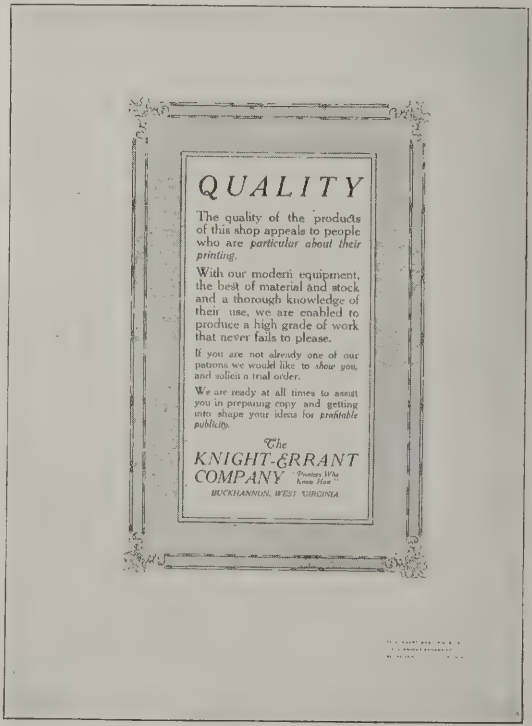
I have from P. H. Lorentz, Buckhannon, W. Va., another bunch of samples which are fully up to his customary standard. I am showing the wall card, both because of its typographical excellence and because some other printers might want to copy the idea to boost their own income. The "quality" story on another piece of work which Mr. Lorentz sends is also worthy of repetition, and is good sales talk for any good printer.



I Buy at Home

HY? ❨ Because my interests are here. ❨ Because the community that is good enough for me to live in is good enough for me to buy in. ❨ Because I believe in transacting business with my friends. ❨ Because I want to see the goods. ❨ Because I want to get what I buy when I pay for it. ❨ Because every dollar I spend at home stays at home and works for the welfare of this town. ❨ Because the man I buy from stands back of the goods. ❨ Because I sell what I produce here at home. ❨ Because the man I buy from pays his part of the town, county and state taxes. ❨ Because the man I buy from gives value received always. ❨ Because the man I buy from helps support my school, my church, my lodge, my home. ❨ Because, when ill luck, misfortune, or bereavement comes, the man I buy from is here with his kindly greeting, his words of cheer, and his pocketbook if need be. Here I live and here I buy.

I buy at home. Do you?



QUALITY

The quality of the products of this shop appeals to people who are *particular about their printing.*

With our modern equipment, the best of material and stock and a thorough knowledge of their use, we are enabled to produce a high grade of work that never fails to please.

If you are not already one of our patrons we would like to *show you,* and solicit a trial order.

We are ready at all times to assist you in preparing copy and getting into shape your ideas for *profitable publicity.*

BUCKHANNON, WEST VIRGINIA

CHAIRMAN PURCELL SUBMITS PLAN FOR ORGANIZATION OF FOREIGN ADVERTISING BUREAU

Mr. Purcell, chairman of the committee appointed at the meeting of the National Editorial Association at Colorado Springs to formulate a plan for the organization of a foreign advertising bureau within the National Association, submits the following:

It is a well-known fact that three-fourths of the population of this country live on farms and in small cities and villages, and that this population not only produces three-fourths of the wealth, but buys three-fourths of the manufactured goods of the country. It, therefore, is evident that the great concerns which depend on publicity to sell their goods and collectively spend many millions of dollars each year in advertising in the magazines and the great dailies, may well consider the advertising merit of the local papers as the only medium through which they can effectually cover the rural or local field. When we take into consideration the further fact that the local newspapers of this country secure only a small fraction of this vast amount spent by the great advertisers, it is also evident that steps should be taken to divert a proper share of this business to its rightful channel.

The great publications are thoroughly organized. The best men that money can procure are their advertising agents, and their efforts have been richly rewarded by corralling a very great per cent of the advertising of the nation. It is only of recent date that the great advertisers are commencing to realize that to effectively reach this great majority of the buying public they must advertise in the local papers. With this sentiment fast crystalizing, it is high time that the country weeklies and smaller dailies form an effective advertising bureau. Such an organization must be thorough and far reaching. A salaried head of this organization with wide experience and great ability must be secured. In my opinion, he must not only secure a nation-wide membership of progressive country publishers, but he must also co-operate with state press organizations, with associated advertising clubs and similar organizations. He must plan and carry out the organization of state advertising bureaus and when found expedient carry the organization to the district or local club. He must work with national advertisers and he must co-operate with the great advertising agencies. In short, the organization must be thorough and along broad lines, for it is only through such a bureau that it will be possible to accomplish great things. There is one great point that must be kept foremost in such an organization as is proposed, and that is to make it more expeditious for the great advertisers to use the columns of the smaller papers. Under present conditions it is much easier to carry space in a few great publications than in a great number of smaller ones. This organization must be so complete that it will be easy and practical to have any specific line of advertising cover any specific field, be it nation wide, state wide or local.

The interests of the country publisher and the country merchant are identical. It would be possible, under proper organization, for the publishers of country weeklies to enlist merchants of their respective towns in a united demand, asking that the manufacturers of such goods and wares as are sold by them be advertised in their local papers. Were this thoroughly done and handled to advantage by a powerful organization of live newspapers of this country, there would be little trouble in securing the recognition that our publications merit as advertising mediums.

Almost every industry is now organized along similar lines, then why should not the local newspapers of this country have a strong advertising organization? It is the purpose of this committee to formulate a plan for an advertising bureau within the National Editorial Association that will be the medium through which it will be possible for local publishers to secure a vastly increased volume of foreign advertising and to make it possible for the great national advertisers to get the best service in the most expeditious way. It is my intention as chairman of this committee to conduct a searching investigation as to the feasibility of such an organization, and with the assistance of the other members of this committee, to submit our findings and our recommendations at the next meeting of the National Editorial Association.

* * *

CHAIRMAN E. R. PURCELL, FOREIGN ADVERTISING BUREAU, NATIONAL EDITORIAL ASSOCIATION

E. R. Purcell, publisher of the Custer County Chief, was born at Springfield, Ill., in 1866. He was educated in the public schools and in Doane College, at Crete, Neb., and learned the printers' trade in the offices of that city. In 1892 he and his brother, W. G. Purcell, established the Custer County Chief at Broken Bow, Neb., and he has been connected with that paper continuously for twenty-one years. Six years ago he purchased his brother's interest in the plant and has been the sole owner since that time. The Chief is one of Nebraska's best country weeklies. Mr. Purcell has for many years been an active worker in the Nebraska Press Association, and is widely known over Nebraska by reason of being before the public in many capacities during the past fifteen or twenty years. He has spent much of the past summer in New Orleans, La., as administrator of an estate comprising several hundred acres of land in the city of New Orleans, and much other real and personal property. He is married and has four children.

NEW MEMBERS NATIONAL COUNCIL

The following are the newly chosen members of the National Council of the National Editorial Association:

Texas Press Association; Lee J. Rountree, Georgetown, Texas, **Commercial.**

Houston Press Club; Judd Mortimer Lewis, Houston, Texas, **Post.**

Southwest Texas Press Association; F. M. Getzendener, Uvalde, Texas, **Leader-News.**

Northeast Texas Press Association; H. P. Nelson, Greenville, Texas, **Banner.**

Central West Texas Press Association; Homer D. Wade, Stamford, Texas, **News.**

Northwest Texas Press Association; W. A. Johanson, Memphis, Texas, **Herald.**

Dallas, Texas, Press Club; H. W. Blakeslee, Associated Press, Dallas, Texas.

Michigan

Michigan Press Association; Homer Harwood, Watchman, Warren.

Wolverine Press Association; L. C. Cramton, Clarion, Lapeer.

Northeastern Press Association. O. Palmer, Avalanch, Grayling.

Republican Editorial Association; A. B. Bragdon, Jr., Record-Commercial, Monroe.

SUBSCRIPTION RATES—In the United States, Cuba and Mexico, $2.00 per year. Canada, $2.50 per year. Foreign subscriptions, $2.85 per year.
CHICAGO, OCTOBER, 1913

One of the pleasant incidents of the opening of the Toledo Printers' Convention was the presentation to President Thomssen of a gavel made out of one of the original timbers of Commodore Perry's flagship, Niagara, reclaimed from the waters of Lake Erie after a hundred years. Religion, which means duty and service to God and man, and patriotism that means love for and devotion to organized society for the protection and conservation of each and all, were thus properly recognized at the very beginning.

* * *

Price-cutting is not an effective means of securing desirable customers or building up a permanent business. High grade work was never more in demand than today, and successful, honest business men, are ever willing to pay full, proper cost with reasonable profit added thereto. Cheap work is not wanted, and all well informed business men know that good work can not be long secured at prices unprofitable to the producer. That it has ever been possible to secure desirable work below cost has been on account of the ignorance of cost on the part of the producers.

* * *

Charles P. Carl of Cleveland, Ohio, proved a faithful treasurer of the Ohio Printers' Federation, and was advanced to the presidency at the convention in Toledo on September 3. Being faithful to his trust and earnest in his work, he was rightfully made the head over all. Cleveland made a splendid showing at the convention and deserved high honors. The city had a very large delegation, and among the delegates claimed the oldest printer, J. C. Forman, of the Forman-Basset Co., 83 years old. Who will say that printing is not a healthful occupation?

Salesmanship and advertising today must be based on an understanding of what will produce the best results for the buyer of printing or of advertising, and definite, broad knowledge of the requirements of business as well as of the highest perfection and possibilities of the art of printing, and the most harmonious, winning, attractive, effective composition and display in advertising. A customer often understands very little as to requirements, but will, nevertheless, readily decide when the right kind of printing or advertising is presented, that such is just what he wants. The kind that will effectively win customers will win the buyer of printing, as a customer for printer or advertising man.

* * *

The Right Reverend Bishop of Toledo, in prefacing his invocation at the opening of the printers' convention, spoke of the recognition of the Divine Providence through the history of this Republic and in all great and worthy undertakings of the people, and enforced its propriety and necessity in the undertakings of printers, who possess such power and opportunities for signal and useful service.

He might have added that it was on the suggestion and motion of the first great printer, philosopher, philanthropist and statesman, Benjamin Franklin, that provision was made for opening the National Congress with prayer, thereby recognizing the direct, overruling power and providence of God in the affairs of the nation to whom the representatives of a free people should look for guidance.

* * *

Quality service is the most profitable service. The service rendered to business and to mankind in the last century by master printers and publishers has been vastly more valuable and profitable than the service rendered by the members of any other calling. Why, then, should not the honor given them and the remuneration paid to them be greater? Simply because they have been willing servitors, prizing service above reward, or else because they have not understood their value and have slighted their work. The benefactor who works from the high sense of duty, and the pleasure of doing good or conferring benefits on his fellow men, is to be prized above the mere money getters, yet we are taught by the highest authority on morals and religion that the laborer is worthy of his reward or his hire.

* * *

Instruction in better business methods, in cost finding and efficiency, has become the keynote of organizations of printers, and should be adopted as the keynote of efforts for improvement by all associations of editors and publishers. There is little trouble to be found as to competition among men entirely great in their callings, well informed as to methods and values and well inclined toward their fellow men.

To help others to higher standards is not only ennobling, but is the most effective means of helping one's own self and attaining the greater, more worthy, more satisfying and more enduring success. Ignorant, selfish warfare in business is what General Sherman designated all war, or, at least, a near approach thereto. Helpfulness one to the other is bringing Heaven to Earth.

✣ ✣ ✣

All publishers should read the "Declaration of Principles" adopted at the convention of the Federation of Trade Press Associations in New York on September 19, and published elsewhere in these pages. The trade press has no monopoly on these principles and every declaration made will be found of direct value to every newspaper publisher.

Every newspaper, as we have had occasion so frequently to remark, should be the promoter of every home industry and worthy institution and of local business, in addition to the giving the news of the day, so that for its home community, the local newspaper performs what the trade or technical journal performs for the special calling or trade which it represents.

Service, truth, frankness, quality, co-operation, interchange of facts and opinions, and the keeping editorial columns independent, unbiased and unafraid, as well as cleanliness, honesty and integrity as to advertising, accentuated in this "Declaration of Principles" are things essential to the influence and permanent success of every newspaper, wherever published.

✣ ✣ ✣

The Printers' Cost Congress and Exposition at Toledo was opened with the booming of cannon and an address by the Governor of the great State of Ohio, and, better still, the Governor is a printer himself. Surely the printers are coming into their own. He showed that he was a printer up-to-date by extolling the cost-finding system and, from his broader view, declared that the working out of a system of costs is not only in the printers' line of work but of all other lines as well, and that, through this system $500,000 would be saved to the State of Ohio.

It will be a glorious time for our cities, states and the nation when all public supplies, work or service are figured down to the basis of actual cost with only a just and reasonable profit added.

The Secretary of the Navy has already declared that he will demand a showing of cost as a basis of prices to be paid for armored steel for war vessels. Facts, recently developed, show that such a rule, if enforced, would save the government tens of millions of dollars annually, but, then, that is only one part of government expenditures. Actual cost is the only honest basis of business, and contractors, dealing with public officials, should be compelled to be honest, and then it will follow, as day the night, that it will be possible to keep public officials honest and to indoctrinate politics with the wholesome idea that honest service, rendering full value, is the one great and first demand for all preferment and that therein all the honor lies.

✣ ✣ ✣

President Thomssen, of Ohio, referred in his recent address, to which reference has been made, to the facts, so often mentioned in these pages, as to the impossibility under existing conditions, of educating printers by the old apprenticeship system, or any so far known modification of the old system.

He rightly advocated vocational training in the schools, and as we have frequently asked and urged, why not?

Free public schools are established and supported in order to make good, intelligent citizens, and what is more important, to good citizenship than is the ability to earn self-support and to contribute to the increase of the means for the support of needed government, public improvements, education and all that makes for the general prosperity?

The citizen may be ever so much learned in book knowledge, but if he does not know how to make himself useful in some worthy occupation and to earn a living for himself and those dependent upon him, he becomes a curse to himself, a burden to the community; besides, the training the hands to skillful and inspiring accomplishment is nature's plan in connection with the highest training of the mind and soul.

Great progress has been made along these lines, but the subject is ever a live one, and there remains very much more to be done. In the early days of this Republic, when every boy and girl had work at home, everything was different. Great men, then, as later, came from the farms and the shops, where they had worked side by side with their fathers, and had learned from the time that they could walk or talk, that life had an object, and that there was useful, helpful work for everyone.

Duty and worthy accomplishment were the first lessons for the youth, and they were made noble men and women in the learning of these lessons.

✣ ✣ ✣

One of the greatest conventions of this year was held in Hotel Waldorf, New York City, September 18-20. Five hundred and twenty-five were enrolled the first day. There were no excursions, amusements or side attractions. It was simply a gathering of earnest, representative, able men, determined upon the improvement of themselves and each other in their calling and the fitting themselves to become more useful to the people and the members of the trades and callings which they seek to serve.

It was the eighth annual convention of Trade Press Associations in the United States. The room where the meetings were held was filled to overflowing at every session. Addresses were limited to ten minutes each, and every man was on duty. There were sixty speakers, and the interest was such that an extra meeting — not provided for on the program — was held the first evening.

Editors and publishers of trade papers realize that all success must come from intelligent, helpful service. To promote commerce and the industries and to aid all the workers to better accomplishment is necessary to the continuance and profitableness of their publications.

It will be a grand thing when all newspaper men realize that the intelligent promotion of all the interests, worthy institutions and enterprises of their communities and of their advertisers, is not only their duty and highest privilege, but the only worthy and assured way to permanent and large success.

There is nothing like the ideals of useful service to make men earnest, anxious for improvement and zealous in their callings and all that pertains thereto.

The success of this convention carries an important lesson to the officers, managers and members of all other organizations for mutual improvement. Zeal was put into the preparation of the program; work was begun early, and then, that which publishers extol for others, but too frequently neglect for themselves, intelligent, well gotten up advertising was used with the greatest liberality and persistency. Editorial and printers' organizations must advertise or they must perish.

✢ ✢ ✢

One of the interesting, active, earnest and consequently successful and honored newspaper publishers of Minnesota is J. C. Morrison, of the Morris, Minn., Tribune. He does not live in a large city, nor does he publish a great big metropolitan daily — only a home weekly — but he has made a success and his fame has spread throughout all newspaperdom, and he is accomplishing much good for his calling.

He has been an ardent supporter of the cost system for two years and has reaped big results, and is now telling the glad story, and the how, for the benefit of his fellow publishers throughout the country.

In a missionary tour for the salvation of brother editors, he made one of the best addresses at the cost school in connection with the cost congress in Toledo. Whether his system is entirely scientific or not — some of the cost experts disagree with him in this regard — he gets there with results just the same.

He illustrated his address on this occasion with stereopticon slides and said, among other good things, speaking first of mechanical production:

> A newspaper is simply a piece of job work on which a certain amount of chargeable office time is expended. It, therefore, follows that the cost of producing a country newspaper is the same as the cost of producing any similar job requiring the same amount of stock, composition, press work and bindery work, plus a certain amount of direct charges like plates, electros, news gathering, editing and postage.
>
> Composition costs the same per hour as it would on a booklet, cylinder press work costs the same as it would on a poster, and mailing costs the same as would any other bindery work. The time spent in preparing copy and editing copy is simply chargeable office time the same as it is on any other job the copy for which must be revised or edited before it is sent to the composing room.
>
> Lest I offended some who love to regard the newspaper as a great molder of public opinion, which shapes the destiny of the community, the state and the nation, let me say that I yield to no one in the ideal which I hold of the place of the newspaper among uplifting influences and the place of the newspaper man among community leaders, but we are met today not as a company of journalists, but as a company of manufacturers.

He then went into the consideration of the methods of ascertaining and establishing advertising rates. He opposed the system of a flat rate for advertising, and showed wherein it was wrong and unscientific.

✢ ✢ ✢

One of the pleasant events of the convention of the Federation of Trade Press Associations in New York, was a visit to and a luncheon at the Thirty-ninth Street building, New York. This building is occupied by the McGraw Publishing Company, and the David Williams Company, the Dry Goods Economist, Class Journal Company, and the Federal Printing Company.

It was highly appropriate that the editors and publishers of trade journals should visit this immense building so largely occupied by the makers of craft and commercial papers, and that was designed and projected by James H. McGraw, that the great publications of the McGraw Publishing Company might have a suitable home.

Lessons were learned as to the advantage of abundance of room, proper lighting, systematic arrangement and orderliness with cleanliness. There was also encouragement and inspiration in witnessing the greatness that has been attained and the satisfactory accomplishment shown on every hand.

Among the journals published in the building are the Electric Railway Journal, Electric World, Engineering Journal, The Iron Age, The Hardware Age, The Dry Goods Economist, and others. Right here, as we believe for the great interest and profit of our readers, we cannot refrain from reprinting the following analysis of the policies, given in a handsome pamphlet handed each visitor, that have resulted in the phenomenal success of the Economist, for they include many excellent principles applicable to all newspapers, as well as to trade, craft or technical journals:

1. Every plank in the editorial platform made in the interest of the reader. No puffs, nor other form of disguised influence.

Work for the Reader

2. Fighting for everything that will maintain for the reader a growing business and a fair profit. Supplying information that is hard to get — deciding vital questions that minimize errors in judgment of employes.

3. Seeking only logical subscribers — interested readers, desirable customers for advertisers.

4. Continuous follow-up to insure maximum attention from readers.

5. Service to readers outside of publication proper: — Merchandise inquiries — Store plans — Problems of accounting, etc.

Merchandising in Advertising

6. Advertising organization recruited from active trade work. Solicitors and service men capable of building business by perfecting the manufacturing and selling policies of advertisers, writing trade paper advertising, trade and consumer literature, etc.

7. Mechanical excellence, attractive appearance, ease of reading, etc.

Internal Organization

8. Conservative methods in conduct of our own business affairs. Complete accounting, careful credits and collections. Strict regulations, maintenance of rates.

Self-supporting Subsidiaries

The following are Economist supplementary departments:

Special Service — Advertising plans.
Fashion Camera (sixth floor) — Photographs.
Economy Service Company — Retail advertising.
Economist Training School (sixth floor) — Teaching decorating, advertising, etc.

The visit was made more fitting from the fact that it was on the sixth anniversary of the occupancy of the building, an important event in the history of the McGraw publications.

It might be well to note here that the printing and newspaper center is rapidly changing in New York, printing offices and newspapers and the representatives of printing press manufacturers and supply men generally, are moving up Manhattan Island.

✣ ✣ ✣

The benevolent and educational work of the International Typographical Union should receive, as deserved, highest praise. The benevolent work is evidenced by the one million dollar Union Printers' Home at Colorado Springs, as a refuge for the sick and aged, and by the payment of five dollars a week pension to those unable longer to earn a living at the trade, and death benefits ranging from $75 to $400.

The charge upon each member is small, and the results show how great a work can be accomplished through systematic co-operation. There is an indirect good in these benevolences to every member contributing thereto, in the way of ennobling of character, humanizing and uplifting. The givers, in a broad sense, are more blessed than those who receive these benefactions.

The educational work through the I. T. U. course in printing, given both at the school in Chicago and through correspondence, deserves highest commendation, started in March, 1908, and the course has enrolled more than 4,300 students in the five years. The institution has proved entirely practical, thorough and beneficial.

It is built on the basis of principles, and everything as to the art is made clear, leading up by easy steps from the primary and simple to the highest and most complex, and there is no limitation as to students. The course is open to the whole world, to union and non-union printers, to the young and the old. Printers sixty years of age who have taken the course have been as enthusiastic in praise of its benefits as have been those who are beginners in the art or those from twenty-one to thirty years of age.

Lessons are given and answers and work done under the instructions sent out. The answers and specimens of work are returned to the Commission at 632 South Sherman Street, Chicago, Ill. The student is then informed as to the correctness or incorrectness of his answers, the perfection of his work, all errors are carefully pointed out and criticism and suggestions are made by a practical printer.

We are indebted for most of the facts given as to the course to a pamphlet received from Mr. W. B. Prescott, secretary of the Commission, entitled "A Turn in the Road from Nowhere." It is in itself a most attractive specimen of artistic printing. It tells graphically and truthfully of the experiences of an apprentice, or rather just a boy — for there are, strictly speaking, no printer-apprentices now — trying to pick up the trade in a printing office, with no one to instruct, and then of the joy that he experienced when fully informed of the course in printing by the International Typographical Union, and then of subsequent instructions, helps in trouble and the pleasure that he received therefrom, as well as of the difficulties that he first encountered. By the victories he won and the reputation he gained he soon found what he had acquired as to knowledge of and ability to display work.

Each student seems to find his bent, and some are especially strong in praise of the instruction in color work. We did not intend to write so much, but must add that to our way of thinking, this course in printing has been most beneficial in impressing upon so many that printing is not alone a trade, but an art, founded on scientific principles.

There has been another line of education that has found place in the International Typographical Union of late years that deserves special mention and still greater commendation. It is an education in fairness, in concord and agreement with their brothers, their fellow men and fellow workers in the craft who carry heavy responsibilities and weighty burdens — the employers. As a result of this education, mutual understanding and consideration have taken the place of suspicion, enmity and jealousy, and arbitration has come to take the place of arbitrary demands and strikes.

A long period or era of industrial peace, alike beneficial to the employes, the employers and the public, has prevailed throughout nearly all printerdom. To ask and give a reason, with justice, kindness and consideration, has been found much more winning than the making a demand in selfish interest, without considering the other fellow, backed by a threat.

* * *

CONSIDERATIONS AS TO THE LATE W. W. SCREWS

Since men must live, work and die, nothing can be more blessed, from our way of thinking, than the being permitted to continue in the employment which one loves, with health and vigor, mental and physical powers all preserved and the heart full of joyousness, until the very last. Sudden death is a shock to relatives and friends, and we are taught to pray to be delivered therefrom, but when the last messenger comes with fleetness of wing to one full of years, who has had a successful life, has fought the good fight and finished the course, there is a recompense in the thought that there were no long years of weakness, or days or weeks of suffering. For one who so dies, after the shock has passed, remains only memories of the strong, happy, living and accomplishment; words of good cheer, of love, helpfulness, hopefulness and friendship.

We were shocked at the announcement, given in our September issue, of the sudden death of Major W. W. Screws of the Montgomery, Ala., Advertiser, but our thought now is of that last happy day, filled with the work he loved, in all the vigor of active life; the kindly association with his people and his "good-bye, boys," at the close of his working day, and his happy hour of pleasant chat with his family.

Major Screws was one of earth's noblemen, and a worthy pattern for every worker in the field of newspaper making. We are glad of his example and that we were privileged to have known him and to have told in these pages and in the "First Decennium of the National Editorial Association," of his life and accomplishments, while he was still with us. The reviews of the special holiday issues of the Daily Advertiser that we have been permitted to lay before our readers from year to year, have contained very much that has been both inspiring and instructive. We were, through these splendid special annuals, permitted, in a very close way, as it were, a place in the inner circle of the happy, united family of the Advertiser people, joined together in mutual zeal and interest for the good of the paper and in real love for its head, the genial, considerate, kindly editor-in-chief.

The address delivered before the convention of the National Editorial Association at Guthrie, Okla., in 1905, by President W. W. Screws, was a masterly presentation of the responsibilities, questions and principles involved in newspaper making. It should now be carefully reread and studied by all members of the association that he so greatly loved, highly honored and faithfully served. In speaking of the newspaper as a moral force he said: "It is as a moral force that the thoroughly honest newspaper and its utterances are most powerful and in a measure a necessary part of our lives." And again, under the sub-topics, "Governed by Convictions"; "Transactions that cannot stand the rigid test of honesty and correct dealing." He advised that, though the experiment was new and untried, the press should give hearty endorsement to a school of journalism. He spoke in highest terms of the National Editorial Association, "alive, active, with clear, resonant voice, reaching to the utmost limits of the great country," and prophesied that "in the not distant future every state in the Union will answer 'here' at the annual roll call."

He has gone from us, crowned with the honors of a useful life, and may we do him honor by striving to make his prophecy true and thereby extend his influence through the years that are to come.

* * *

U. T. A. CONVENTION IN NEW YORK IN 1914?

It has been a long time since the United Typothetae of America has held its annual convention in New York City, but a sentiment has developed which may result in a concerted movement to hold the U. T. A. convention in New York next year.

At the meeting of the New York Typothetae on September 9 this matter was brought up and discussed thoroughly. The delegates to the convention were appointed at this time, and were instructed to boost for New York in 1914.

Harry A. Cochrane, president of the National Printing, Publishing, Advertising, Lithographing, Paper and Allied Trades' Exposition, was present at this meeting, and was given the floor. Mr. Cochrane made a plea that the 1914 U. T. A. convention be held in New York next April. During the week of the printing show the American Newspaper Publishers' Association and the Associated Press will convene. The National Association of Employing Lithographers will probably meet in New York at this time.

The objection was stated that if the 1914 convention of the U. T. A. were held in April, the officers elected at the 1913 convention would then have only served six months, but Mr. Cochrane suggested that it could easily be arranged that the election in April would not go into effect until the following October.

The Value of an Exposition

A Suggestion that Manufacturers Organize for Holding the Same

A GOOD deal of discussion has followed the latest exposition among both exhibitors and printers as to the value of such an institution. It seems that it is difficult to conduct a convention and an exposition at the same time and be fair to both the exhibitors and the program of lectures and addresses.

It is suggested that this might be arranged by dividing the time differently and putting exhibitors on the program. Forty-five years ago, at an agricultural fair in Minnesota, I advocated a plan that I have ever since believed might be made greatly useful. The plan was that every exhibit should be labeled with cards, giving all instructive facts as to the product shown. Then, after viewing the exhibits, all to meet in convention with the instructive facts or claims presented for a free and open discussion, criticisms, suggestions and consideration.

The different lines of exhibits could be taken up in order. This would awaken deep and intelligent interest. Questions could be asked and answered, for the benefit of all at the same time. Many hours would be saved in this way, but no other interest, frolic, excursion or banquet should intervene until all the exhibits are examined and publicly discussed. The forenoons could be for examination of the exhibits, the afternoons, from two to five, to the discussion of exhibits, and then the evening to re-examination of the exhibits that had been discussed in the afternoon.

Under the plan that has been followed heretofore, the printers do not get the information that they should receive, for one reason, because they have not been interested thoroughly and understandingly, and have merely looked at the machines, in ignorance of all that was meant in construction or in possibilities of production.

The exhibitors have not been satisfied because their machines have not received the attention and consideration that they should or that would repay the large expenditures required in making the exhibits. When an exhibitor expends all the way from three hundred dollars to three thousand dollars or more to show his machines or exhibits for the information of those who will be profited by their use, he naturally expects the attention and consideration of those who are to be benefited.

President Thomssen made some very sound suggestions in his opening address that seem, already, to be forgotten. He said, among other things:

> **Million Dollar Exhibit**
>
> We, again this year, have in connection with our state convention, an exhibit of printing machinery, and such an one as has never before been equalled in the history of the craft. There have been gathered under this roof the very latest and the very best in the machinery and equipment line — a Million Dollar Printers' Exposition. Cincinnati had a similar exhibit; Columbus exhibited a few machines. It is but natural that one city will try to surpass the other, and truly to Toledo belongs the laurel wreath for bringing together and making possible this grand exhibit.
>
> This million dollar exhibition has well been named the Central States Exhibition — it is too large for Ohio, or the thriving city on the Maumee, to take all the credit unto itself.
>
> Having had an active part in the Cincinnati exhibit, and having been interested officially in the Toledo exhibit, the question occurs to me: "Does it pay the cities to undertake these large exhibits of printing machinery?" Were it not for the self-sacrificing interest of public-spirited men and the local pride borne in the breast of every man, these exhibits would be financial failures. Money cannot pay for the services gratuitously rendered by both men and women in every station of life.
>
> We cannot dispense with these expositions. We must have them in the future — if not annually, at least every two years. These exhibits attract printers from far and near. They want to see the newest and best — the latest improvements in machinery. At an expenditure of but very little money, the employing printer has an opportunity to examine carefully into such machinery as may be required for the better conduct of his business, and he not only has an opportunity to examine into this proposed equipment, but also to get the advice of men who have operated these machines in their own plants.
>
> **Get Together!**
>
> "The Central States Million Dollar Printers' Exposition!" Is there not something in a name? Does not the very title given this grand aggregation of machinery mean something to us? Is it not possible to form an organization of manufacturers and supply men that will make an exposition of machinery similar to this every year or every two years in one of the larger cities in the Central States of the Union?
>
> Held in Toledo this year, another might be held in St. Louis the next year. Then other cities like Cleveland, Chicago, Indianapolis, Louisville, Pittsburgh, Cincinnati, etc., might be considered. Thus every few years every section of the Central States would be reached. These exhibits should be made profitable both to the exhibitor and the printer.

Yet, in face of these excellent points made by President Thomssen and of the great outlay made by exhibitors, running in the aggregate into hundreds of thousands of dollars, the men who asked for these exhibits, provided the building and charged the exhibitors for space in order to pay for all the expenses and supposedly an added profit, passed the following resolutions, signed by the officers who urged and fostered, in every possible way, the making of the exhibits and charged the exhibitors for the privilege:

> Resolved, That in the judgment of the representatives here assembled, the best interests of all concerned will be more fully subserved by the separation of cost congresses and similar gatherings of printers or publishers from all displays of machinery, tools and supplies, and we respectfully request that at such gatherings the manufacturers of printing machinery, tools and supplies refrain

from having representation for the purpose of entertainment or for sale of their goods.

Now, the exposition was liberally managed, and no one wishes to criticise the management in this regard, but the resolution gives scant consideration to the fact that as a rule, the exhibitors were out every dollar that they paid for space and very few got sufficient returns to pay the cost of the installation and removal of the exhibits, to say nothing of paying for the attendants thereon.

On the two days when the attendance naturally should have been the largest of all, those who had asked for the exhibits, in neglect of the means for their information that had been provided at so great cost, went with their printer guests on excursions that could well have been shortened as to one and postponed to Saturday as to the other.

I do not, at all, find fault with the intentions of the honorable gentlemen who had charge of the Exposition and Cost Congress; the most of them are known to everybody as high minded men who had in view, through the program arranged, the securing of a large attendance and the pleasing and benefiting of those who should attend. They did a great amount of work without pay, and are to be honored for their high motives, zeal and self-sacrifice. The good people of Toledo, the enterprising business men of both city and state who gave liberally of their money and time to promote a worthy enterprise and to advance the interests of the calling as well as the city and state, are worthy of all praise, but they and their printer guests, in order to give and secure pleasure, forgot the main object in view, and in thoughtless zeal did scant courtesy to the splendid program prepared and to those who appeared thereon, to the exhibits, and to the exhibitors who had expended their money, given of their time in a most liberal manner.

It was a splendid exposition and all that President Thomssen claimed, though not over two hundred were present to hear his address. What I am aiming to establish is that there was nothing wanting in the exposition or in the program nor in their combination, but there was much lacking in the attention paid by visitors to both and in arrangement that tended to distract attention from the main and beneficial objects had in view.

These were not offenders above others. The same troubles have been experienced through recent years by most gatherings in conventions of editors, publishers and printers, until it has come to a point where those who are on amusement and pleasure bent are much more in evidence than those who seek information and the improvement of themselves and their calling, and the very best among officers and workers yield to the pleasure-seekers, in order to promote attendance, and it is very doubtful whether separate exhibitions or separate cost congresses or conventions will be ever made as successful as has proved the combination of both.

The lesson to be learned is to so arrange the combination as to secure the worthy ends had in view.

B. B. HERBERT.

DECLARATION OF PRINCIPLES BY THE BUSINESS PRESS OF AMERICA

The Federation of Trade Press Associations in the United States in eighth annual convention assembled at the Hotel Astor, New York, September 19, 1913, made the following declaration of principles:

1. We believe the basic principle on which every trade paper should build is SERVICE — service to readers and service to advertisers, in a way to promote the welfare of the general public.
2. We believe in TRUTH as applied to the editorial, news and advertising columns.
3. We believe in the utmost frankness regarding circulation.
4. We believe the highest efficiency of the Business Press of America can be secured through CIRCULATIONS OF QUALITY rather than of Quantity — that character, and not mere numbers, should be the criterion by which the value of a publication should be judged.
5. We believe in CO-OPERATION with all those movements in the advertising, printing, publishing and merchandising fields which make for business and social betterment.
6. We believe that the best interests of manufacturers, the Business Press and consumers can be advanced through a greater interchange of facts regarding merchandise and merchandising and to this end invite co-operation by manufacturers and consumers.
7. We believe that the logical medium to carry the message of the manufacturer directly to the distributor and the user is the Business Press.
8. We believe that while many advertising campaigns may profitably employ newspapers, magazines, outdoor display, etc., no well rounded campaign seeking to interest the consumer or user is complete without the Business Press.
9. We believe in co-operating with all interests which are engaged in creative advertising work.
10. We believe that business papers can best serve their trades, industries or professions by being leaders of thought; by keeping their editorial columns independent of the counting room, unbiased and unafraid; by keeping their news columns free from paid reading notices and puffery of all kinds; by refusing to print any advertisement which is misleading or which does not measure up to the highest standards of business integrity.

* * *

The Goss Printing Press Company of Chicago has attempted to cater to the moving picture craze by publishing a little booklet of progressive views of a printing machine in operation, so that by running these over rapidly one gets a good idea of the machine in motion. This particular machine is the Goss Comet, which prints from roll paper and type forms. It will print four, six or eight pages of a six or seven column newspaper.

TEXAS WANTS NATIONAL CONVENTION

Texas wants the next convention of the National Editorial Association. The following tentative program of entertainment is offered by the Chamber of Commerce of Houston:

What We'll Do for the N. E. A.

First, we will give the delegates the whole of Houston as a front yard to play in.

We will provide a launch trip over the Houston ship channel to the historic San Jacinto battlefield, and a luncheon after arrival.

Will give them an automobile ride over the city, and they will be entertained at the Country Club.

A one-day trip to Galveston at our expense, entertainment to consist of an oyster roast, etc. The great sea wall.

A reception and banquet with dancing will be tendered as a compliment to lady delegates.

One evening will be devoted to a theater party as guests of the Chamber of Commerce.

A trip by rail to Sugarland, twenty-five miles distant, and a barbecue dinner. Delegates will have an opportunity to inspect the largest sugar refinery in the south.

The circle tour will take in the cities of San Antonio, the Alamo, and Mexican missions, Austin, Waco, Fort Worth, and Dallas. Elaborate entertainment will be provided by the commercial organizations of each city visited, as per correspondence on file.

Delegates may be assured of an enjoyable visit and will receive every courtesy and attention during their stay in Texas.

Special hotel arrangements will be provided.

CHAMBER OF COMMERCE,
Houston, Texas.

Mr. Lee J. Rountree, executive committeeman, and editor of the "Commercial" of Georgetown, Texas, writes:

"We are very anxious to have the next meeting in Houston, and have a splendid program which will be enlarged upon from time to time. The entertainments at Dallas, San Antonio, Austin and Galveston will be the greatest ever offered in the history of our association."

MEETING OF ROCK RIVER VALLEY BEN FRANKLIN CLUB AT WATERTOWN, WIS.

After a two days' session of the executive board of the Ben Franklin Club of the State of Wisconsin, that body went as a whole to the Rock River Ben Franklin Club meeting, held in the Watertown, Wis., high school laboratory, Saturday, September 13.

This active and wide awake club has for some time been holding meetings in different southern counties of that state, and with very great success and benefit to the trade.

On this particular occasion Ed. E. Sheasgreen, manager of the Cost Finding Service Company, of Chicago, gave his lecture on "The Use of Capital and its Relation to Your Business." After this lecture he gave a demonstration of the printers' cost system.

The meeting was called at 2 p. m., and adjourned at 5:15, to attend a dinner which the committee served for the visiting and local men. The general comment was that this had been the most successful and intensely interesting meeting ever held. Over fifty were present, several manufacturers of Watertown who are not printers, but buyers of printing, attending. Many said they wished the meeting could have been continued for eight hours.

Mr. Sheasgreen was invited to give one of his lectures in Fort Atkinson, with a view of interesting the citizens there to put the cost system in the manual training department of the public schools. He has also accepted an invitation to be in Madison, Wis., on Saturday, the 20th, to give his stereopticon lecture on "The Profitable Wage."

Thomas Lyons of La Crosse, Wis., president of the Ben Franklin Club of Wisconsin; Martin Rotier, Paul Nahmens, George Owens, Frank Greentree and George Detis, all of Milwaukee; Frank Cantwell, Walter Meyers, and H. C. Netherwood, of Madison, and Cassius L. Coward, of Lode, were among the many out-of-town workers.

NATIONAL COUNCIL OF N. E. A. MEETING CALLED

Office of the Secretary
Sioux Falls, S. D., September 18, 1913.

To the Members of the Executive Committee and National Council of the National Editorial Association.

Greetings! A meeting of the National Council is hereby called to convene at the Chicago Press Club, in the city of Chicago, on Thursday, October 30, 1913, at ten o'clock a. m.

The object of this meeting is for the purpose of determining the time and place for holding the 1914 convention, and for the consideration of such further business as may come before the meeting that may be of benefit to the National Association.

The official headquarters of the officers and members of this council will be at Hotel Sherman.

The Chicago Press Club, through its management, has extended the "fullest and unrestricted hospitality" of the club during the gathering of this general committee, and while it is not possible at this time to assure you of any special courtesies outside of the club, it is understood that you will have no occasion to regret your attendance.

The prospects for the future are very encouraging at this time, and the success of the next meeting will have a great deal to do with the building up of the Association.

It is hoped that every member will try and make it an object to be present.

The secretary will be glad to hear from you.

Fraternally,
J. C. OSWALD, President.
GEORGE SCHLOSSER, Secretary.

E. H. TOMLINSON — BIOGRAPHICAL

Mr. E. H. Tomlinson was born on a Pennsylvania farm in 1866. In 1900 he left the farm to take up newspaper work, conditions at home preventing him doing this earlier. After a varied experience in the mechanical end on a number of weeklies, he concluded his apprenticeship for newspaper ownership at Trenton, N. J., where he worked as reporter and city editor on the dailies of that town, until 1900, when he went to Morristown, in the same state, and established a daily. He was attracted there by the fact that it was the only town, of which he could learn, with a population of 12,000, and a county seat, without a daily. He, and Mrs. Tomlinson, whose assistance and counsel proved most helpful, found the fight an up-hill one at first, but the paper was soon paying its way with a small profit, which has increased steadily with growing circulation and advertising patronage, and the prestige that comes from age and ability to keep it a one-daily town, despite numerous attempts to start opposition sheets.

The Record is published in its own building, one of the best located and most substantial structures of the town, and has a complete modern plant of linotypes and perfecting press.

Banquet of the Federation of Trade Press Associations

Hotel Astor, New York, September 19, 1913 — John Clyde Oswald, Toastmaster

Speakers' Table

Herbert Casson, F. F. Cutler, Tom Daly, W. H. Ingersoll, Edwin C. Johnston, William A. Marble, Hon. Charles F. Moore, Edwin M. Morgan, Frank Alvah Parsons, F. D. Porter, Prof. Walter D. Scott, H. M. Swetland, W. H. Ukers, Richard G. Waldo, Dr. Nacy McGee Waters, Dr. Talcott Williams, Hugh M. Wilson, Grant Wright.

New York Press Association

1853 — Sixtieth Anniversary Convention — 1913

The New York Press Association, organized in Elmira, September, 1853, celebrated its sixtieth anniversary in the same place September 3-5. Of the thirty-two organizers, but one survives, Maj. Harwood A. Dudley, of Warsaw, in his eighty-eighth year. From a small association of country publishers in western New York, it has spread throughout the state and added to its membership leaders of the metropolitan press and of all the great cities of the state, journalists who have a national and international reputation.

The convention in Elmira was representative and pleasant and profitable to all who attended. The meetings were held in the city hall, a handsome building centrally located. A social session Wednesday evening witnessed the coming together of old friends, men and women, and the making of new friends among the good people of Elmira. The meeting was called to order by President L. William Hones, who turned it over to Chairman I. S. Copeland of the local reception committee. There were eloquent speeches of welcome by Hon. Daniel Sheehan, mayor; Chairman Copeland; Dr. Woodford J. Copeland, president of the Elmira Press Club, and J. Maxwell Beers, of the chamber of commerce, to all of which President Hones gracefully responded.

The first business session of the convention opened at 2 o'clock Thursday afternoon, with a vigorous and inspiring address by President Hones. The report of the secretary-treasurer followed. Then Maj. Dudley, the sole survivor of the organizers, who had been given the seat of honor on the platform, was called for, and briefly responded in touching reference to his associates of sixty years ago and of his abiding love for the association. The veteran's interesting remarks were enthusiastically applauded, all the members standing, the women waving their handkerchiefs.

When order was restored the president appointed these committees: On organization, William J. Kline, Edgar L. Adams, D. W. Murray; on finance, Walter B. Sanders, Charles H. Betts, Paul Nichols; on resolutions, Henry Stowell, C. I. Burch, F. P. Hall.

This program of papers was presented, discussions following:

Reminiscences of Organization and Later Early Days — Maj. Harwood A. Dudley (sole survivor of organizers), Henry Stowell, and others.

The Past Sixty Years: and Then! — Benjamin B. Herbert, National Printer-Journalist, Chicago, father of the National Editorial Association.

Real Advertising — Charles H. Betts, Lyons Republican.

A Profit Is Not Without Honor Among Publishers — John Clyde Oswald, American Printer, New York City, President National Editorial Association.

Local Press Associations and Their Relation to the State Association — Carl G. Clarke, Perry Record.

Experience in Cost Finding — Frank A. Crumb, Alfred Sun.

The secretary read a large number of communications from members who could not be present, and from several organizations.

An amendment to the constitution makes eligible to membership former members of the association who have retired from the newspaper business. The proposed amendment admitting proprietors of printing establishments was voted down.

The entertainment provided by the local committee was varied and delightful and keenly enjoyed. Thursday morning the world-wide celebrated Elmira reformatory was visited, upon special invitation of Superintendent McDonnell, a visit of absorbing interest and enlightenment as to the work for humanity done there. Thursday evening the company was entertained at Rorick's Glen Theater, a natural amphitheater transformed into a veritable fairyland by the art of man, one of the most famous of theaters in the country. Friday morning a trolley ride to Watkins, about twenty miles distant, a concluding business session and a fine lunch at the Hotel Jefferson, and a visit to famous Watkins glen, now under the supervision of the state, which has spent thousands of dollars in making inspection of the glen safe and easy.

At the final business session reports were made by the several committees. Mr. Sanders, from the finance committee, reported the treasurer's account correct, read from the itemized bills and made some wise suggestions looking toward the more prompt payment of dues. Report adopted.

Mr. Burch reported for the committee on resolutions, tendering thanks to those who had so liberally contributed toward the entertainment of members, viz., Chairman I. S. Copeland of the local committee and his associates; Dr. Woodford J. Copeland, president of the Elmira Press Club; Mayor Sheehan; Superintendent P. J. McDonnell, and Dr. Frank L. Chamberlain, assistant, of the Elmira Reformatory; the Elmira Water, Light and Railroad Company, for transportation about the city and to Watkins Glen, and for theater tickets; William J. Delany, chairman city hall committee; to the Cold Brook Club of Elmira business men, and to the citizens of Elmira generally, who had made their stay in the "Queen City of the Southern Tier" so pleasant. The resolutions were enthusiastically adopted.

Mr. Kline, from the committee on organization, recommended the election of these officers:

President — Charles H. Betts, Lyons Republican.

Vice Presidents — John K. Walbridge, Saratoga Saratogian; Will O. Greene, Fairport Mail; James H. Potts, Troy Times; Gardiner Kline, Amsterdam Recorder; Fay C. Parsons, Cortland Democrat.

Secretary-Treasurer — A. O. Bunnell, life member, Dansville.

Executive Committee — Dr. Eugene H. Porter, Journal of Homeopathy, New York, chairman; Jay E. Klock, Kingston Freeman; Garry A. Willard, Boonville Herald; Edgar L. Adams, Marathon Independent; Paul Nichols, Walton Reporter; Walter B. Sanders, Nunda News; L. William Hones, Roscoe Review.

General applause greeted the report, which was unanimously adopted.

Messrs. Grose and Nichols were appointed a committee to present the president-elect, who, warmly welcomed by President Hones, responded in thanks eloquently phrased, pledging his best efforts to promote the interests of the association.

What followed was in the nature of a love-feast — the presentation to the retiring president of a handful of currency by Mr. Sanders on behalf of the members; the touching response by Mr. Hones with tear-filled eyes; the loving and fervent reminiscences of his fifty-four years of connection with the association by Mr. Stowell, which warmed the hearts of all; a spicy letter from C. K. Sanders, who joined the association in 1860; and grateful reference by the secretary to the convention in Watkins in 1868, at which time he commenced his service as secretary, which had been continuous since, emphasizing as one of the latest and best evidences of the loving favor of his associates the presentation of a purse of gold at the golden wedding anniversary of April 9.

Most of the company, singing and cherrily chatting as they went, returned to Elmira, where they separated for their homes, with many fond farewells. The papers and the discussions and the speeches throughout, all evidenced renewed interest in the association, and a determination to make the coming year one of great increase in membership and in value of work.

This outline of the anniversary convention will be followed by pamphlet report giving addresses and papers in full. These will be found informing and inspiring, indicating a new era of effort to keep pace with the world-wide advance in journalism and printing, which is fairly fascinating.

O. A. BUNNELL, Secretary.

TECHNICAL DEPARTMENT IN TYPOGRAPHICAL JOURNAL

Delegate Clyde Baumgardner, of Omaha, presented and secured the adoption of the following resolution at the Nashville I. T. U. convention:

"Whereas, The International Typographical Union has always been in favor of educating its members to become expert workmen, and has used every means at its command to create a desire amongst its members for the advancement of the craft along technical lines, and,

"Whereas, the International Typographical Union technical course has been a big success and of great benefit to those of our members who have been able to avail themselves of its teachings; and,

"Whereas, The International Typographical Union has received the hearty endorsement of the press and employing printers of North America, who have united in endorsing the trade education movement of this organization, and,

"Whereas, The International Typographical Union course has enabled many of our members to command salaries above the scale, thus paving the way for an increased wage for all of our members; therefore be it

"Resolved, That steps should be taken to create a greater desire among our members to avail themselves of the educational advantages offered by the International Typographical Union, and to inculcate a belief among union printers that they should use every means to perfect themselves in the different branches of the craft; and be it further

"Resolved, That the secretary-treasurer of the International Typographical Union is hereby instructed to establish and maintain a first-class technical department in the columns of the Typographical Journal."

The New Force in Business

By R. R. Shuman, of the Shuman-Booth Co., Service Agency, Chicago

From an Address Delivered before the Eighth Annual Convention of the Federation of Trade Press Associations, New York, September 18

It is with a feeling of respect almost akin to awe that I presume to stand up before this audience of the leading publishers of trade and technical media of the United States; for I realize, as perhaps but few of you individually realize, the power which lies in your hands. And it is this power, this new force in business, about which I shall speak.

As periodical visitors to the desks, to the minds and the hearts of the captains of trade and industry of this nation, you wield a power far greater than that of the political press, greater than that of the pulpit, greater than that of any other publicity force that now exists in this or any other country, for the pupils who sit at your feet are not the idle, the thoughtless multitude, but are that great masterful five per cent of the population of this country who control the labor market or the products of the other ninety-five per cent. Your pupils are the men who have built and are building America's industrial and commercial greatness, and your instruction, given with so lavish a hand, has, I firmly believe, done more to put America in the forefront of the commercial and industrial nations of the earth than any other one influence.

Influence of the Retail Merchandising Journal

Those of you who supply the link between manufacturer, jobber and retail merchant, have built up a new force in the distribution of merchandise and the betterment of retail method and equipment which cannot be calculated in dollars. This force — this New Force in Business — benefits producer, distributor and consumer alike, because it simplifies distribution by leveling down man-made hurdles that used to beset the merchandising path.

To measure the benefits you have already bestowed upon the retail merchant, it is only necessary to contrast the primitive, wasteful, inefficient methods of store management and display, accounting methods, store equipment and the like of only fifteen years ago with the advanced methods which so largely prevail today.

What Technical Journals Have Done

To give an index of the power of the technical journals, it is only necessary to study into the equipment and methods prevailing in manufacturing plants of today compared with those of only a very few years ago.

Science and up-to-date efficiency engineering have taken the place of the rule and thumb in manufacture. The printed word has vastly simplified and facilitated the solution of problems of securing first hand distribution of the products made.

Power of the Class Journal

The class journals, those concerned with both manufacturing and merchandising — the journals zealously devoted to specialized fields of endeavor — have become powers in those fields in direct proportion to the intelligence and unselfishness with which they build for others while they build for themselves.

In both the avenues of trade and of industry the periodicals which you publish give to every subscriber the benefit of the latest thought, the latest development of machine or method which the most powerful organizations of the country have been able to devise.

The time was when a few manufacturers or merchants could control at least a partial monopoly of the short-cuts and efficiency plans which they had developed or adopted, but that time has gone, and the brains of each, the creations of each, the efficiency-developments of each, become, through you, the property of all.

Your editorial pages give freely information which cost you, or which cost others, vast sums of money.

Your advertising pages thrill with messages of betterment in appliance or in merchandise. And more and more the subscribers to trade and technical and class journals are coming to read the advertising pages of those journals with a care which is a true index of their valuation of the importance to them of those advertised messages.

Evils to be Eradicated

No force that I know of today holds a greater menace to the evildoer in trade or industry than the force which you exercise. No great wrong can live long in the scorching rays of the searchlight of such of you as have the courage to uphold the good and expose the evil.

Leaders Not Followers

The time has gone by when you are hangers-on in any trade or industry. The time has gone by when you are respectable beggars for crumbs at the rich man's table.

You sail the seas of your industries or trades not as something towed behind, but as the very engines that impel the industries themselves.

Hangers-on there still be; some grossly unworthy, some actually piratical; but I believe that your associations, national and local, are doing more to drive such pirates off the journalistic seas than any other force; and I adjure you, in your own interest, and in the interest of the whole people, to speed the time when the last journalistic black flag shall be found on the sea of business.

From my unspoiled viewpoint as an outsider, I see ways in which you can still further increase the power and influence which you are now exerting, and I shall speak with the utmost frankness, even at the risk of giving offense, because I believe nothing is ever gained by half truths, and if the things that I think whole truths are in reality fallacies, there is no better or surer way of proving their fallacy than by my frank expression of them here and now.

Newspapers and Magazines Need Light

I speak for a more cordial interrelationship between the trade press, using the term in its large sense, and the consumer press. As a matter of fact, from the standpoint of the owners of both properties, the interest is mutual, because the trade and the technical press help to develop and foster and nurture to greatness industries and trades whose products must, in their last analysis, reach the consuming public through the consumer press.

The ideal trade journal campaign (using the term in its restricted sense as referring to the journals that are subscribed for by retail merchants) is, to my mind, one in which the manufacturer first secures dealer-distribution through the medium of the trade press, and then reaches out and helps that dealer through the proper forms of consumer advertising in daily, weekly and other popular publications.

But what I have in mind at the moment is not the advertising interrelationship so much as the fact that I believe it is not only your privilege, but your duty to guide and inform the daily newspapers in centers important to your trade or craft and the great national weekly and monthly magazines as well, so that there may be a marked decrease in the misinformation about trade and technical affairs, which is so characteristic of the popular press of the period.

Even a young publication in any trade or industry that inaugurates and persists in rendering this service, and does it intelligently, will soon become known as the leading journal of its kind. That means that Mr. Harris will have to pay about $100,000 more than he would otherwise when he comes to try to buy it.

More important still, it will multiply your power and influence for good by getting the great public on your side, and will thus give this new force in business a vastly added impetus.

Better Editors

As this new force in business is inherently an editorial force, I want to see you raise your editors' salaries when you get home — if they are worth it — and if they are not worth it, make proofreaders of them and hire editors who are worth top notch pay.

The journal that pays its advertising manager more than its responsible editor is the journal with the wrong slant — a slant that dips downward and becomes a swift toboggan that leads to oblivion.

I want to see a real divorce between sanctum and counting room, not a hippodrome estrangement for grandstand applause to be "given the hook" and dragged off at will.

I want to see every publisher brave enough to hire and keep, and back up, an editor who is brave enough to expose every bad move of every trust or corporation whose acts affect his subscribers, whether that trust be a four-page advertiser or no.

There is no such thing as a good trust or a bad trust in the sense that any trust is wholly good or wholly bad, for the good trusts do some bad things and the bad trusts, if there be such, have many good acts to their credit.

A big man, a truly great man, and a man full of nobility of character, a man who was the father of a thousand acts and policies of the greatest constructive worth to both capital and labor, was indicted by an Ohio jury because he permitted certain evil things to be done in the interest of the corporation of which he is the head.

The really great editor, backed by the really great publishers, would be equally prompt in extolling the good and condemning the evil in that man — whether he advertised or not.

Remember, gentlemen, it is not true, and never will be, that the good trusts are those that advertise in your journals and the bad ones those that do not do so.

First Duty is Toward Subscribers

And remember, that your duty lies to your subscribers, if you will measure up to your part in this new force in business, and that is not only your privilege, but your sacred duty, to hew close to the line in the interest of your subscribers, your industry or your trade, let the advertising chips fall where they may.

Not the popular magazine's duty, not the daily newspaper's duty, but yours, for you alone know the real facts and true conditions and can commend or condemn with the impartial intelligence of the man who knows.

MORE WORK THROUGH PUBLICITY

Address all samples and communications for this Dept. to Harry Albro' Woodworth, 43 St. Botolph St., Boston, Mass.

NEW ZEALAND is said to be the best-governed country in the world, and no country appears to be looking to America for new ideas in business more than this far-away land in the antipodean ocean. Such ideas are not taken bodily, however, when they can be improved in their adaptation to business conditions in that country. When I was editor of Brains, which is now merged with Retail Equipment, more than five hundred business men in New Zealand paid six dollars a year for that advertising weekly! I am glad to see that the job printers of New Zealand are sending their work to American printing journals for criticism, as they seem to have not yet broken away from an English style, which is not now in keeping with the modern mode of job composition originated in America, which style is now being endorsed by the excellent English printing journals. The presswork on all New Zealand specimens I have seen is admirable — what is generally known as "good workmanship" is characteristic of Great Britain and her colonies that are most in touch with her. But art in job composition is fully as important as art and painstaking care in presswork, and it is not in keeping with advanced art in job typography to use such ornamentation as that above the firm name in this particular job (1). A moderate use of such ornaments as that beneath the word "Masterson" is still allowable when is gives a distinct finish to a job, but surely it is incongruous with the other ornamentation, and the unnnecessary rules, in this job. In such a job as this, the old dictum of De Vinne should be kept clearly in mind: "Ornament construction, but never construct ornamentation," although there is no other art in which the artist may sometimes construct ornamentation with pleasing effect as in printing. Will Bradley, a true artist, made some very pleasing designs in the ornamentation he constructed for modern "chap-books," though doubtless he overdid in some cases — which is the natural fault of those to whom ornamentation becomes somewhat of an obsession. Still, Bradley taught printers a great deal in regard to wonderful tone effects that can be produced in one printing by an inexpensive use of pleasing type-ornaments, and his influence is still shown in good, attractive modern work. Whoever set the New Zealand card is a natural artist, who will do some splendid work when he breaks away from old ideas. He should realize that such a good face and good ink, so well printed, would look better either on a plain card or some plain but attractively colored cover-stock than on a card which has a red border with corrugations bit into the stock at every quarter of an inch along the edges. In America we have outgrown such fancy designs, which appeal only to our especial class of 'Arrys and 'Arriets at our beach resorts who have their names written on cards either with a tinsel preparation or with those impossible birds with the shaded tails whose creation was in the elder days of atrocious Art even taught by schools of penmanship.

Our prices are absolutely the limit. We receive work from all parts of N.Z. on account of our low prices

QUALITY

You will find that for neatness we hold a leading position. Only a trial and we will do the rest

I know my New Zealand friend will take this not unfriendly criticism in the spirit it is given, for I never had warmer appreciation of my strictures on advertising than from the ultra-progressive New Zealanders who have advanced in an even more surprising manner than dreamed of by Macaulay in his vision of the New Zealand sketch artist.

A House-Organ That "Spareth Nor Praise Nor Censure"

One of the livest and handsomest house-organs that ever a printer issued is The Andersonian, "Being an assemblage of types put out occasionally for the edification of all kinds of good people," by "The Andersonian Printery — a Print Shop at Sacramento, Cal." One of the types referred to must be that type of Western beauty who represented "Miss Spokane" when the Pacific Coast Ad Men visited Sacramento. Her picture is on the first page of the Andersonian (2a), which has a very pleasing combination line and half-tone effect, in keeping with the charm of the photograph. No wonder the ad men were pleased with such a handsome living advertisement of the young Western city; and the editor of the Andersonian was evidently quite as much pleased with the younger maiden — four-year-old Mildred Tucker, in her "unique impersonation of the fragrant emblem of Portland's official name and annual festival — the Carolina Testout rose." The full-page picture of Mildred shows her as a bud on the top of a long rose-stalk, and a pen such as that at the right of the first page has, in this instance, written the words, "We love you, little Portland bud." It is such conceits as the pen and the different sentences at the sides of the picture that make the Andersonian different from house-organs on which it is painfully evident but little time and thought have been expended.

Publicity That Pulls

PERSONALITY in printing is a pulling principal in publicity that professional business men will not overlook. Printing done by ***Anderson*** has personality as well as quality.

Present your business to the public in a substantial way and create confidence in your firm and your wares.

That booklet you contemplate should be given much care and attention. Every detail should be worked out faithfully. The catalog of your stock means everything to your trade. The careful compilation must be accentuated by careful printery. The envelope folder has a psychological mission to perform. The WAY the idea is presented is just as important as the idea itself. It's in the printing. ***Anderson's printing*** conveys an idea in its fullness. Your consultation invited.
416 J Street, Sacramento

No. 2b

Two editorial pages contain quite the keenest rebuke to the class whose greed overrules their community spirit, to the harm of the community, and incidentally themselves, that it has ever been my pleasure to read. The editor appears to be Col. Brann and Bill Barlow rolled into one when it comes to slinging sizzling expletives at folks that apparently deserve all they get.

There is nothing of the narrowness so vigorously condemned in his paper about Mr. Anderson, who gives half a page to an appreciation of Harry S. Stuff written by A. Hoyt Levy, although Mr. Levy stated that this other live Pacific printer "gives his patrons ten times more for their money than any other printer in the West." Nay, Mr. Anderson even puts this assertion in black.

This (2b) is some publicity of The Andersonian that has considerable personality of its own. It seems to me that no error in spelling is so common as "principle" for "principal." Here it is probable the ad-writer meant to write "principle" instead of "principal"—you see I do not always blame things on the compositor. But then "principal" would hardly be an error in this case.

✣ ✣ ✣

The best or the worst that is in a man is brought out by contact with the world. Friction smooths and polishes solid wood, but it soon destroys veneer.

1883-1913

The July number of Stone's Impressions, a house-organ issued by The Stone Printing and Manufacturing Company, of Roanoke, Va., not only celebrate the anniversary of the nation's independence, but also the anniversary of that printing establishment, whose growth is like that of the nation, and for the same reason — that it was worthy of it. This page from the publication (3) shows that the company now has an imposing force of officials and department heads with "about one hundred and seventy other competent employees" — but in 1883 the working force consisted of a manager, a printer who is now president of the company, a youth who is the present manager, and a "negro who furnished the power." The contrast between the picture of the "printing

office" of 1883 and the large stone building of today, shown in three-color as decked with the American flag on the anniversary, is indeed impressive as showing American progress. This number, with the exception of the insert page mentioned here, is printed in red and blue — harmonious red and blue, the stock being white. The composition of these pages is so good that I should like to show some of them, but am afraid that a reproduction would not do their clear-cut impression justice. The only fault to be found with the book is on that one form the blue was run light for a time, and the contrast between the beautiful blue on some of the pages with the hardly readable blue on the other pages, is not pleasing. It is a reminder of what care should be taken in watching the presswork, particularly with a color like blue; though no doubt the most of the booklets are perfect. But this was a copy sent to a captious, cantakerous, carping and withal conscientious critic!

That one of the best things in this issue of Stone's Impressions is an extract from another printing concern's house-organ is not by any means a demerit. Selection is as great a test of an editor as composition — often a greater test. And credit is frankly and fully given for this article to Pulling Power, the house-organ of the Falconer Company, Baltimore, Md. Such an argument as is contained therein should both cause buyers of printing to think and be of inspirational value to readers of this department:

"Your Price is Too High"

Gentle reader, try to remember those five words, for they are the text of my sermon. You will not find these words in the Bible, but you will find them on the lips of probably every citizen of this country some time or other.

Let us examine into the truth of the expression. We have heard it spoken so often that it has become a sort of proverb — and there is another proverb, you know, that tells us not to believe everything we hear. Does that one apply to this?

I happened to know our would-be customer pretty well, so I proposed that we talk it over.

"How do you know my price is too high?" I asked, for a starter. "Do you know what the job will cost us to produce? Do you know what is a fair profit in our line of business? If I showed you my estimating figures in detail, could you catch any errors? Could you show me how to lower the cost in any way? In short, do you really know anything at all about it?"

Then he admitted what I knew all along — that he meant he could get the job done cheaper somewhere else, had three or four other prices and mine was not the lowest.

He caught the thought in my mind and answered my next question before I asked it. "You needn't tell me that the lowest man will give me a bum job. Everybody's bidding on the same thing. I always look out for that. The specifications are exactly the same."

"If you really believe that," I rejoined, "there is only one thing to be said: you are sadly mistaken. In the vernacular, you are kidding yourself."

"I don't see how," he replied. "If the job isn't exactly according to specifications, I don't pay for it."

"Look here," said I, "I believe you're open to reason, otherwise I wouldn't argue with you. I tell you, specifications don't protect you now and never will, not even if you furnished the ink and paper yourself. And I'm going to prove it to you.

"Walk up Baltimore street from Gay to Calvert, go into every restaurant you pass, and get prices on, say, ham and eggs. You'll find a considerable difference between the Emerson and the slap-dash lunchroom. If you place an order, you'll likewise find a difference in the ham and eggs — even if you supply the raw material yourself. And you'll find the same difference in printing.

"The cheap restaurant can't produce a dish of ham and eggs equal to those at the Emerson, even if you paid the Emerson's price. It isn't equipped to do that class of work. Each charges what its **own product is worth.** Do you get me?"

The enclosed card for return reads: "Please send Stone's Impressions as issued. It is understood the only obligation will be interest in your work and service."

✣ ✣ ✣

Good advice is usually most appreciated after it is too late for it to be of service.

✣ ✣ ✣

Velvet Green

You've read of velvety lawns — but theirs is hardly the shade that the Buckie Printers' Ink Co., 714-16 S. Clark street, Chicago, advertise on their August monthly calendar. But the name is appropriate, nevertheless — and the color is naturally rich.

✣ ✣ ✣

It isn't always the best printing that gets the most advertising. But it should be.

✣ ✣ ✣

For the Discriminating Voter

"These cards," writes R. G. Borton, manager of the Art Printing Company, of Butler, Pa., referring to the specimen shown as 4, "increased our candidate card business wonderfully. You will note their resemblance to a 'regular.'" It is not the first time that I have been told of the gratifying results that seem to follow the injection of a little good-natured, non-partisan fun into printing-advertising during a political campaign. The Art Printing Company is doing work consistent with its name, some of which will be reviewed later.

✣ ✣ ✣

If a local merchant tells any of you publishers that "no one reads advertisements," don't think they believe it, but show them that they don't believe it. Offer to give them a free ad if they will do something — give free samples, for instance — that will involve some cost to them if people do read — and you will find they won't take you up. But it may open their eyes to the fact that they do believe advertisements are likely to be read, and that they have made that statement so commonly heard by publishers to excuse their own fear of expense and lack of energy. Real tact used in such a method of making non-advertisers think often makes them think they should advertise.

✣ ✣ ✣

Two Fine House-Organs of One Firm

One of the most elaborate productions along the lines of this department is Printology, a house-organ of thirty-two large pages and cover issued by the Regan Printing House of Chicago. It is on fine paper, with numerous half-tones in black and tint and three-color, and is probably intended more as a souvenir than a mere advertisement — though it is a good advertisement. One page picture shows "A Night Off — The Regan Family and Friends at the Masonic Temple, April 27, 1912," and another page has a reproduction of the "programme" — it was spelt thus in those days — of "the first anniversay ball of the J. L. Regan & Co.," March 5, 1881.

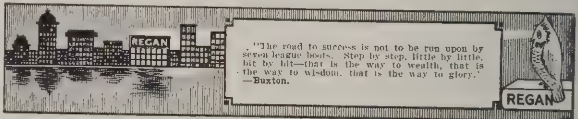
There are eleven lines on the first page of this program, and eight faces — and though one face is used three times it has a fearful and wonderful border of bent rules and ornaments around it in one case. And there is the old familiar stork or crane, with a butterfly nearly as big, and a wasp fully as large, and a Begonia Rex that dwarfs the menagerie. How the art of job composition has changed in the last few decades — but hold! I find the same flora and fauna in this year's vintage.

In the article "An Event in Printerdom," it is stated that "a number of attendants at this affair of a former century were present at this one" — a matter for congratulation, surely.

An especially valuable article is that on "The Chap-Book," illustrated by reproductions of the quaint wood-cuts of artists with more terrible imaginations than Gustave Dore, but with hardly the skill. I cannot forbear to reproduce one of the pictures (5), which is entitled "A Hunting Scene." Clearly the "chap-books" of the American Type Founders Company were deficient in imagination as compared to these old-timers. What brand was the mead served at this banquet?

No. 5

Other articles of real interest are "The Uses of Paper," "The Newspaper and the Magazine," and "The Debt We Owe to Dickens." In the last the statement is made: "In 1842 Dickens visited this country, and as a result of his journey he turned out 'Martin Chuzzlewit' and the 'Christmas Carol.'" Instead of the latter, do you not mean "American Notes"? Dickens was not much kinder to America's editors of the old days



"The road to success is not to be run upon by seven league boots. Step by step, little by little, bit by bit—that is the way to wealth, that is the way to wisdom, that is the way to glory."
—Buxton.

No. 6

than to her real-estate advertisers of the same period; but he was not so severe on the editors as Lowell in his "Biglow Papers." But then it is a human-natural law of nations that home criticism is more welcome than that of a foreigner, even though we should be glad to obtain a foreigner's point of view! But Dickens was long since forgiven.

Although the page "Reganisms" in Printology is advertising, it is not so essentially a house-organ as the excellent Never-Sleep Gazette of the Regan Printing House, with its cover with the 24-hour dial. One of the pages (6) shows how the Press Club helped to advertise the house that has no use for a door-key.

The Never-Sleep Gazette is a wide-awake one, and seldom dozes. But it is doubtful if the following story is good advertising:

> **The Most Vital Question**
>
> The dignified professor was delivering the final lecture of the school term, and he dwelt with emphasis on the fact that each scholar should devote all the intervening time preparing for the final examinations.
>
> "The examination papers are now in the hands of the printer," said the professor. "Are there any questions to be asked?"
>
> Silence prevailed. Suddenly a voice from one of the class in the rear seats inquired: "Who's the printer? I know one who never sleeps, and I guess I'll get him on the wire. His number is Harrison 6281."

It often makes a fine advertisement to take a good story such as the above was when it stopped with the phrase, "Who's the printer?" and to add something making it a good ad of a particular firm. But the whole point of the tale rests on the possible lack of either watchfulness or dishonesty on the part of printers entrusted with the printing of examination papers. Hence the sinister suggestion even so subtle in the improbable addition put into the mouth of the student is certainly out of keeping with the advertising of a firm that has built up its reputation on watchfulness and honesty as well as good work.

The page illustration of a book "bound in leather and stamped in five colors, a class of work for which the Regan Printing House is well equipped," is printed in these five colors on pebbled stock, and thus makes a splendid advertisement of such work.

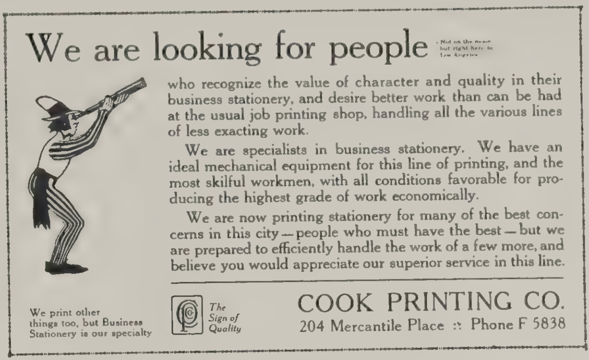
With the Mark of "The Sign of Quality"

The mailing card of Cook Printing Company, Los Angeles, Cal. (7), is on the delicate brown tinted stock that helps to give such distinctiveness to their printing-advertising. The printing is in black, with a touch of orange red on the striped hatband, the sash and the shoes of the astronomer. The words in the very fine type after the head "We are looking for people" are: "(Not on the moon, but right here in Los Angeles)." There is a fine reticence in such a moderate use of color on such a job that is an example of the good taste common to all the Cook printing. And there is no horseplay in the use of the small cut of the comic figure. The distribution of blank space is also effective.



We are looking for people Not on the moon but right here in Los Angeles

who recognize the value of character and quality in their business stationery, and desire better work than can be had at the usual job printing shop, handling all the various lines of less exacting work.

We are specialists in business stationery. We have an ideal mechanical equipment for this line of printing, and the most skilful workmen, with all conditions favorable for producing the highest grade of work economically.

We are now printing stationery for many of the best concerns in this city — people who must have the best — but we are prepared to efficiently handle the work of a few more, and believe you would appreciate our superior service in this line.

We print other things too, but Business Stationery is our specialty

Royal Child, a Prince of Local Typographers

The most modern compositor could have no objection to such lone-line-short composition as

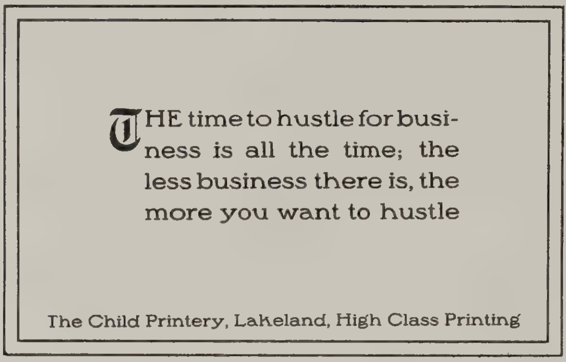
The Child Printery
Royal B. Child
High Class Printing
Lakeland, Florida

No. 8a.

this (8a) on a wide notehead. It is years since I heard from Friend Child, and I know such a hustler will "get before the people" for the people's good:

> Harry Albro' Woodworth, "More Work Through Publicity."
>
> Dear Sir: Here's a small batch of advertising suitable for criticism in your department.
>
> Have just bought a small job shop in this city (about 7,000 inhabitants), and am trying to get before the people, and am using a few kinds of publicity to make them remember me.
>
> The long slim "Books" is intended as a bookmark for your personal use, not as advertising literature.
>
> Yours truly, ROYAL B. CHILD.
>
> Lakeland, Fla.

I should have liked to show the bookmark, which is perhaps the most pleasing piece of composition Mr. Child has sent me, with its poetry that compares books to flowers. Here (8b) is a simple card, with rules and initial red, in a good clear modern letter of which this printer makes considerable use. It is pleasing to note, too, that he still holds to Jenson, a beautiful face which is still modern, especially when used as in the "Thank You" slip (8c). And that such a slip has an advertising value, in keeping with the "service" idea, is not to be doubted. A leading New York department store lately decided to omit such phrases as "Dear Sir" and "Yours very truly" from its correspondence, as being superfluous. This gave Wanamaker's Philadelphia store a chance to answer, without mentioning its rival's name, that to wear a collar and tie was really superfluous. And "Thank you," when it rings true, is a magic expression that, let us hope, will never be thrown into the discard.

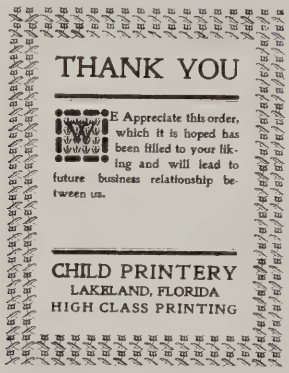


THE time to hustle for business is all the time; the less business there is, the more you want to hustle

The Child Printery, Lakeland, High Class Printing

No. 8b

Really, there should be no necessity for "very truly." Truth is not comparative, and "truly" should express its fulness. But the phrase has grown more or less meaningless — pity 'tis, 'tis true!



THANK YOU

WE Appreciate this order, which it is hoped has been filled to your liking and will lead to future business relationship between us.

Whenever there is danger of a printer's or publisher's business becoming too widely known it will be time for him to stop advertising.

✣ ✣ ✣

From A. Hoyt Levy, Critic, Artist, Ad-writer

The following leter refers to an extended criticism in the May issue:

Dear Mr. Woodworth: That was a most interesting article in the National Printer-Journalist which you published, and I heartily appreciate it. You may include in this appreciation your criticisms, which you know I have always valued highly.

In that part of your article where you call attention to the apparent inconsistency of the phrases on the gun folder and in the fly-leaf of our booklet, I believe that if you had full cognizance of the facts in the matter, you would understand that we are not as inconsistent as these phrases make us appear. You see, we sent out the folder far in advance of the booklet. At the time that we prepared the folder, we were so vainglorious that we believed there were no others equal to us. At that time we practiced the preachments of blowing our own horn. Since then my partner attended several revival meetings and a change of heart ensued in this firm. We concluded that it was morally wrong to blow our own bugles and decided to look to our friends to do the blowing for us. About this time we published our booklet and carried out our convictions on the cover, in fly-leaf and inside of the booklet.

We have not yet learned whether it pays better to let the other fellow blow for us than to do our own blowing. For my part I believe there is a happy medium which I will endeavor to find, and when I do I will put you wise.

You are right about the quality of stock used on the folder. We tried a number of different qualities and found it difficult to get a stock with both a good printing surface and good folding qualities. This particular stock, in a slightly heavier weight, makes a fairly good folder, although it is too light to be scored by scoring knives.

With kind regards, I am Yours very truly,
A. HOYT LEVY.

New York City.

Well, some of us have to blow our own horn, in accordance with the proverb, for we will never get any one to blow it for us. Most good advertisers, however, who toot their own "little tooter" find that this helps to get others to join in the tune.

The envelope in which A. Hoyt Levy & Co. mail their correspondence has the enclosure whose shape is outlined in the accompanying reproduction (9). There is a slit in the envelope through which projects the part of the card with the word "Pull." When this "direct command" is complied with the envelope is opened.

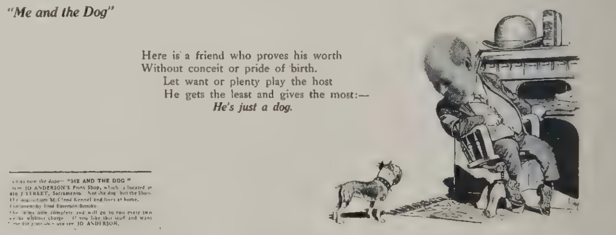
"Dog on It," It's Good!

Here is a blotter (?) on white stock, with the heading and the words "ME AND THE DOG," "JOE ANDERSON'S Print Shop," and "416 J Street, Sacramento," in red, the register being perfect; the remainder is black. As we have been discussing the disposition of white space on blotters recently, what do you think of this as a masterpiece in this line? Being so, it should be a first-rate advertisement for Anderson, my Jo. The poet is given credit, but it takes some discern-



"Me and the Dog"

Here is a friend who proves his worth
Without conceit or pride of birth.
Let want or plenty play the host
He gets the least and gives the most:—
He's just a dog.

No. 10

ment to discover the name of the artist, which is Sweeney — and you don't have to tell it to him. He must be an artist in posing like that exercised on the genial printer for the set-in of the head, which is so perfectly in keeping with the line drawing.

* * *

A Rule That Advertises

The "combination" type-rule and foot-rule sent by States Printing Company, Chicago, is much more of a good advertisement of a good print-shop than such productions generally are. The rounded corners extending beyond the graduations are, however, rather unhandy in many of the uses to which a rule is put. However, they protect the measuring part when the rule is of cardboard. I should like to reproduce the artistic panels on one side of the rule, because they are good advertising composition, and the two cuts of presses are much more handsomely handled than is generally the case in such composition. But the color of stock forbids, and if it did not, the rule is in use. At the bottom of the panel which shows "The Number of Pages Our Large Presses Print at Each Impression" is the line:

> Water always follows the path of least resistance.— J. J. HILL.

Which shows extraordinary discernment on the part of J. J. Hill.

* * *

Keep up your advertising and it will keep up your business.

That Unconventional Convention

The great advertising convention of the Associated Advertising Clubs of America at Baltimore in June had its paper — CONVENTIONalities, which was presumably issued for some months in advance of the convention — I believe the Baltimore boys were working for some years in preparation for that convention, which was naturally an unalloyed success. It is the May number that was sent me — it contains the program, which includes the announcement of the most extraordinary feature of the convention — the thirty sermons by advertising men in thirty churches of nine demoninations. I am not much of a sermon-reader, and I have heard a good many sermons by clergymen that I could not have told much about an hour later, and I have seen only one of the sermons; but I read that, and it has stayed with me. It was by Thomas Dreier, and its subject was Self-Expression, and it was good enough to appear in the Outlook, with appreciative comment. If one-tenth of the preachers would preach like that, we would have the millennium on Monday morning.

Who knows? — possibly the minister could write better ads than the average ad-writer. But I doubt it — though I notice a commendable tendency on their part to get back to human nature.

The program contained this good suggestion to the ladies: "Join the men in the down-the-bay trip. A good opportunity to get acquainted with one's husband."

The Old Bay Line Magazine, a live publication issued monthly by the Baltimore Steam Packet Company, devoted the March number to "Pre-Convention Activities of the Advertising Club of Baltimore."

The new cry has the rhyme-ring of some of the most famous advertising catch-phrases:

"On to Toronto!"

* * *

"We Are Growing." Well, You Deserve It!

I am sorry that a reproduction of any of the pages of the handsome booklet, "We are Growing," issued by the Charles Francis Press, New York, would give but a poor idea of a production that is so unique a triumph of printer and engraver working in real harmony. The cover is in several bright colors, and is a masterpiece of the newest kind of art nouveau impressionism. The illustrations at the top of each page give a remarkably clear idea of the perfect arrangement of all the departments of this concern. The Charles Francis Press believes in giving customers and the editors of the various publications it prints the run of the office, and so great is the order of the establishment and the tact and willingness of its employees that the system leads to mutual benefit and satisfaction. In the invitation to visit the establishment contained on the last page there is a ring of cordiality that no advertisement can give if the place is not imbued with the spirit, no matter how clever the writer. This is what a visitor will realize, according to the booklet — and he will not expect to be disappointed, nor will he be:

> You will have a better conception of what we mean when we talk of Charles Francis Press Service — just as hundreds of representative publishers and business men in other lines have had a better conception of the meaning of Printing Efficiency — reflected in an appreciation and realization of the client's interests, first, last and all the time.
>
> And just because this is so — we are growing.

* * *

Ebel Will Say It "To Your Face"

"EBEL Says:"— the words are so large on the cover of the many-colored and fantastic-artistic cover of the new booklet of the Chas. O. Ebel Printing Co., Cincinnati, O., that they may be considered the title, though what Ebel says on the cover is "It's Not How Much You Pay, It's What You Get That Counts".

The envelope, the cover of the booklet, its smaller inner pages, and an enclosed card are on various stocks and in various shades of dark brown, and the printing is in light and dark brown with the addition of red and green and lilac and gold on the cover. Every body page starts with the lettered words "Ebel Says" in the two browns, with such texts in Italic as "When all is said and done, it is Service that counts —" and the rest of the page is either a sermon preached from the text or is not. One of the things Ebel says is: "A word to the wise isn't necessary." Well, sometimes it helps an awful lot. And the card reads: "The Chas. O. Ebel Co., Cincinnati: We will be ready about [rule] for the following printing [rule] and would like to have your Mr. Ebel see us." That word "Ebel," after having given the book such a pleasing individuality, will "help some," and "some," in the dialect of the Acadian French, has an intensive force.

Trade Pressmen Get Together

"Good Things Coming —" is the announcement on the address-part of the mailing circular which tells of the eighth annual convention of the Federation of Press Associations, September 18, 19 and 20. The trade paper is one of the most useful innovations of the last fifty years, and it should really be unnecessary to demonstrate "How to Sell Advertising Space in a Trade Paper." The Make-it Pay Department of the Hill Publishing Co. could show the publishers something.

* * *

Worth a Quarter to Some

The card of the Center (N. Dak.) Republican is novel, advertising both the newspaper and the printing with good effect. What a chance there should be for a paper in a central town with the name of Center to do some map advertising to advertise their advertising space!

On turning over the card accidentally (why didn't you put the little word "Over" or better, "This Card Good for 25 Cents — See Other Side" — I might have missed the bargain, so many cards are printed only on one side) I find this announcement:

> OLD SETTLERS' DAY BARGAIN
> Good for 25 Cents
> This card and $1.25 is good for one year's subscription to THE CENTER REPUBLICAN if presented within 10 days. Regular price $1.50.

* * *

Type That Tells the Time and Talks

"A Business Man's Calendar," issued by the Hutchison Printery, Scranton, Pa., is printed in red and black on bright orange stock, is bound at the top by a red cord and has no cuts, but is an example of especially attractive composition. "All printers," says the "introductory," "profess to do commercial and society printing, but then every tailor professes to make clothes, and there is as much difference in one as in the other." There is a different sheet for each month, and above the date-information there are mottoes that are as humorous as they are wise, set by a compositor who knows how to make type talk.

* * *

A Tale of a New Dress

The American Bulletin, issued by the American Type Founders Company, has in its July issue an interesting tale entitled "A New Dress for The Elite." Mr. Clark, of the great department store of Clark & Davis, wanted a typographical change in the store's house-organ, The Elite. Mr. Dawson, the advertising manager, decided on India tint for the stock:

> The new running heads for The Elite were set in Bodoni Book caps of 12-point, enclosed by border formed of 6-point Lithotone brass rule — finished with 1-point rule, Bodoni lamp ornaments at the ends. Titles for articles and short stories were set in carefully selected sizes of Cheltenham Bold Shaded, caps and lower, and were bordered by Lithotone brass rule, and initials for the matter were of 36-point Bodoni, set in Bodoni mortised ornaments.
>
> All the display advertising of the store departments was set in Cheltenham Bold Shaded with Bodoni Book for the descriptive matter and every advertisement was bordered with 2-point Lithotone brass rule.

After Mr. Clark had expressed his delight at the improved appearance in keeping with the name of the house-organ, Mr. Dawson explained:

> "You see the two tones of the printing produced by the engraved effect of the type and rules are increased to still another tone by printing upon India tint paper, thus giving the appearance, as you have noted, of three printings when there was but one."

* * *

"Business is Good. Are You Getting Your Share?"

The June-July issue of Monotype, "a Journal of Composing Room Efficiency," devotes the back cover page to a number of cheering reports of different large businesses under the head of "Don't Pass Prosperity By." "The wise man nowadays," says the subhead, "does his thinking in terms of Prosperity, not Adversity." In this connection the Lanston Monotype Machine Company announces that "in May we sold more Monotypes than in any [other] month in the past year and a half."

The Calumet, Chicago, Ben Franklin Club Outing August 30, 1913

MIEHLE & SON MAKE A STATEMENT

By request, the following statement by Robert Miehle & Son, manufacturers of printing presses, Plymouth, Ind., is published for the benefit of National Printer-Journalist readers:

"Robert Miehle & Son is an incorporated company, under the laws of the State of Maine, organized to manufacture printing presses and other machinery. The capital is $100,000, common stock, over three-fourths of which has been paid in at par.

"The officers are as follows: Robert Miehle, president and general manager; A. M. Miehle, treasurer; Robert F. Miehle, Jr., vice-president and secretary.

"The factory is located at Plymouth, Ind., eighty-four miles east of Chicago, on the Fort Wayne division of the Pennsylvania Railroad. The facilities are up-to-date and well adapted to manufacturing high grade printing presses at a minimum cost. The site covers six acres. Being on the main line of the Pennsylvania Railroad, facilities for prompt and careful shipments are excellent.

"Progress on Mr. Miehle's latest press has been most satisfactory. It is an entirely new model of a four roller, two revolution, flat bed press, especially adapted to all high grade printing, including the finest color work. The press runs extremely smoothly, at a high rate of speed, and is built substantially throughout — every detail having been scientifically planned and carefully carried out. The workmanship and material is, of course, of the very highest grade, and has had Mr. Miehle's personal supervision.

"The bed motion mechanism is founded on the original fundamental principles of what is known to the trade as the Miehle bed motion, being of the lifting gear type. However, aside from the lifting gear the bed motion shaft is of the usual large proportions and extends outside of the press frame, where it receives its motion from a cylinder intermediate driving gear. The cylinder intermediate driving gear has an internal gear formation in which the gear on the outside end of the bed motion shaft meshes — thus giving a direct drive from the cylinder to the type bed. The internal gear allows the bed motion shaft to rise and fall without any loose connection or lost motion.

"The register is very superior, assuring constant and reliable register at all times. This is due to the improved design and the greater strength and stability of construction of all parts. A double register rack is used on the type bed (one on each side), which assures a perfect register the full length of the sheet."

"The inking apparatus has been improved to a high degree. The form vibrator rollers are of larger proportion than generally used, giving additional inking surface. These rollers are removable from the form rollers, giving easy access to all of the rollers at one time and without interference from each other. The table composition rollers are five in number and are interchangeable with the form rollers. Furthermore, the table rollers are revolved by a friction device which does away with all gearing and its accompanying noise. The fountain composition feed roller delivers the ink to a small steel roller in contact with one of the table rollers. The feed roller, also, can be set in contact with the ink table, if so desired. A pyramid roller and rider rollers on the form vibrator rollers are used, which, with the extra table roller, furnishes a greater inking capacity than has yet been devised.

"The sheet delivery consists of the usual fly mechanism and a continuously moving endless tape conveyor which delivers the sheet printed side up. The latter arrangement is entirely new and novel and operates on the double delivery system — being an endless tape conveyor with no reciprocal motion. This arrangement permits one sheet to be brought into position over the delivery table while another is being deposited on the table, and makes possible the delivery of sheets at a high rate of speed. In addition to the high speed, because of there being no reciprocal motion, the sheets are deposited leisurely on the delivery board, thus allowing ample time for the air to escape and the ink to set. Pressmen will appreciate these decided advantages.

"In designing his latest press, Mr. Miehle had in mind at all times ease and rapidity of assembling as well as convenience in removing any part of the machine.

"Particular attention has also been given to the convenience of the pressman. The type bed height is such that the form surface can be reached easily from the floor, but, if desired, a step may be used to reach the form at the farther end.

"The cylinder platform is provided with a hinge arrangement whereby it can be held swung up out of the way of the form. This allows the platform to be kept in position at all times.

"The rear end frame is so constructed that the pressman can step over it onto a platform inside of the end frame, thus enabling him to reach the impression cylinder conveniently, whether the feed board is in a raised position or not. Weights are provided to balance the feed board in order that it may be raised without effort. This allows the pressman to stand in an erect position when making ready, for the air cylinders are set forward and bolted onto the tracks instead of to the end frame.

"Access to the table rollers may be had by raising the delivery frame and delivery table. These may be raised or lowered with little effort, by means of two cranks, and they may be operated together or independently while the press is in full operation. By means of this independent adjustment, the relative positions of the delivery frame and delivery table may be changed at will.

The cylinder raising and lowering impression mechanism is of the toggle type. The use of toggles permits of shorter impression rods. The use of these toggles also permits of placing the impression adjusting screws in a convenient position, only one screw being used for this adjustment at each side of the press.

"Many other advantages and improved features might be described but the length of this article will not permit.

"Suffice it to say that a number of prominent printers from New York City and other points have visited the Robert Miehle & Son plant. After seeing the press in operation they have all agreed that it is a masterpiece.

"The firm of Robert Miehle & Son is in no way connected with the Miehle Printing Press & Manufacturing Company.

"Mr. Miehle needs no introduction to the printing trade. At the age of twelve he began his career in a printing office and worked his way up to the position of journeyman, at which time he became a member of the Chicago Printing Pressmen's Union, in which he was voted to honorary membership when he embarked in the manufacture of printing presses. While a pressman he conceived ideas of improvements in printing presses, which he put into practice in the year 1886 by building a large two revolution press for his brother, who used this machine successfully for nine years.

"After building this first machine, Mr. Miehle made and marketed two more presses while still working at his trade of journeyman. These machines attracted considerable attention at the time and in the year 1890, resulted in interesting Mr. S. K. White, a machine manufacturer, and others who associated themselves with him to buy patent rights. They formed the Miehle Printing Press & Manufacturing Company, with which concern Mr. Miehle remained for twenty-one years, leaving them February 1, 1911, to engage in business for himself. Since launching his own company, Mr. Miehle has developed and perfected the press described above. In this work he has been ably assisted by his son, Robert F. Miehle, Jr."

THE KEYSTONE EXHIBIT AT THE TOLEDO EXPOSITION

In the big Terminal Building at Toledo, where the million dollar exposition for printers was held during the week beginning September first, the display of Keystone steel equipment in the exhibit of the Keystone Type Foundry, attracted very favorable attention.

The display occupied a platform at the north side of the building, taking up a space of 30 by 40 feet, and included about thirty exclusive pieces of steel furniture. The designs, covering arrangements for both printers and publishers, and the many new features, all original with the Keystone, made this exhibit one of the most important at the exposition.

The Keystone Type Foundry Exhibit

The exhibit was in charge of Mr. John H. Taylor, manager of the Keystone's Detroit house, and Mr. F. M. Bashelier, a Keystone efficiency engineer, who, with a capable staff of assistants, were kept busy showing their many visitors the possibilities and usefulness of this modern equipment.

It was through the courtesy of the Keystone Type Foundry that the "Expo News," published daily in the building, was made possible. This company furnished gratuitously all of the display type and material required for making up as well as the use of their exhibit for the complete handling of the paper throughout the week, and the facility in which it was handled gave a very practical demonstration of the efficiency of Keystone steel equipment.

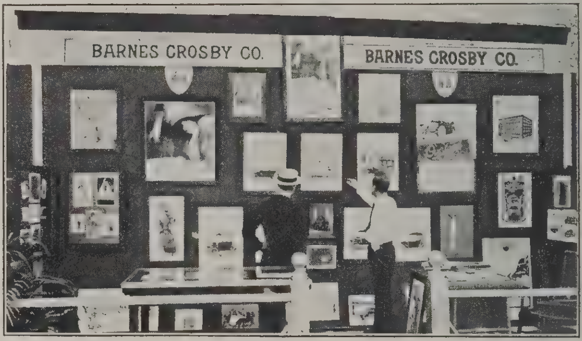
* * *

MIEHLE EXHIBIT ATTRACTIVE

The Miehle Printing Press and Manufacturing Company exhibit at the Exposition was an attractive one and the No. 2 Four Roller Miehle Press was inspected by a large number of visitors. Messrs. C. L. Christeson and James A. Wood were in charge.

THE BARNES-CROSBY EXHIBIT

One of the most interesting exhibits at the Million Dollar Exposition of the Central States Printers, Binders and Photo-engravers, was the display of Barnes-Crosby Company. In addition to a representative collection of original designs, finished proofs, etc., there was an interesting demonstration of the various steps in the photo-engraving process. Among the original drawings was the huge poster design recently reproduced in six colors for the Overland Automobile Company. W. S. Miller, the Toledo manager of the Barnes-Crosby Company, who arranged the exhibit, distributed small sets of progressive proofs to the hundreds of visitors who stopped at the Barnes-Crosby booth.



The Barnes-Crosby Exhibit

MERGENTHALER LINOTYPE COMPANY EXHIBIT — TOLEDO EXPOSITION

During the course of the Printers' Exposition in Toledo the Mergenthaler Linotype Company had on exhibition one each of their models Eight, Nine and "K" Linotypes, and also an Improved Lead and Rule Caster. In addition to the linotype equipment there was also demonstrated in their space a Thompson Typecaster and a Miller Saw-Trimmer.

The exhibition gave the printers a very comprehensive idea of the advantages of multiple magazine linotypes. The machines were equipped with the very latest type faces, were in the hands of competent operators and demonstrations were given during the entire course of the convention.

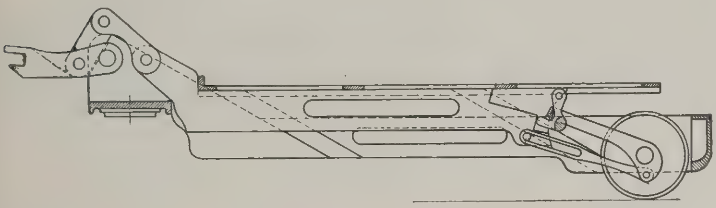
The booth was very tastefully arranged, the background carrying a large number of specimens of linotype composition, some of the most intricate work that has ever been turned out on the machine having been displayed to good advantage during the course of the convention.

The exhibit was in charge of Mr. E. W. Hayden, who has been the Ohio representative of the Mergenthaler Linotype Company for a number of years.

F. Wesel Mnfg. Co. Exhibit
Large iron imposing surface, holding specimens of all styles of "Final" plate mounting bases (at front of booth). Machines at back: Radial Arm Router, Automatic Web Proof Press, Electric Proof Press, Printer's Saw Table with Shoot Board and Squaring Plane. Cases of small tools, brass rule, etc.

THE MILLER TRUCK IN "ALL METAL."

The Miller Incline Truck Company, of New York, has perfected and put on the market another lifting truck of an all-metal construction, operated with a lever, which is a wonder for moving piles of paper without handling the same. This has been given the preference over the truck with the screw mechanism in shops where loads of from one thousand to three thousand pounds are moved. A feature of the lever truck is that it has four wheels, none of which project over the side of the truck. There is, therefore, no danger at all of upsetting a load. The entire truck is no higher than its wheels, which are seven and one-half inches high, and the raising, locking, lifting and releasing mechanisms are all in one, requiring only one operation. A pull downward of the lever raises and locks the truck, and another downward pull releases it. The raising capacity of this truck is two and one-quarter inches, and it will lift up to 3,700 pounds. Write to the Miller Incline Truck Company, 561 West Fifty-seventh street, New York, for more complete information. An announcement of this company appears in another section of this issue.



HIGH SPEED PRESS EXHIBIT

American High Speed Press Company, New York, had an interesting exhibit at the Toledo show. The machines on exhibition attracted the attention of scores of inquiring printers and their satisfaction with the demonstrations resulted in the placing of orders.

The Standard High Speed Automatic Job Press, built by this firm, is a bed-and-platen press which automatically feeds, prints to perfect register and delivers any ordinary print paper up to 120 or 140-pound card at a speed up to 3,500 impressions an hour. The Standard prints from flat forms of cuts or type, and because of its broad scope will handle ninety per cent of the job work of the average job office. It is not necessary to confine the Standard to special stock or to long runs to make it profitable, runs from 1,000 impressions up being practical.

The feeding device is so arranged that the stock is fed from the bottom of the pile, making no interruption when more stock is added. The change from "single" to "double-feed" or vice versa can be made in five minutes, and the adjustments for changing from tissue to cardboard require less than one minute.

A form may be "positioned" on the Standard quicker than on an ordinary hand-fed job press, because the forms are locked to a "head line" in the chase, and after the form is put in the press the operator has only to set four thumb-screws and the side guide.

The Standard is designed for speed and strength, and is so simple in construction that a machinist-pressman is not necessary.

WILL SELL HANSEN MANUFACTURES IN CHICAGO

An announcement of interest to printers and publishers of the Central West is that the manufactures of the H. C. Hansen Type Foundry will be sold in Chicago and contributory territory by the William Thomson Printers Machinery Company of Chicago.

A complete supply of Hansen Type Foundry type and other supplies will be kept on hand in the store, ready for delivery and shipment. This means that type, borders, rules, machinery and other products of Hansen skill may be purchased with the same satisfaction as orders are filled by other local supply houses.

The William Thomson Printers' Machinery Company is anxious that the trade shall become thoroughly familiar with the service furnished by them. The sales force includes men who are familiar with the needs and requirements of printers and publishers, and have a knowledge, too, of what machines and other material is necessary in different classes of offices.

As may be seen by reading the announcement published elsewhere, the Thomson Company is enthusiastic in pushing Hansen manufactures, and expects to introduce the output of the Boston house into many offices where it has hitherto been unknown or unused. Mr. William Thomson is the president and treasurer and Mr. Frank J. Shead the secretary.

THE NEW KANSAS CITY HOUSE OF THE KEYSTONE TYPE FOUNDRY

On September 8 the Keystone opened their new house at the southeast corner of Baltimore Avenue and Seventh Street, Kansas City. This house will be in charge of Mr. Fred Cornell, one of the best known printers' supply men in the Southwest, and whose hosts of friends will welcome his association with a house so well and favorably known for its high grade products, service and fair treatment of its patrons as the Keystone.

The phenomenal growth of this company during the past few years is evidence of the confidence of the printing trade in general. The Keystone Type Foundry has now many good friends in this section, but believed that with a house situated in Kansas City they would be better able to serve their old friends and to give all printers of the great Southwest the kind of service they require and which the Keystone will furnish.

The office and show room of this new house of the Keystone is equipped throughout with steel — ceiling, shelv-

Cincinnati

ing, desks, filing devices, etc.— making it modern in every sense of the word, and further emphasizes the growing popularity of steel in outfitting all modern printing plants. It is the only type foundry office and salesroom in the United States completely equipped in steel.

The Keystone Type Foundry manufactures and sells type and material that please printers everywhere, and are the originators of printers' steel equipment, an innovation for the good of the printer which has been accorded such a welcome that, though a comparatively infant in-

dustry, they have just been forced to build additional manufacturing space to their already large factory at Chester, Pa.

WASHINGTON BRANCH OF BARNHART BROTHERS & SPINDLER IN NEW HOME

The Washington, D. C., branch of Barnhart Brothers & Spindler is now located in a new building, 1224 H Street, Northwest, as shown by the illustration.

This building was erected according to plans especially designed for a printers' supply house, and is of great strength, being of steel and brick, well lighted and ventilated, and is in the new business section of Washington, in which the paper houses and printers are fast locating.

A complete stock of material of all kinds ensures a prompt handling of all business. The force of salesmen, clerks, and other employes, is of such a character as to guarantee intelligent service.

* * *

"K. B." BLANKS PROFITABLE TO PRINTERS

The use of "K. B." blanks will be found profitable to printers. The blanks are bond or stock certificates, steel engraved, in the very best bank note style.

The originality and exclusiveness of design, and the lavish expenditure of work in their production, render counterfeiting practically impossible.

The text may be printed upon the blank forms with a result that is gratifying to printer and customer. The latter is pleased with the workmanship and reasonable price for the service and the former is able to count in a little more profit on the job than he would ordinarily receive. "K. B." blanks are furnished by Kihn Brothers, 99-103 Beekman Street, New York.

* * *

A NEW SPACE AND QUAD DEVICE

Mr. C. W. Lutdke, Jr., of Markesan, Wis., has been granted a patent on a new space and quad case. Mr. Ludtke furnishes the information that his invention is in constant use in the Markesan Herald office, and that he thinks that is a great labor saver as well as a useful device for saving spaces and quads, as it requires only a fractional quantity of the material to supply the office than formerly when the spaces and quads were kept in all of the cases.

The object of this case is to keep the spaces and quads in the small cases which rest in the blank case at the top of the rack or cabinet, instead of having each type case supplied with spaces and quads. Each of these space and quad cases is supplied with a full font of spaces and quads of a certain size and have two trunnions which fit into the slots in the type cases. (These slots are simply holes bored in the rim of the type case.) When wanting to set out of a type case containing six point type, it is only necessary to take the six point space and quad case out of the blank case and attach to type case. When finished setting, it can be instantly returned to the blank case, and so on with any size, as each space and quad case is supplied with a different size font of spaces and quads.

One blank case holds eight small cases, consequently contains eight different sizes of spaces and quads, or the sizes from six point to thirty point, or any other sizes wanted. The space and quad cases will hold a five-pound font of spaces and quads. This arrangement serves the same purpose as the full size stationary space and quad case now on the market, which holds eight fonts of spaces and quads, but has the additional advantage of being able to remove the different cases as when setting some body matter from a certain case of type, the spaces and quads can be instantly attached to the type case instead of being compelled to space from the space and quad case at the top of the cabinet or rack, as is necessary in the old style case.

JOB PRINTING With Us Is An Art

THE BERRIEN COUNTY JOURNAL

OTTO C. WALTSGOTT Editor and Publisher

Eau Claire, Michigan

-.-13.

National Printer Journalist,
Chicago, Ill.

Gentlemen:-

I am a subscriber to your valuable publication and shortly after receiving the last issue left it on the train, while traveling, and have not seen it since. I want to read everything in it and am therefore asking you to send me a duplicate and if there are any charges I will remit.

Yours very truly,
O C Waltsgott

THE JOURNAL is published in the Wealthiest Agricultural County and the "Biggest Little Town in Michigan" and circulated throughout a prosperous, thickly settled fruit country. These points make The Journal a valuable advertising medium. Let us prove it to you

A neat letter on neatly printed stationery

The advantage of this arrangement is that the compositor always has a full and complete font of spaces and quads to set from. This is particularly an advantage when setting from a triple case in which there are not boxes enough for the different sizes of spaces and quads. Besides, two of these blank cases filled with these space and quad cases will supply enough spaces and quads for a large composing room, whereas if each case was filled with spaces and quads it would require a large amount of spaces and quads, and then some of the cases would not be complete with a full font of spaces and quads all of the time.

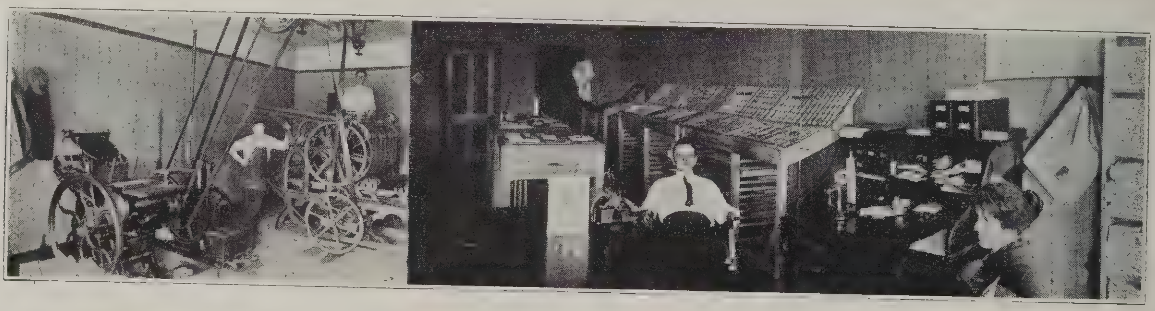
PRIZES FOR BEST RESULTS IN USE OF PRINTING INKS

Charles Eneu Johnson & Co., the well-known printing ink makers, announce a very interesting contest. They will pay the sum of $450 in cash prizes, to be awarded to the successful entrants in a competition for the best results obtained from their printing inks. The awards are to be made for the best examples of half-tone and four-color process work, and the following well-known New York authorities have consented to act as judges: Mr. Charles Francis, of the Charles Francis Press; Mr. J. W. Bothwell, of Theo. L. De Vinne Co.; and Mr. John Clyde Oswald, of the American Printer.

The awards are to be made in connection with the great Printing Exposition, to be held in New York in April next, and will undoubtedly prove an attractive feature of the exhibit to be made by Charles Eneu Johnson & Co.



Office of the Worth, Mo., Tribune
Editor and Publisher D. C. Simons at the desk

Further announcements will appear in subsequent issues of the National Printer-Journalist, and full details may be obtained by writing to the main office of the house at 509 South Tenth Street, Philadelphia, Pa.— Adv.

* * *

Toledo, O., August 13—There is a new "ready print" service concern in the Northwestern Ohio field. The Publishers Press Co., is the caption of the new organization which is an incorporated company with a capital stock of $10,000. The incorporators are R. C. Spohn, B. B. Bell, J. F. Swalley, L. D. Woods and F. R. Swalley.

The new company has taken over the business of the Ohio Advertising Co., which has been furnishing ready print service in a modest way for rural newspapers in Northwestern Ohio for a year or more.

The new concern expects to branch out largely in the "ready print" business and a complete plant for turning out the printing is being established in Toledo. The concern now has contracts with 50 rural newspapers in Northwestern Ohio and Southern Michigan to furnish them with ready print service but expects to branch out largely from this nucleus. A branch office will be established immediately in Detroit and later in other cities. The officials of the new company have some novel ideas which are being worked out in an original and snappy "ready print" service and they also have a co-operative plan, through which the publisher becomes a profit-sharer in the undertaking.

CARING FOR THE IMPOSING STONE

All competent mechanics agree that the proper care and use of tools and fixtures greatly increases their value and length of usefulness, yet in many print-shops that most necessary requisite — the imposing stone — is often subjected to much abuse and careless treatment, so much so that the matter finally becomes a sore trial to those who appreciate good tools and appliances and enjoy seeing them kept in good condition.

In spite of precautions, careless pressboys or green stonehands will slam forms about upon the marble slabs with sufficient force to cause innumerable mars and scratches, while the apprentice occasionally straightens out a bent space by laying the same upon the stone and applying a few gentle (?) taps with the quoin-key or hammer! Shades of Ben Franklin! Is it any wonder we must figure ten to twenty-five per cent depreciation on composing room equipment to be added to the "overhead" which, like the goblin in the fairy story, is sure to "get you, if you don't watch out!"

Frequently, from its location, the imposing stone receives extra rough usage on certain portions of its surface, and in such cases where one side or end of the stone is in more continued use than the opposite part (with consequent increased wear), it is sometimes advisable to reverse the stone, so that the unused part becomes available for use.

This may be done without turning the framework by simply removing the boards along the sides of the stone (often called the "coffin") and lifting the stone clear from the frame, swing it around to the position desired.

When the entire surface has become badly worn, this method will not be of much help, but even then the fixture is far from being through with service, for by telling your troubles to any monument dealer in your town, you may secure the services of a "stone doctor," who, for a consideration will polish off the rough surface and make it actually "as good as new." In this way a considerable saving is effected, as this operation may be done without removing the stone from your composing room and at an expense of but a few dollars at the most, while the cost of a new stone ranges from fifteen to twenty dollars, depending on the size and quality of the stone purchased.

Waste Effort vs. Efficiency

THE printers of the country, as individuals, are rapidly adopting the most up-to-date efficiency methods in conducting their business, and it is time that the different printers' associations and those organizations closely allied should also adopt efficiency methods in regard to their association work.

The idea of the Photo-Engravers holding their convention in one city in the country at one time of the year, and the other printers' associations all holding separate conventions in various other cities at different times, is certainly a waste of effort. It is the reverse of efficiency.

There have also been too many local expositions, and instead of all these haphazard meetings of the different associations in the Graphic Arts industry each year, there should be One Big General Meet in some large centrally located city once a year, and a Big International Graphic Arts Exposition held in that city coincident with it, but not in the same building as the meetings of the associations.

By this manner of procedure, a greater number of people in the Graphic Arts industry would get together each year than has ever heretofore assembled in one place at a given time, and the opportunities for organization work would be greatly enhanced.

The machinery and supply people would also benefit to a greater extent by being able to show their products to a greater number than by going into numerous local affairs; furthermore, it would be cheaper for them.

An exhibit of the best finished productions of the printers and lithographers throughout the country should also be held in conjunction with this exposition, so that the buyer of advertising and printing could attend and see all the fine work turned out, and thereby secure valuable ideas. The average printer has never had any feasible method presented to him whereby he could, at a small outlay, show samples of his work to the business public in general, and the above idea is the first practical plan advanced to enable him to attain this end.

An exhibit of the Paper Manufacturers and Distributors should also be a part of this finished production section, because it will put their representatives in direct touch with the specifiers of papers, as well as bring their lines before the business public in general.

This gigantic movement, as above outlined, is now under way, and it should be the duty of everyone throughout the Graphic Arts industry to "put their shoulders to the wheel" and do their part to help this Big Idea along. It is only by concerted effort that it can be carried out.

The machinery and supply manufacturers are sick, sore and tired of going into local shows and will not do it any more. They will patronize One Big National Affair each year.

Various printing establishments having numerous departments, such as photo-engraving, bookbinding, electrotyping, job printing, etc., are tired of sending representatives from each of their different departments to several conventions in different cities at various times of the year. Some large printing establishments complain that they have to send representatives to as many as twelve or fourteen meetings each year, and the cost of doing this is getting to be prohibitive, without considering the loss of time. They (these large establishments) are all in favor of this One Big Convention—One Big Show, in One Big City idea—each year.

The above ideas are being worked out now and are actually in operation; so "put your shoulder to the wheel" and help spread this information and boost the idea along. It is to your interest to do so.

The week of next April 18th to 25th will be the week this Big International Printing and Lithographing Exposition will be on in New York at the Grand Central Palace. During that same week there will be about 3,000 or 4,000 newspaper publishers, large and small, in New York from all parts of the country attending this Exposition, as well as the Convention of the American Newspaper Publishers Association and the Associated Press, which will be in session at the Waldorf-Astoria. The different associations throughout the trade, as well as the Convention Bureau of the Merchants Association of New York, are striving to obtain the Annual Convention of the National Employing Lithographers Association. The Typothetae of the City of New York has passed a resolution to formally invite the United Typothetae of America and the Ben Franklin Clubs of America to hold their next convention here.

Efforts are also being made to have the American Paper and Pulp Association hold their convention during that same week, instead of in February, as they have heretofore. In all probability, the National Editorial Association, if their convention is held in Richmond, will attend the New York show in a body that week, and when all these important factors are brought together, New York will see the greatest gathering of people interested in the Graphic Arts industry that has been gotten together before in one place in the history of the world.

A bill has been gotten through Congress whereby foreign exhibits for the Big Show in the Grand Central Palace can be entered duty free. In fact, all the arrangements are on a gigantic scale, and the whole affair will outdo anything of its kind ever held heretofore.

Begin now to boost for this Big General Get-together Movement for all you are worth. It is an economic measure that should have your support.

Selling Engravings to the Nation

Because of the detail and the individual attention involved in the production of illustrations and engravings it was long supposed that no engraving concern could satisfy more than a local demand.

Back in 1902 ***Barnes-Crosby Company*** took the first step in shattering this fallacy by installing a branch office at Detroit. Since that time not a year has passed that has not seen a new B.-C. office established.

Today, with two immense manufacturing plants located in Chicago and St. Louis, eleven permanent branch offices and a force of traveling salesmen, Barnes-Crosby Company stands as the highest type of business organization.

Our experience in meeting the varying needs of so many customers is part of the intrinsic value you secure in dealing with us. The above map will help you to locate our nearest branch office.

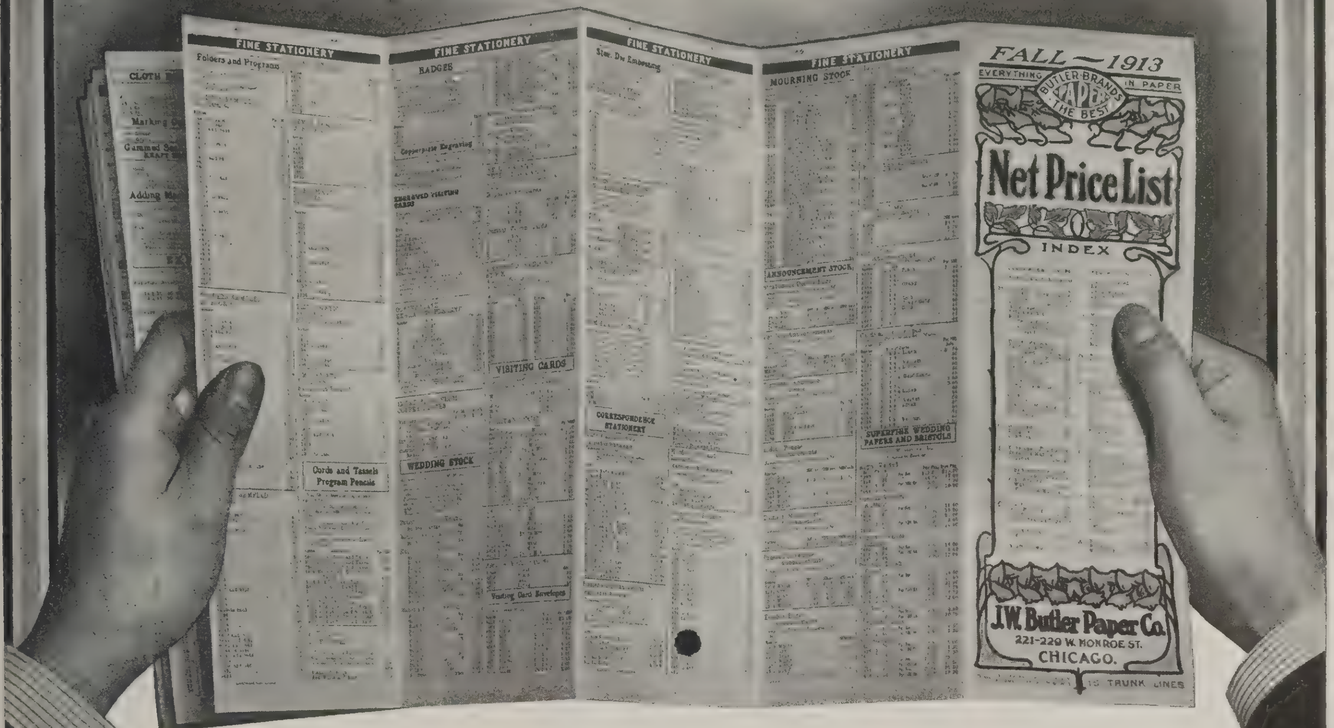
Fine Stationery

You'll find it *Better* here



For the convenience of the trade we have included everything formerly shown in our special Fine Stationery Catalog in our general Net Price List. This is an important change which, we have reasons to believe, will be welcomed by our friends who hereafter will have but one place to refer to for everything carried by us. Advertising Calendars, Fans and Commencements, the designs of which frequently change, are covered separately as in the past.

There is a profitable field open to every printer in the sale of such lines as are indicated by the headings shown in the above reproduction of the Stationery Section of our Net List. For instance: Every man and woman is a prospective buyer of business or social cards, printed or engraved. How much of this business are you getting now? There may be a dozen or more business and social clubs in your vicinity whose orders for Dance Programs, Folders, etc., you can get if you go after them. Equipped with our samples you'll easily corral many orders that are now going elsewhere.

Give this subject serious thought, keeping in mind that to handle these lines means no investment in equipment, practically no expense whatever, and orders may be solicited during slack times. It's a good business proposition. One season's results will show you the opportunities you have overlooked. Remember, too, we protect you by selling only to the printer. Write today and we will send complete information.

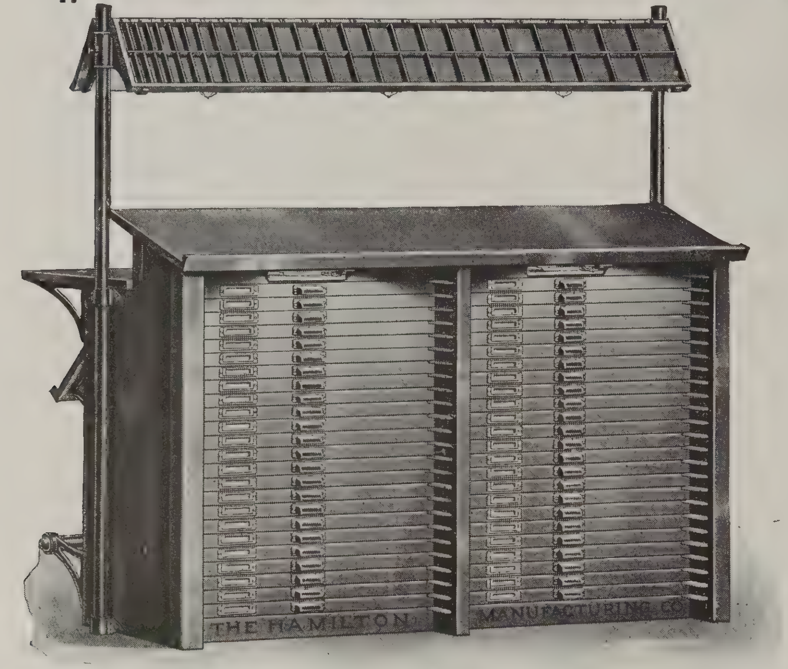
BUTLER·BRANDS ·PAPER· THE BEST

HAMILTON COMPOSING-ROOM FURNITURE

IN ALL STEEL OR WOOD CONSTRUCTION



THE HAMILTON MANUFACTURING CO.

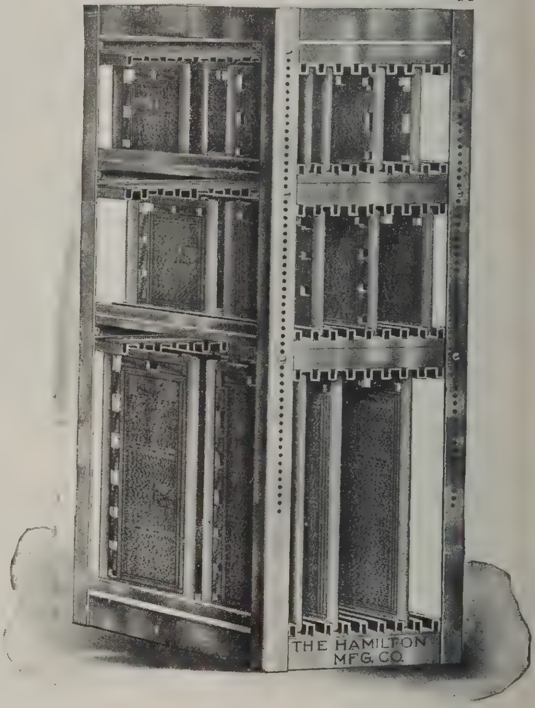
HAMILTON STEEL CABINET NO. 472

For ad.-rooms of magazine houses and newspapers; also catalog printers. Contains 48 deep cases. The overhead bank shown is divided same on both sides. The sloping bank provides for composition and make-up in the usual way, while the flat surface on the opposite side provides a make-up table just the right height from floor for making up large ads., catalog pages, etc., where small cuts and lino. matter predominate. The dump below this surface is also included with the cabinet. Electric lights and foot-rail are extra.

The Hamilton policy and aim is efficiency in the composing-room—i. e., by saving footsteps, which means time, and by saving valuable floor space, which means not only less rent for the composing-room to bear, but a shorter distance for workmen to walk.

We do not stop here, for not only do we make many Cabinets that are equipped with all the necessary materials in a minimum space, but we also supply a variety of Cabinets, some one of which is just the kind you need for your particular class of work—a Cabinet arranged to make the work of the compositor easier to do because it is just fitted for your peculiar conditions.

The accompanying illustration of our Cabinet No. 472 is for large catalog and magazine printers; also for the ad.-rooms of newspapers. It is only one of many. It may not be the right one for you, but we have one that does fit your needs—one that will give you the greatest possible saving. Tell us your peculiar conditions and requirements; we will make recommendations. We have done this for thousands of printers who say we have saved them from 10 to 20% in labor and from 25 to 50% in floor space. If your composing-room is costing too much per hour and you want to reduce it, let us help you.



THE HAMILTON MFG. CO.

THE BULLEN ADJUSTABLE CHASE RACK NO. 466

As arranged for job chases. Capacity, 16 chases each, 8 x 12, 10 x 15, 14 x 22. One great advantage of this rack is the supporting guides at top and bottom for chases, which prevent damage to the type-faces so often occurring in the use of the ordinary chase rack.

This rack is built entirely of steel. It will accommodate any size of chase from a cylinder chase 51½ inches long down to the smallest job chase. It is compact and safe.

The Babcock Optimus

The Babcock Optimus

"If printers knew how good the Optimus really is, no other would be sold."

We agree with the man who said that. Our opinion is not without value. Our knowledge of printing presses is greater, our experience broader, our incentive to their full understanding more vital than the average man possesses.

The printer has grown, is growing. The Optimus has grown, is growing. One development follows the other. Naturally, we are keeping ahead. We must not handicap the buyer. We must give him a tool that will permit his highest achievement, and possess possibilities beyond his best. When thought perfect we must try the harder to better it.

In the Optimus we have developed devices that, with its superabundant strength, make it the easiest and handiest for the operator, the most efficient for the master printer, in quickly producing the hardest and finest work that so greatly interests both of them.

In a way it is a New Optimus. A better press was never made. Constantly improved, it has needed no fundamental change. No basic faults forced drastic rebuilding on new lines, with change of name to indicate the complete demise of the old. Neither buyers nor ourselves assume the uncertainties of the untried.

But the press has been radically refined and bettered. Every one of the sterling qualities that brought it favor still remains. To the development of these we have turned. To make them more convenient, more readily usable, more quickly and easily responsive, has been our labor. In the New Optimus we have improved devices that already were better than any others, and have a press immeasurably superior in quality, performance, and certainty of results. In it form wear and repair cost still remain the least; convenience and service are made the greatest.

In every printing sense, in every business sense, the Optimus is worth knowing; known it will be preferred.

SET IN AUTHORS ROMAN

It Doesn't Pay the Small Printer

The small printer is not a specializing printer.

He makes money by doing more than one kind of work.

And he should think twice before pinning his faith to a composing machine that casts lines of type (slugs).

The handicaps of this system of composition cannot be overcome by the lure of low price.

Nor will a low price on line casters attract the diligent seeker of efficiency in a typesetting machine.

The small printer not only wants, but he must have versatility—a machine to handle any kind of work quickly, economically, profitably.

He gets all these features in the Monotype, and more—type for the cases 5 point to 36 point, and, added to this, a uniformity of printing excellence in the product that commands the highest price and satisfies customers.

There is nothing to the short haul, narrow range disadvantages of the line caster for the small printer.

He wants type, automatically set in justified lines, ready to use.

He wants type and spacing material for the cases.

He wants composing room service—machine composition and sufficient type (tools) to insure 100 per cent. productive time from every composing room employee.

He wants the one-model Monotype—always the latest model—because it is economical, versatile and efficient.

The ADVANCE—Easy Cutting Strong, Accurate

THERE are three important reasons why ADVANCE LEVER PAPER CUTTERS are superior to other makes. First, the lever is so curved as to leave it waist high at the end of the stroke, giving the greatest available power at the most effective point. Second, the powerful compound leverage driving the knife in a sliding shear cut easily forces the blade clear to the stick. Third, a massive brace supporting the bed directly under the point of greatest pressure from clamp and knife, holds the bed absolutely rigid. Other features are, adjustable gibs to take up knife-bar play, easily squared back gauge adjustment, side gauges on both sides, both back and front of knife, etc., etc.

JAENECKE'S MATCHLESS INKS

Standard for almost three quarters of a century

THE JAENECKE PRINTING INK CO.

NEWARK, N. J.

New York Baltimore Chicago Detroit Philadelphia Pittsburg St Louis

Says BARNHART'S JAKE:

DID you ever see a Raw Raw from some Inland College with his pants turned up so far he could hardly get his hands in his pockets, and a supposedly decorative patch or button on every possible square inch of his coat? Did you ever look at one of these without an earnest desire to implant a well placed kick where it would do the most good?

And now, wasn't your impression on that occasion much like the one you get when some florid "smart" piece of printed matter obtrudes itself upon your vision? Fancy type, bizarre composition—a desire to be original resulting in an effect that is outlandish.

You know there is such a thing as being too "fancy." Some of these bizarre types gain a fleeting popularity, but their vogue is short and in a few months they're so much dead type metal cumbering your cases. Steer clear of that kind of type. Get faces that have the clear, clean, expressive look of type that lasts. Such as you'll find in the new Barnhart Book of

THE STANDARD IN THE INLAND CITIES

The printer in the inland towns is often hard put to take care of the many demands on him, because of the wide variety of work he is called upon to produce.

Anything from a card to a catalog, a wedding announcement to 5,000 hand-bills, is apt to be the order in which jobs come in. And the printer in the small cities must be able to take care of the trade.

He is located far from electrotype plants, type foundries and other sources of supply, yet he has to compete in prices and deliveries with the printer in the larger cities, who has a larger equipment, and all the sources of supply at his door.

There is more need for the printer in the inland city to have the very latest and versatile equipment than any other. The demands on him are extraordinary, yet he cannot afford to have a large variety of machinery to produce the many kinds of work.

The printer in the inland town must keep his plant down in size, but up in efficiency.

To this class of printers the **STANDARD HIGH SPEED AUTOMATIC JOB PRESS** must appeal particularly strong. On no other press can there be produced at as great a profit, this wide range of work. It is right there every minute to take care of the little or the big job, and at a production cost in either case that will meet competition on its own ground.

With a STANDARD press as the main equipment, the printer can produce the monthly school or college paper, the 64-page catalog, or proceedings of an organization, the program of a Chautauqua, advertising booklets, forms, special blanks and systems, to say nothing of the ordinary run of commercial stationery.

This one press is fully capable to take care of all this work, turn it out beautifully, and through its great efficiency make a profit that has not heretofore been possible to the printer in the inland town.

Too many printers think that most any kind of a press is good enough for the smaller places. In this they make a great mistake, and soon find that the demands upon them for various classes of work are beyond their capacity.

The large city printer might be able to specialize on certain kinds of printing—the small city printer cannot secure enough of any one special line, and must be ready to handle any and all classes of work.

The STANDARD is not *per se* a specialty press, yet it is an intense specialty press in that it can do a wider range of work than has heretofore been thought possible on any one style of press.

If you are a printer in a small city, and have to turn work away because you cannot handle it, write today for further information about the STANDARD and its immense profit-earning possibilities.

You owe it to yourself, as an energetic business printer, to become familiar with the latest modern way of printing—the STANDARD way.

But a word from you will bring literature or our representative.

NATIONAL PRINTER JOURNALIST
A JOURNAL FOR PRINTING AND ALLIED TRADES

Volume Thirty-One Chicago, November, 1913 Number Eleven

A New Educational Department for Ambitious Typographers

By J. L. Frazier, 604 Kentucky Street, Lawrence, Kansas

INTRODUCTORY

In establishing this new department of the National Printer-Journalist, a few words as to its intents and purposes should not be out of place. The plan is to make it an educational department, to furnish new ideas to ambitious typographers and to show them the proper method of handling the various classes of work.

We all know that a letterhead suitable for a grocer would not be appropriate for a physician — and the banker requires a still different treatment. That idea carried forward into other branches of the printing industry is the reason for this department. It is hoped that readers of the National Printer-Journalist will derive much benefit from the explanations and object lessons to the end that the quality of the work will be raised to a higher plane and the profits accruing therefrom shall be proportionately increased.

J. L. FRAZIER
Lawrence, Kansas

I realize the task I am taking upon myself is a heavy one and the responsibility great. However, whatever knowledge I have of the printing business I am glad to pass along to my brothers of the craft.

Not wishing in the least to infringe on Mr. Hansen's department, I hope readers of the department will send me examples of their work, too, as I hope to find in them examples to illustrate points I expect to bring out. Right now I am anxious to secure as many specimens of letterheads as possible, for I plan to take up the handling of this class of printing at an early date.

J. L. FRAZIER.

* * *

Perhaps no class of printing allows the ambitious typographer so good an opportunity to demonstrate his artistic ability and appreciation of the beautiful as holiday work. In keeping with the spirit of the season it should emulate the joyful time. Since the spirit of the occasion prompts decoration, expressed in the gaily bedecked Christmas trees and the beautiful shop windows, the printing, too, should come forth in its brightest and happiest hues.

Green and red ink upon white paper forms the most effective combination for this class of work. Both red and green are "gay" colors and are in keeping with the season, just as years of association have made the holly and the mistletoe. The green represents the leaves and the red the berry. And in these colors there is further significance, for the red heralds passion, love and happiness, and the green, foliage; that is the Christmas tree. The use of white stock has also its meaning, for it is the essence of purity — a very desirable feature for the birthday of our Savior.

No other class of printing will admit of so much of the decorative element. In fact, in this day of plain, yes severe, type designs decoration is not essential in any other kind of work, but it is as absolutely necessary in the holiday printing as the tree is to the Sunday School treat. Of course, it can be improperly placed and used with such reckless abandon that the job is ruined, but used properly, decoration is the thing in holiday printing. Correct typographic principles should prevail in its use as with everything else.

Contrast for a moment a Christmas greeting card, printed in stern black letters, without adornment, and one printed in red and green ink upon pure white antique stock, with a holly border and a Christmas bell as parts of the design. On receiving the first you are aware that you are remembered, but a feeling of obligation, or necessity on the part of the sender is sensed through the cold black type. How different you feel when you hold the other in your hand. Its very warmth grasps you like a hearty handshake, and you feel that the sender really cares.

Then, too, the card printed in red and green has its advantages from a financial standpoint. It is not an every-day job and the customer cannot compare it with other work he has bought from Tom, Dick or Harry, and hold you down to a "yankee-statement-price." The job is different, and if properly printed no customer will quarrel with you over the price. If my experience in the printing business has taught me anything, it is that I have had less trouble getting a good price for jobs a little out of the ordinary than for the average run of work.

⁂

Specimen Number One is a Christmas advertising folder. It has one claim to distinction in that it is a job that sold itself. I do not remember now just how I came upon the idea, whether it was suggested by another job or just the product of imagination, but at any rate it was set up and printed before a clothier was approached. Three specimens were printed with the name of "Ober, the Clothier," as you see it in the reproduction, three with the name of "Smith, the Clothier," three with "Jones, the Clothier," and three with the name of each of the other clothiers in the town. My plan was to take the samples bearing the name of Ober to him, tell him what a fine idea I had worked out for his holiday advertising, and that I had prepared the samples on my own responsibility, for I felt certain he would want just such a folder to send to the women of the town.

THE CLOTHIER

No. 1

If Ober did not buy I planned to tear up the samples I had prepared for him and go on to my next best prospect — but Ober bought and liked the idea so well that he did not ask for a price.

The above plan might not be considered "good business" by some printers, and it is a little uncertain, I will admit. It could not be used indiscriminately, but where the idea is a distinct novelty, I think it is half sold when the customer can see just what it is.

I am sure every reader can make a pencil sketch of the idea, take it to his leading clothier and get an order. He might fill the two panels with suitable gift selections for women, and secure an order from a dry goods store. In that case the folders would be mailed to the men.

Be sure to print the panel border and the centers of the bells in red ink and the rest of the design in green, upon white antique stock. The reproduction represents the two inside pages. A suitable title page should be printed also, and the firm's mark could appear on the back.

⁂

Here is a Christmas advertising card that is a dandy. It is simple in construction and the idea could be used in advertising almost any business. The design is printed in two shades of green and red upon a white card. The bell in the center and the background of the holly border are printed in light green, the rule inside the holly border and

It represents a modern treatment of the historic ecclesiastical style. The black gothic, or text, letters in the word "Christmas" is a copy of one of the early manuscript letters. This style of letter has become the accepted style for church printing, and wise typographers will use it frequently in that class of work. The maltese cross is also appropriate in church printing. The ancient churchmen considered it a symbol of Christ, and today these crosses have that significance but merely as a matter of ecclesiastical decoration. The rule work which is a prominent part of the page, also has a historic significance, and is therefore very properly used in church printing. It originated through the necessity of the writers of manuscript books to have guide lines to follow in their lettering. No better example of the proper manner to handle a Christmas program could be given. Rules are in red, type matter and maltese cross ornaments in black.

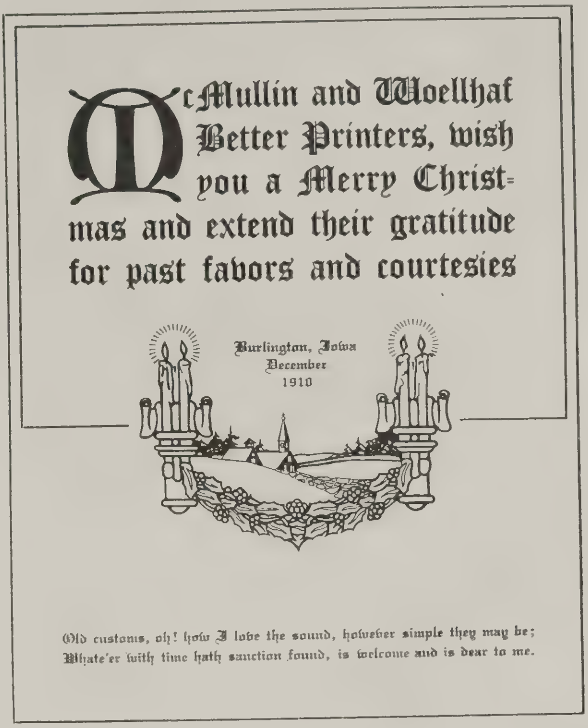
⁂

The holiday greeting card is another thing the printer is often called upon to print at this time of year. These cards, more than any other kind of holiday work, should convey the Christmas spirit both in the matter of color and decoration. The text should be terse but full of feeling; in fact, to use an old expression, it should be "short and sweet and hard to beat."

Exhibit 5 is from that firm of splendid printers, McMullen & Woellhaf, Burlington, Iowa. The expression is a simple Christmas wish, without rhetorical flourish, and yet its sincerity cannot be questioned. The mechanical and artistic details, as in all this firm's product, are beyond criticism. It is doubtful if any firm of printers in the country keeps the whole of its product at a more uniform high standard.



McMullin and Woellhaf Better Printers, wish you a Merry Christmas and extend their gratitude for past favors and courtesies

Burlington, Iowa
December
1910

Old customs, oh! how I love the sound, however simple they may be;
Whate'er with time hath sanction found, is welcome and is dear to me.

No. 5

Printers desiring a form for a greeting to send to their customers can do no better, I am sure, than to "lift" this design.

⁂

As a title page for a Christmas program, Exhibit 6, also from McMullen & Woellhaf, scores high. The uncial initials, very appropriate for this work, are in orange and the remainder of the design in dark green. One advantage in this design is that it is quickly composed and that without altering the beauty of the design.

⁂

I am aware that this is a busy time in most print shops, but I am sure that those plants having at their disposal sufficient decorative equipment to handle this class of work properly would do well to get out some advertising. It should carry some appropriate Christmas cuts and should be printed in red and green, the red leaning toward orange. I am having reproduced here a card sent out by the Colonial Art Shop, Pasadena, Cal., that just about conveys my idea. It is very neatly printed and conveys the Christmas spirit, all right, but there is one stricture I am compelled to make. My idea is the card is too large, 5½x9 inches. Some advertisers might disagree with me on this point, but it has been my experience that the larger the card the sooner it reaches the waste basket. There is one thing, however, and that is it proves the firm has the equipment. It should have brought results.

No. 7

Right here I want to say something about advertising. A glance at the newspaper at a time when business is at its best readily reveals the fact that at just that time the up-to-date merchant is advertising most. He realizes that business is abroad in the land and if he does not get it his competitor will. That is the time for the printer to strike, and the harder he strikes with selling talk of the right sort the better it will prove for him. I know it is too late now to do what I suggest, but next August when the thermometer is boiling and business is all boiled down to nothing, get out your holiday decorators and print some advertising for Christmas printing. Put it on the shelf and let it rest until about the fifth of December — then send it wherever your judgment tells you there is a chance for business. If any man in your town is going to use **real** holiday printing it is a good bet that you will get the order.

✣ ✣ ✣

Should you be talking with a customer about his holiday printing and he does not order envelopes to carry his card, folder, or booklet, suggest something on the order of Exhibit 8. This was printed in red and green and made a pleasing introduction

for the enclosure. It is a mistake for one to send out Christmas literature in a plain envelope, and nine times out of ten the customer will thank you for the suggestion. The man for whom this one was printed did so.

I cannot refrain from reproducing another specimen from McMullen & Woellhaf, Exhibit 9. This is a card that is in keeping with the name of the firm for whom it was printed — odd. In this case it is a virtue, however, and in striking contrast to the majority of broken-up arrangements, almost perfect balance is secured. The green and orange ink on buff stock makes a very pleasing card.

* * *

In closing, a few words as to the historical side of Christmas printing should not be overlooked. Christmas is a very old holiday and for that reason old style type faces and antique stock should be used in the production of Christmas printing. It is a mistake for printers to produce holiday printing in the same style of typography employed on the average work. It offers a great opportunity for artistic treatment and its production is a pleasure to the artist printer who believes significance is an important element in good typography.

* * *

GEORGE SCHLOSSER — BIOGRAPHICAL

Office of the Secretary
Sioux Falls, S. D., October 1, 1913.

Mr. B. B. Herbert,
4618 Ravenswood Park, Chicago, Ill.

Dear Mr. Herbert: E. R. Purcell, of Broken Bow, Neb., chairman of the committee to formulate a plan for the establishment of a foreign advertising bureau, has requested me to furnish you with a portrait and short biography, and my views regarding the work of this committee.

I was born in Wisconsin and raised in a print shop. Never got beyond the high school, and it wasn't very high, either. When I was asked to become the "devil" and roustabout of the Journal at Lodi, over forty years ago, I little realized what a fascinating game I was going up against. But I have since enjoyed many hours of reminiscences and have the supreme satisfaction, and I may add pleasure, of knowing that I have started out on the road to fame and success governors, congressmen and statesmen.

I never think of myself as anything but a printer. However, during my long period of active newspaper work I have had a varied experience, and have been more or less successful. Twenty years in the auxiliary business has given me some idea of the situation as to foreign advertising, but I do not care to offer any advice to this committee at this time.

I think I know something of the peculiarities of the average country publisher, and the constituents he serves. I also know something of the general nature of foreign advertising offered, and will do what I can to help solve the problem of the committee.

Fraternally,
GEORGE SCHLOSSER, Secretary.

How to Build Up the Commonwealth

AT the fall convention of the Virginia Press Association, Colonel Murphy donated three prizes for the three best essays on "How to Build Up the Commonwealth." President Cooke announced the following winners: First, Alexander Forward, former Times-Dispatch reporter, now editor of the Harrisonburg News-Record; second, C. B. Camper, Fincastle Herald, and third, Robert S. Barrett, Alexandria Gazette. Editor Forward was called to the dais, read his paper, and received $75 in gold; President Cooke, in Editor Camper's absence, read his paper; Editor Barrett read his paper and blushingly handed his gold prize to his delighted wife.

Following is the essay which won first prize. Its contents are well worthy of study wherever men depend upon self-government, and are looking forward to and are striving for better conditions:

COMMONWEALTH BUILDING

1. Unite the now scattered energies of active citizens in a concentrated state body to

(a) Teach our own people the full measure of their opportunities.

(b) Tell the people elsewhere of the agricultural, commercial and industrial opportunities in Virginia.

II. Stop the flow of trade and money and blood to other states by developing better transportation facilities.

III. Make our system of taxation attractive instead of repulsive to prospective investors.

IV. Build up the commonwealth by building good citizens.

I.—Organized Good Citizenship

The Commonwealth of Virginia needs a state board of trade or chamber of commerce to do for the state as a whole, work of the sort so splendidly done for Richmond by its chamber of commerce. A majority of states have such organizations, most of them doing efficient work. They are always closely affiliated with local boards of trade.

Among the duties of this state board of trade, or by whatever name it might be called, would be to enhance the efficiency of local commercial organizations; to organize publicity work to set forth to the world the opportunities in Virginia; to encourage the investment of local and foreign capital; to secure greater railroad mileage and better waterways; to so organize the active good citizenship of the commonwealth that prompt and harmonious action might be secured at all times for consideration of subjects affecting the material interests of the state.

The writer has, through recent correspondence, secured information concerning the operation of such bodies. Twenty-eight states have them. They are supported mainly by voluntary contributions, and each year it is easier to get money for their support.

The Texas Commercial Secretaries and Business Men's Association has done notable work. It has organized a welfare commission, which finds what existing laws are in disharmony with efficient and profitable operation of the state's industries. It has formed a farm life commission, which studies rural problems. It conducts a publicity bureau, whose articles, prepared by experts, were printed in 750 papers in 1912 to the number of 308,918. As a result, Texas is the best advertised state in the Union.

The West Virginia Board of Trade manages celebrations, adjusts train service, keeps members informed of the progress of legislation, boosts good roads, gathers exhibits.

The Ohio State Board of Commerce is responsible for tax reform, state depository laws and public accounting, legislation that has saved Ohio $1,250,000.

II.—Railroad Connection—Richmond and the Shenandoah and Rappahannock Valleys.

Every Virginian is proud of his capital city and proud of his state. It is painful to see the bulk of the commerce of two of the richest sections of Virginia diverted to Washington and Baltimore. Most of tidewater and nearly all of the valley of Virginia trade with outside cities.

Worse than the loss of commerce is the loss of citizenship. Young men of these sections, instead of going to Richmond and other Virginia cities, drift to Baltimore and Washington, where their home people trade. They build up business connections with the folks back home that will last for generations, and the loss of good blood becomes appalling. There should be united effort for a railroad to the Rappahannock, and for adequate railroad facilities between the upper valley and Richmond.

III.—Tax Reform

It is discouraging to the prospective resident of Virginia to find that the state taxes bank deposits—a tax on thrift that drives away much money. It should be abolished.

There should be a body authorized to create equalization of taxable values, so that the intending purchaser of property will not find that it is assessed at $2,500, when he is asked $10,000 for it. He is convinced at once that something is wrong. Every real estate dealer has had possible investors thus kept away from the state.

IV.—Making Men and Women

From the rural communities of Virginia come the men and women who make the future citizens of the cities and towns. In the rural communities must be trained the boys and girls that we hope to keep on the farm. Country life must be enriched and dignified, so that the incentive to remain on the farm may be stimulated by the certainty of financial success and the growing importance of community life, and so that those who leave may be stronger and worthier citizens where they locate. The rural communities of Virginia thirst for knowledge and for fuller life. They want libraries. They want better schools, and these adapted to their own needs. As a matter of fact, the best and highest paid teachers should be placed in the smallest and most isolated neighborhoods. These teachers should be equipped to impart appreciation of the dignity of rural life. The state must help to create such teachers and to make their little schoolhouses the centres of community life. The normal schools should be adequately provided for, and their work should be extended with this in view.

The best material for building up the commonwealth is the boys and girls, and the best factory is the rural community.

Associated Nebraska Newspapers

Some Suggestions Worthy of Consideration by the National and State Editorial Associations and the Members.

Readers have already been informed as to steps taken by the Nebraska Editorial Association. In fact, the movement along similar lines in the National Editorial Association received much impetus from the Nebraska plan, and much additional aid may be expected from the same source.

In an address before the National Editorial Association at Denver, in 1887, we advocated at length a similar plan which had been proposed in our first annual address at Cincinnati in 1886 and was subsequently advocated, each year, by ten succeeding presidents, but finally was forgotten in the midst of all the travel, pleasures and educational work of the Association.

As a help, a brief resume of the early steps taken as to the business branch is given elsewhere. That the plan is at least taken up in a practical manner is proof of continued necessity of such co-operation as is now being tried in Nebraska.

Frank O. Edgecombe, chairman of the Executive Committee of the Associated Newspapers, has sent to this office a copy of the Executive Committee Bulletin and also a copy of a letter to the members from which we make the following extracts as being both informing and suggestive and in every way helpful:

Work of the Executive Committee

The Executive committee, as soon as it was appointed in early June, elected C. C. Johns of Grand Island as secretary. Mr. Johns is not a member of the committee. Mr. Johns will be paid for the time he devotes to Association work. No other person will receive a salary. Every member of the Association will be furnished a complete statement of receipts and expenditures. The Executive Committee agreed unanimously at the beginning that a deficit would not be incurred under any circumstances. No plan to spend money will be made until the money is in the bank.

The first regular business meeting of the Executive Committee was held at the Lincoln hotel in Lincoln on the afternoon of Friday, July 11.

The second meeting was held in August and the Committee went over a very satisfactory report submitted by Secretary Johns, which related largely to advertising matters. It was found that a few members of the Association had advertising rates that were considerably below the average of other newspapers of the same circulation and general standing and it was agreed to recommend that they bring their rates up to the proper level.

Advertising

An important matter taken up at this meeting of the Executive Committee was the question of advertising agency commissions. It was agreed that the standard commission generally asked by advertising agencies and generally accorded by newspapers in this and other states is fifteen per cent. It was also agreed that uniformity in this matter among the members of this association is very much to be desired. To pay a commission of more than fifteen per cent is unnecessary, in the opinion of the Committee, and to refuse to pay fifteen per cent is confusing to all of the parties concerned because it is generally conceded that every legitimate advertising agency is entitled to pay for its work and the already established custom is to fix this compensation at fifteen per cent.

It is the custom of some publishers to fix one rate for local advertisers and to fix a slightly higher rate on all foreign advertising, each rate being uniform for its class of course. This plan permits the publisher to pay the customary fifteen per cent commission and still receive about his regular net price per inch. Our Association deals almost exclusively with foreign advertising as distinguished from the advertising coming from your home county and therefore your foreign advertising rate is usually the only one that our Association will have to deal with.

Some publishers say that they have had so much grief with foreign advertising that they don't want any more, but we think this the wrong attitude. There is a right way to solicit and handle foreign advertising on just as profitable a basis as that on which home advertising is handled and the payment is just as certain if proper care is exercised. * * *

Services Performed

The following are among the services performed for individual members of the Associated Nebraska Newspapers in the past three months: Supplied several members with printers. Turned advertising to several members as opportunity offered, in some cases considerably more than paying for a year's membership in this Association. Supplied write-up men to publishers who wanted them. Advised many publishers by letter and telephone in response to their inquiries. Assisted in smoothing out local difficulties in a few cases. Business conditions have not warranted the holding of district meetings but these matters will be taken up as opportunity offers. Secretary Johns invites correspondence.

For Correction of Wrongful Practice

The chairman has prepared a circular letter for use in notifying agencies and advertisers of your membership in our Association and giving out the broad intimation that the members of this Association are standing together for the discouragement of improper practices in the matter of delayed payments and other misconduct on the part of their customers. Recently a member of this Association filed a complaint with Secretary Johns against a fairly well known advertising agency alleging that he was unable to get a reply of any kind to a bill he had rendered for services performed. The case seemed to be very meritorious. One letter from Secretary Johns brought the cash in a hurry. We have no intention to turn the secretary's office into a collection agency but we do intend to get justice for our members or start a rough house. A copy of the above circular letter is enclosed with this bulletin and additional copies for your use, if you like the idea, can be secured on application to the chairman. We suggest that you mention your membership in your letterhead.

To Regulate Rate Setting

(Paragraphs from a paper read by J. B. Powell, Instructor in Advertising, University of Missouri, before Missouri State Press Association:)

The simplest way to get at this problem is to talk to the publisher across the street and forever settle this ratecutting business, for in the last analysis, the fight narrows down to the combined wits of the merchants against the wits of the newspaper publishers. Merchants know they can work you publishers against each other for their own benefit. Why don't you wake up to the possibilities of combination and show them a thing or two.

Cost and Cost Finding — The Value of the Trade Papers

Every publisher knows that it is no more possible for a newspaper to sell a full page advertisement for ten dollars and make money on it, than it is for a grocer to sell forty pounds of sugar for a dollar and make money on it. But you are each afraid the other fellow will take it, and your competition combines to ruin the future of your town.

The bed-rock time has arrived in the newspaper and printing business — as it has in every other.

This is an age of cost finding and honesty in business. Every line is waking up.

There are nearly a dozen trade journals in Chicago, New York, Boston and Philadelphia devoted to the newspaper and printing business. I wonder how many publishers ever subscribe for any of them.

The farmer is studying his problems. He is experimenting with crop rotation and scientific fertilization. He is trying to make the dry year a profitable year. In other words, he is trying to make the dull season profitable. He is subscribing for all the farm journals he can get and he is studying them — in many cases to the exclusion of his home newspaper.

The merchant, butcher, the baker and the grocer are asking the question, "Where have my profits gone?"

And the time has arrived for the newspaper man to ask the same question about his business — it is high time that he does it! If you have been making your living off the little county printing the politicians have condescended to give you, you had better watch out — for commission government may get your town.

Yours truly,
FRANK O. EDGECOMBE, Geneva Signal,
E. R. PURCELL, Broken Bow Chief,
C. F. CLARK, David City Press.
F. L. CARROLL, Ashland Gazette,
A. V. SHAFFER, Alma Record,
Executive Committee.

LETTER TO MEMBERS — COMPLAINTS TO BE MADE — INFORMATION TO BE FURNISHED

C. C. Johns, Secretary, Third Floor, McAllister Building, Grand Island, Nebraska

Geneva, Neb., October 1, 1913.

To All Members of the Associated Nebraska Newspapers:

In case, in your opinion, any advertising agency or general advertiser fails to make prompt settlement in accordance with the exact terms of the contract under which the service was performed, it will be a favor to the officers of this association and a valuable service to each individual member if you will promptly notify our secretary, Mr. C. C. Johns, at the above printed address.

The secretary's office will be prepared to furnish information in regard to the reliability and general business methods of advertising agencies and general advertisers who have not been in the field long enough to be generally known to our members. In every doubtful case make inquiry before proceeding. The secretary's office is also prepared to advise in regard to rates.

In filing complaints with the secretary's office please include a copy of the contract, copies of the material correspondence and other material information concisely stated, that will enable the secretary's office to present the case intelligently. If carbon copies of correspondence with advertisers are kept by each member it will be of material assistance if it happens to be necessary for the case to be reviewed at the secretary's office.

You are authorized to furnish a copy of this circular to any customer whom you think may be interested.

Yours truly,
FRANK O. EDGECOMBE,
Chairman Executive Committee.

A Birthday Luncheon

PRESIDENT Robert W. Nelson, of the American Type Founders Company, is a gentleman who commands the respect and esteem of all with whom he meets, the members of the different allied trades, the competitors of his company and the printer-customers, and the love of all who are associated with him in business.

It is natural that his friends should unite in occasions to do him honor and to express their kindly feelings. The recurrence of his birthday in September furnished the opportunity for such an occasion.

On Monday, September 22, the officers and heads of the American Type Founders Company, representatives of printing trade journals and of allied trades and prominent New York City printers invaded the general office of the company at 300 Communipaw avenue, Jersey City, N. J., and presented President Nelson with a silver-mounted crystal service and tray, called "a milk set" by the donors, as the recipient lives on a farm and is said to be fond of the healthful, bovine lacteal fluid.

The affair had been gotten up, and a luncheon provided in the Lunch Club department of the great establishment, without President Nelson's knowledge, so that he was taken by surprise. His birthday was on the twentieth, but he was necessarily absent in attendance at the convention of the League of Trade Press Associations on that day, so that the postponement had to be made until Monday.

The party gathered in the room of the famed library of typography; and when Mr. Nelson was summoned to meet friends who had called, he asked to be excused, as he had not a moment to spare from business demanding his attention. He, however, finally acceded to the request and then followed friendly greetings and the presentation of the testimonial.

Short speeches were made by a number of his friends and D. R. Fitsworth read a poem appropriate to the occasion. Of course the lunch was greatly enjoyed, as was the friendly sociability connected therewith. There were about fifty guests at the luncheon, among whom as honored invited guests were Mrs. Nelson and a number of her lady friends.

Many of the leading printing press manufacturers as well as New York printers were present. The editor of this paper only regrets that his invitation was in Chicago while he, himself, was in Philadelphia at the time, but wishes to extend no less earnest and sincere congratulations, with his regrets.

The National Printer-Journalist is assured that the occasion made an exceedingly pleasant break in the ordinary business routine of the day and was one of the pleasantest gatherings ever held in the Luncheon Club, and we know by experience how pleasant the regular gatherings are there. The meaning of the taking of so much time, right out of the heart of a business day for the gathering, by so many leading, active men, was evidently fully appreciated by Mr. Nelson, as were all the kindly expressions. The following were present:

Members of the Party at the Luncheon Tendered to President Nelson in Honor of His Birthday. President Nelson Stands a Little to the Left of the Center of the Group, with Lady to His Right, and Mr. Paul Nathan Seated Between Two Ladies Immediately Before Him.

Charles F. Ahlstrom, President Whitlock Printing Press Manufacturing Company; Frederick Alfred, J. W. Pratt Company; Herbert L. Baker, C. B. Cottrell & Sons Company; Raymond E. Baylis, President E. C. Lewis Company; George J. Carter, Wood & Nathan Company; S. Evans Clark, Secretary United Typothetae of America; C. Frank Crawford, Manager Albert B. King & Co.; Charles Francis, President Charles Francis Press; Joseph Gantz, President Publishers Printing Company; Merton L. Griswold, Manager Rogers & Co. (New York); James L. Halley, General Manager The Trow Press; G. Frederick Kalkhoff, Manager The Kalkhoff Company; Harrison C. Lewis, General Manager National Paper and Type Company; Charles G. McCoy, Manager Printing Trade News; Paul Nathan, General Manager Wood & Nathan Company; Louis H. Orr, Bartlett-Orr Press; John Clyde Oswald, Editor and Publisher American Printer; Charles Paulus, General Secretary New York Typothetae; William B. Prescott, Business Manager Inland Printer (Chicago); Charles E. Sheppard, President C. E. Sheppard Company; L. M. Sloman, Eastern Representative Inland Printer; George R. Swart, Vice-President Dexter Folder Company; James R. Thompson, President Thompson Printing Company; David E. Titsworth, General Manager Potter Printing Press Company; John Watson, President Jersey City Printing Company; Edmund Wolcott, President Patteson Press; Charles F. Whitmarsh, General Manager Printing Art (Boston); Gustav Zeese, President Zeese-Wilkinson Company.

Ladies: Mrs. Robert W. Nelson, Miss Emma Liewald, Miss Ada Kunkel, Mrs. Oswald Schraubstadter, Mrs. A. Heynen.

Editor Tozier Invited Families Into Camp at the State Fair

Greeting: The gates to the Tented City have been officially opened, and the public is invited to make reservations for camping space and to pitch tents early. The sheltering oaks are urging you to come and enjoy the refreshing shade awaiting your welcome. If you have formerly been numbered with the population of campers and been blessed with such pleasant weather as is promised during the next Blue Ribbon Fair you know the delights thereof. If you have never tried camping at the Oregon state fair try it September 29th to October 4th, 1913. The beautiful Oak Grove park in which you will camp is situated between the Southern Pacific depot and the main entrance to the grounds. The park is electric lighted, water is piped throughout the grounds, and tents are carefully guarded by day and by night. Oregon's best and truest citizens are proud to be numbered with the camping population. Camping space is absolutely free and you will be allowed all the room you need. Free stall room is offered you in case you come by team. Feed, groceries, wood and vegetables can be obtained on the ground at home prices. Fresh meat and fish every day. The streets are clean and freshly strewn with straw. Come in overalls or broadcloth. Wear the latest Paris creation or an ex-ray bonnet. All meet on a common level. No fashion edicts here. No monstrosities allowed. The procession has started for the Tented City, so lock your house, send the dog to the neighbors, tie the cow behind the wagon, place the children therein and come. Friends and neighbors of the long ago await your arrival.

ALBERT TOZIER, Mayor.

Forty-five years ago, in an address at a Goodline Co., Minn., fair, we urged farmers to adopt this plan of camping out at the agricultural fairs—attending with their families, to enjoy, not only the exhibits, but to listen to accounts of the methods by which the best results had been reached and to join in discussions; also to listen to lectures, concerts and the relation of agricultural experience and social meetings, together with all innocent amusements that may be provided. Oregon provides for the encampment and we hope all these other means for improvement, social and intellectual enforcement.

A snapshot of Albert Tozier, past president of the National Press Association, taken at 6 a. m., July 7, 1913, at his retreat in the Hood River, Oregon, hills, as he was feeding some of the wild birds that he had tamed. On his head are two black woodpeckers and on his arms are two sparrow hawks. The shadow of the photographer shows in the picture.

"OF VERY PRACTICAL USE"

The Arvada Sun
Arvada, Colo., Sept. 13, 1913.

B. B. Herbert, National Printer-Journalist,
Chicago, Ill.

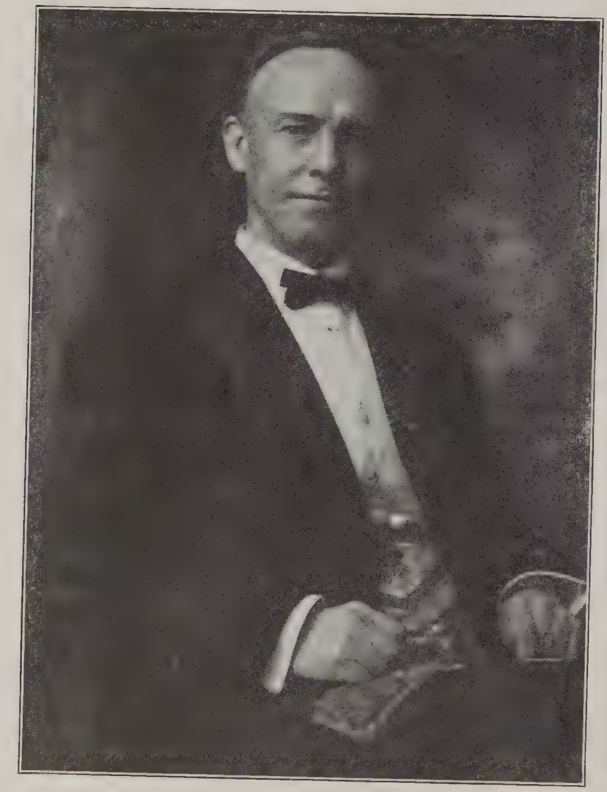
Dear Mr. Herbert: Enclosed you will please find draft for $2 to pay my subscription to the National Printer-Journalist. You will please change my address from Golden to Arvada, Colo., as I have given up the instruction of refractory youth to engage in the newspaper business for myself again. I find the N. P.-J. of very practical use in my business.

Wishing you a full measure of success, I am,
Yours very truly,
C. M. DANFORD.

Advertising and Business Department of the N. E. A.

Some Views by John R. Rison

CHAIRMAN PURCELL of the Advertising Committee, appointed at the last meeting of the National Editorial Association, requests that I give you my views regarding the work of this committee. For several years I was on such committee of my State Press Association, and I found that it was an exceedingly difficult matter to make my brother newspaper men realize that their advertising space was their "stock in trade," their assets, to meet their obligations. In Tennessee, owing to the peculiar condition of affairs, politically, for several years, few men remain in the newspaper business long at the time, and often only a few months, a large number of papers changing hands, or "turning their toes to the daisies," and hence the trouble to deal with the proposition as a whole, and many times the annual meetings of the Association are composed of a majority of new men. Committees appointed by our State Association have often appeared before state legislative committees to secure proper legal advertising rates, etc., and in Tennessee we have a very fair rate, though many other laws governing newspapers are much needed.



John Rison, Paris, Tenn., Post-Intelligencer, Member of Committee on Foreign Advertising Bureau of the N. E. A.

If I comprehend fully the work of this committee, it is for it to report to the National Editorial Association the best mode of establishing a uniform advertising rate, one based upon circulation and satisfactory to the publishers and the customers, and this can only be done by an exchange of views by the committee, and the matter discussed from every standpoint. I trust that this may be done and a full report made to the next meeting of the Association.

Biographical

John R. Rison, editor and owner of the Post-Intelligencer, Paris, Tennessee, was born near Paris, November 12, 1858. He received his education in the academic schools of Paris, and was licensed to practice law upon attaining his majority, and continued in the active practice of his profession until November, 1881, when he entered the newspaper field. He was appointed, in 1892, clerk and master of the chancery court at Paris, which office he now holds, having recently been appointed for another term of six years, and has been acknowledged as one of the most efficient officers in the state. He yet owns the Post-Intelligencer, looking after its editorial and business management. He has been an active member of the Tennessee Press Association since 1882, and in 1909 was its president, having served several years as vice-president. For more than a quarter of a century he was connected with the municipal affairs of his city, serving more than seven years as mayor, and about fifteen years as secretary of the city board of education. At present he is president of the First National Bank of Paris, and is also president of the Paris library association. For four years he was public administrator of his county, and has for many years been chairman of the board of stewards of the First Methodist church, and is treasurer of his Sunday school, having a record of not being absent more half a dozen times in the past twenty-five years. He is an active Mason, a Knight Templar and a Thirty-second degree Scottish Rite, and in 1911 was grand master of Tennessee.

The Post-Intelligencer is one of the oldest established weeklies in the state, and its extensive circulation is due mainly to the special attention given to the home news department.

✣ ✣ ✣

CALUMET BEN FRANKLIN CLUB

Members of the Calumet Ben Franklin Club to the number of about twenty, met at the office of Mr. J. C. Veeder, 915 East Sixty-third Street, on Tuesday evening, September 16, for the first meeting after the summer season. They were indeed well repaid, for seldom has there been more interesting talks and surely never more instructive ones, than those listened to and participated in by all present.

First, Mr. Frank H. Brines, secretary of the Chicago Ben Franklin Club, told us of the aims and purposes of the estimating class being organized by that body, and a number of those present expressed a determination to take advantage of the invitation extended. Mr. Brines stated that a course in salesmanship would follow the class in estimating.

Mr. Ed. E. Sheasgreen, of the Standard Cost Finding Service Company, gave us a talk on "General Estimating." It should have been called "Practical Estimating," as each one present was furnished with a copy of a job and each figure was recorded. Mr. Sheasgreen is assuredly a most interesting and instructive talker, and is certainly an expert in all the angles pertaining to the printing business.

Eleven-thirty o'clock arrived before any of us were aware of it, and the meeting adjourned to meet at the office of Mr. W. A. Stamback, 5552 Wentworth Avenue, the third Tuesday evening in October.

Those members of the Calument Ben Franklin Club, and the printers of the south side in general, who do not attend these meetings, are missing opportunities that can be measured in dollars and cents, and it is their own financial loss.

BUSINESS MANAGEMENT

ED. E. SHEASGREEN, *Editor*, 1603 MONADNOCK BLOCK, CHICAGO, ILL.

TO THE MINNESOTA COMMITTEE

In Mr. J. C. Morrison's reply for the Minnesota Committee to my article on the "Minnesota Committee" controversy, he compares the methods there advanced with the "gross receipts method."

First, let it be said that not only is criticism of the methods advanced solicited from Mr. Morrison or his committee, but from others as well, for, as stated in my previous article, it is doubtful if the last word on the distribution question has been said, or will be said for some time to come. It is only by honest, friendly discussion that **right** methods will finally be found.

In a long talk with Mr. Morrison at the Toledo exposition I was very glad to find that after all Mr. Morrison (and the Minnesota Committee ideas) and those held by myself, were not so far apart as might be seemed. But Mr. Morrison, like so many who are trying honestly to solve cost problems, continually confuse COST with SELLING, thereby making it very much harder (and in some cases almost impossible) to properly understand cost. When it seemed we were about to agree on a point Mr. Morrison became confused between the points of the **cost** of advertising and the **selling** of the same ("service" as he called it).

Now it matters not whether it is over a manufactured article or a service rendered, that a discussion of Cost is on, the **service rendered** has a **cost** the same as the manufactured article. Before the proper **selling** price can be made for either, the **cost** must always first be found. Then if a "flat" rate or a "sliding" scale is desirable, either can be more intelligently made.

Our company, The Standard Cost Finding Service Company, has as clients certain newspaper printer-publishers, and by calling on them and on others (using different methods than we advance) to follow our methods, we are going to try and get still closer to a solution of this important question.

Our company stands ready to assist the Minnesota Committee in the solution of these and other **COST (not** selling) problems, and hopes the time is not far distant when all can "gather around the (black) board" for a discussion of these questions.

The Man Who Thinks He Knows Cost

Here is to the man who **thinks** he knows cost, and does **not.**

Not long ago the annual statements of a business concern were being studied with a view toward interesting its manager to install a cost finding system in his factory. The manager's contention was that he did not need a new system because his old one was good enough, that while there might be a few **minor** leaks in the business, there surely could be nothing very serious the matter with it. Now this business was a very well known and large establishment, employing many people. In spite of all this the street reports were that the institution was not in such excellent condition financially as its manager wished to make it appear.

In looking over the statements for several years back no item for rent was found charged against this business — this because the manager had thought it wrong to charge for the capital invested in the land and buildings. This rent item amounted to a large sum each year.

No reserve funds had been established for replacement of the capital invested in plant tools and equipments, nor for interest on the same. No interest had ever been figured on the commercial investments — work in process, open accounts, bank balances, raw or manufactured stocks. In all, the losses by these very bad business oversights, the same having been O. K.'d by public certified accountants, ran into many thousands of dollars in a year.

And yet the manager **thought** his cost system covered everything but a few minor matters! No wonder **his** credit was poor.

How about **your** credit, my dear reader, whether you sell only your labor, or the products of labor?

Are you a man who **thinks** he knows cost, or are you a man who **positively** knows because a scientifically devised and **properly** installed cost system has been and is daily telling you?

✣ ✣ ✣

The Case of Banker O'Connell

The state of Illinois has had another serious bank failure, Banker O'Connel's private bank of Joliet failing for a large amount.

O'Connell is in prison and is pointed at with scorn. He is hated. If caught by some of those who had money on deposit in his bank, they would in all probability do away with his life. It was reported that he had lost his mind. In short, this man is a wreck, financially, and physically, some might say morally. This department would not go so far, and for the following reason:

First, there was a lack on the part of this banker of a proper knowledge of the Science of Cost Finding — of what constitutes a real cost system, and how the same should be installed to fit a man's business, commercial or manufacturing. Instead of demanding of those who sought his aid, what their liabilities and assets were, he should have demanded rather what methods they followed in cost finding, how the system had been installed and if it covered every item of cost, at the same time showing the correct cost of conducting the various departments of the business or of the various products. O'Connell should first have made dead sure that those whom he would help were **positively getting back** every dollar, with a reasonable profit they were putting into their enterprise.

If they were not doing this, then he could have steered clear of the shoals. If they were not getting back all their dollars, then how could he in turn expect to get back **his** dollars? As is always the case, after good dollars had become bad, he had to put in more good dollars in a vain effort to bring back the bad ones. Again, if those whom he was assisting had known the Science of Cost Finding, and the banker had not, they would have been more cautious about plunging and expanding. Their system would have shown them in advance where such expansion would have left them, and Banker O'Connell would probably not have failed.

It is another of these sad cases of business failure, and there are many of them in process daily, only they do not get to such a serious point in such a short time, probably taking a whole lifetime and even into the next generation before the break comes.

This is where the Science of Accounting, the Science of Salesmanship and Service, or the Science of Credits, or these three taken together, fail to save business.

The case of Banker O'Connell is another argument for better state protection to all manufacturing and commercial business, as well as banking business.

It is also another argument for a better study of the Science of Cost Finding, this study to begin in the home, to be continued in the school, store, and shop, so that when a man goes into business for himself and has to handle the capital of others as well as his own, he becomes the safe, sane, honest business man that he should be, **and that under the present ignorant methods of Cost Finding he thinks he is, BUT IS NOT.**

✣ ✣ ✣

The Man With a Conscience

The man with a conscience is the man with a cost system applied to every act of his every day life and to every one of his moral qualities. He is the man who does right in the little thing as well as in the big thing; who speaks as well of those with whom he disagrees as of those with whom he agrees; who at all times is a fair foe, if foe he must be, not stooping to the little, underhanded, mean things. He would rather boost than knock. He would rather be a one-faced man and carry a black eye, than to be a two-faced man and carry a bad reputation, and be suspicioned by all.

And so the business with a conscience is the business with a properly installed, properly working cost system. Such a business can hold its head high and likewise its price; it does not knock competitors — but rather would assist them; it is not two-priced, but one-priced all the time, even if it does not get **all** the jobs **all** the time. Its reputation is of the highest order and envied by all.

Here is a hand-clasp for the man with a conscience, and a cheering word for the business with a conscience.

✣ ✣ ✣

The Apprentice

A question of great importance to all employers, and all society, is "Where are we to get apprentices — from where is the new crop of journeymen to come?"

While doing cost work, and dealing with many employes in many trades, the question was asked of those workers who had growing boys: "Do you want your boy to become a tradesman the same as you?"

Invariably, whether the man was a bookkeeper, superintendent, foreman or journeyman, or even proprietor, the answer would be "No!"

"Why?" was asked.

"Because the chances for him to 'make good' are small."

"What do you mean by 'making good'?"

"Why, the opportunities for him to be a 'somebody' at a trade are limited because of the small wage received compared to the salary to be had in the professions. Neither can he meet as many people in a trade as in a profession. And then, too, I want him to be more than I have been."

Summed up in one word, the reason why fathers want their sons to become "professional" men is because of the "money" question attached — a mighty big, important reason, and every man has a desire that his son shall be greater than he, nearly always taking money as the measure of the standard of greatness.

It is getting more and more to the point in this country where the non-productive elements are overreaching the productive elements each year. With parents in this country preferring, rather, that their sons become "professional" men rather than journeymen, and with the teachers in our schools often trying to interest boys in some professional calling already overloaded, rather than in the trades, our society is nearly in the position it would be in if all the seed of all grain had been gradually destroyed — the time would soon come when short crops would prevail and a famine be on.

And a famine **is** on in our industrial world — a famine of apprentices.

Let our schools have more of the scholars taught how, as they are learning to use tools in the trade or manual training departments, to become better and safer business men by having classes on the Science of Cost Finding in **all** schools.

Have the home, backed by the government and the labor union, get the cost of producing the human machine, the cost of producing the effort sold by the human machine, and this cost found in such a way that every penny of "outgo" shall "come back" in the wage, and we will **then** find that, with the wage question being better adjusted, fathers will prefer their sons to become tradesmen rather than professional men, for the return in the wage under such a system would be more equal to the salaries now paid in some of the professions.

To go into any shop today one will find the present-day tradesman a man well up in years, few young tradesmen being found. With the "making" process of tradesmen at a standstill, in a few years more it will be almost as impossible to get journeymen as it is now almost impossible to get apprentices. When that time shall have arrived the "cost of living" (production) to all society will have risen to a still higher point than now, because of this "famine" condition in the trades. The **demand** on a trade for the **real** producers and their products will so far exceed the **supply** that it will be impossible to meet it. And what has been thought all the years back, and is still being thought, as serving as a protection to the worker in giving **low** living costs — **will prove just the reverse.**

* * *

The Honor in the Job

The "Honor in a Job" — what is it?

First, the "honor in a job" is the job that comes to you without price, from a customer who has faith and confidence in you that you will bill the same to him at a fair price, and yet at a price that will give you a profit.

It is the "honor in the job" that should make you more than ever want absolutely to know your true productive costs, so that you will not bill below cost.

If you can have your buisness built on this kind of knowledge, if you can have your business built up on a "Cash, plus" basis, knowing perfectly your costs — you are on the right road to a successful business career in which there is the **honorable profit.**

And this profit will have come, not by robbing one man and giving to another, but by getting from each man that which he should pay.

The "honor in the job" is vital to every plant-owner's very best interest.

* * *

MOS' AS GOOD AS DOUGH

Oh, when they git th' ice and salt,
  An' fix the cream an' stuff,
An' git th' freezer goin', till
  It's goin' slow an' tough,
We git aroun' th' wimmen folks
  To help the freezer go —
Our tongue just drips to lick th' dash,
  'At's mos' as good as dough.

An' when they git th' stuff all froze
  An' ready mos' to pack.
We then gits up an' gives our lips
  A sharp, resoundin' smack,
An' when they pull th' dasher out
  An' to the sink they go,
We asks 'em for th' drippin' thing
  'At's mos' as good as dough.

We like to eat th' little chunks
  They cut from cakes an' pies;
We're watchin' for 'em, too, you bet,
  With two big hungry eyes.
But yet, somehow, we also like
  To lick th' dasher so —
Because somehow to us it seems
  It's mos' as good as dough.

—By E. E. S.

Yes, those were great days, those days when we gathered 'round the cake dough pan to help mother and tease sister as we waited for our share of the sweet stuff.

Great days those — but to the memory of the inventor of ice cream and the ice cream freezer, with its dasher, it is our humble opinion that some one should erect a whole row of monuments — not of the ice cream and cake kind, either—but real, genuine marble ones.

Those days of pounding ice and mixing it with salt, of turning the crank, breaking the back, barking the knee, and then waiting to "lick off the dash" were, as Briggs would say, "Days of Real Sport," made ever joyous by anticipation as well as by realization.

We admit that even at this late day in life we still have the same hankerin' for the ice cream dash, aye, and with the kiddies, the pleasure of cleaning out the dough pan.

Long may the dough pan, the ice cream freezer and its dasher live — and may the memories of youth never die out.

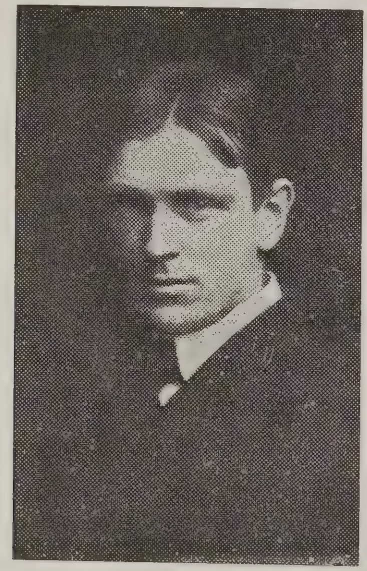
Virginia Press Association

By G. E. Wray

THERE are one hundred members in the Virginia Press Association. Practically all of them were present at the fall meeting held at Richmond in October. Colonel Murphy invited the entire body to feel at home in his new hostelry for two days, and then some. In fact, the one hundred editors were guests of the colonel and Mrs. Murphy, he having invited them to open his new banqueting hotel — easily the finest in the south.

President Cooke opened the first session and called upon Mayor Ainslie to welcome the scribes. The mayor referred to them as "the brains of the state," and went beyond his usual convention welcome. Among other things he said:

"When strangers come here it is our custom to tell them of the glories of old Virginia — to tell what we have done, and are doing, and hope to do. But now that we are all right here together — all Virginians and working for Virginia — we might as well admit among ourselves that Virginia is backward in some of the things that go to make a state. This condition is not the fault of the newspapers, but it is a condition the newspapers can do much to correct.



President Charles B. Cooke

"We must seek to build up a spirit of broad friendly co-operation for the entire state and its welfare, instead of only for each local community. For instance, in this matter of tax reform — and I have not seen a single editorial in any newspaper in Virginia that indorsed or defended the present tax laws — some communities must give up some of the advantages which they have been enjoying, and which they have never had any right to enjoy, and act for the benefit of the whole state. Inequalities are not only harmful to those in Virginia, but the fact that such inequalities exist is a deterrent to those who think of coming into the state. No greater work can be done by the Virginia editors than to educate the people out of the local idea into a broader conception. Richmond has been built up, not entirely by its own energy, but very largely by the prosperity of the rural districts. Our people realize that anything that is hurtful to the agricultural interests of Virginia will be hurtful to the cities. Anything that is hurtful to one section of the state is bound to injure the state at large."

The legislative committee, through Chairman Hughes, reported progress and was instructed to continue their labors. The first publicity law proposed by the committee is an act as to legal or quasi-legal notices, court orders, sheriffs' notices, and all manner of such publications which are required to be published by law, the new act requiring that they be published in the county or town in which the case is docketed, or where the property is located, or, if no newspaper is published in that county, at the nearest point thereto. At present, although certain notices and court orders are required to be published, with a view of giving the matter publicity, it is possible to select some obscure newspaper at a distance, which has little or no circulation in the county where the issue is pending.

The second act recommended requires the publication at least once a week of all real estate transfers, trust deeds, mechanics' liens and judgments. Such a law, it was stated, is now in effect in seven states west of the Mississippi River. Another act recommended provides a minimum size of type for all kinds of legal advertising, providing that it must not be smaller than six point.

The proposed act in regard to libel provoked much discussion. The proposed act, in short, is largely in line with similar laws in Ohio and New Jersey, and is worthy of general consideration:

"An act in regard to libel: when and how withdrawal shall be made, and how and when truth of statement may be proven.

"1. Be it enacted by the General Assembly of Virginia, That when any person shall take exception to any statement made in any newspaper or other publication as libelous, the person who so claims grievance shall, within three days after said publication is made, furnish to the editor, owner or publisher of the offending publication a statement of the matter, under oath, and the editor, owner or publisher shall give the said statement publication in his next succeeding issue after receipt thereof, in the same column in which the article complained of has appeared, under headings of the same size and prominence, and this shall be accepted as full and complete withdrawal of the offending publication.

"2. In all prosecutions or indictments for libel the truth may be given to the jury by evidence. And if it shall appear to the jury that the matter charged as libelous is true, and was published with good motives and justifiable ends, the person or publication accused of such libel shall be acquitted."

It seems that under the present Virginia laws proof of the truth of the statement, or evidence that a full retraction was published, may be taken only in mitigation of the damages. Objection was made that the limit of three days did not give the aggrieved party time to consult counsel or to demand a retraction. Chairman Hughes said the time had only been tentatively set, following the Ohio statute, which allows only three days. President Cooke thought that any paper which, without intention, through misinformation or a blunder of some sort, published an untrue statement libelous in its nature, would hear from it within three hours — not three days. Even simple errors not at all libelous in their nature were usually very promptly reported by some one.

The last of the series of proposed acts recommended by the legislative committee was an act requiring the publication by city and town treasurers of their receipts and expenditures. A law now in force requires such publication by county boards of supervisors under heavy penalty.

There is on the statute books a law requiring quarterly publication by city and town treasurers, but, as it carries no penalty, it is not observed. The only city which publishes a complete statement of its affairs is Winchester, which has a stringent city ordinance on the subject, and which publishes in detail every month all receipts and expenditures.

The committee will have further meetings to consider other matters of legislation of special interest to Virginia newspapers. In gathering data from various United States senators and others as to the laws in many states, Chairman Hughes had been frequently told that what Virginia needed most was a corrupt practices act, but this is a large subject, and will take a great deal of time for consideration.

In the evening the editors were the guests of the Times-Dispatch at a theater party at the Lyric. At 9:15 the stage manager made the announcement that President Wilson had signed the tariff bill at 9:09. The applause was immense, for it goes without saying that Virginia editors are, to a man, proud of this great son of the Old Dominion.

The Richmond reception committee, to whom great praise is due, consisted of John Stewart Bryan, J. St. George Bryan, S. B. Woodfin, Allen Potts, R. W. Simpson, L. Whipple, Jefferey Montague, L. A. McMahon, Horace Hawkins, John H. Cooke, R. M. Lynn, George W. Rogers, A. R. Holderby, Jr.

The ladies' committee consisted of Mrs. John Murphy, Mrs. Charles B. Cooke, Mrs. Alvin M. Smith, and others.

Among those who were registered at the Murphy Hotel were: Charles Berkeley Cooke, Journal, Richmond; Harry Houston, Monitor, Hampton; George B. Keezel, News-Record, Harrisonburg; Mr. and Mrs. E. W. Witten, News, Grundy; Mrs. E. W. Bissel, Leader, Staunton; Mr. and Mrs. E. H. Clements, Times-Virginian, Appomattox; Mr. and Mrs. A. S. Graveley, Bulletin, Martinsville; Mr. and Mrs. George A. Green, Review, Clifton Forge; Mr. and Mrs. Charles R. Hughes, Courier, Berryville; Rorer A. James, Register, Danville; L. E. Lookabill, Critic, Roanoke; Mr. and Mrs. W. A. Land, Courier, Blackstone; J. S. Bryan, News-Leader, Richmond; Col. Allen Potts, Times-Dispatch, Richmond; A. P. Rowe, Fredericksburg; R. N. Robertson and Miss Bertha G. Robinson, Observer, Orange; Mr. and Mrs. J. A. Whitman, Enterprise, Wytheville; A. W. Robbins, Chronicle, Rocky Mount; Alexander W. Forward, News-Record, Harrisonburg; Mr. and Mrs. Isham Wilkinson, News, Kenbridge; Mr. and Mrs. J. E. Spatig, Times, Lawrenceville; W. M. Minter, Journal, Mathews; R. S. Barrett, Gazette, Alexandria; R. S. Chamberlain, Jr., Virginian, Phoenix; Mr. and Mrs. E. G. Moseley, Methodist, Roanoke; McDonald Lee and his daughter, Miss Robinette Lee, Citizen, Irvington; Mr. and Mrs. R. A. Anderson, News, Marion; Mr. and Mrs. J. C. Campbell, Era, Amherst; C. W. Campbell and sister, Mrs. H. R. Mills, Times, Buena Vista; Mr. and Mrs. E. S. Flynn, Times, Martinsville; L. S. Pendleton, Virginian, Louisa; C. B. Camper, Herald, Fincastle; C. D. Denit, Times-Register, Salem; J. L. Hart, Herald, Farmville; Mr. and Mrs. O. W. Eanes, New Castle; Alex Forward, News-Record, Harrisonburg; G. E. Wray, National Printer-Journalist, Chicago; J. E. Cooke, Valley Virginian, Waynesboro; W. C. Goldman, West Point; M. T. Harrison, Bedford City; Alex G. Wedderburn, Alexandria.

Other registrants were: J. H. Baumgartner, Baltimore & Ohio Railroad; Laurens Foreman, Southern Railway, former editor Atlanta Constitution; W. H. Savory, Mergenthaler Company, New York.

The second day of the convention was devoted to business in the morning, pleasure in the afternoon, and a banquet in the evening, which was a fitting climax to the two days of activity. Colonel Murphy and Mrs. Murphy, hosts of the occasion, sat at the head of the main table, flanked by Governor Mann, Governor-to-be Stuart, Mayor Ainslie, President Carrington of the chamber of commerce, President Alvin Smith of the Business Men's Club, President Cooke of the Association, and other notables.

President Cooke proved himself a most able toastmaster. Colonel Murphy had offered prizes of $150 for the best essay on "The Best Way to Build Up the Commonwealth."

Alexander M. Forward, of the News-Record, Harrisonburg; Mr. Camper, of the Herald, Fincastle, and Editor Barrett, of the Gazette, Alexandria, were the winners of the essay prizes offered by Colonel Murphy, the prizes being awarded in open meeting. Mr. Forward was called on and read his paper to the company, Mr. Barrett read his, and President Cooke read that presented by Mr. Camper.

About 10:00 o'clock the speechmaking began. First came Mayor Ainslie, who said some nice things about the editors, as did all the speakers; then Governor Mann, Henry C. Stuart, Alvin M. Smith, John Stewart Bryan, Ben Owen, and others followed.

Later in the evening W. B. Fitzhugh, of the Eastern Shore, who was one of the organizers of the association twenty-five years ago, deplored the fact that there were but six members of that organization now present.

"Most of them dead, stranded or in the poorhouse," commented Mr. Fitzhugh.

Governor Mann spoke for half an hour on the condition of the roads and the farms and the mountains and seashore of the state, and told of many things the state excelled in, and then said the state grew the finest hay, alfalfa, corn, apples and peaches of any state in the country, and he was proud of it.

The singing of "He's a Jolly Good Fellow," "We Won't Go Home Till Morning," and "America" closed a most delightful convention.

* * *

"NIFTY IDEAS FOR THRIFTY PRINTERS"

The above is the title of a book of specimens of artistic printing, designed and printed by J. L. Frazier, 604 Kentucky Street, Lawrence, Kansas. The book needs no excuse for its issue, but the author, in a foreword giving the reasons for publication, which reasons are entirely verified and shown to be sound by the work and instruction, says, in part: "First, I know there is need for such a work. It should prove of worth both in suggesting ideas to progressive customers and to the men who do the work. My second reason for issuing the book is because I am getting letters all the time from printers who see reproductions of my work in the trade journals and desire specimens of my original work."

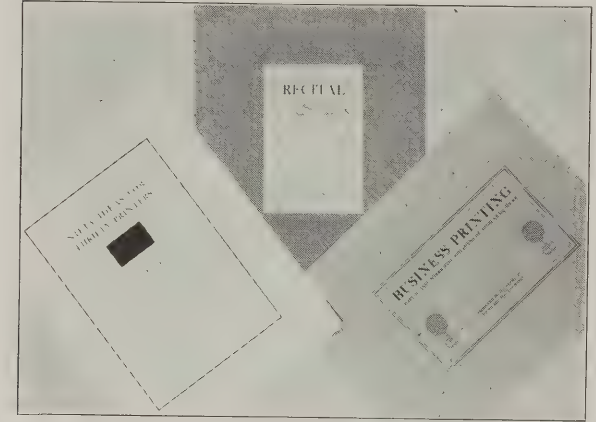
Here is a suggestion of the service that the trade press is rendering to all progressive printers by giving reproductions of specimens of good printing that both teach and inspire, and at the same time serve to bring together the real progressives and enthusiasts in the art preservative of arts and the vehicle for the world's knowledge, thought and wisdom, from which comes all accomplishment and progress.

These designs are of actual work covering a period of three years and are adaptable to any office and are printed in the colors used in the jobs.

Mr. Frazier made his own tint blocks by cutting, to the form desired, three pieces of six-ply cardboard and one press board and gluing them to a block, the press board mounted on the top for the reason of its hardness and because it would not be picked off by the roller during the run.

He claims that he can get as good results with pressboard tint blocks as can be obtained by the use of patent leather that is used by some printers, and save time in cutting them out.

The price of the book is two dollars a copy, and it is worth the money. Mr. Frazier only printed two hundred copies and ought to have no trouble in disposing of the same. It will be a book convenient for reference and to show to customers as suggesting designs for effective printing.



We show herewith a reproduction of three pages selected from this work which show the high quality of the designs contained therein. They show that beautiful effects can be obtained by simple methods and consequently at a saving of time and money. There are about thirty different color combinations used in the book, and they are all beautiful — and, we might add, authentic.

The idea occurs, right here, that whenever a printing office has secured a very satisfactory design in a job, it would be an excellent plan to run off extra copies on sheets of good enamel paper of uniform size to bind from time to time in book form to show to customers and to use in the office. It is one way to serve business men in doubt as to just what is wanted, to convince them of the ability of the office to meet their wants and to suggest to the compositor the possibility of accomplishment with the equipment at hand.

SIDEWALK!

John A. Sleicher, in Leslie's Weekly, October 9, 1913

Keep to the sidewalk! That is the place of safety for the pedestrian in a crowded city. He may have to cross the street and thread his way through the onrushing traffic, but he is foolish, after the street has been crossed, if he does not stick to the sidewalk.

There is a safe road to travel, but the risk of danger allures us. The beaten track that others have followed becomes commonplace. It is too easy to follow. Let us get off the highway, plunge into the thickets and seek a new and better road to our destination!

Never mind the signals of danger, the warnings of the quicksands and the rushing waters! Never mind the silent mounds and the rude head boards that tell the tale of others who sought the risk and paid the penalty!

Plunge on! Push through the brambles of the thickets! Dare the dangers of the whirlpool! Let others follow the beaten track if they will, but for us, give us the zest of sport, adventure and danger. We must be progressive.

This is the spirit of the age. Every Monday morning's newspaper tells the tale: Scores and hundreds borne to death by the undercurrents at the seaside or mangled in the joy riding automobile or the winged motorcycle making its mad record run for a heedless driver.

Note the popular amusements at the summer resorts. They are those always that offer the greatest risk. "The dive to death," "The scenic railroad with 'the deepest dip' in the United States," and "The fastest ride you have ever taken." On with the dance! Let joy be unconfined!

Let the people rule and keep the undertakers busy!

* * *

LET THE PEOPLE RULE!

Leslie's Weekly, October 9, 1913

There was a man who yearned to be
  Right in the public eye,
He dreamed at night about his name
  In letters six feet high.
So first he went upon the stage
  And spouted tragic stuff,
But only played to empty seats;
  All left it in a huff.

A preacher next, he made the dust
  From pulpit-cushions soar,
But quit because a greater man
  Had pounded them before.
He lectured, but with scant success,
  And then he tried to write,
But failure sat upon his pen,
  And nipped his genius bright.

So having found that fame and gold
  For him refused to mix,
For want of something else to try
  He entered politics.
He took a phrase he used to scrawl
  In copy-books at school
To begin his slogan at the polls:
  'Twas, "Let the People Rule."

He painted it on banners gay
  And flung them overhead,
He thundered it in every speech,
  (The only thing he said.)
Believing that he spoke the truth,
  The people, far and wide,
As their deliverer greeted him,
  And rallied to his side.

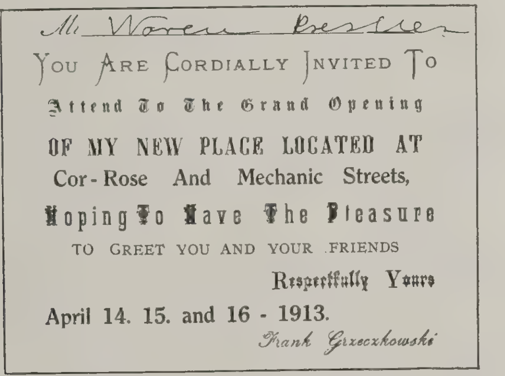
Behold him now, a demagogue
  In office waxing fat,
The public at his door must wait
  His pleasure on the mat.
And does he let the people rule,
  Or even have their say?
You bet he never does, but lo!
  He lets the people pay.

—Minna Irving.

REVIEW OF JOB PRINTING

Address All Communications to E. S. HANSON, 538 S. Dearborn Street, Chicago

THE very first article I ever wrote for the National Printer-Journalist was a characterization of an odd old printer up in Wisconsin, and some representative specimens of his work. This is brought forcibly to mind by a card which Warren Dressler of Camden, N. J., sends me. This, as every reader of this department will know, is not Mr. Dressler's own work, and the printer neglected to put his imprint on it. Mr. Dressler labels it "The Limit" and lets it speak for itself. I think at that it is not quite so bad as the samples I reproduced in the article I have referred to.



M. Warren Dressler
You Are Cordially Invited To
Attend To The Grand Opening
OF MY NEW PLACE LOCATED AT
Cor-Rose And Mechanic Streets,
Hoping To Have The Pleasure
TO GREET YOU AND YOUR FRIENDS
Respectfully Yours
April 14. 15. and 16 - 1913.

Mr. Dressler also sends several of his own specimens which are worthy of special attention. Among them are a number of letterheads, some of them in two colors and almost all of them with a very satisfactory touch. I am reproducing here the letterhead of F. H. Peiffer & Sons because I want to call attention to one more detail which might be improved. I would eliminate the rule under the line "Teamsters and Riggers." This same design has been used with some variations on two or three other pieces of work, and I think on all of them the effect would be much more pleasing with the line omitted. On the card for James B. West, Jr., instead of the short perpendicular rule in the lower right hand corner I would suggest a horizontal rule under the word "Heating" and square it out with that line. The envelope for this same man I consider unusually satisfactory, and I must show this also. I am glad to see the reset billhead for Harry T. Shuster, and the improvement is certainly marked. I should imagine that this man has not had any billheads printed for some time before. I cannot say that I think you have improved very greatly on the resetting of the card for Charles B. Helm. While the original card was poorly executed I think the idea was very satisfactory, and in fact, more in keeping with a professional man than the one with which you have replaced it.

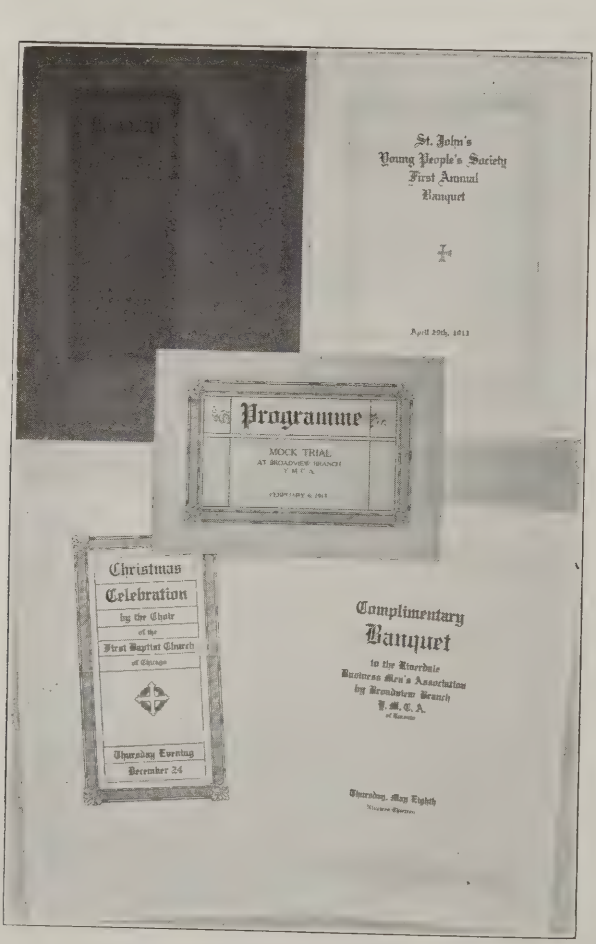
Howard C. Hull, who is now manager of the News Printing House, Charlotte, N. C., sends a little portfolio entitled "A Dozen Suggestions." This consists of twelve specimens of letterheads, the top only being included, making a sheet 8½x3½ inches in size, the portfolio fitting very nicely into a No. 10 envelope. It is in a neatly printed cover carrying the title "A Dozen Suggestions," while the same title is on the envelope in which it is mailed out. Mr. Hull has succeeded in getting considerable variety into this collection, in one, two and three colors, and all of them are worthy of careful consideration by any man who is looking for a letterhead. A leaflet carrying a little sales talk goes out with this portfolio. Mr. Hull asks what I think of this as a business-getter, and I should say unhesitatingly that if I were in the market for letterheads I should be very glad to receive a little book of this kind, as it would undoubtedly help me to come to a decision as to style. As this booklet has now been out some little time, Mr. Hull no doubt knows from actual experience what it is worth in pulling business. I trust that it has been very successful.

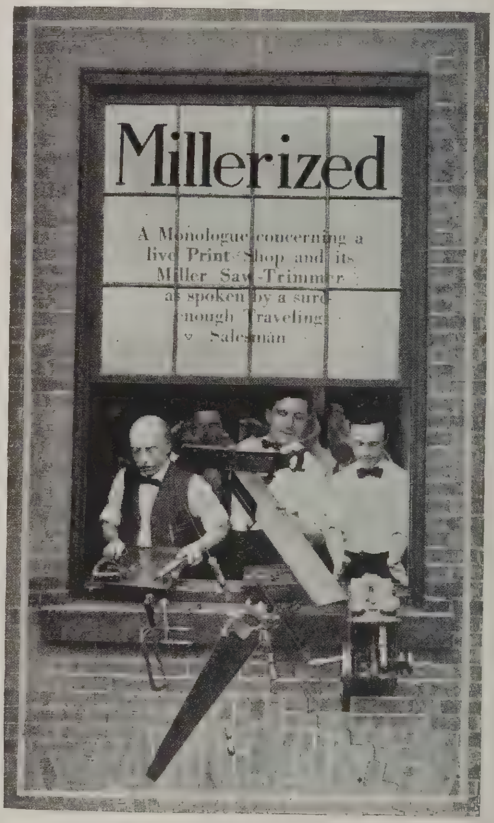
✣ ✣ ✣

Ernest Edwin Adams, of Toronto, sends with his last work a card which shows that he is with the firm of Rous & Mann of that city. If Mr. Adams can be said to excel in any one particular line of work more than another it would seem to be in programs. Several of these are included in this work and all are of the highest degree of excellence. The one for the musical recital under the direction of Mr. and Mrs. Frank R. Smith is particularly satisfactory, though as it is printed on Kraft brown stock I doubt whether it will show up very strikingly in the reproduction. Another good one, that of the Fifth Annual Regatta of the Sparrow Lake Association, I dare not try to show at all, there being too much red in the cover stock so that the most the engraver would get would be a black blur. The little folder for Colmans has been seriously marred by the character of the half-tones, which are very noticeably reproductions from other half-tone prints.



✣ ✣ ✣

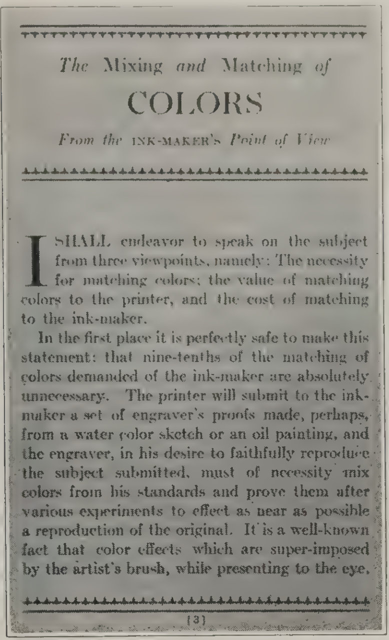
This reproduction is from a booklet published by the Miller Saw Trimmer Company of Pittsburgh, the booklet being entitled "Millerized." This frontispiece is much more striking in the original than it will be in the reproduction, because of the fact that the lettering is printed over the half-tone in red. The entire booklet is delightfully composed and illustrated and shows throughout the print shop utility of the Miller saw trimmer.



Millerized
A Monologue concerning a live Print Shop and its Miller Saw-Trimmer as spoken by a sure enough Traveling Salesman

✣ ✣ ✣

Two admirable pieces of printing come from W. Arthur Cole, who is with the William F. Fell Company of Philadelphia. One of them is a little booklet on gray stock in two colors, giving a reprint of an article entitled "From the Ink Maker's Point of View," by Cliff R. Hunn, Chicago, manager, Charles Eneu Johnson & Co. The other is a booklet in two colors with illustrations tipped on, entitled "Fell Policy and Service in Brief," and is well calculated to show the delightful quality of the work sent out by this noted printing house.



The Mixing and Matching of

COLORS

From the INK-MAKER'S *Point of View*

I SHALL endeavor to speak on the subject from three viewpoints, namely: The necessity for matching colors; the value of matching colors to the printer, and the cost of matching to the ink-maker.

In the first place it is perfectly safe to make this statement: that nine-tenths of the matching of colors demanded of the ink-maker are absolutely unnecessary. The printer will submit to the ink-maker a set of engraver's proofs made, perhaps, from a water color sketch or an oil painting, and the engraver, in his desire to faithfully reproduce the subject submitted, must of necessity mix colors from his standards and prove them after various experiments to effect as near as possible a reproduction of the original. It is a well-known fact that color effects which are super-imposed by the artist's brush, while presenting to the eye,

OFFER SPECIAL ADVANTAGES

✣ ✣ ✣

I want to compliment the man who edits Cottrell's Magazine on the character of the matter which he is printing in his delightful little sheet. He seems to be willing to consider that all people are not looking to house organs to furnish them a riot of nonsense, and has gotten together some matter which is worthy of one's careful perusal. Cottrell presses are, of course, given some attention, but they are not worked into the main body of the magazine.

✣ ✣ ✣

A folder entitled "Greater Houston," from the Standard Printing and Lithographing Company, Houston, Texas, is good, all but the amount and color of the ink. The ink itself is a little bit light in shade to give sufficient character to the half-tones, and the pressman has run it light probably to avoid offsetting. Very likely it was one of those jobs which is not ordered until the last minute and then has to be delivered shortly after it comes from the press.

✣ ✣ ✣

I have spent considerable time looking over the catalogue sent out by the L. L. Poates Engraving Company of New York, descriptive of the Poates method of wax engraving. I am free to confess that I knew very little before about wax engravings. Probably there are a number of other readers of this department in the same boat. I would suggest that they ask for a copy of this catalogue, as it is a most delightful piece of printing, aside from the information which it gives.

✣ ✣ ✣

A recent copy of The School Print Shop, Cleveland, Ohio, contains this interesting paragraph: "To many the occupation of a printer seems merely mechanical; this is not wholly true. In fact, it is an occupation requiring fully three-quarters of mental perception to one-quarter of skill of the hands." This publication contains some really good matter and is handsomely printed in two colors.

E. S. Hanson, Chicago.

My Dear Sir:—I wish to express my thanks for your complimentary notice of my work in the September issue of the N. P. J. It is gratifying to know that my work is gradually improving and worthy of special mention by a competent judge. Your department has been of great help to me. I sent for a half tone of the reproduction and will use it as an ad.

I am enclosing you two copies of a cover page (same wording). No. 1 is the proof I submitted and No. 2 is the way the customers had it changed, which just suited them. Would be pleased to have your opinion of the two.

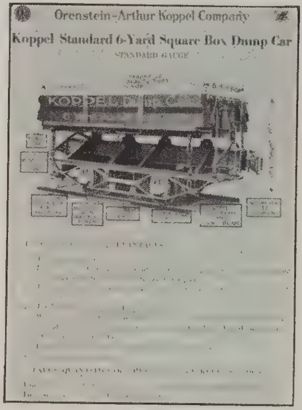
F. A. VAN GELDER.

Lima, N. Y.

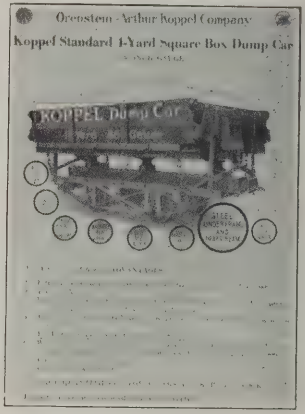
There is no question but that the original setting was along correct lines, and that the customer spoiled it in compelling a resetting. The customer had in mind an entirely different type of design, but his (or her) ideas of that type were vague and indistinct, and the result is a hybrid type, out of proportion and balance.

* * *

Here are shown two pages from a recent catalogue which came to my notice and which are of interest principally because of the treatment of the illustrations. There is nothing which will tell a story as quickly and forcibly as an illustration worked up in this way. In this particular case all the work is on the one plate, making it quite expensive, but as I have pointed out before in this department, the same result can be secured by setting the explanatory matter in type and rule, and printing in color over an ordinary half-tone.



Orenstein-Arthur Koppel Company
Koppel Standard 6-Yard Square Box Dump Car
STANDARD GAUGE



Orenstein-Arthur Koppel Company
Koppel Standard 1-Yard Square Box Dump Car

I also want to call attention to the half-tone running heads on these pages. These should have a line along the top and bottom, and could well stand a somewhat darker background also. As they are, they are much too light and elusive (I guess diaphanous is the word I want) for this class of printing.

"NEWSPAPER WRITING AND EDITING"

Our schools of journalism are rendering splendid services for the newspaper makers and printers or printer-journalists. Not the least while most direct service is incidental and comes through the writing and publishing of books on newspaper making and printing by the professors and teachers. The scientific plan of school instruction in the two great, closely related callings are new, and text books were naturally lacking.

We had hoped, for many years, and from the day of the organization, that treatises would be compiled from the papers and discussions presented at the conventions of the National Editorial Association, but the members of the organization are all busy in their callings and, while what they have presented has proved most practical and valuable for workers in the calling, no one had the time to put the professional knowledge into shape in any scientific manner to meet the demands of learners. Besides, in a broad sense, editors are educators of the people, their knowledge or ability to instruct or to understand the needs of the learners of the profession or not is to be doubted. It may be just as well that no attempt was made, yet it is to be hoped that all that has been produced by the practical members of the calling furnish valuable mines of facts, methods and theories, which teachers and authors are able to work for information and inspiration. From the university schools of Wisconsin, Missouri and Ohio, or rather from the teachers therein, have come very valuable works.

This month two such books have reached our desk, originating from the School of Journalism and the Extension Division of the University of Wisconsin.

"Newspaper Writing and Editing" is the title of a most comprehensive and carefully prepared volume by Williard Grosvenor Bleyer, Ph. D., Chairman of the Course in Journalism and associate professor of Journalism in the University of Wisconsin.

It is published by the great publishing house of Houghton Mifflin Company, The Riverside Press, Cambridge, Massachusetts. The book is worthy of its author and of its publishers. The scope of this treatise is pretty well set forth in the author's preface, from which we quote the following:

"Seven years' experience in trying to train college students in methods of newspaper writing and editing has convinced the author of the need of text-books in journalism. Newspapers themselves supply the student with so miscellaneous a collection of good, bad and mediocre work that, with an uncritical taste, he does not always discriminate in the character of the models which he selects to imitate. Lectures by experienced editors and writers, although fruitful of much inspiration and general information, seldom give the student sufficiently specific and detailed directions to guide him in his daily work. What he needs is a handbook containing typical examples of all of the kinds of newspaper work that he is likely to be called upon to do during the first years of his newspaper experience. These examples should be carefully selected from well-edited newspapers and should be analyzed to show the fundamental principles that underlie their construction. With such a book illustrative of current practices in newspaper making, he can study more intelligently the newspapers themselves and can assimilate more completely the advice and information given by newspaper men in active service. Furthermore, such a book, by giving specific suggestions with examples of their application, serves as a guide to aid the student in overcoming his difficulties as he does his work from day to day. It is to furnish a handbook and guide of this kind that the present textbook has been prepared.

"This book is adapted both for use in college classes in journalism and for study by persons interested in journalism who are not attending college. The needs of these two groups are not essentially different. Both desire to know the basic principles of newspaper writing and editing and to get the necessary training in the application of these fundamental principles to their own work. In each chapter, accordingly, explanation and exemplification are supplemented by material for practice work. * * * In the discussion of the news story, an emphasis has been given to the 'lead' that may seem disproportionate. This has been done in the belief that the rapidity with which newspapers are generally read makes the beginning the most important part of the story. The average reader gleans the significant facts of each piece of news from the headlines and the first paragraphs. He expects in the 'lead' the 'feature' as well as the gist of the news. To the student this problem of massing skillfully, in a compact and interesting form, the substance of his material, is a new one, and he must be shown all the varied possibilities of this treatment. The author has not been unmindful of the fact that efforts are being made to break from the 'gist-of-the-news' beginning, and has given examples of other forms. For stories in which entertainment rather than information is the purpose, beginnings that do not summarize may undoubtedly be used to advantage. In such stories the student must be shown how to arouse the reader's interest and curiosity in the first sentences so that he will read further.

"The function of the newspaper has been discussed at some length in order to call the student's attention to the importance of the newspaper as an influence in a democratic government and to point out the significance of his own work in relation to society. An effort has been made to analyze the problems of newspaper making in order to show the fundamental issues involved. The purpose has been, not to settle these questions dogmatically, but to stimulate the student to think for himself."

The subject is treated under fourteen headings, in as many chapters and the following enumeration of chapter title headings will give an excellent understanding as to how thoroughly and comprehensively the work has been accomplished:

"How a Newspaper is Made; News and News Values; Getting the News; Structure and Style in News Stories; News Stories of Unexpected Occurrences; Speeches; Interviews and Trials; Special Kinds of News; Follow Up and Rewrite Stories; Feature Stories; Editing Copy; The Writing of Headlines; Proof-reading; Making Up the Paper; The Function of the Newspaper."

"BOOKKEEPING AND COST FINDING FOR PRINTERS"

Bookkeeping and Cost Finding for Printers is published by the University of Wisconsin and comes from the University Extension Division and is by Professor E. H. Elwell, whose known ability, as well as the demonstrations of his system, made at Cost Congresses and on other occasions, furnish a guarantee of practical value.

The book, as it reaches this office, is made up of ten pamphlets or "Assignments" bound together in cloth, self-binding cover and embraces, as we understand, the whole "Home-Study Course" in the branches named, of the "Correspondence Study Department." Complete bookkeeping and cost finding forms are given. The course has been thoroughly revised and officially endorsed.

The following letter with the extracts from the little pamphlet will fully inform our readers of the objects had in view of the publication, the authoritative character of the course, and the very liberal terms on which it is offered:

The University of Wisconsin
Madison, October 18, 1913.

Mr. B. B. Herbert,
Editor, The National Printer-Journalist,
Ravenswood, Illinois.

My Dear Sir: At the request of Professor F. H. Elwell, I am taking pleasure in forwarding to you a copy of our new correspondence study course in Bookkeeping and Cost Finding for Printers. Please accept this material with the compliments of the university.

With this letter I am enclosing a little pamphlet which describes our method of instruction and the terms under which the course is sold. You will easily see that this is not a money-making proposition for us. Our purpose is to spread the gospel of accurate costs as widely as possible. If under these conditions you care to favor our work with any comments in your columns, I can assure you that the courtesy will be appreciated.

Very respectfully yours,
R. S. BUTLER,
Associate Professor of Business Administration.

The Need

The printer who does not know his costs of production is never sure of his profit. He loses by prices that are too low; his customers lose by prices that are too high. His estimates are largely guesses, and his prices are often fixed "to get the business" rather than to make a living profit. Business without profit spells failure for the individual printer and demoralization for the printing industry. To avoid unprofitable business the printer must know his costs. Furthermore, a detailed knowledge of costs makes for efficiency by giving exact information about every department of the business. In addition to cost records, accounts that really account for every transaction are as necessary for the printer as for any other kind of business man. Adequate bookkeeping and accurate cost finding are two of the most important needs of the printing industry. The realization of these needs and the desire to satisfy them were the reasons for the preparation of this course.

Purpose

The purpose of the course is, first, to present the general principles of double entry bookkeeping with their special application to the printing business, and, second, to teach the elements of cost finding and to explain methods of installing and of maintaining a complete cost finding system for a printing establishment. The course is based on the Standard Cost Finding System, and is, therefore, founded on those principles that have been uniformly applied by thousands of successful printers in this and foreign countries.

Officially Endorsed

The course was prepared at the request of the Ben Franklin Club of Milwaukee by Professor F. H. Elwell, a practical accountant, who received the co-operation of the members of the club in adapting accounting principles to conditions in the printing trade. The course has been officially endorsed by the United Typothetae of America, by the Ben Franklin Club of America, and by the Wisconsin State Ben Franklin Club.

Before the revision that resulted in the offering of the course in its present form, the American Printers' Cost Commission appointed a special committee consisting of their chairman, Mr. J. A. Morgan, of Chicago, and Mr. H. W. J. Meyer, of Milwaukee, to review the course in detail with the author, to the end that every word might receive the formal sanction of practical, experienced printers. As a result of this careful revision, printers may be assured that the course is entirely practical, and that it presents exactly the instruction that most printers will find of the greatest value in their efforts to learn costs and to keep satisfactory books of account.

Method of Instruction

The course is divided into ten sections, called assignments. Each assignment is bound separately in paper. When a student registers for the course, several assignments are sent to him at once. He studies the first one; writes out his answers to the recitation questions and works out the required practical exercises, and then sends his written work to the Extension Division for examination and correction. As soon as one recitation is completed, he may begin the study of the next assignment. When the written work for one assignment reaches the Extension Division, another assignment is sent to the student, until he has them all, so that he is never without material for study. The recitation is then examined, corrected, graded, and returned to the student.

The ten assignments together make a book of 205 pages, including all the explanations and illustrations of forms needed by the printer for the installation of a satisfactory bookkeeping and cost finding course. When a student has completed the course and has received all of the assignments, he is furnished with a substantial binder for them.

Cost

The fee for the entire course is only $5.00. This fee entitles the student to (1) the careful examination and correction of his recitation papers, (2) the ten printed assignments, and (3) a binder for the course. The Extension Division pays postage on all material sent from Madison to the student. The exceedingly low cost of the course is made possible partly by reason of the courtesy of the United Typothetae of America in extending freely to the University the facilities of the Indianapolis Technical School of Printing.

Instruction in the course is individual; enrollments will be received at any time. The work of the University Extension Division continues without interruption through the entire year. Each student is allowed a period of twelve continuous months in which to complete the course. He is urged, however, to give the course as close attention as possible, and to try to complete the study of one assignment and to send in one recitation each week until the course is finished.

Outline of the Course

Fundamental Bookkeeping Principles for Printers: Importance of correct bookkeeping; kinds of accounts; assets and liabilities; books of original and of final entry; trial balance; arrangement of accounts; profit and loss account; balance sheet; capital and revenue receipts and expenditures.

General Books of a Printing House: Journal; cash book; order and sales book; purchase book; customers' and creditors' ledgers; general ledger; transactions illustrating opening, use, and closing of books, and making of statements.

Introduction to Cost Finding: Factory, selling, and administration accounts in technical and statement form; costs as shown on the general books; jobs in progress; elements constituting cost of a job; principle of controlling accounts.

Equipment and the First Element of Cost — Materials: Equipment controlling account; detailed equipment records; direct and indirect materials; the stock room; purchase requisition; purchase order; report of materials received; perpetual inventory; materials requisition; shop supplies requisition; storing of electrotypes and engravings.

Second Element of Cost — Labor: Productive and non-productive labor; chargeable and non-chargeable operations; labor records; hand and machine composition time tickets; compositor's daily time ticket; press room ticket; bindery time tickets for large and small shops; department pay roll.

Third Element of Cost — Indirect Expense: Direct department and general overhead expense; unit used for cost finding; methods of distribution; selling, stock handling, and shipping expense.

Complete Cost Finding System: Productive order cost system; job ticket; job record; charging materials; posting labor items; record of chargeable and non-chargeable hours and of press impressions; statement of cost of production; average cost per hour; determination of profit or loss on each job; analysis blank; individual record of work performed; how to figure profits.

Depreciation: Definitions; depreciation factors; methods of writing off and of booking depreciation; depreciation funds and accounts.

THIRTY-SEVEN YEARS OF USEFUL PUBLIC SERVICE

Col. R. M. White, for several years recording secretary of the National Editorial Association, completed, on September 25, the thirty-seventh year as editor and owner of the Mexico, Mo., Ledger. He has made the paper entirely worthy and useful during all the thirty-seven years and has kept always in close touch with all local interests and worthy institutions, serving in many positions of trust, in educational, benevolent and social activities, while devoting the columns of his publication to the forwarding of all measures and efforts for social, moral, religious and industrial improvement and for the advancement of education and good government.

Probably no other man ever occupied so many positions, at once, along worthy lines in church, fraternal, literary, editorial and other worthy organizations and in state educational and altruistic institutions, as has Colonel White. His work has won him wide acquaintance and hosts of friends inside and outside of his profession as well as very comfortable success as a newspaper man.

Col. R. M. White

His son, L. M. White, who has been raised to the calling, is now associated with him, and is fully equipped to carry forward the work of his father, as is fully shown by the following, written by him and appearing in the Ledger of September 25, that can be read with great profit by every journalist, no matter how short or how long a time in the profession, that opens so many opportunities to and devotes so much of its faithful votaries:

Thirty-seven years ago this week the Mexico Ledger became the property of R. M. White and its course charted. His purpose was to make it a newspaper with ideals of high public service and the vigor to maintain them, a newspaper that would stand watch over the interests of the home and safeguard the principles of good government and social progress.

He believed then as he has taught me to believe now, that intelligent effort persistently applied to a big broad policy whose principles place the home first, above money consideration, political influence or personal prestige, is achieving Public Service — the first duty of every publication of integrity.

Personal animosities and prejudices of the editor should be foreign to the columns of a publication if it means to stand for right, to safeguard the homes of its subscribers, protect them from evil influences and imposition. It should be edited with a view of advancing the readers material interests, contributing to their moral and mental welfare and advocating the people's cause.

It was well said recently "one inviolate rule of successful journalism requires every impulse to have honesty of purpose and truthfulness back of it. To merely assert an intention to be public-spirited is not enough. The people demand, as a price for their confidence that a newspaper shall at all times, maintain its character. It is only by repetition, by continuous and constant devotion to a cause that a name for sincerity can be firmly established by a paper in the home."

Public service is the first duty of the right kind of a newspaper.

The publishing of a complacent new paper is idle "pastime."

A newspaper, like a person, should have individuality and conscience. The policy of the paper is the public expression of its conscience. Its individuality is its adherence to this policy.

The paper should be constructive working for both the moral and physical uplift of society.

It should possess and exercise those three great human attributes—Faith, Hope and Charity.

It is a reflection of the community in which it is published and should deal wisely with its praise and leniently with its condemnation.

It should always stand for what is right and best for the public.

It should be honest and dependable because it must have character above all other attributes.

Believing this we place the policy of the Mexico Ledger on record as it has been formulated during the thirty-seven years under the present management.

The Policy of the Mexico Ledger

Our policy is constructive in both the moral and physical aspect of its field and is based on true Public Service. To print all the news all the time that's fit to print first and without prejudice, to keep our columns, both news and advertising, free from objectional matter so we may enter the home clean and carry no vicious suggestion to mar its quiet and sanctity. We refuse to accept the following lines of advertising believing when we do we are equally responsible with the advertiser for any criminal results: Intoxicants, Clairvoyant, "Quack" doctor, Objectionable Personal, "Wildcat" Financial and promotion, or other unreliable ads in so far as it is possible to judge. When we enter the home we wish to do so as a clean reliable friend whose association helps rather than injures the child or in any way proves detrimental to the influence of that basis of American society "The Home."

Our motto will continue to be: "To our pride in the past and our hope for the future, let us add vigorous work in the living present."

L. M. WHITE.

A Graphic Word Picture of Editor's Life

One of Colonel White's newspaper friends, in speaking of this occasion, tells of the newspaper man's career in a way that will be appreciated by all editors who have had experience in this field, anywhere in this growing country during all or any considerable part of the last four decades:

> According to Col. Bob White, it was thirty-seven years ago this week that he bought the Mexico Ledger. Since that time he has owned and edited it. To have been in the newspaper business 37 years is to have been in close touch with every phase of life of the community for that period of time. It has been to run the gauntlet of disappointments and joys; to have met success and encountered defeat; to have been cheered and to have been cussed; to have whooped it up for the town twenty-four hours each day; to have lied like a gentleman, for one's friends, the bride and the dead; to have kept the mantle of charity over personal and community defects and the spotlight on the virtues; to have talked against trusts and then trusted everybody; to have denounced the mail order houses and to have been denied patronage by the local merchant.
>
> To have been an editor of a paper for thirty-seven years is to have had a great experience. It can't be described; it must be lived to be understood. It is to have played the part of the municipal alarm clock to keep drowsy people awake; to have been pulmoter to public spirit and enterprise; to have been chloroform to pessimism and digitaliesto optimism; to have built factories over night and advertised for them the next day in the "lost" column; to have been used as a cheer leader and as a football; to have lived on fresh air and scenery and the hope of being postmaster.
>
> It is a great part to play — a hard part. Yet to those who have played it as well as Col. White, there is due great credit. The Monitor congratulates him: congratulates Mexico upon having him for a citizen. Our best wishes for continued success go out to the Mexico Ledger and its able editor.

APPRECIATION OF ASSOCIATE EDITOR E. E. SHEASGREEN

The Western Laborer, of Omaha, Neb., a paper that shows the true spirit in recognizing the rights of all men, employers and laborers alike, and that has helped greatly in promoting the "Omaha Spirit," which we have had occasion frequently, as has our associate, to commend — both in public address and writing — publishes on its first page, October 18, the editorial in this regard by Mr. Sheasgreen and calls attention thereto in the following paragraph:

> Don't fail to read the National Printer-Journalist editorial on the "Omaha Spirit" in the "Dream Book." This article is from the pen of Ed. E. Sheasgreen, cost expert and editor of the "Business Management" department of the Printer-Journalist. Omaha men are acting along lines of the least resistance and most intelligence. Mr. Sheasgreen is not only writing editorials about the "Omaha Spirit," but he is making speeches about it. It will do the Omaha men good to read what he says in one of his speeches and maybe next week we will print it.

HELP TO NEWSPAPERS BY THE UNIVERSITY OF WISCONSIN

Madison, Wis., October 4, 1913.

Editor National Printer-Journalist,
Chicago, Illinois.

Dear Sir: At a recent meeting of the board of regents of the University of Wisconsin, the press bureau of this institution was assigned to the Extension Division. In line with its other work the division will endeavor to make the press bureau a service instrument to the press of the state and the Nation. From time to time it will send you impartial and complete news reports of the activities affecting the university plant, directly or indirectly, when the news is important enough to interest the state papers and papers of a wider area.

The bureau will endeavor to serve you these facts in an interesting way, and it will also attempt to be of service to you in other ways by the furnishing of special information when requested by any paper, and by campaigns to improve conditions within Wisconsin, such as a weekly health service. This service, begun last month, is somewhat after the plan of the Chicago Tribune column edited by Dr. W. A. Evans, but it is especially selected to meet the needs of Wisconsin. The university furnishes this health service upon request without charge, and will also furnish electrotypes to be used as department headings by papers which will run these articles.

To conduct this press bureau the university has selected Mr. Charles W. Holman, who comes from Farm and Ranch (Dallas, Texas), one of the leading agricultural journals in the United States. In his long connection with this publication Mr. Holman has made thorough and exhaustive studies of farmers' problems in many parts of the United States. He is also a thorough-going newspaper man, trained in the daily field, and has held down positions from police reporter to the editorial page.

Of course you recognize and we realize very keenly that the importance of its work and the beneficial results that can come from this bureau will be best gotten with the co-operation and advice of editors. We want you to consider it as your correspondent, and from that point of view we will deem it a favor if you write Mr. Holman, giving a full, free and frank opinion of the character of this service in the past and offering suggestions on how in the future to increase its efficiency.

We should like to have suggestions in regard to preparation of copy and to the types of stories which you think would interest most of your readers.

Mr. Holman will appreciate your keeping in personal touch with him and hearing from you from time to time with suggestions, and, most of all, a personal visit to his department whenever you come to Madison.

Cordially yours,
LOUIS E. REBER, Dean.

CHICAGO, NOVEMBER, 1913

There is no other quality or grace, besides absolute honesty, fairness and loyalty to principle and duty, that so becomes an editor as serenity. Serenity comes from conscientious rectitude founded on confidence as to knowledge, purpose and conclusions.

* * *

As a right, duty and quality inherent in the newspaper calling, every editor should express, seek and exercise power or influence, not for the pre-eminence or the glory that power may bring, but for the opportunities for usefulness afforded, the higher obligations incurred, and the more worthy service that may be performed. Power, so sought, secured and exercised, will endure to bless and adorn and to bring satisfying joys that words cannot express, and a worthy, enduring success.

* * *

No man is fit to be an editor of a newspaper, in this age of error and consequent suffering, whose heart is not filled with sympathetic, compassionate love for his fellow men — for all those whom he seeks to serve. Love not only casteth out fear and makes one kindly while determinedly independent, but it is the one principle in which rests and from which springs all human interest, and human interest is the foundation of all newspaper success.

* * *

The educational benefits that have come through organization to editors, publishers and printers during the past quarter of a century cannot very well be measured, but these benefits have been very great. The promise for the future, to be realized from the increased knowledge and improved methods can only be estimated from the present wonderfully improved condition. Broader and more exact knowledge, a better understanding along all lines and the resulting, more intelligent conduct of business and co-operation have resulted and will result in cumulative benefits. There is every reason that it all has paid and paid a hundred fold as has the support and study of the journals that have helped in making organization more effective and in extending and making permanent the results in efficiency and high character.

* * *

The work of organization has not been only educational, as can be shown by many instances, but one of the striking accomplishments, now just at hand, is that of the Newspaper Publishers' Association, through its able committee, aided also by other organizations, by which, as shown by careful estimate, has saved the publishers of this country between nine and twelve million dollars annually in the purchase price of print paper, and has done away with the uncertainty as to prices.

There have been, as well, great savings from losses in credits, great gains from the development, securing and handling of advertising and the preventing of no small or individual losses of money, time and vexations, by the obtaining the enactment of just laws of libel through the co-operation of the National and State Editorial Associations.

In view of this record of accomplishments, it is not strange that, after a quarter of a century, a greater activity should be manifested in efforts for practical results in many of the State Associations and in the National body. We show, this month, what Nebraska is doing and have given for the past two months the views of the committee members of the National Editorial Association, as to plans being carefully worked out for practical business co-operation as to advertising, and we notice that the circulation managers of Texas newspapers have just formed an association representing one hundred and seven dailies to co-operate in this branch of the business. The National Association of Circulators has been an active organization for several years.

It has been the plan of the new constitution of the National Editorial Association to have all branches of the business editorial, news, business management, advertising and circulation represented therein. The plan seems valuable and entirely feasible. We believe that such broad membership would be of mutual benefit to all workers in newspaper making. There is nothing more important than an understanding and co-operation between all departments of a business.

* * *

Past President Wm. H. Mayes, of the National Editorial Association, is now Lieutenant Governor and acting governor of the great state of Texas and has just entered the field as candidate for governor, subject to nomination at the state democratic primaries in July, 1914. The following from his declaration of principles is worthy the man and the editor:

"Suffice it to say I will give to the state a thorough business administration, looking to the economic handling of every department of the state government, while carefully protecting and building up our educational and eleemosynary institutions, including our public schools; improving our penal system and encouraging in every way the highest development of every resource of this great state."

The members of the National Editorial Association all over the United States would rejoice in his nomination and election. He is in every way a true-hearted gentleman. He made an able and efficient president and his experience as a newspaper man and as Lieutenant Governor has made him familiar with all the institutions and interests of his mighty Commonwealth of the growing Southwest.

As an editor he has been a promoter of the good and the true, and of all worthy means and enterprises for substantial betterment and advancement. He is pure gold.

If we were a resident of Texas, we would consider it an honor and privilege to vote for such a man, and it would be a patriotic duty, as well, for he has been weighed and not found wanting; he has been tried and found true, and Texas needs just what he has wisely and conscientiously discerned and declared, as does every other state of this Union.

* * *

INSTRUCTING CRAFTSMEN IN COST FINDING

Scarcely any other movement can be better for the printing business, or for any line of manufacturing, than to have the workers thoroughly instructed in the laws, principles and ideas of the science of cost and the methods of scientific cost finding. The understanding of the cost of production, including not only the mechanical production but all the overhead expenses, would be of great value in the promoting of better understanding between employers and employes and the different departments, and also a more helpful and intelligent attitude as to requirements of the business, salesmanship and the satisfying and holding of customers.

The Western Laborer of Omaha, Nebraska, tells of commendable steps being taken toward carrying the cost system to the journeymen printers through the pages of the Typographical Journal, and adds:

> This is in line with the progressive policy of the Omaha Union. Knowledge of the cost system is an asset to journeymen printers, as journeymen, and is a further asset to the whole industry when such men go into business for themselves. Once the members get a taste of the cost system in their blood they will call for more, and as a result of this, Omaha conference and arrangement cost educational articles will continue to appear in the Journal after Mr. Ellick's series has run out. Frank Ellick is recognized as one of the best authorities on the cost system in the country and Editor Hays is fortunate in getting him to open the campaign of education in the Journal. At the conference Mr. Ellick suggested that Mr. Hays secure the promise of Edward E. Sheasgreen of Chicago to follow up with cost articles. Should he do so the Journal will print some rare articles on costs that will open the eyes of the members who read the journal.

There is no reason why the study or science of correct cost finding should not be added to the course of printing in the School of Typography. When printers are taught thoroughly this important science of the laws of cost — cost that is everywhere from the apprentice to the superintendent, from the sweeping of the floor and the taking of a proof to the most finished work on the color, offset or perfection press — the highest standards and full and proper remuneration will be insured.

* * *

"DOLLAR DAY"

The Elgin (Ill.) Daily News has shown commendable enterprise and great success, as previously noted, in special features and days for the promotion of advertising. There have been, as we remember, issues for builders, jewelers, farmers, manufacturers and others, with illustrated articles both instructive and pleasing, appropriate to the different lines treated, and, of course, added advertising from those dealers or producers whose respective branches receive special treatment.

Then a bargain day was made successful in which a large number of merchants united and all buyers were appealed to in an attractive manner. On October 3, the News advertised a "Dollar Day." Ten or more large establishments joined in this, and reductions were such in every line as to conform to the dollar idea.

The "Dollar Day" advertising ran throughout the whole issue, but a ten-page section was added, devoted to this idea of the dollar bargain. The first page of this section is reproduced herewith, and indicates very fully the plan. It contained the names of the merchants uniting in the plan.

The Elgin Daily news is an excellent newspaper, with all news, editorial and other departments, properly treated. It is clean, does not fill its columns with sensations or unending accounts of crimes and criminals, but contains those things that are fit to print, that are informing and entertaining. With its twenty-two great pages, it, in matter, size and appearance, is not second to the best metropolitan dailies.

Apprentice Plan

ON account of the date of going to press, it is impossible to give, in this issue, any adequate account of the great convention of the United Typothetae and Ben Franklin Club of America at New Orleans, hence this is reserved for the December issue. However, the adoption of the able report of the Committee on Apprenticeship Plan, October 22, is worthy of special notice. This important matter has been under consideration for many years, and at the annual convention in Chicago last year (September 3-6, 1912), in accordance with resolutions setting forth in preamble the importance of proper training and instruction of apprentices and the difficulty of the problem involved, an able committee was appointed, consisting of: Mr. Henry P. Porter, Boston, chairman; Mr. A. R. Barnes, Chicago; Mr. T. E. Donnelly, Chicago; Mr. E. Lawrence Fell, Philadelphia; Mr. William Pfaff, New Orleans; Mr. Irwin H. Rice, Los Angeles.

The committee made a very comprehensive report, that showed most thorough, careful and intelligent investigation pointing out the present deplorable conditions as to any sufficient means for the training of apprentices, and noting the causes, recommended the following plan for solving the problem:

Recommendations

1. The appointment of a permanent committee on apprentices.
2. An annual appropriation of the sum of five thousand dollars for the use of said committee.
3. The appointment of a National Apprentice Director.
4. Reorganization of the U. T. A. Technical School at Indianapolis.
5. A union of the U. T. A. Technical School Advisory Board with the Committee on Apprentices.
6. The appointment of local apprenticeship committees.
7. The appointment of local apprentice deputies or directors.
8. The establishment of individual shop-schools wherever possible.
9. The establishment of co-operative or local Typothetae shop-schools wherever possible.
10. The establishment of an "Apprentice Department" in all composing rooms.
11. Compilation of a U. T. A. course of instruction for all shop-schools and a modification of same for the "Apprentice Department" of composing rooms.
12. Publication of official U. T. A. text-books for use in instruction.
13. Definition of term "Pre-Apprentice" and course of instruction to prepare same for grade of apprentice.
14. Registration of all apprentices with local apprenticeship committees.
15. Adoption of a uniform indenture, if possible, or agreement, uniting employer, parent and boy.
16. A uniform wage scale for apprentices, and arrangement for bonus dependent upon efficiency.
17. An official U. T. A. certificate of achievement for all graduate-apprentices.
18. Establishment of local lectures to apprentices.
19. A correspondence course for present apprentice workmen.
20. Co-operation with trade union apprentice committees, if possible.

All of these recommendations are fully explained and discussed in the report. We present here the discussions as to 8, 9 and 10 as being of the greatest direct value and interest to our readers, while the others relate more to the details of the work to be taken up and carried on by the organization and its committees and officers:

8. The Establishment of Individual Shop-Schools Wherever Possible

It is the judgment of your committee that trade schools (or, as we prefer to term them, shop-schools) provide the only genuine solution of legitimate trade training. And by shop-schools we do not mean public-controlled schools, whether classed as vocational, manual, continuation, industrial or technical schools. Our definition of a shop-school is a trade education or training department in which school instruction in trade technique and practice, combined with necessary elementary instruction consisting of mathematics, drawing, English, spelling, punctuation, color harmony, word study and composition, etc., is pursued, coincident with work at the trade — in other words, trade training on the job, two concrete examples of which are seen in the efficient schools at the Lakeside Press, Chicago, and the General Electric Company Works at Lynn, Mass., each, among others, having been the subject of investigation by this committee.

Your committee bases its conclusions as to shop-schools of this description upon the following definite reasons:

a. That trade instruction in public schools must be differentiated in our minds from the trade training which can be obtained in shop-schools, and that this trade instruction would furnish but part of the theory and part of the technique.

b. That the rest of the theory and the rest of the technique, which is eventually to result in developing a competent craftsman, can only be secured through practice on actual work under trade and commercial conditions.

c. The most effective way to give the apprentice-student these two divisions of instruction and training is to associate them as closely as the conditions of the particular kind of business will permit, so that the school instruction and the trade training proper may be practically simultaneous.

d. That it is unfair to the apprentice-student who undertakes to learn a trade, to furnish him with less than full opportunity to perfect himself as a craftsman.

e. That it is unfair to our trade itself, or to the efficient craftsmen now engaged in it, to turn out half-equipped workmen who tend not only to produce a poor quality of work, but to act as improper competitors against competent workmen.

f. That the interest of our craft as a whole demands a product from trade instruction and trade training that shall be as near an all-round development of each individual in his chosen trade as is reasonably possible, to the end that those who are to be finally accepted as craftsmen in our trade may be fully capable of performing the work as it should be done.

Your committee recognizes fully the fact that the average print shop is small, and that most print shops cannot install and maintain an individual shop-school. But there are, nevertheless, in most large printing centers, at least one or two establishments large enough to do so, while recommendations Nos. 9 and 10 provide for smaller and average shops.

Your committee, recognizing the economic question usually uppermost in the minds of employers, "What will it cost?" has made this feature the result of special inquiry, and has found the universal response from employers of different trades who are maintaining shop-schools, that these shop-schools eventually become most profitable investments.

And they become profitable investments, not because they supply the employer with cheap workmen (which motive should be condemned by all citizens), but because they materially raise the efficiency standards of the entire establishment, thereby increasing production, resulting in decreased unit costs.

The question of equipment, curriculum, text-books and other necessities for a shop-school will be briefly discussed under recommendation No. 11. All shop-schools, whether individual or co-operative, should be subject to the Committee on Apprentices, provided for under recommendation No. 1, who would issue official licenses or "charters," and receive stated reports, in order that uniformity of instruction may prevail, and that each shop-school may receive full benefit from the experiences and developments of all other shop-schools.

9. The Establishment of Co-operative or Local Typothetae Shop-Schools Wherever Possible

Based upon the identical reasons as given under recommendation No. 8, but co-operative instead of individual, because of average shop limitations, your committee recommends the establishment of co-operative shop-schools in all localities possible.

An illustration of a co-operative shop-school is seen in the Boston school maintained by Boston printers for the past thirteen years. Your committee believes, however, that support of co-operative shop-schools should be mandatory upon local Typothetae membership, and not subject to the uncertainties of private contribution.

Co-operative shop-schools should be located as near the printing center of a given locality as possible, in order that apprentice-students may at all times be kept in close touch with actual working conditions. Part-time instruction, alternating the apprentice-student between an actual shop (his ultimate, agreed-upon destination), and the shop-school, at regular intervals, would seem to be a better course than to retain the boy in the shop-school for the full school term.

Co-operative shop-schools should never be night schools, in the judgment of your committee, as the information gathered upon this point, based upon several years' experience, seems to conclusively demonstrate that tired young bodies and minds, the result of day work, do not absorb or respond to the lessons or tasks of night shop-schools.

The above does not apply to elementary night schools, conducted by public school departments, as many apprentice-students have taken up in night schools prescribed elementary courses in which they were deficient, and have reaped material benefit therefrom.

A co-operative shop-school is no more expensive to equip than an individual shop-school, and aside from necessary space rental, costs no more to maintain. It can train a yearly class of from fifteen to twenty at small cost per student, one or more apprentice-students being selected by a local employer and sent to the shop-school to be trained for his shop.

These co-operative shop-schools to be under the immediate supervision and control of the local Typothetae Apprenticeship Committee, as provided in recommendation No. 6, who would employ the instructor, and, through the Apprentice Deputy, as provided in recommendation No. 7, would keep in touch with the apprentice shop-school graduate after he had left the school and had taken up continuous work with his employer.

The question of tuition-fee and wages paid (if any) during the time spent by the apprentice-student in these co-operative shop-schools would be largely a matter of local conditions, but whatever arrangements entered into thereon, your committee would emphasize the fact that the right kind of boy, regardless of temporary financial consideration, is the most important feature.

10. The Establishment of an "Apprentice Department" in All Composing Rooms

There are large numbers of printing plants located away from recognized "printing centers," and no system of apprentice instruction will be adequate to our needs unless these detached shops can participate therein. Apprentice instruction should be a part of the daily business duties of every printer, and each shop should be organized to this effect. The success of the cost system movement is largely due to the fact that print-shops of any size, small or large, can participate in the benefits to be derived from conscientious application. It is the aim of your committee to provide for similar shop-school co-operation upon the part of all printers.

We therefore recommend that every printing office, of average size, set aside at least a single frame with cases of type and a modest equipment of other necessary material for the exclusive use of apprentices. That such type and material shall have, if possible, a reserved shop location and be known as the shop "Apprentice Department," same to be used for no other purpose than apprentice instruction.

Also that at certain hours each day the shop boys or apprentices be required to take up in this "department" the prescribed course of study which the U. T. A. Committee on Apprentices shall cause to be prepared for this especial purpose.

These miniature "shop-schools," or Apprentice Departments, to be equipped and organized in accordance with instructions issued by the Committee on Apprentices, and be "chartered" or "licensed" exactly as the more pretentious shop-schools.

Arrangement can usually be made with the local public school authorities for the necessary elementary instruction at the public day schools or night schools, as practiced in several localities.

Your committee recommends the establishment of these "Apprentice Departments" in all printing shops, whether located in town or city. They will not only soon prove to be, in the judgment of your committee, of great value to the detached shop, but will also prove to be of inestimable value to those shops that are identified with co-operative shop-schools as outlined in recommendation No. 9.

The local Apprentice Deputy can give material aid to shops maintaining these Apprentice Departments.

Thus, with the establishment of sizable individual shop-schools in all large plants, the establishment of co-operative shop-schools in all fair-sized printing centers, and the establishment of modest "Apprentice Departments" in many printing shops of average size, all under the general direction of the National Committee on Apprentices, regularly reporting their progress and experiences to the Apprentice Director, and receiving in return helpful suggestions, ideas, valuable data and assistance, our entire industry will be working unitedly and intelligently to educate and develop our young workers, resulting in a few years in a new "race" of highly trained printers.

SECRETARY FRANK R. BRINES RESIGNS

The resignation of Mr. Frank R. Brines, secretary of the Ben Franklin Club of Chicago, was tendered to the board of directors at a specially called meeting of that body, held September 25, 1913.

The work of Mr. Brines has been spoken of throughout Chicago and the middle west as being unusually successful, and not only had the board learned to think a great deal of him but the respective members as well, he having that happy faculty of making friends wherever he would go, and pushing to success all plans and undertakings for the good of the club.

Mr. Brines states that there are numerous reasons for his resignation, the chief of which is to return to the east and live with his family and to accept a position with the American Type Founders Company of Philadelphia.

Snapshot in Office of Chicago Ben Franklin Club, Showing Retiring Secretary Brines, first gentleman to the left, standing. On the Walls are Photographs of Some Friends Gathered and Framed by the Secretary as Souvenirs and Friendly Reminders of His Work in Chicago.

In the past few months there have been numerous changes of secretaries of different organizations, and this change adds another to the long list, and with this move is the notable feature that the secretary mentioned above has been connected with organization work for the past ten years, and is known as one of the most congenial and successful association men ever in the field, and there is every reason to believe that he will be equally successful with the house that he intends to represent.

Not only do the members of the Ben Franklin Club of Chicago regret his leaving, but the members of the Chicago Chapter No. 2, Order of Pica, as well have expressed their regrets, for he was secretary of that organization and was the means of getting the boys together in such shape that they had one of the strongest organizations in the country.

Our congratulations go with Mr. Brines and his employer, and our sympathy is extended to the Ben Franklin Club of Chicago.

* * *

A HAPPY OCCASION

Reported by Mr. Rice, of the Review Printing and Embossing Company

Word having been passed around among the members of the club that Secretary Brines had accepted a position with the American Type Founders Company at Philadelphia, and would leave for his new field of work at his old home on Saturday, an unusually large number of members attended the monthly meeting of the Ben Franklin Club on Thursday evening, September 23, to show their good-will for their departing secretary and to say the parting words and to express their kindly wishes.

The evening was enjoyed, after the transaction of routine business, by good fellowship. Many short, stirring addresses were given, filled with kind words expressive of the high regard in which Mr. Brines was held and wishes for his future prosperity.

Words, however, did not satisfy the feelings of his many admirers, so, on Friday, measures were taken to secure a more substantial expression, and the 'phone was used, and soon a handsome sum was secured in small amounts so that no one should be deprived of the pleasure of contributing. The fund amounted to between sixty and seventy dollars, the major part of the active and some of the associate members contributing. As most appropriate to the subject had in view, a gold watch was purchased and the contributors were invited to meet at the Grand Pacific Hotel to unite in the tender of a complimentary luncheon to Mr. Brines, to which he was also subsequently asked, but, of course, he was kept in ignorance of the presentation feature.

The luncheon was held before the noon hour Saturday, but fifteen were present and sat down to a very satisfactory repast. After the luncheon was under way, a representative of the firm from which the purchase had been made, appeared, and asking for Mr. Brines, handed him a package, on behalf of the Chicago Ben Franklin Club. The opening of the case disclosed a solid gold, full-jeweled Elgin watch, properly inscribed with the name of the club and the recipient, with the date. There were, also, gold chain and seal.

The presentation speech was made by Editor B. B. Herbert, of the National Printer-Journalist, who spoke very fittingly on the subject of Mr. Brines' much regretted departure.

He referred to the satisfactory work that had been done by Mr. Brines and the friendships that had been formed, saying in substance: "This timepiece encased in the precious metal was intended to bespeak, and to be a reminder of, the golden hours that the members of the Ben Franklin Club and other friends in Chicago have passed with you and as the result of your efforts. Your endeavors have been golden in intention and in results. All those present, and those whose presence has been prevented by other engagements in view of the very short notice that it had been possible to give, have spontaneously contributed, with hearty good-will, to this slight token of appreciation and friendship. May all the remainder of your hours be golden with worthy efforts, proper reward and happiness. As you watch their passage on this watch, beautiful in itself, and associated, hallowed and surrounded by the purposes of its gift to you, may you recall with happy recollections the respect and love of your Chicago friends. May all good be with you and may you remember and return, to visit if not to remain, where you will always find a glad and sincere welcome."

Others who took part in the exercises, making appropriate remarks, were Messrs. Chesterman, Clark, and Layman, of the Typothetae, and Messrs. Hastie, Kirchner, Rook, Rice, Morgan, Loth, Sweeney, and Hayes. All the remarks were earnest and appropriate. Mr. Hastie, who closed the speaking, referred very sympathetically to the influence, inspiration and helpfulness such expressions of high appreciation, by sincere friends, must prove to anyone in the struggles of life.

Mr. Brines made feeling response to the kind words spoken and referred to incidents coming from his work and association with members that had revealed the struggles through which some had passed, and the kindness, helpfulness, earnestness and loyalty of all in the work and association.

Then followed friendly hand grasps and au revoirs, none wishing to say the final good byes. Evidently Mr. Brines was highly pleased with the demonstration of good will, and went away feeling that his labors in Chicago were more appreciated than he had supposed. Mr. Brines is now traveling for the American Type Founders Company. His headquarters is at the Philadelphia branch.

* * *

SECOND CONVENTION OF THE AMERICAN CONFERENCE OF TEACHERS OF JOURNALISM

The second meeting of the American Conference of Teachers of Journalism is to be held at the University of Wisconsin, November 28 and 29, 1913.

At the first meeting of the Conference in Cricago last November twenty-two were present, representing fourteen colleges and universities.

The officers as elected at that time are: President, W. G. Bleyer (Wisconsin); vice-president, J. M. Lee (New York University), secretary-treasurer, H. F. Harrington (Ohio State University); additional members of executive committee, Talcott Williams (Columbia) and F. W. Scott (Illinois).

All persons "interested in the teaching of journalism" are eligible for membership. Members have not been required to pay any dues.

At the coming meeting plans will be considered for cooperation between the colleges and universities represented in the Conference, in securing as special lecturers well-known newspaper and magazine writers and editors. The preliminary programme follows.

It is desired to have a general discussion of each of the papers by as many of the members of the Conference as desire to take part.

PRELIMINARY PROGRAMME

Friday, November 28

2:30—Paper: The value of a printing plant to university courses in journalism — its cost, size and use. Professor Merle Thorpe (University of Kansas). Discussion by Professor J. W. Piercy (University of Indiana) and Professor Frank L. Martin (University of Missouri).

Paper: To what extent should instruction in advertising, circulation methods, and other phases of the business management of newspapers be given in courses in journalism? Professor James Melvin Lee (New York University). Discussion by Mr. Frank L. Blanchard (The Editor and Publisher) and Professor R. S. Butler (University of Wisconsin).

Paper: Methods of training students in agricultural journalism. Professor F. W. Beckman (Iowa State College). Discussion by Professor A. W. Hopkins (University of Wisconsin.

8 p. m.:—Paper: The place of instruction in journalism in the university curriculum. Dr. Talcott Williams (Columbia). Discussion by Dean E. A. Birge (University of Wisconsin).

9 p. m.: Smoker at University Club.

Saturday, November 29

9:30—Paper: The college daily paper as a means of giving students of journalism practical experience—Academic credit for work on college papers—Control of the college paper by the department of journalism. Professor H. F. Harrington (Ohio State University). Discussion by Professor F. W. Scott (University of Illinois) and Professor C. G. Ross (University of Missouri).

Paper: The journalist's responsibility. Professor J. W. Cunliffe (Columbia). Discussion by Rev. J. E. Copus (Marquette), and B. B. Herbert, Editor National Printer-Journalist, Chicago.

Paper: Metropolitan daily newspapers as a means of giving students of journalism practical experience during the summer vacations of their university course.

2 p. m.: Reports of committees, election of officers, miscellaneous business. Consideration of requests from the honorary journalistic fraternity of Sigma Delta Chi.

Paper: The relation of instruction in journalism to courses in English.

Paper: Are special courses in history, political economy, government, science, languages, etc., necessary in undergraduate courses in journalism?

STANLEY WATERLOO, DECEASED

Brief Review of His Life, Death and Burial

Stanley Waterloo was widely known as a newspaper man, having done work in the three cities of St. Louis, St. Paul and Chicago. The Chicago Ad Man's Weekly gives the following brief but comprehensive review of his life and work and the facts as to his death and burial:

"The demise of Stanley Waterloo, well known in Chicago literary and newspaper circles, came as a surprise to his many friends and admirers. His health had been failing for some time, but not sufficiently to cause any alarm. His end came suddenly. He was stricken with pneumonia on Thursday and succumbed to it Saturday morning at 10 o'clock.

"Mr. Waterloo was one of the founders of the Chicago Press Club and was the life-long intimate and associate of Opie Read, John McGovern and other literary lights whose works of fiction have done so much to elevate present day writings.

"The last request of Mr. Waterloo was that his funeral services take place at the Press Club of Chicago; and, in keeping with his wishes, the rooms of this historic old Club were draped in mourning and its members gathered around his bier in the Lounge Room to do honor to the memory of their fellow clubman and comrade.

"Rev. W. D. Norton had charge of the funeral services and Frank B. Comerford and John McGovern both delivered glowing eulogies to their departed friend.

DO YOU KNOW YOUR COST?

By Geo. H. Benedict, Globe Engraving & Electrotype Co., Chicago

In order to charge for your product intelligently and at a profit, you must know your cost of production — do you? If not, this will introduce you to a simple cost-finding method that will give you the cost of every job of printing you turn out.

While it is a new idea as applied to Printers Cost Systems, it is based on experience, has been compared with the known averages, developed by the most complicated cost systems and the comparisons are astonishingly close.

To begin — the fundamental facts to get fixed in your mind are: First — A printer is a manufacturer, making things to order only, and as such has but two commodities to sell — labor and material.

Second — A considerable portion of the printers' payroll is wages paid for work that has nothing directly to do with the actual production of the things he manufactures.

PRINTERS' COST CALCULATOR

Minutes											Wage per Week	Hours								
5	10	15	20	25	30	35	40	45	50	55		1	2	3	4	5	6	7	8	9

.20	.39	.58	.77	.96	1.15	1.35	1.54	1.73	1.92	2.11	**46**	2.30	4.60	6.90	9.20	11.50	13.80	16.10	18.40	20.70
.20	.40	.60	.80	1.00	1.20	1.40	1.60	1.80	2.00	2.20	**48**	2.40	4.80	7.20	9.60	12.00	14.40	16.80	19.20	21.60
.21	.42	.63	.84	1.04	1.25	1.46	1.67	1.88	2.09	2.30	**50**	2.50	5.00	7.50	10.00	12.50	15.00	17.50	20.00	22.50

Only even figures are used. For odd figures add one-half of the difference between the figures above and below the one needed.

Third — The use of the machinery, the time and skill of the employes and the material consumed are what you sell. The charge for the article delivered must be sufficient to cover these items and every other expense, **and make the profit.** Therefore, the proportion of the labor cost that is chargeable to the total cost of operating the business must be the basis of the cost charges. The material should be charged at a per cent above cost — 25% it not too much.

It will be surprisingly easy to satisfy yourself that the chargeable labor you pay for is about one-half your operating expense. The non-chargeable — and all other operating expenses — must be included in the hour cost of the chargeable labor. There is no other way of getting these expenses into the cost of the work.

The idle or unsold hours must also be considered in arriving at the hour cost. You pay your men for 48 working hours per week — how many hours of actual work do they deliver?

The Cost Calculator is based on **Double the wages paid for 40 sold hours per week.** It gives the cost of the time put in — from five minutes to any number of hours — at wages from $6 to $50 per week.

To get the cost of machine work **add to the labor cost $2 per week for each $1,000** — or 20 cents per week for each $100 of the cost of the machine used. (The Calculator will double this charge and will cover the interest on the investment and provide for replacement in ten years.)

EXAMPLES — The time of a $24 per week man on a $2,000 machine will be charged at $28 per week or $1.40 per hour. The time of a $10 per week boy on a $500 machine will be charged at $11 per week or 55 cents per hour.

Charging the Labor Cost at double the wages paid covers the overhead expense. Basing the Hour Cost on 40 sold hours allows for eight non-productive hours per week. If you have more it may be your fault — if you have less, you are to be congratulated.

The chargeable labor is the time of every man who works on the job. Have each workman put down the exact time he puts in, on the Job Ticket. When the Ticket is brought to the office, use the Calculator to fill in the cost of each operation. Do not overlook any operation.

If the Calculator seems to give the cost too high or too low, you will think the Hour Cost is wrong. It will be too high if you are very busy and too low if you are very slack.

Remember — The Calculator is based on an average. You will have good and bad months before you can strike an average. The good months must make up for the bad months.

The Calculator is ready for use — nothing needed but a Job Ticket and to instruct your workmen to put their time on it and be accurate. It is self-starting — no expert accountant is needed — no special books — no change in your book-keeping.

The Bill Clerk will figure the cost as the bills are made out. He will not object to the extra work because it will be so easy and such a pleasure to show the "Boss" the profit or loss on every completed job.

Manufacturing, Commercial, Agricultural and Labor Organizations as Means to Efficiency, Intelligent Co-Operation and Aids to Just Governmental Enactments and Administration.

London proper is governed by guilds. In view of the conditions and uncertainties of legislation, interpretation and administration in municipal, state and national government, it occurs that an improvement might be made by having all government conducted by chosen representatives of the different activities of the people. Representatives of all interests and industries conferring together could certainly decide on such measures as would be hurtful to none, if not helpful to all.

The business of free government, by a self governing people, is not to rule, in the old sense of that term, but only to co-operate for the subserving and advancing the prosperity and well being of all the people through securing safety, equal opportunity and all improvements and means for carrying forward the legitimate pursuits of life, with greatest efficiency, productiveness, convenience and security.

The idea of a self-governing people turning their affairs over to the unfit or to the antiquated followers of precedents in law, tradition and decisions, that have come down, in the first instance, from monarchal or kingly rule, founded on the idea that some one above in power by descent, divine right or force or conquest or through intrigue, must rule over the affairs of others concerning which they knew little and have no further care than keeping in place and collecting revenue ought to be thoroughly exploded and relegated to the dead past.

The affairs of the Republic of the United States and all departments therein and of the States and Cities therein, supposedly or theoretically, are governed by the people, but the fact is that the people have very little direct, intelligent or governing control in affairs. Organization, outside of parties and government, has been found necessary to prevent wrongs and to secure rights that should be prevented or secured by the real representatives of all the people. With a supposedly free government, those who are engaged in the upbuilding of all industries and worthy institutions, — agricultural, manufacturing, commerce, transportation and publishing, are compelled to combine for protection against the ignorance, graft, incompetence and inefficiency of rule by self chosen officials backed by exploded theories and antiquated precedents.

These thoughts were suggested by remarks made by President A. Marble of the Merchants Association of New York at the banquet of the delegates of the Eighth Annual Convention of Trade Press Associations in the United States, on September 19th, at Hotel Astor, New York City. He spoke of the formation of the local merchants' associations and of the Chamber of Commerce of the United States of America, representing the local bodies of merchants, declaring, among other things:

Organized only a year ago, the influence of the Chamber of Commerce of the United States of America is already being felt, not only throughout the entire commercial world, but even in the halls of Congress; for it can make known to those who are charged with making our laws, and with their interpretation, the needs of American business, the safeguards it requires and the protection. By referendum it can secure the opinion of its constituents upon the economic questions involving the welfare of our industries and commerce, and by open and dignified presentation of its conclusions, drive home its findings with a force that hitherto has never been known, compelling Congress to give attention to the things that business needs.

"Heretofore the American Federation of Labor and the National Farmers' Union, representing as they do skilled labor on the one hand and the farmer on the other, have had the field of national influence somewhat to themselves; but at least the commercial world, realizing the necessity of a national organization, is in the field, and it will exert a tremendous force in the years to come.

"This is indeed an era of progress and change, and to quote from Holy Writ: 'Old things have been done away; all things have become anew.' There is no better illustration of this fact than in your organization itself, which a few years ago would have been considered an impossibility. Today it is a wide factor in the field of individual trades and interests. You have realized in your work what we are all realizing in our various fields of activity: There is strength alone in union."

The question arises, why should not those in whose hands rest the whole of the commerce, the manufacturing, the agriculture, the publishing and all else that concerns the employments and productions of the people be directly represented in the making and enforcing of all necessary regulations for the supply, security, progress and welfare, instead of standing outside to inform the ignorant legislators and administrators and to strive, through influence and argument, to prevent injurious legislation and hurtful, wrongful interpretations of laws?

✣ ✣ ✣

R. T. PORTE WITH THE STANDARD AUTOMATIC PRESS

That Mr. R. T. Porte, secretary of the Cincinnati Ben Franklin Club, should leave his organization and instruction in cost-finding work, was somewhat of a surprise. He had won success from the start, had done much good and made many warm and appreciative friends. But the call came to a more remunerative position, and, naturally, out of duty to himself and to his family, he accepted. However, his present position, which will bring him in contact with the best and most progressive members of the calling, will enable him to continue his work as an expert counselor and as a friend to all movements and plans for the improvement of the printing craft.

He is a man of active intellectuality, of clearness in thought and expression, genial and companionable with all. Commencing as a small printer in North Dakota, his industry and ability have won him a place in the rich and cultured East. We deem Messrs. Wood & Nathan fortunate in the securing of so able a man to explain all the excellence and adaptableness of the Standard Automatic Job Press.

✣ ✣ ✣

The Celerity of the Cerotype

Frank McLees & Bros., 18 Rose street, New York, send a large number of remarkable examples of cerotype printing, which most people would consider creditable specimens of lithography. "Some printers," the firm writes, "find it hard to believe that these sheets were run on ordinary Gordon presses, but if you will call while you are in New York we will show you how easy it is."

With cerotypes it is easy to print engraved effects on ready-made envelopes. Sometimes an envelope, a letterhead and a business card are printed from one engraving at the same time, with no more trouble than the shifting of the guides.

FRED F. PORTER, NEW PRESIDENT OF FEDERATION OF TRADE PRESS ASSOCIATIONS OF THE UNITED STATES

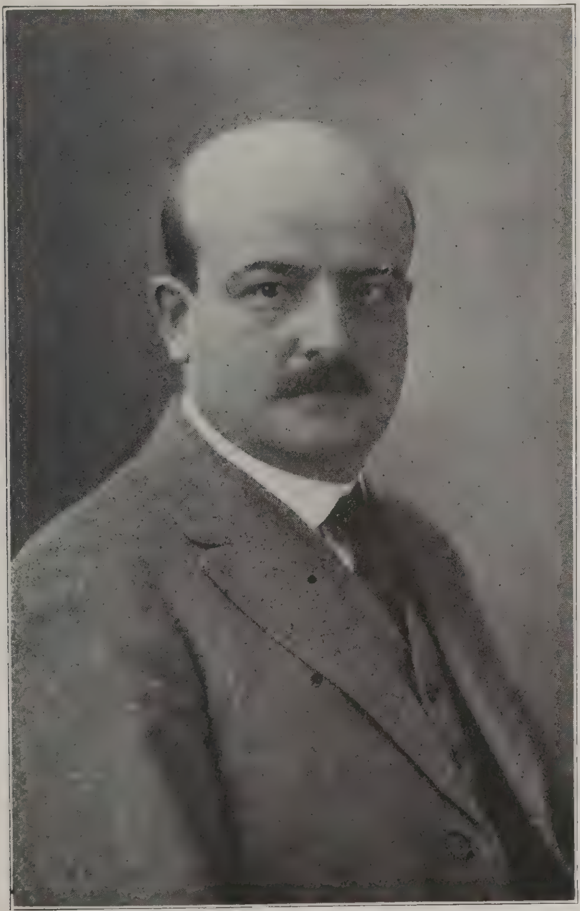
AS has already been noted, editorially, the recent convention of the Federation of Trade Press Associations of the United States was in every way a model, and a great success. The following were chosen officers:

President — F. D. Porter, the National Builder, Chicago.

Vice-President — John Clyde Oswald, The American Printer, New York.

Secretary-Treasurer — Elbert E. Haight, Motor Age, Chicago.

The new president, Mr. Porter, is president of the Chicago Trade Press Association, and he is a Chicagoan by birth. He first entered the banking business, and his experience and what he learned of financial matters in that line have been of value to him in his subsequent career, though he did not find satisfaction in that line of work. He wanted greater activity and an opportunity for expression and useful accomplishment, and turned to the publishing business, and has made a signal success.



F. D. Porter, Chicago, President of League of Trade Press Associations of the United States.

For the last thirteen years he has been publisher of the National Builder. During this time, he and his partner (the firm is Porter-Hoagson Company) have owned, at different periods, the Inland Architect, Building Management, and the Glass and Pottery World. These publications were each and all bought when practically dead and were put on a good paying basis and sold at an excellent profit.

For two years he served as treasurer of the Chicago Trade Press Association, and was then promoted to the presidency, where he has served two years, and his promotion to the presidency of the National body was earned by the record he has made.

The new secretary-treasurer has a like high standing in the association and in business.

At a recent meeting of the Chicago Association, most complete reviews were given, by different members who attended, of the papers and discussions had at the convention in New York.

The matter of the convention of 1914, which it is expected will be held in Chicago, was taken under consideration, and a spirit of enthusiasm manifested with regard to arrangements that would make it equal in every way to the 1913 convention. It was fully realized that the pace set would be difficult to equal, but the indomitable spirit and motto of Chicago, "I Will," it was claimed, would win.

How difficult will be the task is indicated by the following brief extract from an outline of the great success this year, given in the October issue of the American Printer:

"The convention of the Federation of Trade Press Associations, at the Hotel Astor, New York, September 18, 19 and 20, was remarkably successful. Few conventions of this or any other organization have excelled it in enthusiasm, practical usefulness and the high standard of its attitude on business questions. Not only were the audiences pleased with their speakers, but the speakers were immensely gratified by the interested attention and sympathetic response of their audience.

"The program was the longest and most comprehensive ever put through at a trade press convention. There were between sixty and seventy talks, and trade journal publishing was discussed from every angle. The publisher, the editor, the advertising manager, the subscription manager, the reader, the advertiser, all contributed their experience and advice. The program appeared in full in the September number of The American Printer, and because of its length will not be repeated here.

"The attendance was larger than was expected at all sessions, and the meeting rooms were crowded to their capacity.

"The convention opened Thursday morning, September 18, with an unusually large attendance, and immediately started out to carry through its program as scheduled.

"The address of the president, H. M. Swetland, showed that there are seven hundred and fifteen class, technical and trade journals in America, of which two hundred and thirty-six are included in the membership of the Federation of Trade Press Associations. The amount of money invested in such publications is estimated at fifty million dollars, the Federation membership alone representing a capital investment of not less than thirty-five million dollars.

"At noon the delegates were taken by means of automobile busses to the Thirty-Ninth Street Publishers' Building. There a large reception-room had been provided and a splendid luncheon was served, following which the delegates were divided into parties and taken on a tour of the building. A large number of business publications are produced in this building and the trip was filled with instruction and interest. In the afternoon there was an Editorial symposium led by A. I. Findley, editor of the Iron Age, and a Circulation Symposium led by M. C. Robbins, of the David Williams Company.

"On Friday morning an Advertising Symposium was led by Hugh M. Wilson, of the McGraw Publishing Company, and was followed by a big business meeting, H. M. Swetland presiding, during which the heads of several large business publications told the inside stories of their success. Friday afternoon witnessed a mass meeting and the delivery of inspirational addresses."

THE PRESS CLUB OF CHICAGO AND ITS NEW PRESIDENT

All newspaper workers of Chicago have cause for rejoicing and pride over the present flourishing condition of The Press Club of Chicago. The membership is larger than ever before in the history of the organization and what is more nearly to the point of efficiency, all the practical newspaper workers are numbered therein.

The new President, Walter A. Washburn, Assistant City Editor of the Chicago Tribune, is a power of strength in himself and a hustler as well. The Chicago Ad Man's Weekly says of him:

"Wash" is a big man in a lot of ways, as an administrator, or newspaper man, a friend—and physically. It was his work as chairman of the membership committee and his success in getting newspaper men back into the club that brought him out as the chief candidate for the presidency and induced other candidates to leave the field open to him.

He started his newspaper career in Chicago back in World's Fair times, when, graduating from the Chicago College of Law, he abandoned the idea of acquiring legal fame and set out as a reporter on the old Chicago Times. Born in South Framingham, Mass., of good Yankee stock, January 3, 1874, he had come to Chicago as a boy. He stayed with the Times only a few months and within two years he had been successively — and successfully — reporter for the Dispatch, dramatic editor of the Sporting Gazette and circulation manager of the Globe — and moved on to Duluth. Before he had become accustomed to his desk on the Herald there he went out after a "scoop" on the typhoid epidemic and got it — the scoop, not the typhoid. That little story did not please rival papers, but was seized by the city and the officials indicted for manslaughter. He became city editor of the News-Tribune, only to quit suddenly and establish his own printing plant with the Hustler, still in existence. He also became proprietor of the Northwestern Merchant, secretary of the Commercial Club and deputy clerk of the district court. Then came the panic of 1897 and, hit hard, Mr. Washburne moved to St. Paul to start over. He became a reporter on the Pioneer-Press, member of the city and county republican committee, county license inspector, and missed the county abstract clerkship by a small margin. He moved on to Lincoln, Neb., to Omaha as news editor of the News, to Kansas City as telegraph editor of the Times, and finally in 1903 came back to Chicago to read copy for the Tribune. Then he moved over to the Post and the American, but came back to the Tribune in 1908, as assistant telegraph editor, coming "downstairs" to the city room two years ago. He is a member of Ionic Lodge, A. F. & A. M., and known to practically every important man in town.

PROSECUTION OF FRAUDULENT ADVERTISERS

PITTSBURGH, PA., Oct. 6.—At a meeting of the Pittsburgh Publicity Association, Assistant District Attory Harry H. Rowand of Allegheny County advocated the prosecution of fraudulent advertisers. He declared that every publisher and every good citizen should be interested in the enforcing of the law against fraudulent advertising both in letter and spirit. This he regarded not as a matter of expediency but of conscience. He congratulated the association for its work in behalf of the enactment of the new law.

Davenport "Midget" Times Makes a Hit

The Davenport (Iowa) Daily Times, with E. P. Adler, publisher, and H. E. Dreier, advertising manager, made a great hit at the convention of the Associated Advertising Clubs of Iowa, October 21 and 22, with a midget Daily Times.

This little edition was gotten out by the advertising department of the Times, with the co-operation of the editorial force, and was put in the souvenir baskets as the Times souvenir, to the visitors. When the delegates registered they were given a basket containing thirty souvenirs, similar to the suit-case full of souvenirs at the Baltimore convention.

The pages of the paper were only 8½ by 10½ inches. There were seven columns to a page, but the columns were only six ems, or one inch in width, and nine and one-half inches in length. It was set in solid nonpareil but well printed and entirely legible. The contents dealt largely with convention affairs, enlivened by wit and humor. Excellent portraits of the presidents of the Davenport and Iowa Ad Clubs and the chairmen of the convention committees were given at the top of the three center columns of the first page. It was a perfect little newspaper, and no wonder it made a hit.

Topeka Capital Shows Kansas Prosperous

"How the Farmers Beat the Drouth"

Enterprising newspaper men are always concerned about the prosperity of the people in their cities, states and in the Nation. No other newspaper anywhere has shown greater or more intelligent care or regard for the welfare of its commonwealth than has Arthur Capper through his publications.

Recent issues of his daily, the Topeka Capital, show his ardor is not in any way lessened either by the drouth or by political defeat. Numerous encouraging articles and items have appeared showing that Kansas has no cause for discouragement, but is really in a very happy condition. One article, entitled "How the Farmers Beat the Drouth," indicates that the Kansas farmer is as intelligent and up-to-date as he is enterprising. Here is a brief extract:

"Investigation showed that the farmers who farm intensively and scientifically, diversifying and rotating their crops, obtained the best results. In the corn sections, where the condition was distressing, fields were found that will go forty bushels to the acre. The farmers in the first instance plowed their ground deep and cultivated their corn constantly, thus keeping down the weeds and 'bottling up' all the moisture. In a large area of the state wheat matured before the dry weather came, but in counties where the crop was short, the scientific farmer as a rule had a fair yield."

Then there are other items proving that bank deposits show all previous records have been smashed; that 6,678 automobiles have been bought in the state at a value of six and one-half millions of dollars; that Kansas wealth and purchasing power, notwithstanding the severest drouth known in fifty years, prices being unusually high, is greater than at any time heretofore, credit good and the purchasing power not diminished; that one county, Kiowa, having occasion to issue bonds for building a courthouse, decided to offer them for sale only to its own citizens, excluding all foreign bids.

This is the way to drive away gloom and help a state through a newspaper in which the people have good reason to confide.

Neighborhood Correspondents and Popular Contests

In speaking of the completion of the twenty-eighth and beginning of the twenty-ninth year of the East Hartford (Conn.) Gazette under his management, Editor H. B. Hale has the following to say of its aim and success:

"It has always been the aim of the paper to be only local, with a large list of correspondents, covering the nearby towns, with every nook and corner covered by a live reporter. This feature has made the paper what it is, abolishing the telegraph and story feature and sticking to the home news of the best and cleanest happenings. In one sense The Gazette has not nor will not feature the sensational side of life; and hundreds of times has it omitted from the public gossip corner wicked items that would no doubt have pleased many of the excitable readers. The aim of the paper is to maintain as near as possible pure and acceptable news that is fit for the family to read. For the past few years different features have appeared. There is a growing circulation that keeps the paper well before the farmers and the advertising patronage is of a high class. Today we have twenty-two regular correspondents, all of whom are paid for their news, and who are most reliable in their reports. The school teachers' contests have been a great drawing card for the past four years and we hope to send a number of East Hartford teachers to Washington at Easter time, 1914. There is no end of work in these contests, but if it is a benefactor who makes two blades of grass grow where but one grew before, what shall we say of the subscription contest which creates hundreds of subscribers where there were but fractional hundreds before?"

Likes the Old Name Best

Old Town, Maine, Oct. 22, 1913.

National Printer-Journalist.

Brother Herbert:—Enclosed find $4.00 to cover my past year and coming. I note the return to the old name, National Editorial Association, which the Journalist, under your management, has so long and ably represented.

You have done a splendid work and done it well, in organizing and continuing for so many years your interest in the upbuilding of the organization and personally I appreciate most heartily the value which I received during my nearly twenty years of annual attendance. The past four years, since I sold the Enterprise, has brought an annual regret that I was not a delegate to the National meeting. I shall, however, continue my interest in the Journalist, as every issue brings myself and wife many pleasant reminders of cherished friendships made at the annual meetings of the N. E. A.

Yours fraternally and with best wishes,

C. W. ROBBINS.

* * *

"BEST IN THE UNITED STATES"

Covington, Tenn., October 21, 1913.

Sirs:—Enclosed find $2.45 for payment of this bill. I thank you very much for the favor extended and consider your journal the best for the printer published in the United States, and I have seen nearly all of them.

THOS. R. McGREGOR.

* * *

"Most Excellent"

Office of the Maury Democrat

Columbia, Tenn., Sept. 22, 1913.

Mr. B. B. Herbert, Editor The National Printer-Journalist,
Chicago, Ill.

Dear Mr. Herbert: We are sending check to pay our subscription to your most excellent journal to March, 1914. We read the Journalist with a great deal of interest and pleasure. We have been on your subscription list since February, 1897, and the writer has attended seven of the annual meetings of the National Editorial Association, the first one being the Galveston meeting in 1897, and the last one was at St. Paul in 1908. We are sending you under another wrapper a copy of the Democrat, and also enclose two clippings from two of our best exchanges about our thirty-second anniversary.

With kindest regards and best wishes we are,

Yours truly, LYNCH & E. C. PERRY.

By E. C. Perry.

PLUMSTEAD, DEPTFORD, GREENWICH AND ERITH.
PUBLISHED FRIDAY, 8 A.M.
12 OR 16 PAGES WEEKLY
PRINTED ON A TWO-REEL ROTARY PRESS
CHIEF OFFICE:
WELLINGTON ST., WOOLWICH.

Editor of National Printer-Journalist:

Dear Sir — Your two recent letters respecting my subscription to The National Printer-Journalist have interested me much, but I really cannot alter my decision to discontinue it. I have not sufficient leisure to read all the good matter published in your interesting journal, much of which is rather beyond us on this side of the Atlantic. I know full well the many strong reasons you can advance as to why I should read your journal and all trade journals, but these are quite beaten by the hard fact that I have no time. I am sorry in a way to part, but there is no other way! With the English trade journals I can only give a hurried glance, however foolish and unbusinesslike this action may be.

You have had posted on at least two numbers since my subscription finished, so I am enclosing a dollar note to cover cost.

I was in Chicago in June, 1911, and it was real hot weather, as you remember it! I had only two or three days to spare for your great city — I was on two months' holiday in the States and Canada — but one afternoon I tried to find your office. If my memory is good, I took a train on the elevated to Irving Park, and after wandering about for an hour owing to three misdirections by residents thereabouts, I had to give up my intention.

I came to the conclusion that residents in the suburbs of Chicago are very much like those of suburban London — they know where they live themselves and their way to the railway station and that is all. I should like to have seen you, as I have read much of you and your good work in the N. P.-J. a few years ago when I had my evenings free. Now I occupy a somewhat unique though not well-paid position, and I must devote all my time to my work.

I will send you copies of the two newspapers on which I work here. You may care to glance through them, but don't put on your extra sharp American glasses to accomplish this favor. And don't hand them to your critics, who seem to have nothing to say in favor of anything British. I rather pity them at times — they simply don't know what suits the publishers. The British people and British laws would never permit some of your American newspapers to prosper as they do in the States.

Apologizing for such a long epistle and wishing you many more years of successful work on behalf of the newspaper men and printers, Yours faithfully,

GEO. W. NEVES.

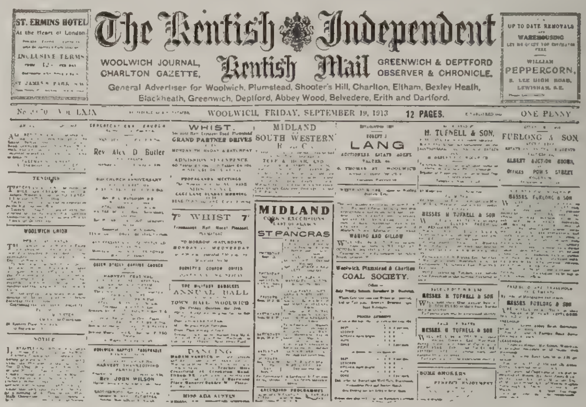
Our friend should have taken the Northwestern elevated Ravenswood train to Ravenswood station, and he would have had no trouble. It is curious to those who have had no experience, how a great city is divided into neighborhoods, the inhabitants of which have no acquaintance one with the other. These neighborhoods have their own local schools, churches, lodges, hospitals, stores and newspapers, and these are all locally maintained by people living within a square mile, and, outside of this territory, the acquaintances and businesses of nine-tenths of the residents are down in the business section of the great city.

We are sorry that our friend from Woolwich did not find the office of the National Printer-Journalist, which is locally known as The Ravenswood Press and Ravenswood Citizen. The business of the National Printer-Journalist is nearly all carried on through correspondence, while our job printing office and local newspaper deal directly with the local people, and hence are advertised locally.

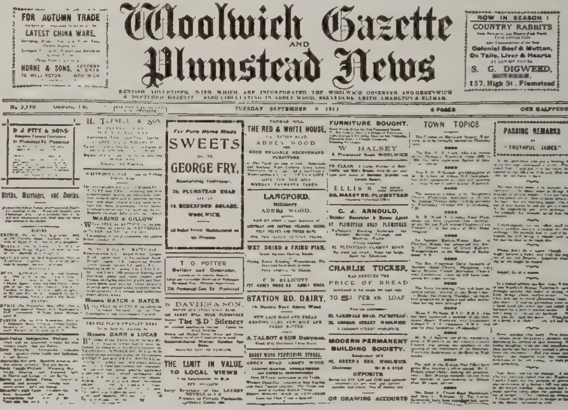
We regret that the time of Mr. Neves is so taken up that he no longer has time to read the papers devoted to his calling, but then there are others who have made the like statement, but they have generally come back later with renewal of subscriptions. Generally the study of papers devoted to a man's vocation saves time and money.

There is a difference between English and American newspapers, and possibly it is hardly right for our critics to measure the English publications by American standards. American publishers have reached the belief that the subscribers, buyers and readers of the newspapers are to be first considered. They, the readers, make the newspaper valuable to the advertisers, and that their attention should be secured, that they should be attracted, pleased, entertained and instructed, are the things of paramount importance.

Hence, American newspapers do not put advertising on the first page of a paper, nor in the first column of other pages, unless, of course, in case of full-page advertisements, but give the ads an orderly arrangement in the columns to the right. The effort is to make the pages artistic, orderly, attractive to readers and to show them the courtesy of not permitting advertisers to push in between them and news or editorials. The belief is that the consideration of the convenience and good-will of the readers by the advertisers is worth more to them than the pushing of the ads in their faces regardless.



The Kentish Independent
WOOLWICH JOURNAL, CHARLTON GAZETTE, Kentish Mail GREENWICH & DEPTFORD OBSERVER & CHRONICLE.
General Advertiser for Woolwich, Plumstead, Shooter's Hill, Charlton, Eltham, Bexley Heath, Blackheath, Greenwich, Deptford, Abbey Wood, Belvedere, Erith and Dartford.
WOOLWICH, FRIDAY, SEPTEMBER 19, 1913 12 PAGES. ONE PENNY



Woolwich Gazette and Plumstead News
TUESDAY SEPTEMBER 9 1913 ONE HALFPENNY

In these regards most American newspapers have changed from the old methods, and these are the most successful and influential and maintain higher advertising rates. Others keep in the old ruts. Some advertisers, in this country, strenuously objected to giving up positions on the first page. English papers might meet with some difficulty in making changes at first, but in the end they would find advertisers and subscribers satisfied. Most people do not know what they want until they are shown, and it is up to the publishers to seek out the better methods and to show their patrons.

The two papers sent us are large, creditable, prosperous publications with a great amount of advertising. The most of the reading matter is set in small faced six point or agate solid. We reproduce the upper half of the first page of each publication. The first pages are entirely given up to advertising, as shown. There is no advertiser with money enough to buy a first page position in most of our best American papers. Besides, the paper stock in these papers is not up to the American standard of quality. We have not intended any criticism of these papers, but only to tell and point out by illustrations the difference between them and the best American newspapers.

NEWSPAPER CRITICISMS

Address all communications to O. Byron Copper, De Soto, Wis.

It now develops (in my mind, at least) that W. R. Hotchkiss of Menominee, Wisconsin, and myself are perhaps quite as far wrong in our late conclusions regarding the findings of Brothers Morrison, Whiting and Roe, of the Minnesota Editorial Association committee on the cost of newspaper advertising, as we at first thought that committee wrong in their findings.

I make the foregoing acknowledgment as an apology to the aforesaid committee, whose greatest mistake seems to me now to have been a fear of telling their fellow newspaper men the plain, blunt truth about the science of the distribution of costs. This committee apparently feared that the class of men to whom I have been pleased to refer as a "very wise class," would not be capable of grasping anything so scientific, theoretical and yet so practical, and, in consideration of the fearfulness with which newspaper makers generally regard the raising of their rates to a fairly remunerative basis, I don't know as the members of the committee can be too severely criticised for their seeming lack of confidence in the intelligence of their fellow craftsmen.

As to Brother Hotchkiss and myself, in our method of cost-finding, we have practically failed to take into account the matter of cost distribution at all, which the Minnesota committee did, in a sort of slight-of-hand way, however, which had a tendency only to confuse, whereas the hope was to infuse and enthuse.

In case of an unusually great circulation, the Hotchkiss method might possibly be applied with accuracy, or adequacy would be more proper, as in such case the income from subscriptions, locals and legals might be sufficient to cover and give an adequate net profit over and above the expense represented in the balance of the paper not given up to displayed advertisements; but in ordinary cases, I know, this is hardly true.

To my mind, however, that which Associate Editor Ed S. Sheasgreen of this magazine, is giving us on this all-important subject of the cost of newspaper publishing is the most scientific, and therefore the most valuable, of anything which has as yet been offered. By following the method as outlined by Brother Sheasgreen most comprehensibly in the September National Printer-Journalist, any intelligent newspaper man can fix his selling prices, not alone of advertising space, but of subscriptions, locals and legals, at such figures as will return him the proper amount of money to insure a profit; and he can reverse the process and prove that he is getting the profit.

In conclusion, again I wish to add the assurance that nothing which I have been moved to contribute on this interesting topic has been written with anything but friendly motives, with no purpose to insult, deride or injure, but rather (if possible) to instruct, and more especially to inspire fellow newspaper men with greater interest in the extremely vital matter of getting more for their labor; and again I add that whatever may be the errors of Brothers Morrison, Whiting, Roe, Hotchkiss, Sheasgreen, Grondahl, myself, or any others who have expressed themselves, it is all finally destined, I feel confident, to result in much good, and culminate at last in the emancipation of the craft through better rates for their products which will assure them of a more commensurate share in the universal distribution of wealth. Hence, where is there ground for quarreling?

* * *

A novel publication which has long lain on my desk waiting deserved notice is this Nebraska Press, official paper of the Nebraska Press Association, which I have received, presumably, through the courtesy of Secretary-Treasurer C. C. Johns, of Grand Island, where the Press is published. Whether or not the publication of this official organ is a permanent thing with the association, I cannot say, but during the days before the annual meeting of that body (these copies before me were printed at that time) the sheet was used very advantageously in exploiting the proposed work and entertainment to be undertaken at the June convention. It was very neatly gotten up, ably edited, and in every respect worthy of the avowed purpose.

* * *

To be constructive, independent, fearless and free, certainly expresses ideal qualifications for a modern home newspaper, and such is the motto-like claim of the Wall Lake (Iowa) Blade, of which W. O. Howard is editor and publisher. I am pleased to note, too, that there is evidence that the claim is true, and, furthermore, that the Blade is excellent in other respects besides its motto. The front page is a clean one and made up in an especially attractive and correct manner, the pains spent in having the double-deck headings uniform not having escaped me. The news service of this six-column quarto is particularly good, the local news field being well covered and the numerous letters from local correspondents meriting hearty approval. The patronage accorded the Blade by local advertisers, in its liberality, shows that the Blade is appreciated at home, where a home newspaper ought to be appreciated. The editorial work denotes natural aptitude and culture, the presswork is first class and the advertisement composition better than the average. The first page of this creditable sheet is shown as exhibit No. 1.

✣ ✣ ✣

I have here further copies of that distinctive publication, the Penn Yan (N. Y.) Democrat, complimented before in these columns for its excellent grade of book and consequent pleasing presswork. Regretably, there is slight improvement observable in the matter of heads, to which I referred in my last review of the Democrat. For instance, in exhibits 2 and 3 accompanying this paragraph, may be seen a couple of heads from one of the issues at hand, neither of which conform wholly to the suggestions offered during a former review. In exhibit 2 the defect is that the first two stair-step lines are too short, although the wording of this head is entirely proper, except in point of the use of the article "a," which I understand was used to eke out the length of the line. Articles, such as "the" and "a" are always omitted by up-to-date head-writers, and in the case of stair-step lines like these, to look well, the lines are made longer, like those in the next exhibit, No. 3, in which the defect, however, is that the pyramided couplet is a word or two short, and the whole wording is wrong.

CRUSHED BY A
ROAD ENGINE.

Highway Workman's Narrow
Escape From Death.

No. 2

MRS. JAMES HUSON
BURNED TO DEATH.

A Pitiable Tragedy at Halls
Wednesday.

No. 3

Suppose the first head had been written something like this:

MAN CRUSHED BY
TRACTION ENGINE

Highway Workman Has Narrow
Escape from Death

and the second one something like this:

AGED HALLS WOMAN
BURNED TO DEATH

Pitiful Tragedy Occurs Last
Wednesday Morning

the effect would have been more pleasing to me. I have to confine my complaints to little things like these, in commenting on the Penn Yan Democrat, for it is only in respect to details that there is anything out of kelter in this generally excellent sheet. The editorial work is done with cleverness, the editor featuring different things of local interest from week to week in attractive illustrated stories, as for instance the new postoffice building one week, a local fire the following week, and so on. The large half-tones used in connection with these features are perfectly printed and the subject matter of the text, as especially in evidence in the postoffice story, is fine. In this write-up Editor Earles improved the opportunity of reviewing the history of the hundred and twelve years extending over the time from the establishment of the first United States postoffice in Penn Yan up to the present. Following along the various steps of progress made during those hundred and twelve years, from the courier on horseback, then the stage coach, next the canal, and lastly the steam railway, leading up to the elegant new $60.000 federal building as a climax, an extremely readable narrative was created. It is just such things as these that raise a home paper high in the esteem of its local readers.

Few towns enjoy a better home paper than that with which Chilton, Wisconsin, is blessed. I refer to W. A. Hume's Times, copies of which Foreman J. N. Huntz favors me with from time to time. And I am happy to observe, also, that few newspapers are better supported by their home town than is this same Chilton Times, which even during the dull month of August had to include twelve six-columned pages in its regular edition, in order to accommodate the many advertisements and the great abundance of reading matter. Truly the Times' news service is great, and the editorial page is one of the best among Wisconsin democratic newspapers. An interesting feature about the Times is that the familiar old face known as DeVinne predominates frequently in the displayed spaces, and it demonstrates, again, as does also this specimen from the Nebraska Press (mentioned some paragraphs above, exhibit 4), a truth I have often called attention to, namely, that not many of the new type faces can excel this grand old standby in beauty or service. (Exhibit 5.)

Prize Printing Exhibit

of the Nebraska Press Association
Meeting, Omaha, June 2, 3 and 4

Bring Along Your Best Samples

The Splendid Prizes

1st prize. Beautiful solid silver trophy cup, neatly engraved with the name of winner. This is the finest trophy ever put up for a printing prize and is worth over $150. Contributed by the Omaha Publicity Buereau.

2nd prize—American Lead and Rule Cutter, No. 30, donated by Barnhart Bros. & Spindler, Omaha.

3rd prize—$10 worth of printing material donated by Dr. Rich of Grand Island.

4th prize—Two cases of Skinner's Elbow Macaroni, donated by Skinner Manufacturing Co., of Omaha.

5th prize—One case of assorted Iten Biscuit Products, donated by Iten Biscuit Co., Omaha.

6th prize—Year's subscription to Inland Printer.

7th prize—Year's subscription to National Printer Journalist.

Other prizes will be added.

An Effort is Now Being Made to Secure Additional Prizes

Rules and Requirements

Prizes will be awarded for the bestdisplay of printing, executed in the office of the exhibitor, and must be regular work produced during the past year. Member of N. P. A, only can compete. Shops of Omaha and Lncoln barred.

Display must consist of letterheads, envelopes, statements, bill heads, small folders or business cards. These must be mounted on sheets of white cardboard 17x22 inches, so that we may have a uniform exhibit.

Awards will be made by disinterested judges who will take into consideration the size of the town and the equipment the exhibitor has to work with. Winners will be announced on Wednesday morning, June 4th.

Exhibitors will be allowed to remove exhibits after Wednesday afternoon at 4 o'clock.

❖ ❖ ❖

The Bucklin (Kan.) Banner is another sheet that uses the good old DeVinne face almost exclusively in its displays (Exhibit No. 6), and the compositor usually follows the dignified styles of simplicity in which this fine old letter is at its best. And when it comes to dashing off bits of editorial drollery, there are few who can beat Editor J. B. Miller of this same Banner. Here's one of his latest:

Reduced Prices On Nets

I have a large stock and am making special prices on them.

Get your harness oiled and repaired before the fall work begins.

Have some wagon umbrellas at reduced prices.

When figuring on buying harness call and look over our stock. We guarantee good goods at right prices.

I also have several second hand bicycles at from $5 up.

E. S. GORDON

No. 6

I have been insulted. It is really worse than that, but I don't know what to call it. This is what was done to me. You know that little piece in the paper a couple of weeks ago about simplified spelling? Well, someone who read that framed up one right. A few days ago I received a copy of the Chicago Evening Post, "Marked Copy" it said on the wrapper. I unwrapped the thing and looked for the mark. I found it—and this is what I saw: "Simplify the Spelling Book for the Benefit of the Children" was the headline, and following was a column or more devoted to the subject of simplified spelling in the schools of Kansas. I have not figured out yet whether to lay it onto Ed. Gresham, Ray Frazier or Emerson Willhite, or attribute it to the hand of some unknown enemy. But I was, oh, I don't know what it was, but it was, just the same.

❖ ❖ ❖

A very pleasing full page advertisement is this from the Kensett (Iowa) News (Exhibit No. 7), which shows the beauty of simplicity and the delightful Cheltenham faces. But, I should have preferred the ad with the heavy underscores at top omitted. Some people, especially advertising managers who are used to buying expensive space, such, for instance, as magazine space, or space in the great city dailies, would naturally object to so great an abundance of white; but it has been my experience that ofttimes white space in an advertisement is even more beneficial, and therefore more valuable, than if filled with words. Take, for example, this Ford advertisement (Exhibit No. 8), clipped from the Penn Yan Democrat reviewed in a foregoing paragraph, which is typical of Ford advertising. Surely the liberal white masses in this ad are worth all they cost, because of the power of attraction which is in them.

Walk's Advance Announcement

Of New Fall Goods

WE have been enabled by the success of our recent clean-up sale to bring on our Fall Goods purchases ahead of the usual time. We believe our buying this year will please all of our customers and meet with the approval of the careful buyers. We have selected a large assortment from the choicest the city markets afford, with the main object in view of getting goods of full value. ¶Our lines will show the latest and most popular goods of the season—fabrics and shades that will be much in vogue for fall and winter wear. You cannot go wrong if you make an early selecting here. The goods are right and will be priced right—as is the custom here. We invite you to inspect this showing.

HOLINESS PRAYER MEETINGS

¶ All Christians of Hinsdale who have been filled with the Holy Spirit; and all who desire to experience this second work of Grace; are cordially invited to meet at West Hinsdale Chapel tonight and the following nights for 10 days at 7:30 o'clock. The Spirit Filled Church as described in the book of Acts will be studied.

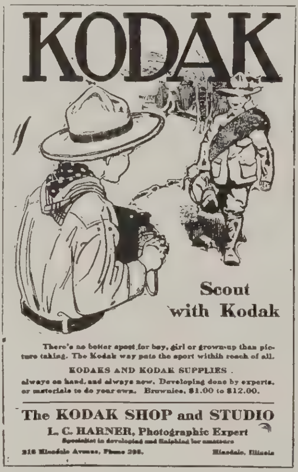
"Follow after peace with all men, and the sanctification without which no man shall see the Lord."—*Heb. 12; 14.*

B. M. BROWN, Evangelist.

No. 9

✣ ✣ ✣

Constant readers of these columns will remember that I have referred before to the Hinsdale (Ill.) Doings, and I have often wanted to show something from its columns, because, with the high grade of stock used, fine type faces employed and excellent presswork attained, the ads ought to be near perfection, but usually there has always been something radically wrong with the Doings' ads. But lately there must have been a new ad man employed, else the old one is taking greater pains, for practically every displayed space is treated with exquisite taste, so here's a bunch of ads, each with its own little lesson. (Exhibits 9 to 14, inclusive.)



There's no better sport for boy, girl or grown-up than picture taking. The Kodak way puts the sport within reach of all.

No. 14

The first is a fine example of modern church publicity, and is particularly well treated by the compositor. The next shows the great advantages of simplicity in ad-setting and the beauty of appropriate illustration. The remaining three are each and all dainty creations, the last being more particularly remarkable for the striking use of the arrow in directing attention to the dealer's name than for any points of extraordinary beauty.

✢ ✢ ✢

An extremely fine, clean, newsy sheet is the Williston (N. D.) Graphic, the front page of which is reproduced as Exhibit No. 15. The excellent balance of head-masses achieved by the mechanical make-up man is strikingly apparent. It is a pity, however, that he who wrote these headings did not do his work so well as the make-up man has in their arrangement. The remarks written above in reference to heads in the Penn Yan (N. Y.) Democrat will apply nicely to this publication. The Graphic's contents are especially praiseworthy, typography high grade and print first-class. Exhibit No. 16 will be sufficient to establish the statement that some very fine advertisement work is in evidence in the Graphic's columns.

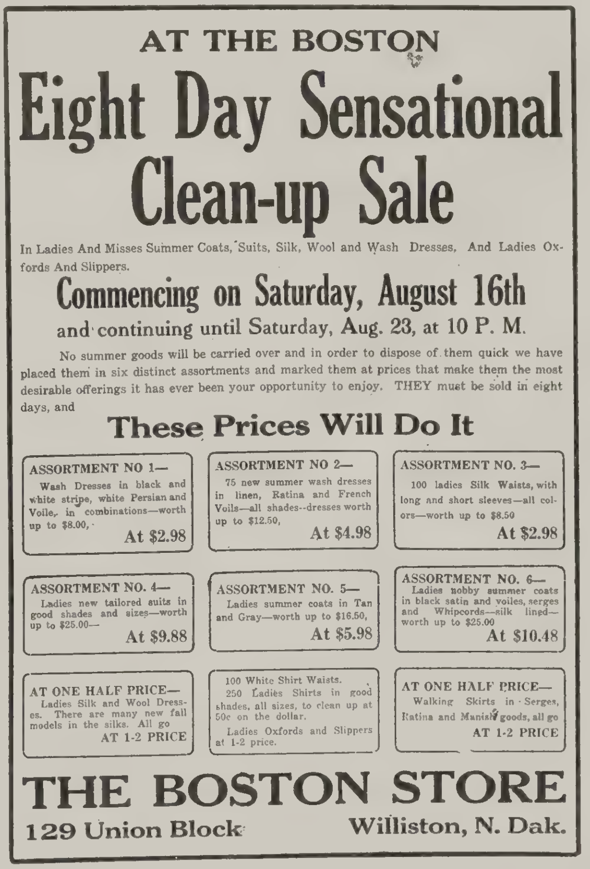
Among the editors of the many home newspapers that come regularly to my desk, Carlton M. Brosius, editor of the Herald-Progress of Sumner, Miss., beats 'em all for downright high class editorial dope. His editorial stuff never fails to grip me, and I never fail to read it through. "Are Not All Souls Entitled to Salvation?" is the title of one of these editorials in the copy of the Herald-Progress at hand, which shows up, in modern editorial fashion, how wrong it is to spend millions on foreign missions, while many of the very same people who contribute liberally to the fund for saving the faraway African and Chinese women from sin, are so filled up with the holier-than-thou sham religion and mock modesty that they are not willing to give a kind word or even the encouragement of a hearty hand-clasp to save the women of our own land who have followed the line of least resistance and fallen into lives of shame. Brother Brosius has that rare gift of penetrating to the heart of his reader, using English plainly, simply, in which fashion it is the most beautiful and the most powerful.



AT THE BOSTON

Eight Day Sensational Clean-up Sale

In Ladies And Misses Summer Coats, Suits, Silk, Wool and Wash Dresses, And Ladies Oxfords And Slippers.

Commencing on Saturday, August 16th

and continuing until Saturday, Aug. 23, at 10 P. M.

✢ ✢ ✢

At last the Forest Grove (Oregon) Press has ceased changing hands, the name of George Huntington Currey now being inserted in the sub-head as editor and owner, and he is surely giving his subscribers an up-to-date publication. This new editor of the Press is doing some unique things, one of which is the inauguration of a contest, in which prizes are offered for the most complete lists submitted to the editor of local, judicial, executive or legislative officials. This innovation, Brother

Currey explains, is put on to stimulate interest in local political government, as well as for mutual instruction in an all-important matter, and makes an altogether commendable thing. Another pretty bright idea from this new Press owner is this advertisement to advertisers, reproduced as Exhibit No. 17. The Press is produced, as I suppose I have remarked in former reviews, in a shop of up-to-date equipment, and, with an abundance of news, the result is an up-to-date newspaper. Besides being strong on local news, with a special effort to build up an adequate corps of country correspondents, an able editorial department is maintained, which is worthy of praise both in point of subject matter and literary merit.

WHY ADVERTISE?

The Best Way to Reach the Trade

After a thorough study of conditions that affect your sales, namely the prospective trade and your stock of goods, then your chief aim is to bring them together. You do this, on the one hand by preparing your goods so that they may be easily presented, and on the other hand you must notify the trade that you are ready to serve them.

It is not enough to simply notify the people in your section, you must argue with them, suggest to them, and convince them that you have for sale what they need or what they desire. That your store is the best place for them to trade, because of advantages of quality, price and convenience must be impressed upon your prospective customers.

It is the psychological law of repetition of the same idea, that will finally causes the average customer to ''Catch the Spirit'' so to speak, and will be guided thereby.

Now think for a minute, your store windows attract merely those who happen to pass their way. Your salesmen can wait on only those who find their way within your store. An advertisment in your weekly paper reaches out to nearly all the homes in your city, and to nearly all the farms and ranches for miles around. It is read by the husband, the wife, the children, the hired help and others. If it were not for the newspapers you would have to do a great deal of soliciting to attract your trade. But that the paper does for all business men. It keeps up its circulation for your benefit. By inserting in your advertisment, the message you you wish taken to nearly all the homes in your territory is promptly delivered, and if placed in the right kind of paper will be attractively presented, and will receive a good hearing for it will be in desirable company.

No. 17

Some of my regular readers will think perhaps that I never tire of referring in a flattering vein to the excellent features in the Lawrenceburg (Ind.) Press — and I guess they're about right. I take it that Brothey Smashey is responsible for several unique features noticed in a late copy of that estimable sheet, one of which features consists of short pointed paragraphs under a box head, "Some Things Which Otherwise You Might Not Have Thought Of." Here is a sample of this stuff:

Why do so many girls snicker when they begin talking over a 'phone?

Come to think of it, there is hardly anything so prosaic as a coal chute.

Are you old enough to remember when many of the streets of Lawrenceburg were fringed with dog fennel every summer?

Whenever a man who is accustomed to working steadily takes a half day off there is certain to be someone ask him if he's sick.

Another column is devoted to a lot of short notes consisting exclusively of news of the workers and local industries, headed very appropriately "Industrial Items," which is extremely creditable stuff, and still another column of original paragraphs is headed "Do You Remember," of which a sample follows:

When many business men wore paper collars?

When cows, hogs and geese roamed the streets and alleys?

When there was a large flour mill at the foot of Elm street?

When loafers regularly congregated at some of the groceries?

When the only means of putting out a fire was by the bucket brigade?

When Center street was called Partition lane?

When there were two or three houses around town said to be "haunted"?

Besides these catchy little features, of course, the Press presents a great array of news, all headed up in a highly attractive shape, withal, making a very good home weekly.

visits to my desk, here's my thanks, notwithstanding that sometimes the columns of the Review contain stuff not intended to swell an American's head any, as for instance that bit of talk about Buffalo's preparation for the Perry Centennial, in commemoration of Perry's victory on Lake Erie. But, maybe the Canadian editor is more than half right, after all. This boasting of American victories is doubtless not only odious, but downright incourteous to our British cousins across the line, and, anyway, I, for one, am heartily against any more war. . Yet, how, prithee, are we ever to stop this murdering of one another at wholesale in the future, if we do not first stop this foolish present hero-worship of great soldiers and marines of the past? Notwithstanding the occasional un-American (?) sentiment expressed, the editorial page of the Review is an able one, the news service creditable and all mechanical features well handled, including the advertisement composition, of which I show a few specimens (exhibits 18, 19, 20 and 21), the last of which is particularly worthy of attention, inasmuch as it is an advertisement to advertisers inserted in the interests of the Review itself. The typography of this specimen is especially pleasing, too, and the wording clever.

Printing

There is no other investment that brings such sure and constant profits as really high grade printing. There is no other method so inexpensive. This has been proven time and again by leading business men the world over. Now is the time to follow in their footsteps—invest in printing—good printing, the well designed, out of the ordinary class with pulling power—that's the kind we do if we have our way. Remember price is not a factor when your printing shows results, gets orders, lands bargains, grabs the dollar.

Your needs—office stationery, cards, booklets, blank books, posters—whatever it may be will suffice to prove the assertion.

PIERCE COUNTY TRIBUNE

how Brother Price features up his county correspondence, of which this particular week he had thirty-six letters, aggregating 344 separate items of news. There is nothing in the world better for a home newspaper than as much of this stuff as the publisher can get — nothing that will so fast and securely build up the local circulation — and personally I have found it a very easy thing to get and keep. The only secret, so far as my personal experience has been, in securing and maintaining a staff of county correspondents is in being prompt and regular with the necessary supply of self-addressed envelopes, writing paper and postage stamps, not to mention the requisite copy of the paper itself. I find that the great trouble with most country editors who claim they have trouble in maintaining a competent staff of correspondents lies in the fact that they are simply negligent in keeping their correspondents supplied with these materials necessary for the work. And, naturally, the gathering and writing of the weekly news is in itself a hard enough task, without the added hardship of having to furnish one's own stamps and stationery, so who can blame a correspondent for quitting, if these essentials are not regularly supplied? Some home publishers pay their correspondents, as possibly Brother Price does, and while I know in this case the laborer is worthy of his hire, paying him isn't absolutely necessary to secure his service, as I have proved by having kept certain correspondents on my staff for twelve long years, with no further compensation than that mentioned above. But, I do not wish to be understood as not strictly in favor of giving the correspondent a just compensation, wherever the publisher feels he can afford it.

NELS JACOBSON

No. 32

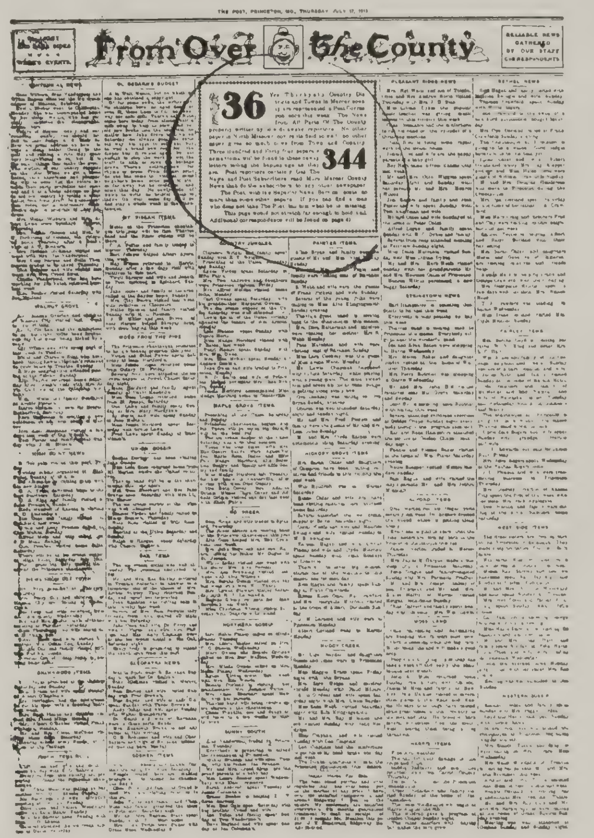
* * *

And now, after several months' silence, here my good old friend, Fred F. Flatt, bobs up again as editor of the Thornton (Iowa) Enterprise. And, by the way, the Enterprise is the first and only paper examined thus far this month which does not have a clean front page. This is a six-column quarto (with ready-printed interior) and the four columns of advertising on the first page look bad. Otherwise I have little complaint to offer. The impression, typography, contents, editorial work, and all features seem to have received careful treatment, resulting in a very decent sort of home newspaper.

I congratulate Brother Flatt on the fact that he is still in the game and doubtless steadily progressing upward.

* * *

Of course, I have had this copy of H. E. Hogue's nifty little Eaton (Colo.) Herald "kicking" around the shop for a good many moons, as I have also had most of the stuff mentioned in this month's installment, but I can't say that I could possibly have enjoyed looking the thing over any more last July, when it was fresh, than I have tonight. It may not be like wine, improving with age, but the mirth-provoking paragraphs on Brother Hogue's own page (which he tells folks, impertinently, that they may read or let alone, as they please), have an effect on the reader that is a good deal like that of old wine.



No. 33

"Improves With Every Issue."

Office of Observer, Morenci, Mich.
October 24, 1913.

National Printer-Journalist, Chicago, Ill.

Your magazine seems to be improving with every issue, and it certainly contains a fund of information for the craft.

Inclosed find check for $4.00, amount of statement.

Very truly,
E. H. AHRENS.

Sixty Years, and Then !

By B. B. Herbert, Editor National Printer-Journalist, Chicago, Ill., at the Sixtieth Anniversary New York State Press Association, Elmira, New York, September 3-5, 1913

THE organization of this State Press Association of New York sixty years ago, is an event worthy of proper remembrance. To come to the beautiful city where the organization was formed, on September 9, 1853, is certainly most appropriate. In the age and continuance of this organization during all these years, is certainly found a distinguished honor to the enterprise of and to the high regard for the calling and its usefulness, held by the worthy members.

There is but one rival in the high honor of precedence in organization, and that is by the editors of the progressive State of Wisconsin, celebrated alike for educational and civic advancement. The early editors of that state came largely from New York and other eastern states by way of Michigan, Ohio and Illinois, in which states they had conducted papers and were drawn together by pioneer or frontier interests, hardship and comradship.

Wisconsin editors celebrated their sixtieth anniversary only the first of last month, so the precedence is only a matter of weeks, and, possibly, the editors there were spurred to quick action, sixty years ago, by the steps being taken toward organization in the old home state.

Another distinction worthy of thought and commemoration on this occasion is the fact, that through three-fourths of the period of this organization's existence, or for forty-five years, this association has been served by the same kindly gentleman in the very responsible position of secretary-treasurer. His zeal has never flagged and his kindliness, thoughtfulness and considerateness, for each and all, have formed a golden cord to bind the members together as one happy family and to girdle the years with friendships and happy memories.

It is certainly the wish of all that he may complete the half century in service, that the membership may be permitted to manifest their love and esteem — only increased by the lapse of years — on the golden anniversary of honorable service, as they were permitted to manifest their friendship on the occasion of the memorable silver anniversary. It is to be hoped the venerable secretary-treasurer may, in the next four years, find an assistant or understudy, on whose shoulders his mantle shall fall with its associations and inspiration.

How great and beneficent in results have been the work and influence of this association in these sixty years only eternity can reveal. The annual conventions have been addressed by the ablest men in the calling, and their words have gone throughout the land. I remember that in 1883, in preparing the annual address to deliver before the Minnesota Editorial Association, I found matter and inspiration in the published proceedings of the New York Press Association of 1879, and quoted words of Whitelaw Reid of the New York Tribune, delivered before this body, in an argument for more thorough preparation and higher qualifications.

Editor Reid had spoken of great newspaper enterprise, and urged for greater ability in writing and for clearer narration with all possible brevity, saying that the time should come when a paper seeking out great events, like sending a Stanley to Africa to find a Livingstone, would send along a Green or a Froude to write the story. The time of the education of journalists through training in schools has already arrived. New York has had its share in this advance, and it was well that a New York editor should furnish a munificent endowment for such a school.

This association has taken a prominent part, during the past quarter of a century, in the National Editorial Association, to its profit and honor, sending able men as delegates, whose words and examples, able papers and discussions have influenced the press of the Nation. This association has furnished, with the one elected this year, three presidents of the National body.

The first two performed their duties with honor, and received, in honest expressions and substantial tokens, highest proofs of esteem and endorsement. From the third National President from the great Empire State of New York, John Clyde Oswald, of the American Printer, still greater things are expected, as is also the hearty support and co-operation of all members of the State Association who know him and his good qualities so well and esteem him so highly. His administration of the National Association for this year should be made the crowning glory of this sixtieth year of this association which he so worthily represents.

His opportunity is great, resting upon the present conditions and progressive demands, to make the National Editorial Association the most efficient agency for the advancement and upholding the professional and business interests of the calling and putting into well directed and permanent action all the means for betterment and improvement and the making more efficient every state organization through plans worked out and put in practice by the representatives of the National body, its officers and members. Every editor of this state should feel it a matter of pride and duty, in loyalty to the State Association, to aid him in every way possible.

When spoken trippingly from the tongue, sixty years does not seem like a great stretch of time. When we consider, however, that these three score years cover one thirty-second part of the entire Christian era, with all the word's changes since its glorious dawn, and then contemplate the discoveries, improvements and advancements within the sixty years, we begin to realize that the meaning of the saying that "time is measured by deeds not years."

Naturally, on this occasion, thoughts are busy with the wondrous advances and changes of the press. Many have joined the ranks, fought a good fight, finished the course and passed to their reward. It would be fitting to call the roll of past officers and members, but they and their words, deeds and worthy examples are enshrined in chastened memories, and a multitude have come forward to take their places.

In 1853, the great State of New York had some two hundred and twenty-seven publications, with a total aggregate circulation only one-fourth greater than is now enjoyed by the excellent illustrated journal of civilization, Leslies', edited by a beloved and honored ex-president of the New York Press Association, John A. Sleicher.

In 1853 there were about 1,713 newspapers in the United States, with an aggregate circulation of 2,211,512. The population of the whole country then, was, in round numbers, thirty-nine million. Since then the population has increased about threefold, counting Island possessions, but newspapers have increased tenfold, and the aggregate circulation very nearly one hundredfold. One daily in New York City claims today an eighth of a million more circulation than was the combined circulation of all the publications of the state in 1853, while there are single publications in the United States that have a circulation equal to that of all the papers of the United States in 1853.

The increase, in size and scope, of newspapers, has been also in proportion to the increase in circulation. From four to eight pages was the limit of possibilities of a newspaper sixty years ago, and now the rule is for papers of from twelve to thirty-two pages, with no limit, under a hundred or more pages, for Sunday or special editions. I frequently receive, at my office, special issues of rural weeklies and dailies running in size from sixty-four to one hundred and twenty-eight pages.

The transformation of the newspaper has been miraculous. From a means of narrating a few of the most important events and for giving lengthy editorial essays or discussions, directing the people as to political or social rights and duties, the newspaper has come to be the storehouse of all knowledge and all events of the whole world every day or every week, with illustrations and portraits to bring the conditions, occasions and the actors therein before the minds of the readers. Instead of largely publishing arguments and opinions, the people are given all the facts without fear or favor from which to draw their own conclusions and form their own opinions.

Every individual, every institution, every industry, every means for man's betterment and information, for the uplift of society and the conservation of the resources and the preservation of the health and well being of the people, is now served through the newspapers, and the good work has only begun.

How has all this that sixty years ago would have been impossible, been brought about? The streams, the forests, the ocean and the air, electricity and numerous inventions of men have been brought into the service of the press. The whole world has been brought together in sympathy and knowledge and made to have an interest in knowing, through the newspapers, of all that happens anywhere on the earth.

I remember, with scarcely less emotion today than was the thrill of heart when a boy in my teens, the publication of the first cablegram that ever passed under the ocean, sent by the indomitable Cyrus W. Field to Queen Victoria: "Glory to God in the Highest, Peace on Earth, Good will to Man." That was long after the formation of the New York State Press Association.

What has not the electric cables meant to the newspapers as well as the telegraph, and later, telephone service, and through the newspapers, to all peoples, until joined through understanding, business and social interests, sympathy and friendship, the time seems hastening when through all these and mutual dependence for all things of life, there will be "Peace on Earth and Good-will Among All Men."

Newsgathering or Associated Press agencies followed speedily upon the means for rapid communication of the news, and mechanical inventions, making possible the printing, speedily, the greatly increased bulk of information, followed as by design or Divine appointment.

In 1853, the very year of the formation of the New York Press Association, a New York man invented the blade to cut papers from the roll in course of printing.

In 1860 Mr. Bullock, of Philadelphia, perfected the web press to print seven thousand papers an hour. Later, Walter Scott, then pressman on the Tribune, in Chicago, further improved the web press with folding machine attachment, to print, fold, count and deliver thirty thousand complete eight-page papers an hour, and then followed combination of presses, improvements in stereotyping and other improvements, until presses turned off one hundred thousand complete papers an hour.

Then flat bed perfecting presses were built for papers in smaller cities, that had formerly had circulations from 500 to 2,000, but suddenly, with the broad increased news service and the new appliances, reached in circulation from 4,000 to 16,000 and 20,000. Requisite speed had been reached in the press room but the composing room could not well meet the demand for the greatly increased amount of matter required, and the linotype machine, doing the work of five compositors, came to meet the demand.

The demand for paper increased, and a lower price, in order to profitably print all that was required, was an absolute necessity. In 1873, when I first commenced publishing a newspaper, I paid twelve cents a pound for print. This price would be prohibitive today. The use of wood pulp was discovered and the paper machines were improved and enlarged so as to turn off a hundredfold the original output, and the paper question, with paper at two cents a pound, was solved.

It would be interesting and profitable, but it is not necessary, to go into details of other inventions and improvements.

The war for the preservation of the Union naturally increased the demand for newspapers and, like all wars, had, as we now realize, a deleterious influence through the creation of a demand for sensationalism in the press. However, the demand for newspapers has been stimulated tenfold since the war by the world's advance in civilization, industries, education and commerce, if not also by the increase of crime, or, at least, its wider publication.

Advertising, or commercial news, has become a great factor in the great enlargement and improvement of the press. Commerce is a great evangelizer along the lines of honest, effective publicity, and to the interest of women in the press as well as to the higher education through schools of journalism and to the truer, more conscientious, honorable, patriotic and more useful plans sought out by earnest workers in such organizations as the New York Press and the National Editorial Association, must we look for the "Then" of newspaper making.

That the calling is to become more remunerative is assured, as it becomes more worthy and serviceable. Special preparation of men for the calling under experienced, noble-minded teachers must instill a higher regard and prove an inspiration for well-equipped workers with full understanding of the ethics and obligations of the profession and an understanding of its just rights as well as its requirements.

Women have become the greatest readers of newspapers, and their good will is of the highest concern to publishers, and it is certainly to be believed that their influence will lead to the greatest purity of the press. The women, with the larger part that they are now accorded in all things educational, social, business and political, have the reform of the press in their hands.

Commercial news, that is more than news to the publisher, as it is a source of greatest revenue, must tell most on the press of the future. Advertisers have of late taken the highest stand for business integrity and purity. The self-interests of advertisers have made them willing students of all that tends to efficiency and permanent benefit. Immorality, deceit or fraud have come to be known as, in the end, unwise and unprofitable, both to advertisers and publishers.

The new gospel of advertising, preached at all conventions of Associated Advertising Clubs, must reach and influence for good all the editorial and news departments.

Then, too, advertisers have become great believers in, patrons and users of art, as well as advocates of purity, honesty, cleanliness and absolute reliability.

"Then" must see greater improvement in writing, greater care in news gathering, greater ability in conservation, wider freedom of views, absolute squareness and fairness with readers, better papers artistically, and better, too, in everything that is of good report, that helps, informs and ennobles.

The field for honest effort, fair co-operation among all worthy associations and worthy publishers will be enlarged. Co-operation is the growing, extending, higher law of trade and of good newspaper making. There may not be more newspapers in proportion to the population or larger in size, but they will be more attractive, more concise, more reliable, more useful in every department, with greater influence for the square deal, for honesty in business, purity in society and individual, for civic righteousness, and good government.

To these ends, as for all measures of wise economy, mutual helpfulness and the improvement of the press in character, professional standing, popular esteem and honest consideration and reliance, should the members of the New York Press Association and the National Editorial and all other associations faithfully work during the next sixty years, "and Then?"

* * *

Maury Democrat Reaches 32nd Year

Messrs. E. C. and Lynch Perry, of Columbia, Tennessee, are among the most popular and enterprising weekly newspaper editors and publishers of the country. They have been frequent attendants upon the conventions of the National Editorial Association, E. C. Perry having served for many years as member of the executive committee. At present they are being congratulated by their numerous newspaper friends over reaching the thirty-second anniversary of their excellent paper, the Maury Democrat, which they have advanced to a high place among the home papers of the country. Among the many kind notices by the members of the State, the Nashville Democrat contains words that ought to be grateful to the hearts of these earnest, kind, gentle, manly, deserving newspaper men:

> The editors and owners, E. C. and Lynch Perry, have, through honest business methods and an abundance of energy, built up the finest country weekly in Tennessee. In no other county is there a weekly paper to compare with it, and there are a number of excellent weeklies in the state. Despite the fact that Ed Perry has been in poor health for years, the Democrat has continued to grow in patronage and influence, and has done so because it deserved it. May the Democrat and its popular owners add many, many years of life and prosperity.

We are glad of the opportunity to join in these congratulations and commendations. The influence of such men and of such a paper is powerful for good inside as well as outside of the calling.

DOINGS OF THE BEN FRANKLIN CLUB AT MADISON, WISCONSIN

On Saturday, September 20, Ed. E. Sheasgreen, manager of the Standard Cost Finding Service Company (Sheasgreen & Turner), of Chicago, gave a stereopticon lecture before the Ben Franklin Club of Madison, Wis., on "The Use of Capital and its Relation to Your Business." In spite of the fact that the night was very stormy, one hundred and fifty attended the lecture, which was held in the auditorium of the public library. Manufacturers of many lines were present, together with building contractors, merchants, bankers, college professors and printers, with many employes. After the subject of the evening had been covered, Mr. Sheasgreen suggested to the audience that if they would care to stay, slides which had to do with the wage question and the "solution" of the same, would be shown. All present remained seated and listened to what proved to be a most interesting lecture in itself. Slides were shown that dealt with the cost of the human machine, how to get that cost and when found, how the knowledge should be applied to "solve the problem." At the close of the lecture over twenty of the audience began asking questions and kept at it until nearly midnight.

Mr. Sheasgreen has been asked to deliver two or three lectures before the University of Wisconsin Political Economy classes, and to also repeat the labor part of the lecture given at the library.

As the Standard Cost Finding Service Company has some heavy work on at Madison, which will necessitate several visits on the part of Mr. Sheasgreen, these lecture engagements will be filled at those times.

The Standard Cost Finding Service Company (Sheasgreen & Turner) of Chicago, has recently signed up several contracts in Wisconsin. It is reported that not only the printers in that state but other manufacturers as well, are becoming very much interested in the question of cost through the work this cost company is doing. The work is in charge of Theodore J. Turner, assistant manager, who has been busy at Hamilton and Cincinnati, Ohio, and other southern points.

J. J. WALSER, DECEASED

On October sixteenth, at his residence in Austin, Illinois, Mr. Jacob Joseph Walser, manager, for a quarter of a century, of the Goss Printing Press Company, passed away. He was widely known throughout the world of newspaper making and printing and very highly esteemed as a business man, and a kindly gentleman, honest and generous in all his dealings.

He was born in Germany but came to this country at an early age, and his business life has been passed in Chicago. He was sixty-five years of age. He is survived by his wife, Mrs. Sarah Walser, and by a daughter, Mrs. Lizzie Oliphant, and a son, Mr. Joseph J. Walser.

The funeral took place from the family residence, 145 Central Avenue, at 2 p. m., Monday, October 18th, under the direction of the Masonic organizations of which he was a member: Austin Lodge No. 850, A. F. and A. M., Siloam Commandery No. 541 K. T. and the Shriners. The burial was in Forest Home Cemetery.

Hermann, Mo., Oct. 22,, 1913.

National Printer-Journalist, Chicago, Ill.

Gentlemen:—We Enclose our check for $2.00 to renew our subscription to your excellent trade journal, which is read in our shop with much interest from editor down to "devil."

Yours truly,
GRAF PRINTING CO.,
Per Theo. Graf.

MORE WORK THROUGH PUBLICITY

Address all samples and communications for this Dept. to Harry Albro' Woodworth, 43 St. Botolph St., Boston, Mass.

EDWARD L. STONE, of Roanoke, Va., who, as an article in the October number showed, was thirty years ago the only printer of the mammoth establishment now known as the Stone Printing and Manufacturing Company, has sent me the following bright letter. As his letterhead shows, Mr. Stone is not only president of this company, but also of the Borderland Coal Company, the Young Men's Investment Company, the E. R. Johnson Coal Mining Company, the Times Investment Company, and the Crystal Spring Drainage Company, which should be an inspiration to the only printer in a plant in a small locality where the true optimist sees Promise:

Harry Albro' Woodworth, 43 St. Botolph St., Boston, Mass.

Dear Sir:—I have just noticed the very nice article in your October number about our House Journal and our company.

You must have a nose for "the only copy," somewhat like the writer has a reputation of having in our plant.

All the folks in the manufacturing departments say that, if a quad sticks up on one sheet in a run of 10,000, that is just the time the writer walks around that press.

Or, if a sheet runs light in color, or, if printed crooked, or anything of that sort, that is just when the writer happens around.

Don't you think that rather a questionable reputation to have? That suggests that one might always be looking for trouble.

With kind regards, I am,

Yours truly,

EDWARD L. STONE.

The Stone Printing and Manufacturing Co., Roanoke, Va.

No, Mr. Stone! I do not think that a questionable reputation for a man such as you to have. You have not been looking for trouble, or you would have found it — to a fuller extent than your omens indicate. You have been looking for Perfection. And though that is infinitely harder to find — and to secure — than trouble, you seem to have come very close to it, as is shown by the work of your printing establishment — and, I trust, your investment companies. Michaelangelo (whose familiars never called him "Mike") is said to have answered a critic who chided him for his care as to detail, said that all his watchfulness and attention to trifles tended to Perfection, "and Perfection is no trifle." And that master of master craftsmen appears to have been as thoroughly "all-around" a man as Mr. Stone.

There is such a thing, of course, as too much attention to detail on the part of a boss. But it is the wrong kind of detail — or rather it is the wrong kind of a boss. Mr. Stone has personally mastered the details of the printing business, at any rate, and he knows enough not to spend all his time on them now he is the chief. Nothing is so likely to create a feeling of unrest and all the don't-care work it inspires than the perpetual nosing-around of a fault-finding boss who simply wishes to show his authority, and who often knows practically nothing of the practical work he is so fond of disturbing. But from the extraordinary career of Mr. Stone, the wonderful history of his concern, the spirit that radiates from the house-organ of the firm, and his letter, I feel sure that his interest in attaining perfection, tempered by his clear understanding of the difficulties it involves, is an inspiration to his employes.

There is a difference between fault-finding for the sake of fault-finding on the part of an employer; careless work because the employe consequently doesn't care; and the help of a keen trained observer in the person of an employer interested in good work who helps the employe at a time when his attention is distracted by many arduous duties, and inspires him to do his level best because the boss both understands and cares.

✣ ✣ ✣

A man should love his work, for that which he loves to do he will do well.

✣ ✣ ✣

A Printer's Newspaper in Blotter Form

The two issues of the Liberty Park Blotter, issued by the Liberty Printing Company, Camden, N. J., are printed on blotting stock of a size to fit into a No. 10 envelope, but contain more matter than any blotters I ever saw. They are, however, very easy to read, so clear is the typography, even though the ink is blue. But because of this color and that of the stock I am unable to show this unique publication, much though I should like to do so. Each copy has four columns of editorials, locals and advertisements. It is a regular newspaper in blotter shape, and the advertisements and locals are by no means confined to announcements of the Liberty Printing Company. Eleven other firms are represented on one of these blotters, in locals and ads cleverly illustrated by well-chosen stock cuts, and even the panels at the side of the heading are utilized for such advertising as "Ask Your Grocer for American Pretzels" and "Particular People Use Lawnton Dairy Milk."

The September issue is largely devoted to political articles and advertisements, one column, however, being reserved for a clever ad of the printers, of which one paragraph is: "We print everything and anything with the exception of Postal Cards, Postage Stamps and Paper Money. You know Uncle Sam is a particular friend of ours and we hate to interfere with his business." The Blotter announces that for public office it "supports the best available timber, whether they be Republicans, Democrats, Reformers or Socialists." Another announcement is that "the Thirteenth Ward Advocate, a new weekly paper, will appear January 3. Warren S. Dressler, of the Blotter, will be the editor and publisher."

This unique publication is so pleasing in all respects that I hope its editor will be so kind as to have a black proof pulled of the next issue, so I can show it to National Printer-Journalist readers.

The Blotter is an insulated live wire. It is a good advertisement for the Liberty Printing Company, for the eleven other firms, and for the political aspirants. And no doubt the other advertisers were glad to pay a good price for their advertising in a medium that could not help being read for its novelty, if for no other reason.

* * *

A good advertisement is generally a combination of various good qualities.

* * *

"More Business and How to Get It"

A house-organ for printers with the title "More Business, and How to Get It" should appeal to this department, whose conductor tries ever to iterate that the printer, in seeking More Work Through Publicity for himself, cannot do anything more in keeping with the business spirit of the age than to show that his object is to help his customers to get More Business. The title is that used by William J. Ellis, editor, printer, publisher, for the new house-organ of "Bucks County's Big Four" — the Delaware Valley Advance, Hulmeville, Pa., the Morrisville Monitor, the Langhorne Leader, and the Yardley Review, of which he sends me the initial number. The reading matter of the publication is bright and interesting, and the articles, "An Ideal Community," with its inspiring praise of Bucks county, "Where Our Papers Circulate," and "Printing from New Type," are especially well written. One of the new purchases mentioned in the last article is that of two sizes of the Caslon family. Are two sizes all you have of this family? I ask this because this paper, so good in many typographical respects, has a few faults that indicate there is a lack of series in the office that produced it, or else that the artistic possibilities of the series idea are not fully appreciated by the compositor. The sub-title, "And How to Get It," is, for instance, not as harmonious with the line "More Business" as it should be. Still more out of keeping with strict typographic harmony and the proper title-idea is the composition at the top, in the first right-hand column on the second page. Here "More Business" is in Litho Roman, yet "And How to Get It" is in 8-point Gothic caps. Then there is a short line, "House Organ of," in 8-point Gothic caps, caps and lower-case, and "Bucks County's Big Four" papers in a line and a quarter of 8-point Gothic caps. This makes something of a jumble. Would it not have been an effective way of emphasizing the fact that new Caslon type had been bought to have used this fine heading type in the headings, and stating this in the article? Possibly, however, the two sizes were not heading sizes; and the Gothic looks very neat for headings, being, however, somewhat too suggestive of "boiler plate." There are many more forceful heading-faces, though. And where 8-point Gothic is used for headings to 8-point Roman it is not well to employ 8-point Gothic caps to "bring out" some striking statement, or to display the names of the papers advertised and that of the house-organ. Here this is done both when there are double-heads (caps, and then caps and lower-case), and single heads of caps and lower-case. It is much better to obtain the emphasis by using caps of the Roman, which is done in some cases, this, however, being another departure from uniformity. In the headings, too, periods are both used and omitted.

I am mentioning these faults because they are very common ones where machine composition is used for both heads and text, and somehow I have neglected to call attention to them before. Moreover, where a house-organ advertises printing as well as newspapers, it is well to take more pains to have the production typographically faultless.

I like this house-organ very much; it is a good advertisement, and it needs but a little attention to details to make it a better. Put me on your mailing list. I won't be so critical next time. I have worked with men named Ellis, and I know I won't need to be .

* * *

An advertiser should always keep probability in view.

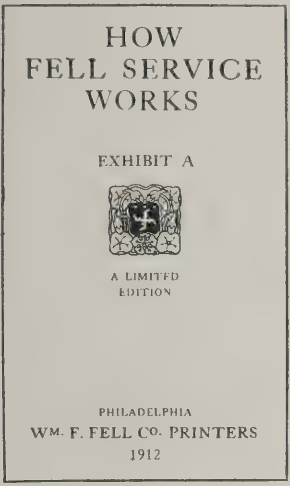
A Booklet That Is a Poem. What Kind? Lyric

An eight-page booklet, rather smaller than most booklets, on buff-tinted dull-finish stock, in black and orange, without cover, and held together simply by a light cord a third of the way from the top, makes, with this chaste typography on the outside page (1a), such an appeal to the lover of the beautiful, who is each of us, that it will get more attention than many an elaborate and highly-pretentious product of the printers' art. This booklet is issued by William F. Fell Company, of Philadelphia. The first page has this panel (1a) with broad margins at the left and bottom. The title, the center of the ornamentation, and the line, "Wm. F. Fell Co., Printers," are orange; the remainder is black. The second page, in orange and brown, shows what is meant by "Exhibit A" — a Limited Edition done by the Fell Service Bureau of "The Voice of the Garden," by Abram Linwood Urban. The third page has nothing but the introductory line of caps, "As a Prospect" — introductory to the article on pages 4 and 5 (1b and c), in which but the side heads and title are orange. One advertising point about this booklet is that the style is that of Exhibit A, even to the color scheme.



HOW
FELL SERVICE
WORKS

EXHIBIT A

A LIMITED
EDITION

PHILADELPHIA
WM. F. FELL CO. PRINTERS

1a

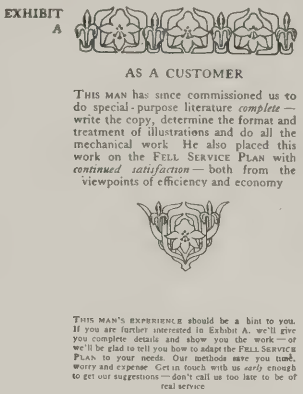


EXHIBIT
A

AS A CUSTOMER

This man has since commissioned us to do special-purpose literature *complete* — write the copy, determine the format and treatment of illustrations and do all the mechanical work He also placed this work on the Fell Service Plan with *continued satisfaction* — both from the viewpoints of efficiency and economy

This man's experience should be a hint to you. If you are further interested in Exhibit A. we'll give you complete details and show you the work — or we'll be glad to tell you how to adapt the Fell Service Plan to your needs. Our methods save you time, worry and expense Get in touch with us *early* enough to get our suggestions — don't call us too late to be of real service

1d

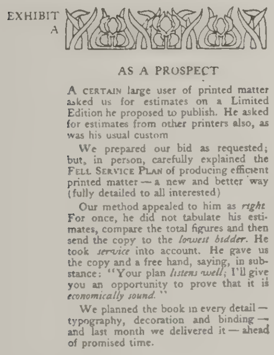


EXHIBIT
A

AS A PROSPECT

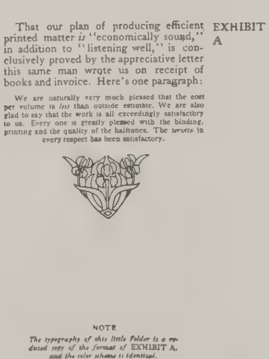
A certain large user of printed matter asked us for estimates on a Limited Edition he proposed to publish. He asked for estimates from other printers also, as was his usual custom

We prepared our bid as requested; but, in person, carefully explained the Fell Service Plan of producing efficient printed matter — a new and better way (fully detailed to all interested)

Our method appealed to him as *right* For once, he did not tabulate his estimates, compare the total figures and then send the copy to the *lowest bidder*. He took *service* into account. He gave us the copy and a free hand, saying, in substance: "Your plan *listens well*; I'll give you an opportunity to prove that it is *economically sound.*"

We planned the book in every detail — typography, decoration and binding — and last month we delivered it — ahead of promised time.

1b



That our plan of producing efficient printed matter *is* "economically sound," in addition to "listening well," is conclusively proved by the appreciative letter this same man wrote us on receipt of books and invoice. Here's one paragraph:

We are naturally very much pleased that the cost per volume is *less* than outside estimate. We are also glad to say that the work is all exceedingly satisfactory to us. Every one is greatly pleased with the binding, printing and the quality of the halftones. The *service* in every respect has been satisfactory.

NOTE
The typography of this little Folder is a reduced copy of the format of EXHIBIT A, *and the color scheme is identical.*

1c

The sixth page is devoted to the opinions of two authorities on the edition de luxe. Henry L. Johnson, editor of the Graphic Art, says that the illustrations give one of the richest effects on dull-finished paper that he has ever seen.

✣ ✣ ✣

Don't use too many arguments in one advertisement.

✣ ✣ ✣

Harry Albro' Woodworth, 43 St. Botolph St., Boston, Mass.

Dear Sir:—Your kind letter just received and contents noted. Have sent plates to N. P.-J. Also stamps for return of same. As these plates are made with two pages to each, I have sent the whole 12 and they are at liberty to saw them apart.

Am sending under separate cover copy of the original paper of that date. You will note that we fold the two sections separately, but in order to get a saddleback bind on the miniature we inserted the second section in the center of the first section.

I am sending you the copy of the original, as some of the editors at the convention looked as though they doubted me when I said it was an exact replica of that issue — appeared to think I had shoved in a few extra sheets. We run from 16 to 24 pages — just as the ads call for. We do not often reach 24 and only in the dull months get down to 12 — usually 18 or 20 pages.

As to the cards you mention, the miniature Herald was my principal cards; the other simply a side-issue for fun. I also had a few for my wife which I had to give out myself.

But for the short time in which we had to work on the job, I would have printed my name and address in red, as we did the copies we mailed and distributed after I returned home, a copy of which and the envelope used I am also sending you.

Thanking you for courtesies received in the past and the coming one,

Yours very truly,
H. E. HOGUE.

EATON, COLORADO

The Readers of My Paper Don't Care if I Never Get Home

2a

For some reason the card I alluded to in my write-up was not reproduced, though I sent it in, and alluded to it in my article. Here it is (2a), as Mr. Hogue sent me another copy, and also a tastefully printed card of Mrs. Howard Eugene Hogue, with the following words in small type: "The power behind the editor of the Eaton Herald."

✣ ✣ ✣

A sale that causes the loss of a friend is usually an unprofitable transaction to the seller as well as to the friend.

✣ ✣ ✣

From Stutes, of Spokane

From the Stutes Printing Concern, of Spokane, Wash., comes a number of printing conceits of the ever-active brain of our old friend Stutes. The most elaborate and the most strikingly original of this lot are unreproducible. One is a folder of which the back, all but a very elaborate embossed title panel, with the words "Art Service for You," is built up with ornaments and fancy rules. Two larger panels respectively constitute the most of the two argument pages of the folder, and these have as a background the ornament and rule design, which extends to the flap. Now you know all about it. If you do not, remember that a simple reproduction — a picture of the job — would convey the idea as I could not if I wrote a column about the production, which is, after all, original only in the selection of material. But how much that is, sometimes! The best originality does not mean the mere doing of something as nobody else has done it before — sometimes this is mere craziness. It is the doing what others have done, better — and in the work of an artist-printer, what a chance he has for originality even in a simple selection of type-forms. The face shown in the jobs 3a, b, and c, is one that the Inland Type Foundry have manufactured for some time, but now one thinks of Stutes when he sees such a job as those here shown. But the simple selection is not the only explanation in this case. There is other simplicity — that of genius. Take 3a — of course it will look like a mourning card in the reproduction, but the border is a beautiful green; think warmly in green when you look at it. Is not there real art in the use of the second size of time as is done here? — and yet, how simple!

If it were as easy to follow good advice as to give it, there would be no need of jails and reformatories.

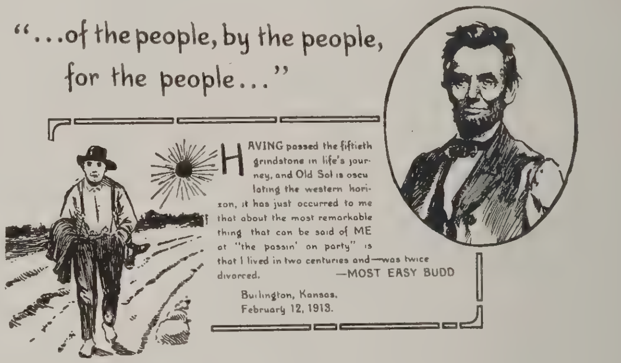
Budd and Abe

Mr. H. A. Woodworth:—I read the "fairy story" in the July N. P.-J. and wish to thank you. I sure would like to meet you some time but that will probably never be my pleasure.

Very respectfully,
MOST EASY BUDD.

A fairy story, Budd? Not on your continuous life. Just read Sir Oliver Lodge's address as president of the British Association for the Advancement of Science, delivered a few weeks ago. I'll meet you here or hereafter — mayhap at Fiddler's Green or the delightful Land of Aise — anywhere there's a newspaper or a printing office.

Here is one of the most "only original" cards I ever saw — birthday card of two honest men, sent out on February 12. Red is the head (not of Budd, but of the card), and the sun. And I hope it will be reproduced so that it can be read. A man that "lived in two centuries and — was twice divorced" — should there be a hereafter for him? There is a St. Peter story about such a case — but I will not repeat it. Here's hoping that at any rate I can meet Budd, either in Burlington or Boston.



"...of the people, by the people, for the people..."

HAVING passed the fiftieth grindstone in life's journey, and Old Sol is osculating the western horizon, it has just occurred to me that about the most remarkable thing that can be said of ME at "the passin' on party" is that I lived in two centuries and—was twice divorced. —MOST EASY BUDD

Burlington, Kansas.
February 12, 1913.

✣ ✣ ✣

It would be as reasonable to undertake to construct a house with no materials but one brick as it is to expect to build up a big business with one advertisement.

✣ ✣ ✣

Extry! Sauer-Kraut Edisheen!

I have a museum of the exceptional, the odd, the bizarre, the extraordinary, the unconventional, the bughouse and the rare in journalism, and into a reverent niche of it must go the special Sauer-Kraut Day Edition of the Inter-County Journal, of Ackley, Iowa, of four different years. Sauer-Kraut Day is in Ackley of all the year the maddest, merriest day — and has apparently been shifted from the last Thursday in September to the last Thursday in August — or for all I can learn, it may begin on the last Thursday in August and keep up till the last Thursday in September — and then may be extended — like wienerwurst — farther yet.

A minister told me that in a year when kale was a rare article (the vegetable kale, that is) he asked the head of a family in Lunenberg, Nova Scotia's German county, if he had much sauer-kraut for the winter. "Very leetle," was the sorrowful reply, "only sefen parrels for seekness." But if we are to believe everything we read in the extra number of the Inter-County Journal, this would not last a Hardin County family, well or sick, through the day.

The headlines, some of which are red, are as startling as the yellowest thrillers — but it was, for instance, crickets that had crawled into a barrel to eat the remains of kraut that were "the twenty-seven burned to death" in the "holocaust," as the yearly bonfire is called. Of course, there are want ads such as "Wanted — Immediately or quicker — five carloads of dogs," supposed to be inserted by the Weiner Committee. But the paid ads are many; and this paper of delightful holiday foolery, which was presumably sold to visitors and townsmen, is evidently a very profitable investment.

There are many editorials, poems, stories, locals, and articles, most of which have to do with the state of the kraut krop.

There is, of course, a program of the day's events that should cause digestion to wait on appetite, judging from these items: "2:00 p. m. Get greased pig on gallop. $1 and goose. Free for all" and "Catching greased pig. Purse, pig."

There is an editorial wail concerning the "counterfeit Sauer-Kraut Days" that are being put on by two other towns in the state. Doubtless the sauerkraut edition will likewise be imitated. It should certainly serve as a hint for publishers who desire to make some extra money on other festivities, and to interest out-of-town folk in their papers and their job offices.

Says an ad of the Journal: "It is It around here." And the revised version of an immortal thought is as follows, with the exception of the elimination of one of the "o"s from the word that is four times used: "He who loses his purse loses trash, but he who loses his good name loses about all he can't get back by advertising in the Journal."

* * *

If you are not enthusiastic about your business, you are not likely to write a good advertisement concerning it. Neither is any ad writer you may employ.

* * *

BUSINESS NOTES

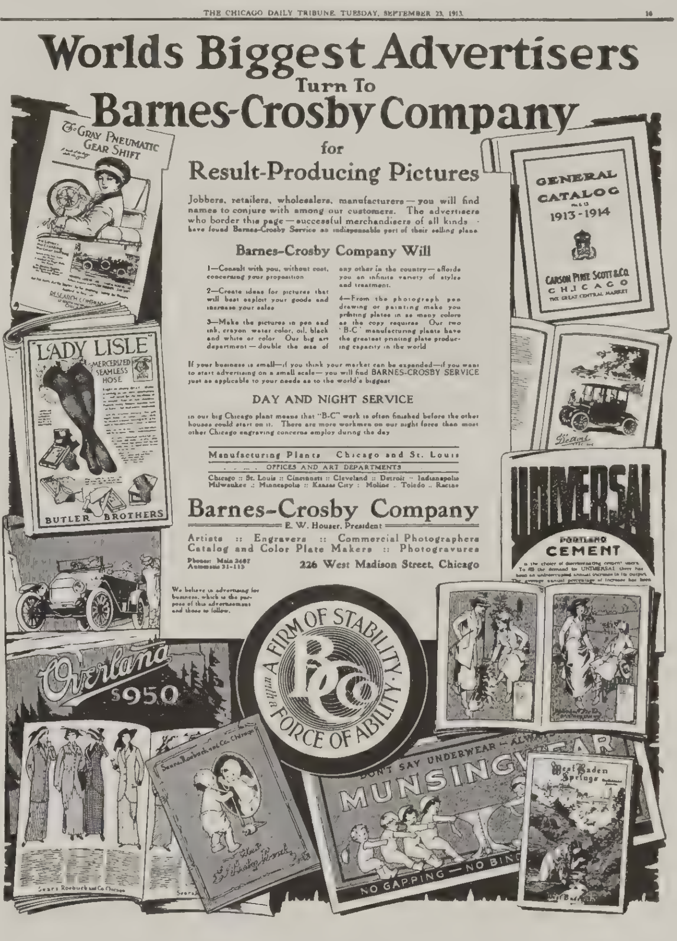
Joseph Hays Promotion

Mr. Joseph Hays, who has been in charge of the western territory of the Lanston Monotype Machine Company, has received a well merited promotion. Mr. Hays has been made assistant to the president, and will hereafter devote his time to special work. His duties will, however, take him frequently into the western territory, where he will have an opportunity of meeting his old friends. Messrs. Richard Beresford and James H. Sweeney, who have in the past acted as assistants to Mr. Hays, have been promoted and placed in charge of the western territory.

Barnes-Crosby Ad in Chicago Tribune

The full page advertisements of the Barnes-Crosby Company that have been appearing in a series in the Chicago Daily Tribune are educative as well as effective. These advertisements show "how", and the "how" to do things is the great need of all people, of business men as well as of farmers.

The how to advertise is one of the great problems of this age of salesmanship through attractive, informing and convincing publicity. It is the great question of modern merchandising, whether it be the selling of dry goods, groceries, printing or machinery, of education in the schools or of advertising itself, the chief product or staple of newspapers and magazines and, as to matter, construction and illustration, of publicity experts, illustrators and engravers.



THE CHICAGO DAILY TRIBUNE. TUESDAY, SEPTEMBER 23, 1913. 16

Worlds Biggest Advertisers
Turn To
Barnes-Crosby Company
for
Result-Producing Pictures

Jobbers, retailers, wholesalers, manufacturers — you will find names to conjure with among our customers. The advertisers who border this page — successful merchandisers of all kinds — have found Barnes-Crosby Service an indispensable part of their selling plans.

Barnes-Crosby Company Will

1—Consult with you, without cost, concerning your proposition

2—Create ideas for pictures that will best exploit your goods and increase your sales

3—Make the pictures in pen and ink, crayon water color, oil, black and white or color. Our big art department — double the size of any other in the country — affords you an infinite variety of styles and treatment.

4—From the photograph pen drawing or painting make you printing plates in as many colors as the copy requires. Our two "B-C" manufacturing plants have the greatest printing plate producing capacity in the world

If your business is small—if you think your market can be expanded—if you want to start advertising on a small scale— you will find BARNES-CROSBY SERVICE just as applicable to your needs as to the world's biggest

DAY AND NIGHT SERVICE

in our big Chicago plant means that "B-C" work is often finished before the other houses could start on it. There are more workmen on our night force than most other Chicago engraving concerns employ during the day

We believe in advertising for business, which is the purpose of this advertisement and those to follow.

The advertisement of September 23 — reproduced herewith from the great newspaper page of seventeen inches in width to our cut of three inches — is an illustration in point. The advertisement is enforced by that powerful influence, the example of the "World's Biggest Advertisers." The work is exhibited and the ability to design, construct and illustrate clearly shown, while the text tells the story of the resources, the facilities, the reasons and the desire to serve, with an assurance of promptness and effectiveness.

If the small illustration does not sufficiently portray the points mentioned, get the Chicago Tribune and examine for yourself. It is the greatest daily in the world, is used as text book in the great School of Journalism of the University of Wisconsin and deserves study except, in our way of thinking, as to the too great extent of the continued stories of Chicago's crimes and criminals.

Recent Installation of Scott Multi-Unit Presses

The Scott "Multi-Unit" Newspaper Printing Press has certainly won its way into the hearts of the publishers. Recently they installed one in the office of the Providence, (Rhode Island) Journal, and in ten (10) days from the time the press was started up they received a check in payment for same. The latest installation of Scott Multi-Unit Presses was at the Montreal Daily Mail, the new paper recently started at that city. They have been running the machine a few days, and are so well pleased with the running of it that they have accepted and paid for same. Someone has said that money talks louder than words, and the fact that these two enterprising newspapers have bought and paid for these presses within such a short time after installation is in itself a very good recommendation for the SCOTT "MULTI-UNIT" PRESS.

* * *

H. C. Hansen Type Foundrv in Chicago

As has already been noted, the H. C. Hansen type foundry has established, with the William Thomson Printers' Machinery Company, 426 South Dearborn Street, a complete Chicago branch. In other words, the William Thomson Printers' Machinery Company, at the above named address, have become the selling agent for Chicago and this territory. An expert stock and order filler — a man having years of experience — has been sent from Boston, and the trade is assured the highest class of service.

They carry a complete line of Hansen types, borders, rules, etc., in stock ready for immediate delivery. All orders will be fully and promptly filled as from the home offices. The Puritan Type Series of this foundry, with their gray-tone brass rule border, is shown on page 764 of this issue, and the home of the office in Boston is portrayed in half-tone cut herewith.

This foundry, as will be noted by an examination of the page advertisement, now has branches in Chicago, St. Paul, Grand Rapids and New York City.

Boston Office H. C. Hansen Type Foundry

Standard High-Speed Automatic

There is profit in studying advertisements and keeping up with all the latest machines and improvements. The Wood & Nathan Company have an important message this month to printers who are so located as to demand a press with a wide range of printing possibilities, that can handle all manner of jobs, large and small, from "a card to a catalog, a wedding announcement to 5,000 hand bills"; both short and long runs from 500 to 50,000, economically and speedily. The claim is rightly made that printers in the smaller sized cities, away from electrotype plants, type foundries and other sources of supply, have greater need of the very latest and most versatile equipment than have those in the larger cities where deficient equipments may be quickly remedied or where the equipments of others may be utilized through friendly arrangements, to help out in times of need.

It is too expensive for the printers in the smaller cities to have a large variety of machinery to meet all possible demands in an emergency, hence there is economy in buying presses or machines that will do the widest variety of work.

It is claimed for the Standard High Speed Automatic Press that it can do, profitably, a wider range of work than has heretofore been possible on any single style of press.

* * *

"The Miehle Printing Press and Manufacturing Company of Chicago announces that Mr. Robert Miehle has again associated himself with the company, under an arrangement which for a long term of years insures to the company the benefit of Mr. Miehle's experience, inventions, and advice in connection with the development of its printing machinery."

Goss Display at Toledo Exposition

Last month we gave an illustration of the interesting exhibit of the Goss Printing Press Company at the Toledo Exposition that in itself furnished a pretty full description, but we now add the following, which will still be of interest to readers of the National Printer-Journalist.

The Goss company had a very prominent place on the platform, some five feet higher than the main floor, thirty feet by thirty feet in extent. A Goss Comet Flat Bed Web Perfecting Press was shown in the center in operation. The press was used to print the official Exposition daily, entitled "The Toledo Expo News," which had a guaranteed circulation of 10,000 daily. The paper varied in size from six to eight pages, according to the amount of space required by the advertising.

The background of the Goss exhibit consisted of a map of several of the Central States. On each side of this map there was a large list of Comet users. One of the attractive features of this background was the small pictures which showed the exact location where Comet presses are installed, in the different towns of these states. This background effect answered many questions in itself as to where Comet presses are in use and who the users are.

The exhibit was in charge of the Cox brothers, Joseph L. and Paul F., the veteran flat bed press builders, who have spent the greater part of their lives perfecting newspaper presses of the flat bed type.

The exhibit press was sold the first day of the show to Berner Bros., of Antigo, Wis.

✣ ✣ ✣

Hamilton Exhibit at Toledo Convention

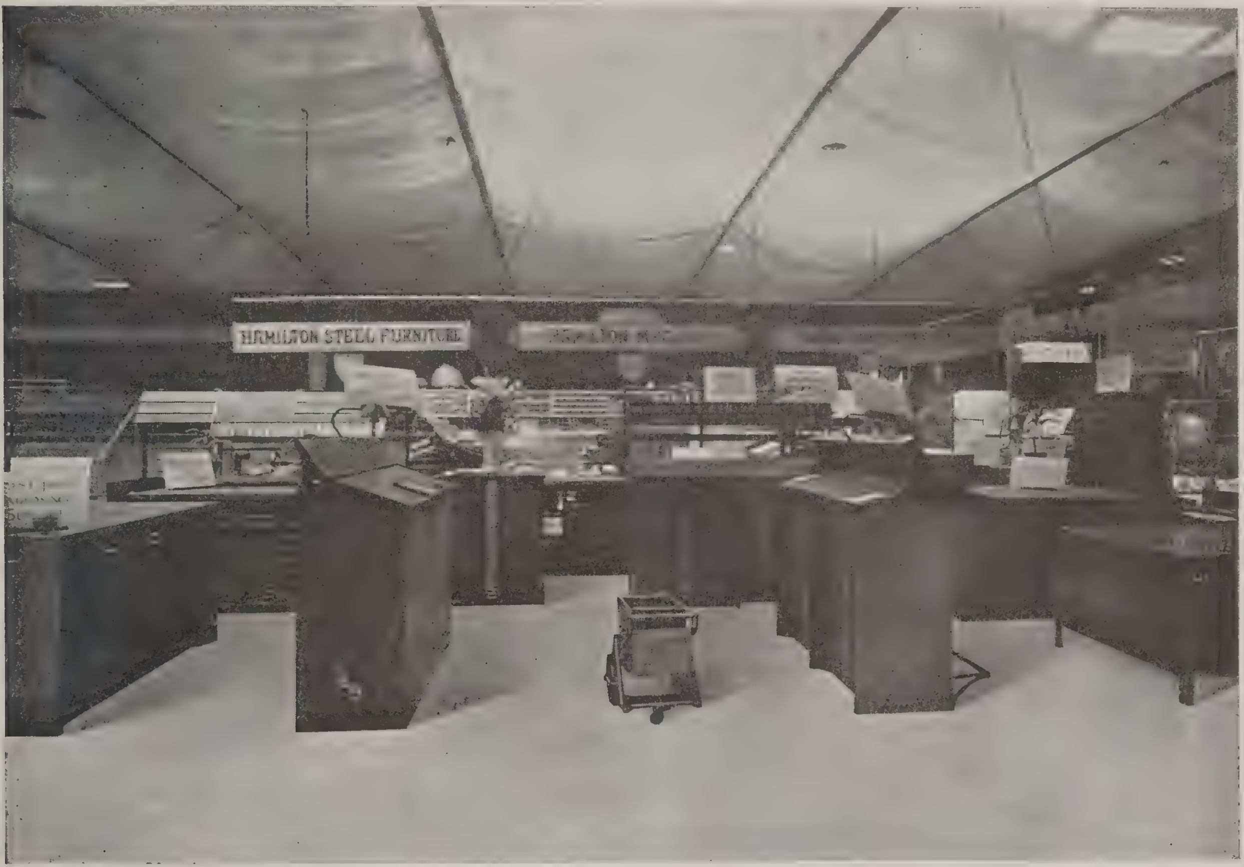
The exhibit of the Hamilton Manufacturing Company at the Ben Franklin convention in Toledo, recently, met with considerable interest and attention on the part of printers who attended the convention. This was really the first representative display of Hamilton Steel Furniture ever given publicly, and it naturally presented many interesting new features in the way of composing room equipment for space and time-saving, as well as the general improvement of the composing room.

Every article shown is worthy of a detailed description here, but unfortunately space does not permit.

One very clever new piece was a sectional sort cabinet built like a sectional bookcase so sections can be added from time to time as needed.

Another very interesting piece was the Bullen sectional chase rack, which, in addition to being probably the most compact chase rack ever produced, has the further advantage of safeguarding the forms when being taken from or put into the rack by means of an adjustable top guide which prevents the chase from falling over against another chase in the rack and thus damaging its face.

A new cabinet known as the ad-man's cabinet, had several new features of especial interest, one being a rack suspended immediately below the lead cases filled with small boxes for holding brass and copper thin spaces, thin leads, spaces and quads, etc. Another feature of this cabinet was a swinging tray immediately below the working surface for holding quarter cases filled with rule.



One novel and decidedly practical feature was found in one of the long make-up tables, where the steel letterboards are operated on steel rollers, making it possible to handle them with extreme ease. As an evidence of the ease with which the boards operate, a man weighing 180 pounds stood on one of the boards while it was pushed back and forth, in and out of the frame.

Most of the articles shown at the Toledo exhibit are described in a special booklet issued by the Hamilton Manufacturing Company for distribution at the Toledo show. The booklet is entitled "Where Quality Counts," and those not fortunate enough to secure a copy at Toledo, we are informed, can secure one from the Hamilton Manufacturing Company on request.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order

A COLD SIMPLEX STEREOTYPING OUTFIT, $19 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage, for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

THE VAN BIBBER ROLLER CO., Sixth and Vine St., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

The Graphic Arts and Crafts Year Book

THE AMERICAN ANNUAL REVIEW OF THE PRINTING AND ALLIED INDUSTRIES

Volume VI, now in press, will contain a comprehensive exposition of the year's accomplishments in the graphic arts, and classified displays showing constructive features in the different fields of advertising.

SECTION I. *General Review.* Seventeen interesting articles reviewing the year's progress.

SECTION II. *Advertising Literature.* Articles by 26 well-known advertising men, each a leader in his line.

SECTION III. *Engraving and Plate Making.* Instructive contributions by Edward Epstean, Walker Engraving Co. New York, editor, and nine associate editors. 64 pages of specimens in black and in colors.

SECTION IV. *Typography.* Helpful text with suggestions by A. V. FitzGerald, Hamilton, Ohio, and eleven other typographical experts.

SECTION V. *Press.* Eight authoritative discussions of pressroom difficulties by W. S. Carroll, American Bank Note Co. New York, and associate contributors.

SECTION VI. *Paper and Supplies.* Articles of interest by C. D. Jacobs, Wm. B. Wheelwright and others.

SECTION VII. *Binding.* An unusually complete resume of existing conditions in the binding industry with a forecast of the future by E. W. Palmer, J. F. Tapley Co. New York. Superbly illustrated.

SECTION VIII. *Efficiency.* Modern practices in plant and office efficiency by E. B. Passano, Waverly Press, Baltimore, and five other authorities.

350 pages of terse technical text by nearly 100 contributors. More than 200 pages of exhibits by the country's leading printers and engravers.

Volume VI will contain about 600 pages, bound in half-leather, delivered carrier charges prepaid, $5.00.

WRITE FOR A PROSPECTUS OF VOLUME VI.

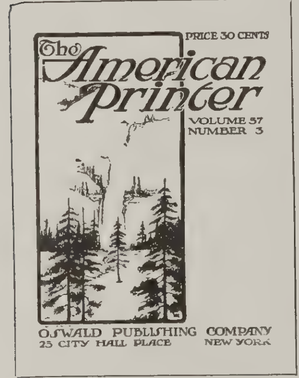
Are You Interested in Cost-Finding?



If so, you should not miss reading the series of articles on the subject now appearing in

THE AMERICAN PRINTER, a Magazine of Printing

A writer who has the facility of making things plain has especially prepared a complete explanation of the mysteries of cost-finding. The November number also has an extensive article on the preliminary preparation of printed matter. The winning answers in the Contest in Printshop Knowledge are now appearing in instalments in The American Printer; don't miss them. It takes a whole page in each number to list the titles to the numerous interesting and practical articles. Besides there are lots of illustrations. Send thirty cents for a sample copy of the November number.

Printing ◆ Advertising ◆ Engraving

An Exposition of Printed and Lithographed Productions

By Harry A. Cochrane

IT is agreed that the year 1913 saw in New York the greatest printing machinery exposition ever held on the Western World. There were many doubters when the idea was first proposed, especially when it was noted that it was scaled on such comprehensive lines. Already sufficient contracts have been signed to make certain that the 1914 Exposition will be greater in every way than that of 1913.

It has been my aim and ambition from the time I took up the matter of advertising the great printing industry and its products to this country to develop something more than a printing machinery exposition. I want in addition a printing exposition—one which will show materials, processes and the latest in the completed product—an exposition to which the *buyers* of printing and lithographing will come each year, as well as the printers and publishers of the country.

The scope of the 1914 Exposition will therefore be greatly extended. The exhibition of printing will be complete and the showings will be displayed by printers and lithographers located in all sections of the country. At a cost which only covers my expense, provision has been made for printers and lithographers to show their product.

Awards of merit will be granted to those printing and lithographing establishments whose entries secure the favorable decision of a competent Jury of Awards. This Jury has been selected with great care and the members of it carry weight in the trade.

In this day of advertising these certificates of merit should be of immense value to the winners. The opportunity to attract *new customers* through the display of a house's printing is also apparent.

BESIDE THE SHOWING OF PRINTING AND LITHOGRAPHY, THERE WILL BE A LARGE SHOWING BY PAPER MANUFACTURERS AND DISTRIBUTORS OF THEIR LINES.

THE ADVERTISING CLUBS AND AGENCIES WILL ALSO BE INVITED TO PARTICIPATE IN THIS COMING AFFAIR.

Printers, and lithographers and paper manufacturers and distributors are now reserving spaces, the plan meeting with universal approval.

Information as to sizes of spaces, location and the cost can be secured by writing to the National Printing, Publishing, Lithographing, Paper Advertising and Allied Trades Exposition, Fifth Avenue Building, (B'way and 23d St.) New York City. Harry A. Cochrane, President. Tel. Gramercy 724.

The Sun Never Sets on Our 40 Cent Ink. It is used all over the world. It has the best value for the price of any black ink on the market. It is a 75c ink trimmed down to meet popular demands. All its value is there and the printer gets it. Our 25c magazine black is built on the same lines, has the same fine working qualities. We have cover inks that cover. White that is white. Specify 1061 Red for the finest brilliant red ink made. Black Diamond News, cleanest news on the market.

Selling Engravings to the Nation

Because of the detail and the individual attention involved in the production of illustrations and engravings it was long supposed that no engraving concern could satisfy more than a local demand.

Back in 1902 ***Barnes-Crosby Company*** took the first step in shattering this fallacy by installing a branch office at Detroit. Since that time not a year has passed that has not seen a new B.-C. office established.

Today, with two immense manufacturing plants located in Chicago and St. Louis, eleven permanent branch offices and a force of traveling salesmen, Barnes-Crosby Company stands as the highest type of business organization.

Our experience in meeting the varying needs of so many customers is part of the intrinsic value you secure in dealing with us. The above map will help you to locate our nearest branch office.

The Battle is on

Listen to this!

"How do you expect us to print with this axle grease?"

"That isn't axle grease. It is good printing ink made to print on ***printable*** paper.

(Notice the log. It represents anticipated profits.)

"The paper is all right. The trouble is you are trying to run the job too fast and your ink is poor. You should use special ink to meet the conditions, etc., etc."

(See the old man working. Soon he will be finished.)

You have heard of wrangles like this where the pressman, ink man, paper man and printing salesman blamed each other for something that went wrong, and all positive their argument was right. The disastrous part of it is that while this is going on, Father Time gets in his work; profit figured on the job vanishes, and the printer is very fortunate if he does not eventually have to dig down into his own jeans after the order is completed.

No printer ever foresees trouble on a printing order and puts in his figures accordingly. If he did, his competitors would send him floral donations. It takes greater ability to print on certain book papers, especially coated papers, than on other kinds, and just so it takes long years of experience and specialized study, say nothing of equipment and mill location, to produce book papers that are *right.*

Printers who are buying book papers of us have found that they have greater success with them than with others. The average quality of our product is more uniform. Our papers print better under average conditions and therefore are an important element in conducting a printing plant for profit.

Following is the list of "Butler Brands" of Book Papers:

COATED BOOK PAPERS

"Warren's" Cameo Plate Coated
"Warren's" Superfine Coated
"Warren's" Lustro Coated
Snowflake Enameled
"Warren's" Cumberland Coated
Litho. Coated
Coated Label
Duchess Colored Enameled

SUPER-CALENDERED BOOK PAPERS

"Warren's" Printone
Extra S. & S. C. Lithograph
Casco Plate Super
"Warren's" Cumberland S. & S. C.
"B. M." S. & S. C.
Bengal S. & S. C.
Colored S. & S. C.

MACHINE AND SPECIAL FINISH BOOK PAPERS

"Warren's" Artogravure
Dresden Pamphlet
Coventry Antique Finish Laid
Classic Egg Shell
Exmoor Laid
Star English Finish
"Warren's" Cumberland Machine Finish
Wawasa Machine Finish
Special Machine Finish
Novel Tint
Music

You have probably heard of most if not all of these papers, but have you ever printed on any of them? If not, you owe it to yourself to learn what the advantages are. The products of S. D. Warren & Co. are known throughout the bookpaper world for their intrinsic merit. They save time and expense in the press room because they are made to meet the average conditions in the average plant and they are ***printworthy*** if ever paper was.

Do yourself the favor of getting our samples and prices. Let us demonstrate that you will increase your profits and make stanch friends by using "Butler Brands."

HAMILTON COMPOSING-ROOM FURNITURE

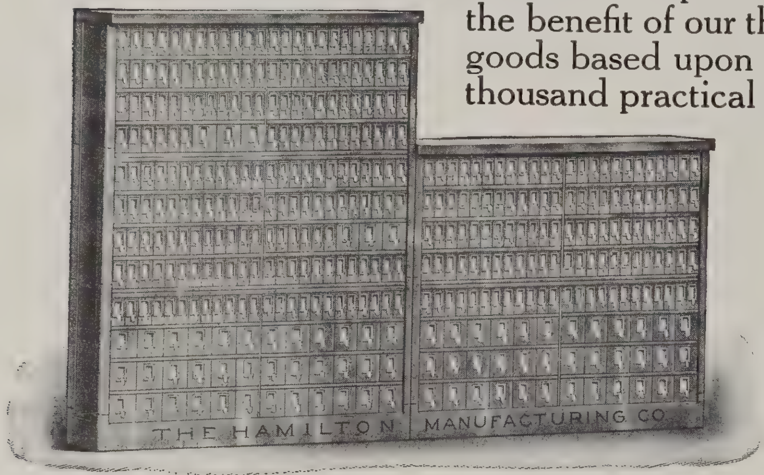
IN ALL STEEL OR WOOD CONSTRUCTION

Every printer knows that material is cheaper than labor. With material there is only the first cost involved; the labor cost is continuous. The successful printer is the one that not only knows this but is ready to put his knowledge to practical use.

We continually strive to reduce the cost of manufacture in our own plant and to design and produce furniture for printers that will reduce costs of printing through improved efficiency and a saving in floor space.

When the printer buys Hamilton furniture he gets the benefit of our thirty years' experience and a line of goods based upon the requirements of more than fifty thousand practical working printers. These goods are made of wood or pressed steel construction, whichever customer prefers.

Many of these improved efficiency articles of furniture for the editorial, composing and press room departments are being shown in our advertisements. Watch this space for more money-making ideas.



Hamilton Steel Unit Sort Cabinet No. 461

Send for new catalogue, showing new unit system for newspaper equipments in steel construction. This handsome catalogue has just come from the press.

This Cabinet provides a means for storing sorts in a convenient and systematic way. Additional units can be added from time to time as required. It is a durable, sanitary Cabinet occupying little space. It can be placed against a wall or arranged double-faced on the floor, with units placed back to back. The removable unit drawers are in two sizes, holding approximately 2 lbs. 10 oz. and 6 lbs. 3 oz. of type. Each fitted with a label-holder pull. Send for complete descriptive circular and ask the supply man for information.

This sectional Sort Cabinet can be supplied in wood on order.

RECENT INSTALLATIONS

Examiner, Los Angeles.— Steel composing-room outfit; four carloads. Sold through the American Type Founders Co., Los Angeles branch.

The *Herald,* Calgary, Alberta, Canada.— Composing-room outfit, wood and steel construction. Sold through Miller & Richard, Winnipeg.

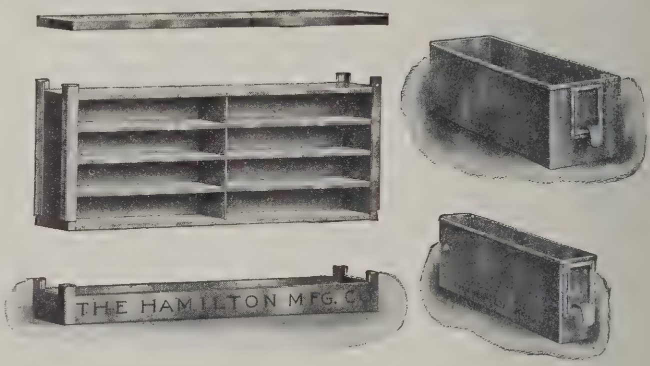
The *Times,* Asbury Park, N. J.— Steel composing-room outfit. Sold through the American Type Founders Co., New York city branch.

Public Ledger, Philadelphia, Pa.— Complete composing-room outfit; two carloads, wood construction. Sold through American Type Founders Co., Philadelphia branch.

Daily News, St. Paul, Minn.— Steel composing-room outfit. Sold through the C. I. Johnson Mfg. Co.

Daily News, Dayton, Ohio.— Steel composing-room outfit. Sold through American Type Founders Co., Cincinnati, Ohio.

Southam Press, Toronto, Ont., Canada.— Wood composing-room outfit. Sold through Toronto Type Foundry Co.



Sectional Parts of Unit Sort Cabinet No. 461

The above illustrations show the parts in all-steel construction. There are three cabinet units — the holding frame, cap and base, and two sort-drawer units — five parts in all, which, combined, make up the complete Cabinet as shown in the upper illustration on this page.

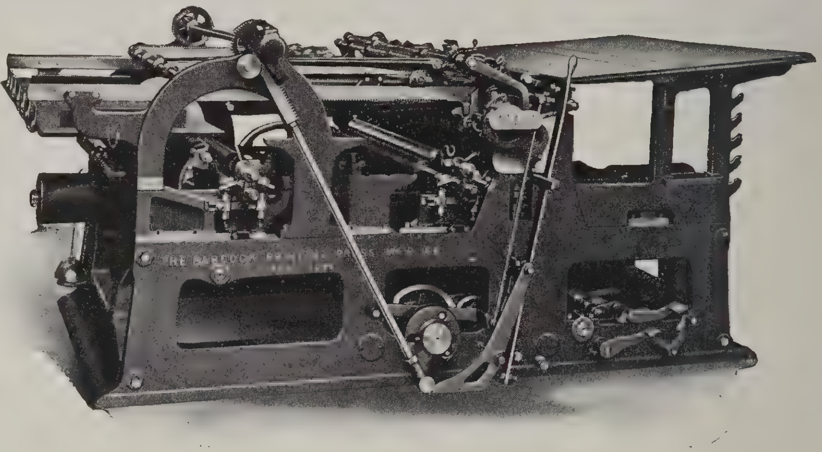
Babcock's New Optimus

Latest Two-Revolution Pony a Marvel of Efficiency and Handiness



This is not the pony two-revolution you know; it is better than any you have heard of.

It is the biggest small machine offered today, and one year old—one year of all-around work in more than average pressrooms, where it has been busy.

The year's trial before marketing is always the Babcock way. We demand more than anybody from our machines.

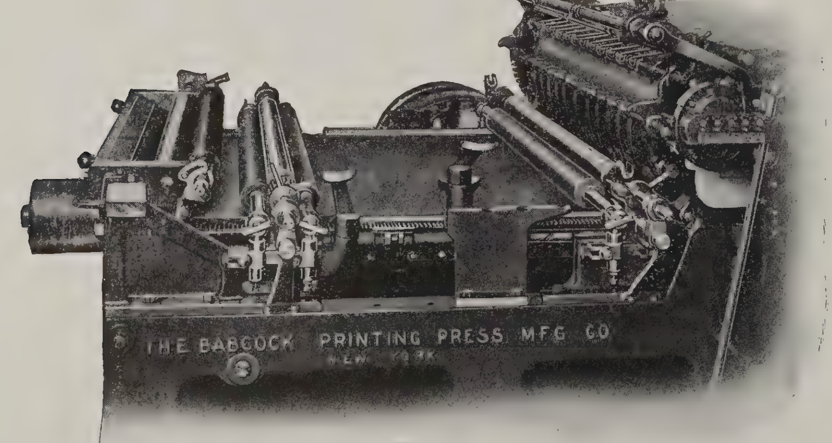
The year's test of this New Pony on all sorts of work determines that it can be sold and bought with confidence. It has proved entirely satisfactory to the users and ourselves.

Note well its size; its speed; the form it takes; the sheet it prints with half-inch margins. This sheet is standard for more work than any other. It will print the smallest form you care to give it, and deliver just as well as the largest.

We now offer the Babcock New No. 41 Optimus pony to printers with full assurance of their appreciation of its advantages. We have left nothing undone as far as our present knowledge has carried us to make this machine above criticism. It will add to our reputation as builders of exceptionally good presses.

Description of the New No. 41 Optimus Pony Two-Revolution Press

The Babcock New No. 41 Optimus is a two-roller press; bed 28x41; form 24x37; sheet 25x38; speed 2800. It is full size for its sheet, which it prints with half-inch margins. This is important; makes a small press as big as possible. Don't overlook a Babcock way that is rare in other presses, and will prove of the greatest advantage on the pinch form liable to come at any time.



Bed is strongly supported by four tracks—two long of our patented roller type, and two shorter patented wheel tracks, readily adjusted to take up wear.

There are no angle rollers. Table rollers are geared. All composition rollers are three-inch and interchangeable with each other; that is, the ductor is exactly the same as a form or table roller or rider, and either one of the latter can be used as a ductor at any time, working great economy and certainty in operation. All of this is entirely new on a two-roller pony, and is true of every Babcock press except the very smallest.

The ink feed is from fountain to steel vibrator. At this point the ductor roller becomes a distributor, and so acts half the time or until the ink, thoroughly worked between itself, the vibrator and two rollers, reaches the table well distributed. Vibrator is driven by a noiseless spiral device, the simplest for the purpose ever patented. Distribution never ceases while press is running. Fountain trips automatically when impression is tripped, a new feature in small presses. A composition rider roller is furnished for the form vibrator, increasing covering capacity. Altogether it is splendid distribution for a two-roller press.

A very notable improvement is in the delivery table supports, now formed to give ready access to fountain and table rollers, making handling and washing up easier than on any other machine.

The delivery is printed-side-up, particularly good and economical on pony work; saves time and stock; always ready for any size or thickness without adjustment. It is the only delivery handling tissue and thin papers at speed and without bother.

The bed motion is the improved Babcock ball and socket; counter-balanced shaft, and balls at rack ends. It's the best in the world.

Self-oiling boxes on all quick-moving or important journals.

Note that feeder stands on floor; no step to climb; a small big press, surprise in its capacity.

The No. 41 is furnished with complete equipment; there are no extras, unless slip-sheet board is ordered. It will be arranged for direct motor drive without cost if change is made at factory before shipping. A two-horsepower motor is needed; consumes one and a half horsepower in operation.

The New No. 41 Optimus is exceptionally strong, is fast and almost noiseless. It is perfection throughout, the latest and best small two-revolution pony machine for anything from a post card to a 25x38 sheet.

SECOND PATENT SUIT

LINOTYPE VS. INTERTYPE

We desire to announce that we have instituted a second action in the United States District Court for the Southern District of New York against the International Typesetting Machine Company (manufacturers of the Intertype) for infringement of the following United States Letters Patent:

D. S. Kennedy,	No. 586,337	J. M. Cooney and H. L. Totten,	No. 759,501

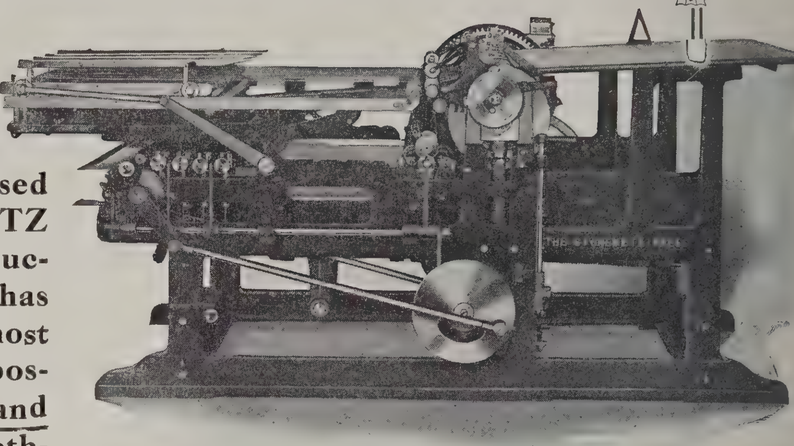
W. H. Randall,	" 758,103		

We have recently announced a first action, now pending, brought by us against the International Typesetting Machine Company for infringement of the following United States Letters Patent:

O. Mergenthaler, No. 614,229
O. Mergenthaler, No. 614,230
J. R. Rogers, Reissue, No. 13,489

MERGENTHALER LINOTYPE COMPANY
Tribune Building, New York.

Stonemetz
Two-Revolution



THE approval of every printer who investigates the STONEMETZ TWO-REVOLUTION is based on the fact that the STONEMETZ lacks nothing essential to the production of high grade work; that it has surplus strength to withstand the most severe impression strain; that it possesses the necessary registering and inking qualities; that it will run smoothly and noiselessly with a reserve of speed which places it far above the low price asked for it. It's the press that competition cannot touch in quality or price. Let us mail you full particulars—FREE for the asking.

The Challenge Machinery Co.
Grand Haven, Michigan
Salesroom and Warehouse, 124 South Fifth Avenue, Chicago

THE STONEMETZ is sold and guaranteed by Type Founders and Dealers in all principal cities.

NEWARK, N. J.

New York **Baltimore** **Chicago** **Detroit** **Philadelphia** **Pittsburg** **St Louis**

To the Publisher of the Small Daily or Weekly Paper

Is the lure of low price likely to influence your choice of a composing machine?

It shouldn't.

For economy, service and reliability on straight matter—news—ads and job work the line casting (slug) machine is a single feature machine that doesn't fit into the many sided requirements of your composing room.

It casts lines of type—that's all.

The small publisher not only wants but he must have versatility—a machine to handle news, ads, job work, quickly, economically and profitably.

He gets all these features in the Monotype and more —type and spacing material for the cases 5 point to 36 point, and, added to this, type foundry quality and printing that satisfies readers and advertisers.

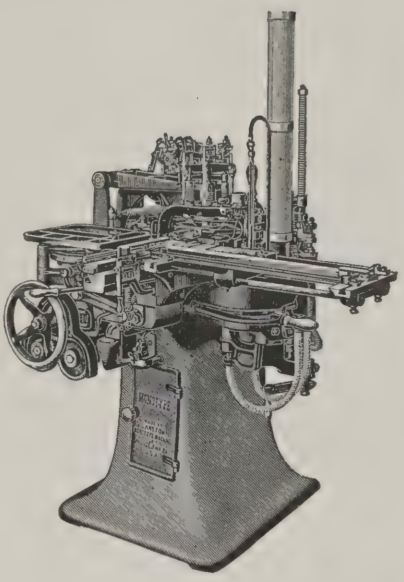
There is nothing to the short haul, narrow range disadvantages of the line caster for the small publisher.

He wants type, automatically set in justified lines, ready to use.

He wants type and spacing material for the cases.

He wants composing room service—machine composition and sufficient type (tools) to insure 100 per cent productive time from every composing room employe.

He wants the one-model Monotype—always the latest model—because it is economical, versatile and efficient.



Sets More Type and Casts More Type than any other composing machine or type caster.

What Kind of Galleys Are You Using ?

The Best Ones? GOOD. They Are the Cheapest.

Original cost cuts small figure when buying to LAST. That's why our Superior All-Brass Galleys are universally popular. ¶ There are several kinds—each with its particular merits. ¶ The One-Piece Rim Galley is practically indestructible; nothing but determined and inexcusable abuse will warp or ruin it. The rim is a continuous strip of heavy flanged brass, absolutely secured so that it will hold fast at the corners. This Galley costs a little more than any other make. It's worth the price and more.

We also exclusively make
The Barnhart All-Brass Galley, patent corners. The Bruce Galley.
The Lincoln Galley. The Milholland Linotype Galley.
The Bruce Style Linotype Galley.
We make them all and we make them as well as it is possible to make Galleys.
How many and what style shall we send you?

Something Attractive in Connection With

PRINTING INKS

We will exhibit our various lines of PRINTING INKS at the National Printing, Lithographing and Advertising Exposition, to be held in New York, April 18th to 25th, 1914. One of the new and attractive features of this immense and interesting enterprise will be the exhibition of fine printing for which certificates of merit will be awarded. We purpose enlarging on this feature by presenting $450.00 in cash to the successful printers who enter a contest which we have arranged under the following terms:

For the best example of Black halftone we offer $100.00 cash
For the second, $75.00 cash
For the third, $50.00 cash

Also for the best example of four color process printing we offer $100.00 cash
For the second, $75.00 cash
For the third, $50.00 cash

These amounts to be equally divided between the firm and the pressman.

A quantity of ink sufficient to furnish us with the required number of copies will be supplied without charge, upon application to our nearest branch house or our traveling representatives.

The sheets submitted must be unbound and not smaller than 19x25. At least twelve copies must reach us not later than March 31st, 1914.

The following well known New York authorities have consented to act as judges: Mr. Charles Francis of the Charles Francis Press, Mr. J. W. Bothwell of Theo. L. DeVinne Co., and Mr. John Clyde Oswald of the American Printer. These gentlemen are not connected in any way with our Company, and their decision shall be final. We also offer certificates of merit as they may be awarded by the judges.

Only one example of either Black or Colors, may be submitted by any firm and each specimen must be marked with name and address of firm and pressman, together with number or name of ink used. This competition is limited to printers of the United States and Canada.

DO ALL THE PRINTING OF YOUR TOWN

The printer in the Smaller Cities often stands aghast at the quantity of work that is leaving his city, eaten up by first one "specialty" printer and then another from the larger cities, and wonders where it is all going to stop, and what printing will be really left for him to do.

The banks buy of a "specialty" printer, the grocer buys weird systems of duplicating slips, the hotel man secures his stationery from a "hotel printer," the moving picture show gets syndicated advertising matter, and there positively seems no end.

Is it any wonder that the printer feels like cussing, or pulling up "stakes" or going into a specialty himself, and thus adding one more to the already overcrowded field of "specialists?',

There is an opportunity for him right in his own field, to grasp every job of printing in his own territory, and add immensely to his own profits, and still not become a mere specialty printer.

This cannot be done if he will hang to the old style hand-fed job presses and all their limitations. Yet, to put in all the various classes of special machinery to handle all the different kinds of work would be financially impossible.

Not alone in the so-called small printing, does the printer in the Inland City bump up against it, but in much of the larger work. Nearly every city of 5,000 inhabitants or over has either a school, college, factory or some special industry, or perhaps several, that require various kinds of printing, but not enough to warrant an outlay for a big printing plant to take care of it and most of their work comes in at only certain periods of the year, and then for the rest of the year the plant would remain practically idle.

Such is the condition confronting thousands of printers throughout the country, and they do not like to sit idly by and see a stream of work leaving their city, yet seem hopeless of stemming the tide.

There is now a chance to keep this work at home where it belongs, a chance to enter upon the ground with an even break with the other fellow, and perhaps even "beat him to it."

The printer in the Inland town is on the ground, he does not have to employ high salaried salesmen with large expense accounts, or conduct a mail selling campaign where the postage alone eats up a lot of money. He is right there without a bit of this "selling" expense, and with but the facilities to turn out the work, he would be given the preference.

And right there is the rub.

The printer has the type, the imposing stones, the paper, the cutter, and all the rest, but he lacks the one essential—the presses to handle the work.

With his old-style hand-fed job presses he knows he cannot compete, and imagines that each "specialty" printer has some weird machine which turns out the work impossible to do on the old presses he has.

And he is right—but there has entered the field a press built on the most modern lines, with a simplicity and capability of handling a large variety of work at a big profit.

The STANDARD HIGH SPEED AUTOMATIC JOB PRESS has a range in the Commercial Job Printing line far beyond that dreamed of before, and each day something is being done on the Press at a greater profit, that has been thought almost impossible.

We have established a service department designed especially to take up with the printer in the Inland City, the question of properly handling at a profit the various classes of work that he feels he cannot do, or that the specialty printer is depriving him of.

This is a splendid opportunity for you to secure all the work of your city, hold it right there, and make a big profit on every bit of it.

Write to our service department at once, send samples of your work, with quantities, and if possible prices, and we will be glad to take up each item with you, and assist you in every way.

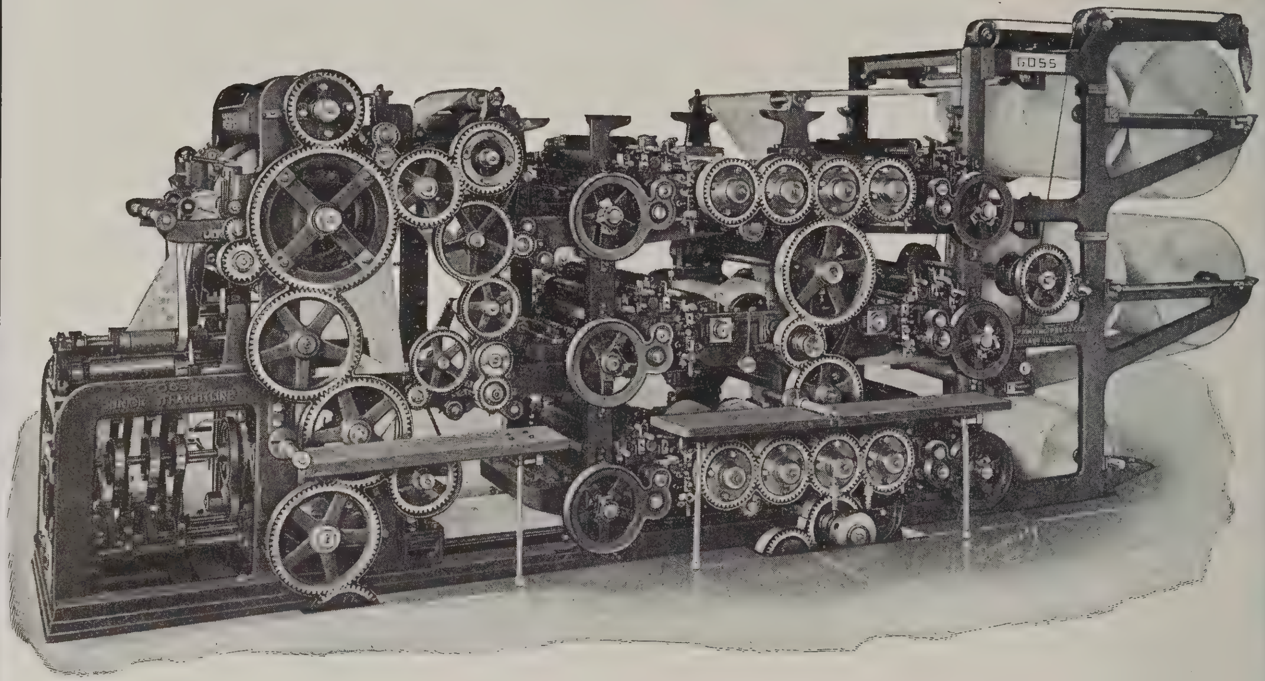
SOMETHING ENTIRELY NEW

THE

GOSS Junior Straightline

Built on Our Regular Straightline Design



Built 2, 3, 4-deck high, or in tandem, according to space or selection, producing 4, 6, 8, 10, 12, 14, 16 pages in book form, printing seven columns wide by length of columns from 20 in. to 22 in. All plates cast from our standard stereotype machines (no boring of plates required). Can be arranged to print from one to three extra colors. Additional decks or sections can be added at any time in the future. Can be made to deliver products either one-half or one-quarter page size. Best workmanship and material used in its construction. Ask for further particulars.

Church Advertising—Follow-Up and Card System

"A Success Talk" Good for Newspapers and Printers

NEWSPAPER makers, printers and ministers have not borne very good reputations as business men. Editors have busied themselves with looking after community and governmental affairs and the politics of municipality, county, state and nation — about gathering, giving and interpreting the news and helping to form or crystallize public opinion. They have rejoiced in, and improved the opportunities for expression, not through deeds, but through discourses on the printed pages.

Printers have gloried in "the art preservative of all arts" and the opportunities to serve all departments of business. Ministers have gloried in their pulpit efforts and in preparations therefor.

These several things are all worthy, necessary and to be glorified, and in no way to be neglected or subordinated. However, these cover only the side of production and to get any results there must be salesmanship and, in these callings, it has been found necessary to combine salesmanship with production. It might be better if it were possible to separate production and merchandising.

However, under existing conditions most editors, printers and even preachers are compelled to be business men as well as producers. They must see to it that the business ends are looked after. Among other things they must look out for patrons or customers. Even the minister can not do much, be his sermons ever so practical and eloquent, if he has not satisfied hearers, and these must pay the expenses of the church. The minister must have material support, must be paid just as must the editor or printer be paid. All the expenses of the maintenance of the church must be met just the same as the overhead expenses of a newspaper or printing office, rent, light, heat, etc., must be paid. There must be salesmanship at a profit above expense.

While it may seem out of the ordinary for churches to advertise and work for supporters or customers, in systematic business way, it is just as essential for churches as for newspapers and printing offices and there must be systematic effort or good business methods.

These thoughts have been suggested by an article recently reprinted in the Springfield, Mass., Union, from the Washington Herald, as to the advertising and business methods of a minister — methods that newspaper makers and printers would do well to study and adopt, while at the same time cultivating churches as legitimate customers, as advertisers and users of printed matter. The right kind of advertising and printing can be made just as profitable to the churches as the same can be made to newspapers, printers, business men and manufacturers and for which they should pay just the same and just as legitimately as do others, and just as they pay for buildings, light, heat, furnishings, hymn books, janitor services and salaries of pastors, musicians or other employes.

The following is part of the article from the Springfield Union with the title:

SUCCESS TALK

Parson Uses Business Methods — Advertising Builds Up Church

Whatever helps you in your work belongs to you, and should be adopted by you, no matter what the traditions of your calling or business may be. Such is the motto of Rev. Christian F. Reisner, pastor of Grace Methodist Episcopal Church, New York.

"I have learned many lessons from the business world that I have used advantageously in my church work," said Dr. Reisner.

"It pays to advertise in the business world. I learned that lesson from the way I saw merchants making a big success from advertising in the newspapers. I observed their methods closely and I figured out that newspaper advertising that was such a success for the business man would be as great a success for the minister.

"I found that this method succeeded, and I looked around for other things in the business world I could adopt. I found the card index system used extensively, and discovered I could use that system in widening my church work. I have as large a card index and follow-up system as the average merchant, and I am getting results with it.

"What I want to do is to get the people to come to church. My card index system is used for this purpose. I find out the names of people who move within the bounds of my church, or who can come to my church, and then I find where they are from and what they are interested in.

"In New York there are people from all sections of the country. They are constantly coming and going. I have people from every State in the Union among the members of my church. When a stranger moves to New York, say from Texas, I find out all I can from him by a personal call, tell about the church and invite him to attend. I do not stop there, but ask some of my congregation from the state of the stranger to call on him and extend a friendly hand.

"I keep a record of all calls made by myself and by my parishioners, and by this method I know just where the work with the stranger within our gates is by referring to my index. Then I have follow-up calls, just as a business man has.

"I found that from the unusualness of the stunt the advertising of a church on a billboard would attract people to my church. I have had billboards advertising the advantages and services of my church along Riverside Drive for the last three years.

"In the church itself I have made changes. I think I am the first minister in New York to employ a brass band for the Sunday evening services. That was a novel stunt to New Yorkers, and the church was crowded.

"The motion picture films are one of the greatest attractions of the age. I found I could use them to advantage in getting a large audience for my Sunday night talks.

"Always and ever I let people know they are listening to God's word and that it is a church they are in. This is just what the shrewd business man does; he concentrates on getting people interested in his work or his article, and then concentrates further to have them see that it is to their advantage to buy from him or engage him. That is all I am doing. I get people to come and listen to me by methods a little out of the ordinary, and then I make them realize the Gospel is the greatest thing in the world for their comfort and guidance."

Dr. Riesner began his work of advertising and using unusual methods in Denver. His work there was so successful that he was called to New York. Since he took charge a few years ago the church attendance has jumped so much that he now preaches to capacity audiences both winter and summer, and the membership of his congregation has grown several hundred per cent.— Washington Herald.

How many newspapers or printing offices advertise as they ought, or as they might advertise with comparatively small expense? How many have a card index of customers or possible customers kept up-to-date with a record of all calls made and remarks as to conditions, necessities, or prospects? How many see to it that every new resident coming into the community, is visited, and a kindly, helpful welcome given, while the merits of the paper or the printing office are made known?

The Brooklyn Eagle, as we have had occasion to state, has such a system. We would like to know how many of our readers maintain such a system. We would like to know for the benefit of other readers and will gladly publish all facts in this regard and make our pages a clearing house for such systematic methods for the benefit of all, believing that each would receive in return very much more than any one would be able to give. How many editors or publishers are constantly on the watch, to make their papers interesting and attractive and attention-commanding by the introduction of new and striking features and the keeping up every department, so as to be useful, entertaining and satisfying to all?

There is opportunity before every newspaper publisher or printer to keep up to the fullest capacity as to advertising columns and as to work. It is known that many churches are comparatively empty or not filled to half capacity. The same is true as to many newspapers and printing offices. Here is where is found a great loss and added cost. Work equal to capacity or equipment is the only way to success.

* * *

JOURNALISM, PRESENT AND PROSPECTIVE

As the newpaper occupies a position of incalculable influence by its close and intimate and universal relation to all the people in their homes and in their business, social and political lives, as a purveyor of information, if not as a counselor and guide — in a measure directing if not forming opinions touching all their interests, their institutions, industries, their education and their very morals, their good deeds, their offenses and their crimes and even their religions or irreligions — it is right and patriotic that its condition should be discussed, not alone by the members of the calling and by the journals devoted to its upbuilding, but by all the people as well as by the great periodicals and magazines that seek to consider and treat, from a higher and more scientific basis, all social agencies and economics or other questions that touch human life, government or society. The newspaper should certainly be given broad and intelligent consideration.

The Nation, of New York City, is to be commended on a recent candid article entitled "Changing Journalism," based on an address by Robert Donald, President of the British Institute of Journalism, in a recent annual conference of that organization, in which he said, as quoted by the Nation:

From the point of view of the reading public, the newer journalism is preferable to the old. There has, on the whole, been a general improvement in the daily press in the last twenty years — an all-round speeding up. Newspapers of all classes are better written, more readable, more entertaining, and more attractive than ever they were, and are quite as well informed. Even the greatest of them all, the Times, has been touched with the spirit of modern enterprise at every point, and never reached a higher level of journalistic excellence.

The Nation says, giving further views, quoting from The Chicago Inter Ocean and adding its own comment:

Himself managing editor of the Daily Chronicle, he speaks with the intimate knowledge of the working journalist, and sketches with vivid pen the many startling changes in the British press. But if he records what he chiefly and sanguinely regards as progress, he also admits the growth of far-reaching changes of a less desirable kind, akin to those that have taken place in journalism on this side of the water. He does not, for instance, deny that commercialization has gone on apace. The "proprietorial system" has almost disappeared, the corporation having taken the place of the individual owner, to the extent that nine-tenths of the leading daily newspapers "belong to limited companies"; twelve such, listed on the Stock Exchange, figure in its daily quotations. Naturally, he finds that under this corporate ownership "the main concern of shareholders, who are investors and not journalists, is their dividends, and dividends must be earned, even if principle has to suffer in the process."

Side by side with this development has come a distinct check to the increase of the number of newspapers in England. That increase has been only 6 per cent in the morning and evening field for the past twenty years, in which the population has grown 24 per cent, and the reading public at an even faster rate. The explanation of this is not far to seek. It costs large sums nowadays to found newspapers, and the aggressive reaching out into the provinces of the London dailies makes the lot of the small-town newspaper less and less secure and inviting. This competition is accentuated by the simultaneous publication of several newspapers in two centers. If this has stimulated the provincial press to greater efforts, it has damaged the advertising of the press as a whole, the advertiser feeling that the newspapers of great metropolitan and provincial circulation fill all his needs. The more or less sensational methods of the successful London halfpenny papers "make it impossible," Mr. Donald declares, "for papers run on old-fashioned lines to survive." He is sure that the immediate future will see this fierce competition intensified, and more and more of the old-fashioned kind of journals go to the wall. It is the day of the newspaper with tremendous means for special trains, motor car delivery services, publicity campaigns, and endless billboard and poster advertising, and Mr. Donald prophesies that twenty years hence an English newspaper which has not at least a half-million readers "will not be seriously considered as an organ of the people."

The political and social power of these journalistic Dreadnoughts will not be any less, Mr. Donald feels; and then, to console the small journalist who may see himself finally put out of business by the coming use of the aeroplane, airship, "motorplanes running on special tracks," the merging of morning and evening newspapers, with hourly editions by day or by night, which our authority foresees, he adds that there will be a revival of the purely local country newspapers, "much improved in form and style." But all newspapers, it appears, will have to fear not so much competition from one another as from new methods of delivering news by cinematograph, telephone, or phonograph. This is indubitably looking a little far into the future. But what we do not get from Mr. Donald is some assurance that under the wonderful new conditions the character of newspapers will continue as high and their sense of respectability to the public as keen. That is the question which deeply concerns everybody.

We wish the omen were more favorable on this side of the water, or at least clearer. Our worst specimens of the yellow type combine all the bad features of unscrupulous, irresponsible proprietorship and of corporation management. The only thing certain is that the day of the old-fashioned type of newspaper is rendered more difficult by the journal which is the counterpart of the British half-penny shrieker. There is striking proof of this in a remarkable editorial article that has just appeared in the Chicago Inter Ocean, which that veteran journalist, Mr. H. H. Kohlsaat, purchased about a year ago. He declares that "from being the purveyors of news and opinions in due perspective for the public, the daily and periodical press have become very largely the muckrakers of the universe, the distorters of facts, and the debauchers of thought for the masses, in whom eventually abides the fate of the republic." In his crusade to combat this he has been producing in the Inter Ocean a newspaper according to the ideals of St. Paul in his epistle to the Philippians. He has made gratifying progress, but here is the warning which is the real keynote of the editorial:

"So long as its present editor retains control of the Inter Ocean it will continue faithful to Chicago, true to the higher traditions of journalism, alert and fair in printing the decent news of each day, sane and fearless in discussing the questions of the hour as they arise. But if the business men of Chicago, who have more at stake than the Inter Ocean, fail to accord it steady and generous support, the temptation to stand from under may prove irresistible. And then journalism of the 'itching palm and wanton eyes' will have its way."

It is the problem of every sane journalist which Mr. Kohlsaat confronts, but it is still more the problem of the intelligent public. Over decent and indecent journalism alike the public has the power of life and death. The question is simply how far it will utilize this power — whether it will guide towards good ends the rapidly changing currents of journalistic activity, or let them be directed solely by the will-o'-the-wisp of individual or corporation gain.

PHILOSOPHIC AND PRACTICAL ADVERTISING VIEWS FROM YANKEELAND

"The Come Nigh Look" — "Attention, Interest, Desire, Action"

Hartford, Connecticut, has a Charter Oak Ad Club that lives up to its name — significant of loyalty to right and devotion to high principles. At a meeting and banquet of the club on October 23, President Arthur J. Birdseye alluded, with good reason, to the great speaking talent assembled and referred to the declaration of splendid principles promulgated at the recent Baltimore convention of advertising clubs.

He spoke of the opportunities offered by the club for the education and advancement of all who either buy or sell advertising. Courses of instruction are open to the members on any phase of the subject of advertising or salesmanship, and this club is now considering plans for the coming year that will be of practical benefit to every member. Elbert Hubbard has said, "We never know anything for sure until we have told it to someone else, and whatever we know of value that is of value to ourselves is of no particular advantage to us unless we can share it with others." I can recall but two things that are really worth while that it pays to keep to ourselves or to enjoy alone, and these are 'our best girl' and 'the morning plunge or shower.'"

"Salesmanship has been defined as that character of personality in a man which enables its possessor to attract others and inspire their confidence. Advertising is but a department of salesmanship, and probably the most important one, for it requires greater skill in the use of language to inject one's personality into cold type than to exercise it upon a customer by personal contact, especially when the salesman has been unusually endowed by nature. Speaking of personality in salesmanship, I am reminded of the two women who met after years of separation, and one said to her old friend, 'Jane, how is it that when you and I were young my father was well-to-do, was able to give me every advantage of education, fine clothes, society, etc., and I was thought to be specially attractive in face and form; while on the other hand your father was poor, you were unable to enjoy any of the advantages of education, society, etc., you dressed plainly and was thought to be plain in appearance, yet you are married, and happily, with a nice family, and I still an old maid?' Her friend replied, 'Mary, it is not in the fine clothes, the handsome face, the advantages of society, etc.' And Mary asked, 'What is it?' Jane, turning to her, said, 'Mary, you must have that "come nigh" look in your eye.' Now to have that 'come nigh' look in your eye on an advertising page is no boy's job. However, one can cultivate almost anything, even though his eyes are like burnt holes in a blanket, and it often occurs that the man without the 'come nigh' look in his face has it in heart and brain and may be better fitted to put his personality in type than the other man into his presence.

"We have with us tonight a man who not only has the 'come nigh' look in his eye, but in heart and brain, and we are most fortunate in having for our first meeting since we have completed the organization of our club a galaxy of talent which our entertainment committee may find it hard to equal in the future. We have gone to the fountain head of psychological advertising and invited the man to speak to us whose degree in Columbia University was won on his thesis, 'The Relative Merit of Advertisements,' and this is the first thesis ever written on advertising. He is a student and teacher of psychology, and shares the honors of research with James and Munsterberg.

"I take pleasure in introducing Professor Edwin K. Strong, Jr., of Columbia University, who will talk to you on the subject, 'The Importance of Complexity and Unity in Securing Attention.'"

How to Write Advertisements

Professor Strong moved over to the blackboard, and with apologies that he must limit himself to an hour, proceeded to give the copywriters present some very valuable instruction in the technique of the advertising game. Attention, interest, desire, and action are the four necessities in effective advertising, explained Professor Strong. Some men prominent in the advertising world, according to the speaker, put interest first, others, attention first. The former should be given the prominence, said Professor Strong. Taking attention as a distinct heading, he said that there are three kinds of attention: primary attention, a feeling of "awareness," simply aware that things are about you, purely passive on your part; secondary attention, the form that men have in mind generally when they talk about "attention," the concentration on various things during the day, a state of continuous fluctuation; when you get down to work, the condition of attention is then derived primary. That's when you get down to work, said the speaker. You are wholly unconscious of what is going on about you. The primary stage is absolutely worthless, the secondary stage is a trifle more weighty, as you have the momentary attention, as it were, of your advertiser, and when the derived primary is reached you have achieved what you are after.

Your problem as an advertisement writer is not that of "awareness," said the professor. Your problem in preparing an advertisement is in making it so attractive that you will make the reader remain with it and prevent him from fluctuating, or going from one to another with a disinterested air. Make it so that your advertisement is the only one on the page that gets the consciousness of the reader. He discussed exhaustively the apparatus used at Columbia in the advertising department. Attractiveness is the chief essential, said the speaker, and he sought to show how advertisements could be made more attractive.

Its the number of units of thought in the headline, said Professor Strong, and not the number of words, as some psychologists maintain. There must be a limited amount of distinct unit so that the idea will be grasped, yes, in one-hundredth of a second. Otherwise the picture will pass immediately out of the reader's consciousness. Get them into the fluctuating stage, and then you will get them down to the third and final stage of attention where they will read it diligently.

The professor displayed two well-known advertisements which appeared side by side in a popular magazine. One of the advertisements had several unnecessary units, while the other, while not appearing so attractive from a black ink standpoint, was about eight times as effective as the former. The art of building headlines attractively was discussed by Professor Strong, as was the decoration of shop windows.

"There are six things which advertising men usually depend upon to get attention," said the professor, "namely, intensity, isolation, size, motion, contrast and repetition. Familiarity, novelty, illustration and suggestive action are other things to be taken into consideration when writing an attractive ad. These are all used by good advertisement writers to attract attention."

Other speakers were Winchell Smith, Thomas A. Curry and H. K. Hanna.

Mr. Hanna declaimed against the adoption of the so-called Printer's Ink statute against untrue advertising. The trouble with the country now is too much legislation, legislation and litigation, he said. He said that the advertising in the newspapers and magazines is cleaner now than the news and editorial ends. If the advertising becomes too clean, he didn't know what some of the newspapers would do. If you are going to have enacted into law the "Printer's Ink" statement you will have the element of imagination in advertising eliminated. He gave illustrations of the absurdity of trying to regulate the cleanliness of advertising by law. Business in the present day is too much run by the legal profession, said Mr. Hanna. Keep the law away from it and it will right itself.

STUDENTS STUDY PRESS REPORTS

Daily news service of the United Press is used in the course in journalism at the University of Wisconsin, a complete copy being furnished daily through the courtesy of Roy Howard, general manager of the United Press, and Richard Lloyd Jones, editor of the Wisconsin State Journal.

BUSINESS MANAGEMENT

ED. E. SHEASGREEN, *Editor*, 1603 MONADNOCK BLOCK, CHICAGO, ILL.

THE EMPLOYE AND THE COST SYSTEM

THREE news items of great importance in the cost finding movement appear in trade and union journals this last month.

First, the news was received that the Typographical Union is to begin a series of articles on the Cost Finding System, written by Mr. Frank I. Ellick, of Omaha. We believe that the "Omaha Spirit" is responsible for this particular body of workmen taking up the study of this all-important question.

Word was received from the Pacific Coast that the American Federation of Labor is taking on a great deal of the "Omaha Spirit," and that employers and employes are meeting together to study out a way of bettering bad business methods.

Then came the news that the International Photo-Engravers' Union of North America have agreed to have its members work by the cost system that the International Association of Manufacturing Photo-Engravers have universally adopted. This particular union, however, has a clause in its agreement which is a peculiar one. It follows:

"And that said 'Simple Cost System' is not intended, and that it shall not be used in its entirety, or any part thereof, by any employer for the purpose of checking up the workmen, or used in any way detrimental to the workmen or their working conditions."

A cost system, properly installed, should check up every man in the plant. That is the whole purpose of the cost system, so that TRUE costs may be had. The president of a company is as liable to be the one who should be 'checked up" for bad business as any workman. If a checking up of bad workmen and conditions is **not** had, how can those conditions be bettered? There are bad workmen — most expensive fellows, some of them, but not intentionally so — as well as there are the same kind of fellows in the office. If bad conditions do exist, why not know them, know where they are, why they are, and then, when the TRUTH is had, apply the remedy.

Are HONEST men, whether employer or employe, afraid of the TRUTH?

Truly, the COST SYSTEM is doing things.

But, gentlemen, let us have it bore into the very quick of ALL things. Let no bad condition escape, even if it should prove to be a bad manager, or a bad workman.

When bad conditions are found, then right remedies may be applied.

* * *

SEVEN CENTS A BILL

"Do you know the cost of a bill?"

"Do I what?"

"Do you know the cost of a bill — of billing your work?"

This question was asked one day in a plant where many office clerks were engaged.

"Why, no, we have never looked into COST that fine — of course we have a way of our own of doing things that is very good for our particular line."

"How many clerks have you?"

"All you see here."

"How many of them are doing your billing?"

"Why, sometimes we have about three clerks, well, possibly nearer four, on billing all the time."

"They must put out a good many bills in a day."

"Why, yes, they do; about sixty."

"Sixty bills a day the work of three people? Hitting the high spots are you not?"

"Well, we said that our line was very much different than some others — we need them all."

"The clerks, you mean?"

"Yes, the clerks."

"How much do these particular clerks get in wages?"

"About eight dollars a week apiece."

"Taking an average of three clerks at eight dollars a week, that would be twenty-four dollars a week for making out three hundred and sixty bills, or a cost per bill for wages alone of about six and two-thirds of a cent a bill — pretty stiff, eh?"

"Why, that cannot be!"

"Figure it out yourself, and then add the stationery and stamps. You see you have a pretty little item of cost for billing, yes?"

An analysis in that house found many bills came back for correction because the billing department did not always know the correct prices of the goods. Some times one price was given, another time a different price given for the same goods. There was checking, rechecking and duplicating of nearly all their effort. There was searching for necessary information that a billing clerk should have close at hand. Many extra steps a day were taken to and from desks to get information. There was a long way round of doing things in this shop and office which they thought was so much different than any other institution that energies could not be conserved.

Now, do not laugh, dear reader. **How are matters in your** office and plant — are **you** hitting the **high** spots in **your** plant and thereby giving extra costs to **your** business which you think is so much different than some other? DO YOU THINK YOUR METHODS CAN NOT BE BETTERED?

DIG INTO YOURSELF, hurt yourself a little and find out.

If you do not have the nerve to do this — to face the TRUTH — why, get some one to do it for you.

It will pay you in the long run.

And remember, that even a bill or a letter costs money, and that this cost can be found.

* * *

INSTALL A SYSTEM NOW!

By Ed. A. Sheasgreen

Yes, we have **begged** and we have **plead,**
Until we've nearly had a row,
But — once again we recommend —
"Go, install a System now!"

Oh, yes, we know YOU know it all —
That you've a Master "High Brow's" brow —
But, here old Friend, **again** we beg —
"Go, install a System now!"

Oh, shucks! Get out! Of course we **know**
You've grown from out the "case" somehow,
And started on a "shoe string," too —
But, "Go, install a System now!"

Of **course** you're working day and night!
You'd squeeze a job before your frow —
Jobs seek **low** spots, like water, sir —
"Go, install a System now!"

You are the **highest** priced in town?
To **you** all buyers **lowly** bow?
Just take a tumble, friend, and **then** —
Well — "Go, install a System now!"

You'd rather **fail** than take **our** tip?
We are **unwelcomed** guests? **Here,** now,
Your methods, sir, **have finished** you —
Your system's got **you** going now!

Well — when you sell your final job,
And go to Sheriff's Glory Glen,
With Bugs like you, who **know it all,**
Well — **we** will have some profit then!

Meeting of the National Council of the National Editorial Association

Chicago, Illinois, October 30, 1913

A REGULARLY called meeting of the National Council of the National Editorial Association convened at the Chicago Press Club rooms. President J. C. Oswald presided. The following representatives were present: G. E. Hosmer, Denver, Colo.; Past President A. D. Moffett, Ellwood, Ind.; L. J. Rountree, Georgetown, Texas; Mrs. L. J. Rountree, Georgetown, Texas; Joe Eastwood and sister, Miss Lila, Watertown, S. D.; Miss Louise Belford, Georgetown, Texas; E. H. Childress, Fairfield, Ill.; J. C. Oswald, 25 City Hall Place, New York; W. C. Lusk, Yankton, S. D.; W. B. Collins, Gloversville, N. Y.; J. Byron Cain, Belle Plaine, Kans.; Sheridan Plough, Hutchinson, Kans; H. C. Hotaling, Mapleton, Minn.; Past President, R. E. Dowdell, Artesian, S. D.; W. R. Hodges, Sleepy Eye, Minn.; E. R. Purcell, Broken Bow, Neb.; J. H. Hungerford, Carroll, Iowa; F. O. Edgecomb and wife, Geneva, Neb; Charles Bradshaw, Carrollton, Iowa; Homer Harwood, Warren, Mich.; C. A. Huling, Chicago, Ill.; A. B. Bragton, Jr., Monroe, Mich.; George Schlosser, Sioux Falls, S. D.; Austin Gay, Big Rapids, Mich.; Eugene L'Hote, Milford, Ill.; Frank Roderus, Chicago, Ill.; Fred D. Porter, Chicago, Ill.; Edward H. Fox, Chicago, Ill.; W. A. Woodring, Peru, Ind.; Ben F. McKey, Lebanon, Ind.; W. W. Aikens and wife, Franklin, Ind.; S. J. Porterfield, Cullom, Ill.; M. W. Porter, Hoyt, Kans.; John R. Rison, Paris, Tenn.; Edward Albright, Gallatin, Tenn.; A. C. Hutchinson, Cayuga, Ind.; O. Palmer, Grayling, Mich.; Past President B. B. Herbert, Chicago, Ill.

J. CLYDE OSWALD
President National Editorial Association
City Hall Place, New York City

Mr. Hosmer, of Colorado, chairman of the committee on the question of the government printing of envelopes, made a brief report of the progress made by the committee and some of the obstructions encountered in the work. A vacancy existing in this committee, the president appointed Marshall Cushing of New York to fill the same.

A report was called for from the secretary and treasurer of the Association. The secretary explained his dilemma in not having any official records to commence his active work with, but outlined a proposition which he hoped would leave matters in shape, so that by the time the next annual meeting is held things ought to be in fairly good shape, as far as the list of membership and financial condition is concerned.

The secretary also explained the arrangements made at the last meeting for the publication of the proceedings of the last meeting and the verbal contract entered into by the retiring officers. It was thereupon moved by Mr. Roderus, of Chicago, that the contract made by the retiring officers with Mr. Herbert for the publication of three hundred copies be approved. On discussion of this matter it was moved that the entire subject be passed for the time. Following further discussion, a motion was made by Mr. Dowdell of South Dakota that the matter be taken from the table. This motion prevailed. Following this action the original motion of Mr. Roderus was renewed, authorizing the publication of the proceedings as originally contracted with Mr. Herbert. This motion prevailed.

The treasurer followed the secretary with a brief report showing that the financial condition of the Association was considerably better than it was one year ago.

The matter of dues was discussed. In this connection it was recommended that the secretary notify all persons in arrears not later than the first of the new year.

The object for which the council was called together was primarily for the purpose of determining the time and place for holding the next annual or 1914 convention. Invitations were presented from St. Louis, Mo.; Richmond, Va., and Houston, Texas. There being no representative from St. Louis present, the invitation from this city was presented in the form of a letter.

President Oswald presented an invitation from Richmond, Va., and a very interesting program to follow, with visits to Washington, D. C., Annapolis, Md., Philadelphia and New York City.

Mr. Lee J. Rountree, of Georgetown, Texas, presented the claim from Houston, Texas, together with a very interesting itinerary of the state, as follows:

"Mr. President, and ladies and gentlemen of the Council: Splendid indeed is the proposition of our worthy president, Mr. Oswald, of New York, that we meet in Richmond, and then visit Washington, Philadelphia, New York and other eastern centers. I am glad that the effete east recognizes the historic city of the south, dear old Richmond, as a proper place to receive the National Editorial Association. I love Richmond, the historic old city, for the deeds of the heroic men enacted there in the great fratricidal conflict of a half century ago, because in that conflict those near home looked to Richmond for hope and inspiration.

"But, ladies and gentlemen, I shall speak today for another great commonwealth. If I did not sincerely believe that I offer to you one of the greatest programs ever tendered this Association, and that your coming to Texas would not be for the upbuilding and perpetuation of our beloved Association, I would not stand here today and plead the cause of Houston. I attended my first meeting of the National Association in Chicago a decade ago (in 1893) and the friendships formed then are steadfast today, and some are present here that were here then. I hold in my hand the official invitations from Governor Colquitt and Lieutenant Governor Mayes of Texas, who was a former president of this Association; the mayor of Houston; the Press Club of Houston; the Press Club of Austin; the Dallas Press Club, and words of welcome from the Texas Press Association, one of the greatest state associations in the Union; the Northeast, the Northwest and Southwest Texas Press Associations, and pleas from the Chambers of Commerce of Dallas, Galveston, Fort Worth, Greenville, Wichita Falls, Waco, Austin, San Antonio, and to underwrite it all — and that is not necessary in Texas, for the promises of men there are better than bonds — is the program submitted by the Chamber of Commerce of Houston, through that indefatigable worker and princely gentleman, Secretary Adolph Boldt, of Houston. Houston, the young commercial giant of the southwest, is sincere and earnest in asking you to come to Texas, and the program will appeal to the ladies and gentlemen of the Council."

Here Mr. Rountree read the telegrams and letters, including a touching plea from Col. F. B. Baillio, of Texas, a former president of the National Association, in which Colonel Baillio told him he could not come back to Texas if he did not bring the National Editorial Association, and also a telegram from Floyd P. Loebridge, of the Austin Press Club, in which Mr. Rountree was barred forever from the doors of the Press Club if the editors did not come to Texas. Mr. Rountree piled the invitations and telegrams high on Secretary Schlosser's table, and said:

"George, read them to the Association; they are from the best people on earth, and are true and genuine expressions of friendship.

"Now, my friends, somehow I feel in my heart you are with me in this contest for this high honor to my native state. The Texas Press Association will meet the special trains from Chicago and St. Louis at the Red River with a carload of refreshments, including Texas goods and Texas products and Texas sunshine and Texas friendship. We will go with you through our great state, vast in its resources and possibilities; through its corn and cotton fields, its valleys and cities, its great prairies, and to the sea at Galveston, where noble men have given civilization the great sea wall for the protection of the lives at the second seaport of the nation; at Dallas and Fort Worth you will see the manufactures and packeries; at Waco and Austin you will meet a citizenship building cities for time; at San Antonio you will visit Fort Sam Houston, the army post of the south, and the historic old Spanish missions. Here is the Alamo of sacred memory. One of the greatest battles for freedom of the ages was fought here in 1836, by men as brave as the Spartans, for it is said that under Leonidas that 'Thermopalae had its messenger of defeat, but the Alamo had none.' You will see where our heroic dead fell to give us a new nation, that came voluntarily into the Union, as the greatest state of the greatest country in civilization. Then we will visit that lonely spot near Houston, where the gallant Sam Houston defeated the Napoleon of the West, Santa Anna, reconquered Texas to a history — glorious, eternal and undying. The voice of my people — among whom sleep four generations of those near and dear to me beneath its sacred dust — from the crystal sea across the richest black lands of the world and from the piney woods to the great mountains, joins me in asking you to come to Texas. We shall not only give you entertainment and the substantial things of life, but friendship, sympathy and cordiality in your great and honorable work in upholding the dignity and honor of one of the greatest professions known in the world's history. The gates of Texas — my beloved state — are open to you, and the hand of welcome is outstretched to you. Five million people join me in this invitation, and it is genuine and comes from the hearts of the noblest and best men and women who are making history for our great nation, and I want to send the message home that you, my friends, are coming to the land of hospitality; to the land of great prosperity, rich in history and achievements, far-reaching in possibilities and aspirations, the land of fair women and brave men, the garden spot of the continent — Texas."

After a discussion on the location, it was moved by Mr. Albright of Tennessee, and supported by Mr. Hosmer of Colorado, that Houston be declared the choice of the members present as the next meeting place of the Association.

Mr. Hungerford of Iowa moved as an amendment that Richmond be inserted in place of Houston. Amendment supported by Mr. J. Byron Cain of Kansas.

After a thorough discussion of the subject and the motion being put, the amendment was lost.

The chairman thereupon putting the question, the original motion was declared carried with a few dissenting votes.

Mr. Hotaling of Minnesota followed this vote with the motion that the vote be declared unanimous, and it was so recorded.

The fixing of the date for the next annual meeting, on motion of Mr. Dowdell, was referred to the president, secretary, and Mr. Rountree of Texas.

There being no further business to come before the meeting, adjournment was taken, and the hospitality of the Chicago Press Club was enjoyed at a luncheon served in their magnificent club rooms.

The Luncheon

In the absence of the president of the Press Club, Vice-president Julius Reynolds Kline presided, and after appropriate words of good-will and congratulations, introduced the different speakers.

President J. Clyde Oswald responded on the part of the National Editorial Association, and was followed by Vice-President Hosmer, who told of former visits to the club and of the high appreciation of the hospitality and courtesies extended. The other speakers were: Danlus Mullock, Frank Comerford, Judge Sheridan, E. Fry, Charles F. Hatfield and Lee J. Rountree.

"The modern newspaper is going to be a clearing house for all the facts," said Mr. Comerford, "and the publication of the facts is the one means of keeping our government one by the people.

"Unless we have a patriotic set of editors who are willing to overlook personal and party prejudices and print the truth, we cannot have a free country."

Mr. Comerford drew attention to the campaign against quack doctors by the Chicago Tribune as an example of the progressiveness of "a great modern newspaper."

Municipal Judge Fry urged the editors to take up work similar to that of the Chicago Safety Commission in their own cities.

ADDRESS BY MR. C. E. HATFIELD

Field Secretary, Bureau of Conventions and Societies, Panama-Pacific International Exposition

Mr. Toastmaster, and Members of the National Council of the National Editorial Association and Members of the Chicago Press Club:

I appreciate this opportunity of calling your attention to the "International Press Congress" or "World's Press Parliament," which it is proposed shall be held in connection with the Panama-Pacific International Exposition at San Francisco in 1915.

As members of the press, it is not necessary for me to tell you in detail about the Exposition itself. I will simply state that it is believed that this exposition will excel every other previous exposition.

The Exposition is planning to make the conventions and congresses a great feature. These world gatherings will bring to San Francisco the great thinkers of all nations along the lines of fraternity, industry, art, science and education. Low railroad and steamship rates, ample hotel accommodations at reasonable rates, a favorable climate, the attractions of the Exposition and points of interest throughout California and the Pacific Coast will make 1915 convention year in San Francisco.

It is with this thought that we are inviting the various national press associations, not only to meet as individual conventions in San Francisco in 1915, but that there shall be held an International Press Congress, even greater than the great "World's Press Parliament" which met in connection with the St. Louis Exposition in May, 1904, and with which the National Editorial Association had so much to do, in connection with the American Newspaper Publishers' Association and the Missouri Press Association, with the co-operation of the prominent leaders in the press world, as to deserve the credit of having organized that successful press parliament, and it is estimated that those attending the congress represented more than ten thousand publications.

As representatives of the exposition we have been in communication, personally and by letter, with the other principal national associations, and have their assurance of hearty co-operation. Some have already appointed committees and others are ready to do so. I trust that at this meeting of the National Council your executive committee will be authorized to appoint its committee.

As soon as the various national organizations have appointed their representatives it is proposed to effect a permanent organization, and that the congress be worked out through committees representing the various associations in co-operation with the Bureau of Conventions and Societies and the Exploitation Department of the Exposition. Efforts have already been inaugurated to secure meetings of all the international, national, state and district press associations.

It is further recommended that a month be set aside to be known as the "International Press Month," in 1915, and some prominent in the press world have suggested that May would be the most desirable.

Representing the Exposition, I can assure you that the usual courtesies that have been granted to the press in the past will be extended by the Panama-Pacific International Exposition, so that the press representatives and their families will be taken care of liberally in the way of passes, which will no doubt apply to all concessions, as has been done at other expositions. Comfortable press headquarters will be provided with every convenience for those in attendance.

Speaking further of committees to be appointed by the various national associations, it is our thought that these committees should have full authority to lay out the plan and scope of the congress and to arrange for the permanent organization, representing each different body that co-operates in the movement, so that there will be a central and national organization with authority in connection with the Exposition and the California Press Association, which will be the natural host, to extend invitations to the press organizations and great editorial leaders in other countries. This permanent organization could also extend its membership and activities by enlisting the co-operation of the various state, district and local press associations, so that when the Press Congress was held special trains could be started from all parts of the country, uniting at San Francisco, where they could hold their various conventions separately and then unite in a great International Press Congress.

I am glad to report that the Exposition is progressing most satisfactorily in its construction, being at least two months ahead of schedule; that the financing is arranged; the exhibit space more than applied for, and it is the expectation that everything will be in readiness to open the Exposition in a completed condition on the 20th of February, 1915.

C. E. HATFIELD, 917 Ashland Block, Chicago
Field Secretary, Conventions and Societies, Panama-Pacific International Exposition

We hope to have the hearty co-operation of the National Editorial Association, as well as the Chicago Press Club, and every other press organization in this country; the reasons for this are so well known to you representatives of the press that I will not take your time to review them.

It is believed that all the nations of the world having commercial interests of any importance will gladly take advantage of this time and place for international felicitations upon the completion of a work, the greatest ever undertaken by a single nation in behalf of and in the interest of all; and it seems assured that this sentiment, coupled with the substantial commercial advantages to be obtained, will secure the participation of governments upon a scale that has never been equaled at any other exposition.

The problems of the country are already in process of solving on the shores of the Pacific. The far-sighted rulers of other lands will realize the transformation which the Panama Canal will work, will grasp the changes that will come with rapid growth along the shores which border this ocean — which will come to the always-verdured isles of the Pacific, soon to be so readily within reach of immigration.

To forward the civilization of the world by a quarter of a century is a mighty program! Worthy of the times, worthy of the nation which inspires this mighty task. In its accomplishment the world will share; in its benefits the world will participate.

I hope to meet with you in San Francisco, in the greatest press gathering that has ever been held.

* * *

EXECUTIVE COMMITTEE MEETING OF THE NATIONAL EDITORIAL ASSOCIATION

At 2 o'clock p. m. the Executive Committee, consisting of the president, vice-president, secretary and treasurer and six members of the Association, was called into conference by the president of the Association.

On convening, a motion was made by Mr. Roderus of Chicago, supported by Mr. Hotaling of Minnesota, that a committee of five be named by the president on an International Press Congress, to be held in San Francisco during the time of the Panama Exposition in 1915. This motion prevailed.

The president appointed as such a committee: Walter Williams, Missouri; L. C. Crampton, Michigan; Edward Albright, Tennessee; A. D. Moffett, Indiana; J. P. Baumgartner, California.

Mr. E. R. Purcell of Nebraska brought up the question of the organization of a foreign advertising bureau. The subject was discussed by Mr. Edgecomb of Nebraska and others, without any official action being taken.

The president at this meeting outlined his program for an increase in membership, and which received the hearty support and approval of all the members present.

The dates for the annual meeting at Houston were fixed for April 23-24-25, to be followed by an outing as guests of the various cities of the State of Texas, continuing over a period of about eight days.

There being no further business, the committee adjourned, subject to call of the president.

HOUSTON'S INVITATION

Chamber of Commerce
Houston, Texas, September 25, 1913.

Mr. John Clyde Oswald, President, and Directors of the National Editorial Association, Chicago, Ill.

Gentlemen: The annual convention of the National Editorial Association is an occasion regarding the importance of which the Chamber of Commerce is duly appreciative, and we are asking for the pleasure and privilege of entertaining its delegates in 1914.

In doing this we are fully mindful of our obligations as hosts, and it is with particularity of vision, and a full knowledge of the hospitality of our people that we assure you that the selection of Houston will not only be a subject for rejoicing on the part of our citizens, but the occasion will also prove an unqualified pleasure for all attending delegates.

The city of Houston has many historic associations, and is progressive and modern in every respect. Our hotels (of which we have many) are not surpassed in appointment and general excellence by those of any city in the south, and we are exceptionally proud of our Municipal Auditorium, which has been especially constructed for convention purposes at a cost of half a million dollars. With a seating capacity of seven thousand persons, it is well adapted to the accommodation of national assemblies.

The historic battlefield of San Jacinto (converted into a beautiful park), where Texas won her independence, is nearby-located on the Houston Ship Channel, and reached by a splendid automobile highway.

The city of Galveston rightfully boasts of the finest surf bathing to be found on any coast, and is reached from Houston by rail line, interurban or automobile. Its magnificent sea wall, and the causeway connecting the city with the main land, are both examples of exceptional engineering merit. One day will be spent in Galveston, and an oyster roast and other suitable entertainment will be furnished, visiting delegates being the guests of the commercial association of that city.

The circle tour of the state, for which all arrangements have been perfected and an exceptionally low rate secured, embraces a visit to San Antonio with its Alamo and its historic Spanish missions, thence to Austin, the capital of the state, with its imposing statehouse, the seventh largest building in the world. The party will then proceed to Waco, one of the flourishing cities of the state. The next city on the itinerary is Fort Worth, the center of the cattle and packing house industries of Texas. From Fort Worth we proceed to Dallas, the metropolis of central Texas, important as a commercial and industrial center.

One day will be spent in each city, the trip being made by easy stages, and elaborate entertainment has been promised and will be furnished by the commercial organization of each city visited. It is believed that the circle tour will prove a most enjoyable occasion, and will be profitable as well, affording the delegates, as it will, an opportunity to study at first hand the wonderful resources and possibilities of this, the Imperial State of the great American Union.

In event any party of delegates should desire to visit the Canal Zone, it would afford us pleasure to make the necessary transportation arrangements for them, sailings to be made from Galveston.

The Houston program of entertainment which we will provide will be in part as follows:

Program

First we will give the delegates the whole of Houston as a front yard to play in.

We will provide a launch trip over the Houston Ship Channel to the historic San Jacinto Battlefield, and a luncheon after arrival.

Will give them an automobile ride over the city, and they will be entertained at the Country Club.

A one-day trip to Galveston at our expense, entertainment to consist of an oyster roast and a boat trip on the Gulf of Mexico.

A reception and banquet, with dancing, will be tendered as a compliment to lady delegates.

One evening will be devoted to a theater party as guests of the Chamber of Commerce.

A trip by rail to Sugarland, twenty-five miles distant, and a barbecue dinner. Delegates will have an opportunity to inspect the largest sugar refinery in the south.

The circle tour will take in the cities of San Antonio, Austin, Waco, Fort Worth and Dallas. Elaborate entertainment will be provided by the commercial organizations of each city visited, as per correspondence on file.

Delegates may be assured of an enjoyable visit and will receive every courtesy and attention during their stay in Texas.

The Texas Press Association will meet the delegation train at Red River and escort the body to Houston, a distance of 500 miles. Refreshments are to be furnished by the Commercial organizations of Texas.

Special hotel arrangements will be provided.

In conclusion will add that we wish it was possible to convey to you, and to each member of your executive committee, the degree of sincerity and good-fellowship which accompanies this invitation. Your committee can make this possible only by its acceptance.

Respectfully requesting your favorable consideration, and wishing your association much prosperity, beg to remain,
Very sincerely yours,
B. B. GILMER, President.

Ben Campbell, Mayor, City of Houston:

As mayor of the city of Houston, it affords me more than usual pleasure to extend to the members of the National Editorial Association a most cordial invitation to meet in annual convention and accept the hospitality of the good people of this city in 1914.

It is my understanding that the Chamber of Commerce has in process of preparation a most attractive program of entertainment with which we are heartily in accord.

The general attitude of the citizens of Houston toward all guests which they are privileged to entertain leaves nothing to be desired, and we bespeak for your delegates a most hearty welcome and the extension of every courtesy.

I am asking to be given an opportunity to become personally acquainted with the members of your association. The selection of Houston would grant this request.
Very sincerely yours,
BEN CAMPBELL, Mayor.

Texas Press Association Invitation

Dallas, Texas, October 25, 1913.

To the National Editorial Association.

The Texas Press Association unanimously invites your great organization to hold its next annual convention in Texas. The city of Houston will welcome you with ardor and devote its best efforts to your entertainment, and every other city in this imperial commonwealth will second the efforts of Houston. Come to the big state and have a big time.
J. J. TAYLOR, President.
SAM P. HARBEN, Secretary.

Invitation of Governor and Past President of the National Editorial Association

Governor's Office
Austin, Texas, October 6, 1913.

To the Council, National Editorial Association,
Chicago, Ill.

Gentlemen: As past president of the National Editorial Association, and as acting governor of the State of Texas, I wish to present to you a most urgent invitation to hold your next annual meeting in Houston, Texas.

I can assure you that not only would Houston give you a hearty welcome, but that the people of the entire state will assist in making your stay in this state the most pleasant in the history of the Association.

There is no city in this country with better and more up-to-date hotel facilities than Houston. There is not a more hospitable people on the face of the earth than you will find there. They have already begun making active preparation for your entertainment, and this preparation will be continued up to the time of your coming. They know how to entertain, and they know how to make all visitors feel at home.

Houston is being joined in this invitation by all of the larger cities in the state, including Galveston, San Antonio, Austin, Waco, Dallas and Fort Worth, each of which places you will be expected to visit while in the state, and at each of which you will be most delightfully entertained.

I am certain that my friend, Hon. Lee. J. Rountree, will do all that any man could do to let you know just what a royal reception awaits you in Texas, but even Rountree cannot do justice to the subject. But for business engagements calling me to another state I should certainly be present to reinforce the many invitations that will be extended to you. We want you to come to Houston, and to Texas, and sincerely hope you will not disappoint us.

Fraternally yours,
WILL H. MAYES, Acting Governor.

A Characteristic Houston Editor's Invitation

Office of the Houston Daily Post
Houston, Texas, September 27, 1913.

National Editorial Association Committee,
Chicago, Ill.

Brothers: Let me push my work off from me long enough to stand with those who are reaching their hands to you, who have on their wanting clothes. Like a hobo needs a barber, like a poet needs the shears, like Bill Bryan needs Chautauqua, like Milwaukeeans need beers, like The Colonel in his speeches needs an extra font of "I's," like when it draws near to October men need mother's pumpkin pies, like a banquet spread and waiting needs a cheery, hungry crew, so, oh, brothers, Heavenly Houston stands arms out and needing you.

Won't you come to dear old Houston? Won't you come and put your feet 'neath the tables we're preparing to load up with things to eat? Won't you come and smell the perfumes from our miles of blossomed leas? Won't you come to feel the gulf breeze bring you greeting from the seas? Won't you come and let us show you what the "Houston spirit" means — buildings reaching up to heaven, cakes and pies and pork and beans? Oh, you many pencil shovers, from the west and from the east, we are waiting for your answer, to start spreading you a feast. The world's gladdest, sweetest children shall weave clover wreaths for you; Houston has the sweetest maidens that e'er wore a peek-a-boo; Houston has the dearest matrons, who will stand behind your chairs helping you to Houston dainties, helping you forget your cares. We we will send you home rejoicing when the curtain has dropped down, but forever there'll be longing in your hearts for Houston town.

Leave your money where it's hidden, leave your cares upon the shelf; Houston will be glad to see you — and I'll be plum glad myself.
Fraternally,
JUDD MORTIMER LEWIS.

Alike cordial invitations were received by letters and telegrams from Governor O. B. Colquitt, the Houston Press Club; Waco, Texas, Chamber of Commerce; Navaro County Press Club; the Austin Press Club; the Chamber of Commerce of Austin — "the Capital City of the Grandest State in the Union"; Northeast Texas Press Association; City Council of Greenville; Houston Cotton Exchange and Board of Trade; the Chamber of Commerce of Wichita Falls; the Business Men of Wichita Falls; Galveston Commercial Association; the Galveston and Dallas Daily News; the Chamber of Commerce of Fort Worth; the mayor of the city of Houston; the Chamber of Commerce of Houston; the Chamber of Commerce of Greenville; Dallas Chamber of Commerce.

The following telegrams are sufficiently indicative of the character of most of the others that have come from all over the great State of Texas:

Hon. Lee J. Rountree: The Texas Press Association in executive session extend through you to the Council of the National Press Association a hearty invitation to come to Texas with their next meeting. Thirty members of our Association will meet delegates at the Texas border and escort them through Texas. Every member of our Association will act as a special committee to see that every member of the National Press Association has a good time while in our state. Tell them we want them — want them bad — and Lee, you must bring them to us.
SAM P. HARBEN,
Secretary Texas Press Association.

Lee J. Rountree: The executive committee of this Association has just passed a resolution as follows:

"Whereas, The newspaper men of Texas are making a determined effort to secure the next convention of the National Editorial Association; and,

"Whereas, The city of Houston has extended a cordial invitation to the Association to convene in that city, be it

"Resolved, That this organization extend a hearty invitation through Mr. Lee J. Rountree, of Georgetown, to the National Editorial Association to hold its next convention in Texas."
J. A. ARNOLD, Sec'y-Manager,
Texas Commercial Secretaries and Business Men's Association.

A Decade's Changes in American Journalism

An Interesting Interview with Dean Williams of Missouri

(From August issue The Newspaper World, London, England)

Mr. Walter Williams, the well-known dean of the School of Journalism, which, for half a dozen years past has advertised the University of Missouri, not to say the state in its entirety, to the world at large, is at present among us, industriously taking note of the changes that have passed over the newspaper world of the United Kingdom in the last decade. A London journalist who, on Mr. Williams's invitation, took part in the Parliament of the Press, one of the features of the vast International Exhibition at St. Louis, he there helped to organize, has seized the opportunity to elicit from him, in his turn, the changes which have taken place in American journalism in the nine years that have elapsed since that memorable excursion. Happily, they have been all to the good.

A letter from a reporter in the last issue of The Newspaper World suggested one of the earliest questions: "What happens to the conscientious reporter — say, a reporter who refused to transcribe the details of a filthy case?" "As a matter of fact," explained the dean, "wherever else you may detect the weaknesses of our journalism, the publication of the details of cases of an immodest or indecent character cannot justly be described as one of our sins. This is due, it is only fair to observe, not so much to an antagonism upon the part of the reader, as to the innate niceness of mind in newspaper men themselves. I have in mind such a case as is suggested by the letter of which you tell me; a reporter sent out by the 'city,' or, as you say, the news, editor, to pursue inquiries as to some scandal, returned to the office in a state of disgust. He began by saying to the news editor that rather than write out the details he would quit — you know that in our offices resignation and dismissal can take effect instantly — but the news editor instantly assured him that he need not talk in such fashion. But the technical position in which he thus placed himself enabled the reporter as an outsider to express freely his views as to the humiliation and folly which would be involved in the publication of the details, and in the result the news editor consented to the writing of a report that avoided the offensive particulars. Really, immorality (except, perhaps, in the form of a certain type of advertising, now rapidly disappearing) receives mighty small patronage from the newspapers of the United States."

In another direction, it quickly appeared, the journalist "on the other side" enjoys great freedom — indeed a freedom much wider than his brethren in this country know. "A staff writer either under his own name or anonymously, is often permitted to expound views opposed to those held editorially by the journal in which his article appears; a notable instance of this is the regular nightly dispatch of the Washington correspondent of the Kansas City Star (recorded two or three weeks ago in The Newspaper World). I know it is not absolutely a rarity for articles to be printed in your papers here that are contrary in tenor to the policies ordinarily advocated in their columns; but seldom, I imagine, are members of the staff of a paper conceded such a freedom. In the United States, however, illustrations of such freedom are now quite common, and, though, as you have noted, proprietors of journals may here and there protest, I believe that newspaper men generally accept it, not only as satisfactory from the journalist's standpoint, but also as a profitable piece of business even from the standard of the cashier's office."

"The spirit which has animated this departure from the custom of a strict political partisanship which prevailed until half a dozen years ago," continued Mr. Williams, "is even better illustrated, probably, in the spread of independent journals, which now constitute, it may well be, one-third of the journals published in the States. These journals, either starting without, or throwing off, the trammels of party allegiance, make their sole aim to be the servant of the people at large; just as a tramway or a system of street illumination or power supply is a public service, so the independent newspaper desires to be regarded, and, in addition to providing news in abundance, it fights strenuously for the interests of the community whenever it conceives these to be in danger from monopoly or corruption. Take the Hearst journals, for example; there is a body of opinion, I know, which affects to regard them as under the influence of insincerity, but even if, for the sake of argument, we concede this, it will be very difficult for their fiercest critic to deny that they have rendered inestimable services to the public; they may have been only after 'good copy,' to use a phrase which is now more common in England than in the States, but at least they have in its pursuit accomplished great reforms. After all, when I reflect, this is the most significant thing I can tell you about American Journalism in the past decade. Journalism with us, whatever it may be with yourselves, is in the first place in the way of wresting from party what was meant for mankind, and then of seeing that mankind, having come into possession of it, wrings from the new weapon all the advantages it can provide in its service."

"And how, amidst the working of the yeast of this new time, fares our old friend, the journalism you long ago taught us to know, I won't say respect, as 'yellow'"?

"I can understand your gibe at yellow journalism, but when you have lived in the country, with its ever-enlarging heterogeneous population and its vivid life, you can find, if not excuses for it, at any rate explanations of it. Anyhow, you will be pleased to learn, a great change has been passing over it. All the many big-type headlines — all the aids to rapid perusal and ready comprehension — may still characterize it, in a number of its leading exponents; yet in so far as it stood for exaggeration, in so far as it substituted screams for sanity, in so far as it flayed innocent people for the sake of increased circulations which spelt pelf, I can report most satisfactory progress towards a healthier condition of affairs. The readers of the newspapers now increasingly expect from their journals the accuracy of statement, the sound judgment, and the good form which they look for in their closest and most trusted friends; and popular papers are discovering that as their yellow attire drops from them, their status and influence grow. The people in this country have always over-estimated the measure of yellow journalism, but in any case it is far from being the factor in our national life that it was a few years ago."

Through the hour's conversation with Mr. Williams, there meandered a pleasant stream of chat concerning the personnel of American journalism. As the foundations of American journalism, as, in fact, likewise those of English journalism, were laid in the main, by men recruited from the printing office — here and there they were drawn from other sources — for illustration: one of the most brilliant and best known of all the managing editors in the United States once assured the writer that he began life as a shoe-black, or, at least, as a newsboy, in the East End of London some forty years ago — but in the bulk they had followed the lead of Benjamin Franklin. Islands of glory, continents of respect, are the due of these men, but the class from which they were drawn is now rapidly giving way to men coming from the universities. Not at all, however, for the reasons that the mention of the word "universities" suggests. The change is actually traceable to the change from composition by hand to composition by linotype machine, the machine having been the means of introducing a type of man, a mechanic rather than a craftsman, into the composing room. Almost of necessity, therefore, the young men from the universities have been welcomed into the newspaper offices. Generally they are poor men; for in the States the cost of maintenance at a university, the number of scholarships, the absence of the caste feeling which here prevents a student from earning money by the performance of services like those of a waiter, for instance, and other factors, enable men to obtain the advantages of university education who could not receive it in England. The sons of rich men frequently enter the profession, because of the flair of it; but, unless, like the son of the great Pulitzer, they have journalism in the blood, the attractions of their own sphere usually draw them far away from it.

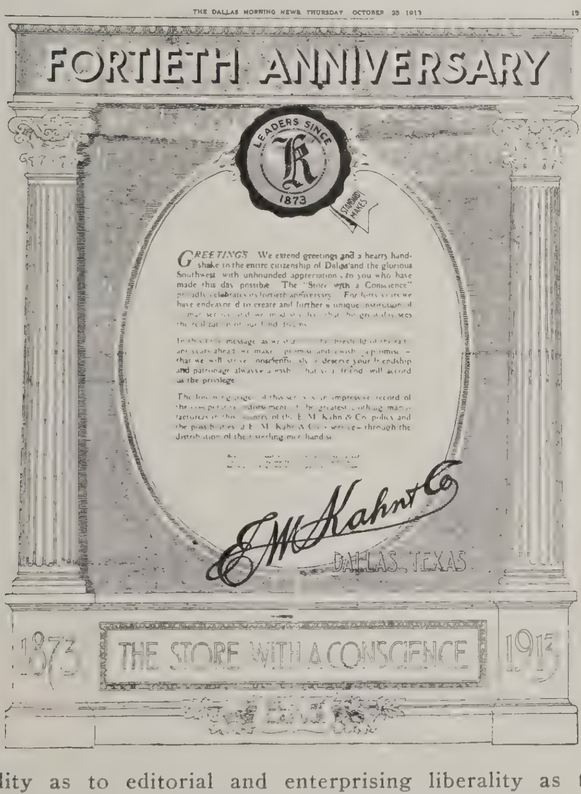
⁂

A GREAT TEXAS DAILY

A Nine-page Advertisement That Shows the True Texas Spirit

Texas has a number of excellent newspapers that have reached greatness with the growth of the cities, whose prosperity these newspapers have fostered and materially aided.

Our attention has been particularly called to the issue of the Dallas Morning News of October 28. It is a daily of metropolitan proportions and style, gotten up with ability as to editorial and enterprising liberality as to news departments, and with mechanical excellence.



THE DALLAS MORNING NEWS THURSDAY OCTOBER 23 1913
19
FORTIETH ANNIVERSARY
LEADERS SINCE
K
1873
STANDARD MAKES
GREETINGS
E. M. Kahn & Co.
DALLAS, TEXAS
1873
THE STORE WITH A CONSCIENCE
1913

This issue, however, is especially to be noted by the fact that it contains a nine-page advertisement by one local patron. Every page is artistically treated, and we reproduce the first page of the nine to show the style and as a model. Art certainly may have, and — as taught by Editor Samuel Bowles, of the Springfield, Mass., Republican, in his address printed in this issue — should have a place in newspaper making. This advertisement, as will be noticed, was in celebration of the fortieth anniversary of the store.

To have been for four decades in successful business, as an extensive merchandising establishment, in the new state of Texas, is something worthy of celebrating, and there is no better nor more profitable way to celebrate such a record than through the pages of a worthy daily paper, that has, doubtless, contributed much to the great success, and through which all the customers of the establishment are reached and given to realize and to rejoice in the signal growth and accomplishment.

We like the slogan of "The Store With a Conscience" adopted by E. M. Kahn & Company, as also the claims of "service," "sterling merchandise" and "truthful advertising." These are the things that tell for permanent and worthy success in every kind of business, and no less in newspaper making than in merchandising.

As indicated in the page reproduced, the words "an impressive record of co-operative indorsement," the advertisement is evidently of the co-operative character that has come somewhat into vogue of late years, as the manufacturing establishments whose goods are handled by E. M. Kahn & Co. have separate representation in the great advertisement.

Manufacturers and jobbers do well and wisely to second, back, and take part in the advertising of local dealers who handle their goods.

The mammoth advertisement, from a home mercantile establishment, testifies more eloquently than words to the ability of the Dallas Daily News as an ideal medium to demonstrate to its patrons the real power of advertising in its papers through carefully prepared and artistically displayed copy.

⁂

SOLICITING OF FUNDS CONDEMNED

Office of United Typothetae and Franklin Clubs of America

Chicago, Ill., November 7, 1913.

National Printer-Journalist, Ravenswood Station, Chicago, Ill.

Gentlemen: At a meeting of the executive council of this organization, the enclosed resolution was adopted and the secretary was instructed to send a copy of same to the trade papers for publication.

Kindly give this resolution publicity in your publication.

Very truly yours,

S. EVANS CLARK,
Secretary, United Typothetae and Franklin Clubs of America.

Whereas, It has come to the attention of the Executive Council of the United Typothetae and Franklin Clubs of America that it is the growing practice of committees in charge of cost congresses, conventions and other gatherings of printers and the allied crafts throughout the country to solicit donations in support thereof, or request advertising in literature relating thereto.

Be it resolved, That this method of securing funds is beneath the dignity of the business, and subjects the craft to merited criticism, and that this Executive Council does not endorse this practice, but on the contrary desires to go on record as condemning it.

Be it further resolved, That this resolution be given to the trade press for publication.

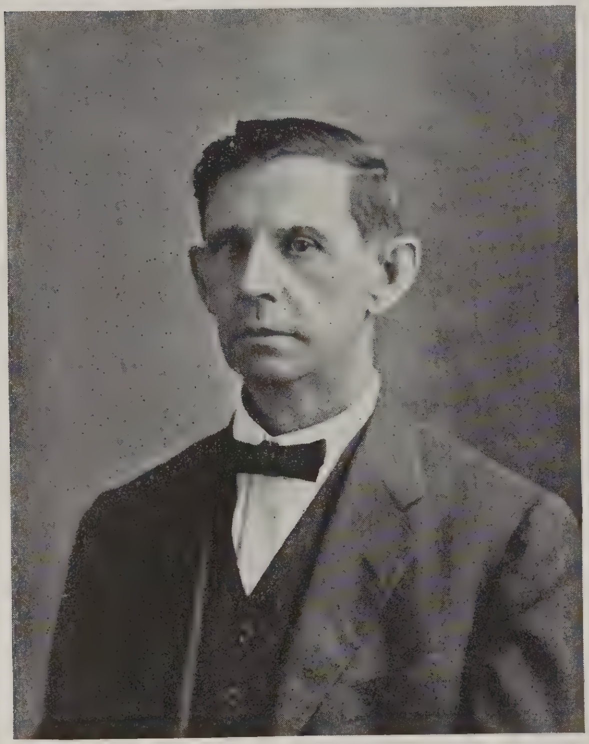
Advertising Agency of the National Editorial Association

By W. A. Woodring, Peru, Indiana

An advertising agency of a co-operative nature whose only business is to get advertising for the newspapers and to place it in such a manner as to get the best results for the advertiser and thereby make him more interested in newspaper advertising, is what the publishing fraternity needs and needs badly.

An Agency established and maintained by the newspapers would make the profits to the publisher greater and surer, and would, if anything lower the cost to the advertiser, for the big dividend-paying feature of the agency would be eliminated — in other words, the middleman who has controlled the situation would be cut out.

It has been and is the business of the advertising agency to secure the highest rate for space from the advertiser and then with an elaborate contract form get the publisher down to starvation prices. This leaves to the agency the cream which should go to the people who give direct publicity to the copy.



Wilford A. Woodring, Peru, Ind.

This is not a lengthy article, but details are not necessary on the matter, as the average business manager of a paper can fill in his own details from experiences with the elusive agencies. In connection with this it is known that many "mushroom" agencies never pay at all — the publisher always finds this out but not until after the agency has evaporated and another comes to take its place and repeat its methods. There is, to my mind, no argument against a co-operative agency that has for its purpose the getting of business — good business, and not the paying of dividends to agency stockholders out of the pockets of the publisher and advertiser.

Why not make the co-operative agency go further and establish a mild censorship over the bushels of free advertising that glut the lockbox of every newspaper publisher. Have the propositions submitted to the agency. The agency can investigate and advise all publishers as to whether the matter deserves free publicity or not. Then it is up to the publisher whether he is in business for his health or is too tender hearted to refuse it.

Biographical

Wilford A. Woodring was born at Thornville, Perry County, Ohio, August 8, 1850. Moved with his parents to Miami County, Indiana at the age of three years. The family located in the dense forest with but one cleared field within several miles of their log cabin home. The family moved to Neosho County, Kansas, in a prairie schooner in the spring of 1870, and returned to Miami County, Indiana, in the autumn of 1874.

After completing school days, Mr. Woodring was a teacher in the district, village and city schools for eighteen years, and ended this work as county school superintendent. On January 2, 1891, he entered the Peru Journal, a daily paper, as a half owner. He became business manager, which position he still occupies.

In 1894, while not relinquishing his hold on the Journal, he, with Col. George B. Lockwood, at present proprietor and editor of the Muncie (Ind.) Press, founded the Terre Haute Tribune, where Mr. Woodring remained a little more than a year, at which time he disposed of his interest in the Tribune and again took active charge of the business end of the Peru Journal.

"LOADED WITH GOOD THINGS FOR THE PRINTER"

Likes the New Educational Department

Office of the Ludtke Printing Works, Markesan, Wis.
November 11, 1913.

Mr. B. B. Herbert, National Printer-Journalist,
Chicago, Ill.

Dear Mr. Herbert: The current number of the National Printer-Journalist has just been received, and as usual it is loaded with good things for the printer and publisher who cares. It is with delight that we see the new Educational Department for Ambitious Typographers established in this month's issue, with J. L. Frazier, of Lawrence, Kan., in charge. I only know Mr. Frazier by his work, but by the many reproductions of his printing work that I have observed in the trade journals, I consider him one of the most expert typographers in the country, and I congratulate you on getting his services for your most excellent journal. I am sure that his department will be a most interesting one. When Mr. Frazier recently sent us an announcement of his book of specimens of artistic printing, "Nifty Ideas for Thrifty Printers," we mailed our check to him for a copy by return mail, so eager were we for samples of his work. We had the distinction of buying the first copy, so he told us. To say that we are highly pleased with the book is putting it mildly. If there is anything we wish for in our shop it is for more samples of his work, and now that you have secured his services for your journal, we are assured of more from him.

Wishing you and the National Printer-Journalist the success you deserve, I remain,

Very sincerely yours,
E. W. LUDTKE, JR.

* * *

THE MODEL NEWSPAPER

Mr. Samuel Bowles, of the Springfield, Mass., Republican, in an address before the students of the School of Journalism, of Columbia, N. Y., on October 25, declared that the model paper was one that contained not merely a few human interest stories, but was filled with stories that would create sympathy.

Business Management

Continued from page 860)

THE OWATONNA MOVEMENT

There is a new movement on among the business men — both manufacturers and merchants — of Owatonna, Minn. — a movement that speaks volumes for the future welfare of that little city.

One or two of the manufacturers of Owatonna (and a bank) are making a special study of costs in their establishments. They have learned of the cost game from E. K. Whiting, the publisher of the Chronicle-Journal, and a man who had the moral courage to " kill " his pet, " The Daily Chronicle-Journal," when by the use of the modern cost system he found that he was losing over three thousand dollars a year, with no chances of the daily ever paying for itself.

And how many dailies are being run at a loss in this country, and how many publishers, if they KNEW their cost would have the courage to " kill " their pets?

This bold business move on the part of Mr. Whiting aroused the whole community. Many good people criticised his actions as a blow to the best interests of the locality — a few called him a fool, and but only one or two thought he knew what he was doing.

It was on January 1, 1911, that The Owatonna Journal-Chronicle Company installed its cost system. At first Mr. Whiting thought the job department was the big leak. After " plugging " everything there that looked bad he found that even then there was a greater OUTGO than INCOME. Then he tackled the daily and weekly, studying them both together as one job. This led nowhere. Then he did the right thing — he separated the two papers, and to his great surprise and regret found his pet, the daily, the cause of all his troubles. It took ONE YEAR of faithful, honest study in a SMALL plant to find the place where the outgo more than equalled the income. Mr. Whiting did all he could to save the daily to the people of Owatonna, by sending out an advertising man and by raising advertising rates. But to no avail. By October, 1912, he decided to have a " killing," and announced this would occur with the November 16 issue, and it did.

Shortly after Mr. Whiting installed the cost system in his plant, the buyers of printing in Owatonna had to pay more for this commodity than ever before. They soon found, though, that instead of " doctorin 'a dyin' horse," they were playing a dead sure winner. And which is the best game, anyhow?

Mr. Whiting talks straight out to his townsmen — he tells farmers, bankers, manufacturers and merchants alike that they should ALL study COST if they would better succeed. His talks are beginning to count, for hardly a day goes by but what some seeker of light does not go to him for advice.

From time to time the subject has been discussed of forming an organization among the business men of Owatonna, a club or association for the sole purpose of studying the question of COST, first, as it applies to each separate business, and then in the big way.

Only recently did such a movement crystallize into something real.

Early this October the first meeting brought out only four.

This would discourage most people who were trying to start " something." But the followers of Mr. Whiting are not that kind of citizens. They kept busy injecting cost serum into their townsmen, until it began to " work right." Then a second meeting was called, October 24, and twenty-nine were present. A full set of officers was elected and plans outlined to have a course of lectures on business economics, with each business represented making a very careful study of cost in its own affairs.

The officers of the new association are Louis Klima, president; C. S. Barr, vice-president; H. W. Stout, treasurer, and W. M. Warren, secretary.

All members of this association are to work on the same identical lines.

And how can this be? Because the principles of cost finding are exact and applicable the world over to any kind of a business.

And why are they to do this?

They realize that as there are ten men in any community, so will there be found TEN DIFFERENT methods of cost finding — when in finding cost there can be only one very simple law to follow. By working to this principle, every business concern will be, so far as methods of COST finding are concerned, on the same basis. They believe in STANDARDIZATION OF BUSINESS.

Throughout the country there are many business failures each year. All society helps to pay for them. If Mr. Whiting HAD NOT the courage to have " killed " the daily when he did, IN TIME ALL of us would be helping to pay for his failure — whether we ever saw his publication or not. The cost system saved ONE failure — in that town — and made a solid financial institution instead, and the same methods applied will save many another business concern in that very same city.

COST ENTERS INTO EVERYTHING, from babies to locomotives.

When it is not POSITIVELY known what COST IS, we have not only business failures, but we have INDIVIDUAL or HUMAN FAILURES as well, for which we all help to pay dearly.

Owatonna will soon find that plants there that are manufacturing the SAME (duplications) products will shift these so that the plant the BEST equipped to make ("A") will become the specialty plant in that one line, and let the plant that is equipped to handle ("B") handle IT, and so on.

Merchandising houses will experience the same thing and certain wares now found in ALL the stores will be found only in a few, those few being the best, the most economical and desirable places, from the standpoint of the whole community, from which such articles should be sold.

In time the people of that little Minnesota city will go still farther in their search for cost knowledge — they will have their children in the public schools, especially in the manual training department, studying the principles of cost finding, so that on going out into the great world to take their places as world workers, they will be better able to cope with conditions as they may find them. Thus, Owatonna children educated along these lines will become not only better workers, but safe, sane business men.

And yet again ——

The good citizens of Owatonna will some day find themselves keeping true costs in the home — FOR THE HOME IS THE MOST IMPORTANT PLANT IN THE WORLD — this knowledge to assist in finding what it COSTS to rear a human being (something our great government does not know), and which knowledge will enable Owatonna's FUTURE citizens to know better what it COSTS TO PRODUCE LABOR. Such information will allow of a FAIRER SELLING PRICE for that most necessary and important commodity in the world — LABOR.

Brethren, why should not ALL people gather such information? And why should not the Owatonna citizens handle their wage question on that kind of a business basis — a "cost, plus" basis?

IF THEY DO THIS, THEIR COMMUNITY WILL, IN TIME, BE A THOUSAND TIMES BETTER OFF THAN ANY OTHER LIKE COMMUNITY.

It will be but the matter of a short while when other communities will follow the example of Owatonna. Then men will find out that ignorant competition will gradually pass away — the monster will die.

In its place a dutiful slave will come — the slave of a competition based on the accurate knowledge of cost. The "Owatonna Movement" means that some day the workers and employers of that little city will set down about the board together, and from cost records — the home records of the worker, and the plant records of the employer — play the game of business so that the RIGHT wages and working conditions can be had by the worker, and a RIGHT profit be had by the employer, the entire business of the community being done on the honorable, true business basis of "cost, plus."

All hail to the Owatonna Movement!

* * *

Mr. R. A. Austin Leigh, of London, England, before the convention of the United Printers' Association of Sweden, held in Gothenburg, August 27 and 28, said in part:

"The proof of the pudding is in the eating, fits on the cost finding system, I assure you, and in my country — I don't hesitate to say so — the system has shown us precisely how much our machines produce and how much they could be made to produce, as also it has helped us to make the same quantity as before with considerably less machines."

Yes. And some day, by the use of the cost system, ALL manufacturers, whether printers or not, will find out that they are over equipped with machinery, or that they have equipment, all of which should be discarded and new labor-saving devices installed.

This will INCREASE the HOUR COST, but DECREASE the JOB cost.

Which would you rather do, dear reader, pay for forty hours at $1.00 an hour, or for thirty hours at $1.25 per hour?

It is safe to say that the "forty hour" condition prevails in the majority of manufacturing institutions in this country?

To get plans to the "thirty hour" condition is the mission of the cost system.

The "high cost of living" (in other words, the high cost of production) demands that this thirty-hour condition be brought about as rapidly as possible.

* * *

Holding Their Own (?)

The average business man, manufacturer and otherwise, are like a certain company of United States soldiers who were on a drill down near the Mexican border.

The day was a very hot one for so long a hike, dusty the road and burning the sun. Along about noon a lone rancher was met.

"Say, how far is it to Smithville?" asked the jaunty captain.

"I reckon about two mile," was the response.

The soldiers trudged along, the way to them seeming hotter and dustier than ever, if such a thing was possible. Another hour passed by, when they met a second rancher.

"Say, you fellow, how far is it to Smithville?" asked the now disgusted captain.

"Wa-all, let's see, wa-all — I reckon jest erbout tew mile farther on," was the lazy answer.

The soldier boys pulled themselves together for a new effort, and it had NOW become a real effort, to march with knapsacks and guns weighing a ton apiece. After a long, long, steady, weary march a third rancher was met, and of him it was demanded:

"Say, you rustler, do YOU know how far it might be to Smithville? Do you KNOW?"

"Do I KNOW how far it mout be to Smithville? Well, I reckon I does. It is jest erbout tew mile yander."

"Be gobs," spoke up the little red-headed, bow-legged, pigeon-toed Irish sergeant at the end of one of the lines, "Be gosh, thank the Howly Saints, we're able to be a-howldin' our own."

Yes, the average business man is like this company of soldiers — plodding along the ruts of life amid all the hot sands, fierce winds, and burning suns of the business world — dragging on toward (?) Profitville, being guided all the time WITHOUT true and accurate records and BY those people going in the OPPOSITE direction.

Mr. Business Man, in what manner are YOU "howldin' yer own"?

Or are you doing worse than that?

* * *

RECIPROCITY AND CO-OPERATION

W. G. Martin is the new secretary of the Ben Franklin Club of Cleveland, and is doing good work, as evidenced by the News published by the club. We take the following from the October number of this little but active agency for the promotion of the work:

"A member of this organization derives benefits exactly in proportion to what he puts into it. Give it a little attention and you will be paid ten-fold in benefits derived from co-operation.

"This is an age of co-operation, and wide-awake business men are realizing more and more the necessity of getting together so that, through working together in unity, protection against the forces which prey upon the unprotected may be afforded. Men have learned through association with one another that their competitor, in most cases, is not such a bad fellow after all, and can more readily be trusted to do the fair thing than the purchasing agent who often leads you to believe that your competitor is using underhand methods in order that he, the purchaser, may gain a better price through your dislike for your competitor, of whom you believe almost anything and give never a chance for explanation.

"The time is rapidly disappearing when purchasers of goods can line one competitor up against another and succeed in getting them to cut the bottom out of prices regardless of cost. Confidence in one another is being restored to its normal balance. A business man realizes today that the interest of his fellowman affects himself to a great degree, for a demoralized competitor means in turn demoralized competition, and that in turn means a demoralized line of trade, which is destructive to every person engaged therein. The solution of the problems facing the printing business can be arrived at only through the hearty co-operation of all those engaged therein, and this we can safely rest assured of, for where is there a man who can sink so deep into the mire of despair that he does not hope for better things. Get into the band wagon and work and you will remove the obstacles which confront you in short order. Work shoulder to shoulder with your fellowman who suffers from the same abuses as yourself, and the resulting benefits will be sure and lasting."

At the September meeting of the club, among other speakers was A. F. Sheldon, founder of the Sheldon School, who referred to co-operation as a test of sanity. It shows a normal frame of mind.

* * *

CO-OPERATIVE EFFICIENCY AND HIGHEST EFFORT

At a banquet of the members of the traffic department of the Associated Press from Missouri and Kansas, at Kansas City, Milton Garges of Chicago, division traffic chief, declared that: "The Associated Press has grown to be the greatest news gathering organization in the world, simply because every man in its employ, both the editorial men and the telegraph operators, co-operate. The public does not know much about the Associated Press, but when the great papers of the country want to impress their readers with the veracity of a report they place a little line 'by the Associated Press' over the story, and that means that the story is true, written by men unbiased in opinion, and hurried to the newspapers in the quickest possible time by the fastest telegraph operators in the country."

Tells of Dayton Hardships

Garges told of hardships suffered without murmur by Associated Press employes during the Dayton flood, where men were forced to wade through water neck deep, climb shaky, dangerous telegraph poles that wires might be tapped and a story of the disaster hurried to the newspaper readers of the country.

Edgar T. Cutter, manager of the Kansas City office, spoke of the spirit and zeal existing among the men to do their utmost, regardless of hardship or danger, the work in hand, and to be always ready, saying, among other things:

"The man who reaches the top in our business is the man who does his work every day to the best of his ability. We are all here to help one another. The association demands the best of every man. Don't think because you are on the 'line' in a small town that your work does not count. You can never tell. Tomorrow may make your office the most important one in the service. The story of the year, demanding your highest effort, may break before you are back home. You must be able to meet it; to lay that story in the hands of the telegraph editors of papers from New York to San Francisco in the quickest possible time."

There are no other things so important in newspaper making or in printing, for that matter, than hearty, loyal, co-operation among workers and a determination on the part of each to do his best, with deep conviction that each is responsible for worthy accomplishment and for the worthy success of the publication or of the office.

* * *

Charles F. McElroy, after serving the Ben Franklin Club of Cleveland, Ohio, efficiently for several years, retired from that office in September. Upon retiring he gave a review of the work for the past two years, complimenting the members upon their accomplishments during that time and assuring them that although he was about to leave for fields far remote, his heart would still be with the Ben Franklin Club of Cleveland. At this juncture President Cannon, on behalf of the board of directors, presented Mr. McElroy with a fine stickpin, a moonstone set in platinum, as a token of their esteem.

Mr. McElroy is now with the Geroge E. Lee Company, 1603 Monadnock Building, Chicago.

"Advertising—Good and Bad"

A Live Business Men's Association Making Good

HARTFORD, Conn., is not only a beautiful city, bright, clean and up to date as to streets, boulevards, parks, handsome buildings — attractive in architectural design, well built, imposing in appearance and substantial in construction — with all modern public institutions and utilities, well equipped and well conducted, but it is, as might be expected, a city known for the intelligence of its inhabitants and the high character, enterprise, public spirit and Yankee thrift of its business men, financiers, manufacturers, underwriters and bankers.

Naturally such a city has a progressive Business Men's Association and, just as naturally, that Association gives intelligent attention to the important subject of advertising or profitable publicity. Through the courtesy of a gentleman now known as "Souvenir Taylor" on account of the publications which he issued, but whom we knew, many years ago, as a newspaper publisher and the organizer and secretary of the Connecticut Weekly Press Association, we have been favored with an account of the proceedings of the Hartford Business Men's Association, published in the Hartford Courant of November 12, 1913.

Many reports were made and subjects considered, among others, suggesting a chance for editors of home papers to bring similar matters up for consideration by the business men of their respective cities or communities, were the following: Transportation; Freight Rates; Credits and Collections, a Red Book System; Preservation of the City Hall; Report of Delegates to State Conventions; Atlantic Deep Waterway; Reception of the Boston Chamber of Commerce, and so on.

The principle feature, however, was the address, by George R. Hopkins, on "Advertising — Good and Bad," from which we present the following instructive paragraphs, the teachings of which it will pay publishers and printers to heed and to reproduce for the benefit of their business men and the members of all callings, for all must succeed through legitimate publicity:

Newspaper Advertising

Of the many forms of printed publicity offered you, newspaper advertising is the most extensive and the least expensive in the proportion of the number of people directly reached. I know that the men whose advertising bills run up into hundreds of dollars a month will wonder what I mean. But, tell me what other form of publicity can you purchase so low as a cent a square inch for every thousand of people reached? At the same time, when you are paying from 28 to 42 cents an inch a day, it is absolutely necessary that the copy or announcements of your business be effectively put before the people, or you will join the crowd of discouraged advertisers, who say that "advertising don't pay," when the fact is that they are not doing the right kind of advertising for the money spent.

If you have the ability and knack of writing effective advertising, be sure and use live copy, changed daily if possible. If you are not an ad writer, or if you can write ads and yet have not the time to do it regularly, it is money in your pocket to secure the services of some man who makes a business of this kind of publicity.

Whatever you do, have your advertising distinctive, original and truthful. Do not follow in the wake of others, and do not imitate. I am a strong believer in a well selected mailing list. Many of you have on your books the names of hundreds of people who have traded with you and can get the names of others who would be interested in the lines of merchandise you handle. I believe it is a good thing to mail a personal announcement to such people as these, every little while, showing them the advantages that you have to offer. But whatever you do, do not use cheap printing simply because you can get it at a cheap price. It is no credit to you. It is no more a good advertisement for you than a drunken man in the gutter would be in front of a saloon.

Making Good Is Good Advertising

The word "advertisement" comes from the Latin, "ad verto," which means "to turn to or draw attention toward" anything. Every act that we perform, and every word that we say, is an advertisement of ourselves, which attracts men to us or repels them from us.

The storekeeper who is industrious, courteous, energetic, whose store is well lighted and attractive, whose clerks are attentive and more interested in serving customers than they are in discussing their own private affairs among themselves, whose stock of goods is complete and well arranged, whose show windows are clean and frequently rearranged with new goods, will be sure to draw trade to himself, no matter where he may be located.

You know there are three ways of spreading news quickly — telegraph, telephone, and tell a woman.

You, each one of you, go to some particular store for your clothing or shoes, or to some barber shop, not because you can purchase your merchandise at a less price there than elsewhere, but because you enjoy and appreciate the attentive service given you by the men behind the counter.

I have in mind a printer in this city whose place of business is over a mile from the retail center, and yet because he turns out splendid work, charges only a fair price and delivers you your printing at the time promised without fail, has built up a fine business. On the other hand, I have occasion to pass by every morning a drug store, located on a busy corner, which is plastered over with cigarette signs, candy signs, patent medicine signs, trading stamp signs, and the interior of the store wears the same discouraged appearance. To me the sign "We Give Trading Stamps," is a confession of weakness and is mighty poor advertising.

I know that some of the largest stores do hand out trading stamps, but these are the exceptions that prove the rule. The money spent for trading stamps, if invested in some other form of publicity, would bring much larger returns.

IDEAS FOR PROGRESSIVE TYPOGRAPHERS AND COMPOSITORS' ROUND TABLE

Type, Border and Decoration

By J. L. Frazier, 604 Kentucky St., Lawrence, Kansas.

NO small portion of the business of the average printer is the printing of business stationery — letterheads and envelopes. For the reason that the two items are one, in a way, and wherever the envelope goes it carries the letterhead, the two will be considered together. A further reason for this is that, being companions, they should be treated in the same typographical style in order that they will form a harmonious whole. Perhaps no law of typography is violated more than the practice of printing the letterhead in one style of type or in one arrangement and the envelope in another. This is inexcusable, uncalled for and a detriment to the trade. If the printer would educate his customers in this respect, show them neat letterheads and companion envelopes treated in the same style, I am sure there would be fewer government printed envelopes used and, consequently, more work for the local printer. No man who is capable of conducting a business of any importance is so blind that he cannot see the improvement thus brought about in stationery. He has only to look a little farther to see that it is an advantage from a business standpoint. You need only look over your own mail to see this. There are, for instance, ten letters in your morning mail. Nine of them are government printed, all in the same style of type. the other is **different.** It is printed in two colors of ink, on a tinted paper, perhaps, and there may be a cut of the product of the firm that is writing you printed thereon. Does not that envelope stand out above the rest? You know, unconsciously perhaps, the firm's name is being stamped indelibly upon your mind. When you are ready to buy the item that firm manufactures, or sells, it is a five to one chance you will buy from the firm sending out the distinctive stationery. Why? Simply because the little impression is still on your mind and as a consequence that firm is the first one you think of when you want what they sell, or make. It is sub-conscious, perhaps, but there just the same.

I hope all who read these lines will take up this matter the next time they go soliciting. If the United States government insists on continuing a competitor to the very best class of her subjects my advice to the printers is to meet that competition on the basis of quality which after all is the only proper way. You may take a job away from a competitor by cutting the price but that is about all the good it will do you. Once, however, you have won a customer through the merit of your work he is yours to stay.

Take great care of the stationery of your clientele; make it so good that he will consider it a trade mark almost, if not one of the assets of the business, and I know your competitor will not be able to budge him. If a business man once gets what he wants in stationery it is about as hard to budge him as it would be to set Pike's Peak down in the middle of Lake Michigan. Pretty strong statement? Yes, but I have tried it and perhaps you have also. I have tried it when I knew I could give the customer better work but he was satisfied. That's the word — make your customers satisfied and their feet will wear a beaten path to your door.

* * *

Appropriateness is a prime consideration in the printing of business stationery. Perhaps in no other branch of the business is it more important and I am sure in none other is it more often violated. Different businesses call for different treatment. This fact is generally known to typographers and yet some of the best, through thoughtlessness, make weird blunders.

I once heard of a letterhead executed by a printer in a small town, a prominent part of which was the line "PVRE BRED DVROCK JERSEYS." He must have seen the "V" used in some such phrase as "PVBLIC LIBRARY" where it could have been used in the inscription above the door or on the old brass dedication placque with perfect propriety. The early Roman printers, Jenson and Aldus, used the "V" instead of the "U" because they had no "U." Jenson fashioned the types he used after the inscriptions on the ancient Roman buildings and the letters of the scribes and at that time the letter "U" was not a part of the alphabet. Jenson was the father of the Roman type face. There are a few, a very few instances, in which the capital "V" can be used instead of "U" with propriety but one of them is not in connection with swine. If used at all, and I do not advocate it, the work in hand should have a historical interest — the public library for instance. Then, too, it should never be used with any type save old style Roman and never on anything but antique or handmade papers. The above is cited merely as an example, my idea being to impress upon the readers of this department as emphatically as possible the need for appropriateness.

When the printer takes up a piece of work and plans how it should be set he should invariably ask himself this question, "Is it appropriate?"

⁂

Various elements enter into the construction of a letterhead or envelope. The advertising element is very often important, especially so when the firm sending out the letters does the bulk of its correspondence with its customers. For example, a wholesale grocery house does the bulk of its correspondence with grocery stores in its territory. It is good business, then, for the wholesaler to boost with a cut on his stationery, perhaps, some special brand of canned goods or coffee, so that whenever he writes a grocer that individual will think of the article. The grocer buys that brand of goods, all right, but he, in direct contrast with the wholesaler, does very little writing to his customers and would be very foolish to boost the brand on his stationery. If he should do so the wholesale house would see in a minute that he was pretty strong for the goods and the grocer would have little luck in getting "a price." Wherever the bulk of a firm's correspondence is done with its customers the advertising element enters and deserves much consideration.

Then there is work where the art element is essential. A little thought on the part of the printer and his best judgment will show him where. For example, however, I want to make a comparison. Music is an art and all printing pertaining to it should be slightly decorative and above all, artistic. The same might be said of the printing for literary societies, arts and crafts stores and everything wherein there is an artistic consideration.

It is a mistake to set the letterhead for a hardware store, machine shop or foundry in the same style type as that used for a Music Club. Plain, stern type is the best for the stationery of a firm whose stock in trade is hard, rough iron and it is a mistake for the printer to be "fancy" in the treatment of this class of work. It should be artistic the same as all work, that is from the standpoint of established typographic principles, but in no case should it be decorative.

The banker's printing should show strength. About all a doctor wants on his stationery is his name plus M. D. in very small type. He, in common with attorneys, architects, dentists, teachers, etc., are known as professional men, and the usual treatment for the stationery of such is small, plain type placed in a small group in the center of the heading or in the left corner.

The stationery for the theatrical profession should be highly attractive in keeping with the spirit of the profession which is exemplified in the bright costumes and cosmetics. Many printers in trying to satisfy the demands of the performers in this line make the designs too gaudy and thus run a grave risk of inharmonious type and color schemes.

Real estate men demand striking effects in their stationery. They are great advertisers and want to make sure that their letters receive proper attention.

I could go on and cite further examples, but the above should serve to start the progressive printer to thinking, and that done, the rest is easy. Following are some specimens that explain some of the ideas I have mentioned and some that bring further facts to the fore.

⁂

There is no special manner of handling the letterhead for the garage or automobile dealer, coming as it does under the head of general business style, and the compositor has a wide latitude in arranging his display. Strength should be apparent, thus allowing the use of strong type, but plain letters should be the invariable rule. In exhibit 1, I present a letterhead suitable for this line of business. The cut is printed in light blue tint back of the subject matter, which is in bronze blue, and upon a blue or white paper this makes a very effective heading. I am sure more pleasing results could have been obtained had the words, "Peerless Garage" been printed in a size smaller type, eighteen point, and the rule underneath that line omitted. It should prove a good suggestion to printers, and I am sure those who arm themselves with a good pencil layout of the idea can approach their local garage with a good chance of success in landing an order. The idea of printing a cut in tint back of the subject mat-

ter is not a new one, but is very effective, and could be used for other lines of business as well.

* * *

The letterhead for J. O. Lovejoy, Example 2, shows a pleasing manner of placing a cut in a letterhead. The cut is a trifle dark to obtain perfect tone harmony, hardly enough to mention, and yet I cannot refrain from saying that the heading would have been better had the ornament and the four parallel rules been printed in a light green. A more even tone would thus be obtained and the evergreens placed in their natural color. Real estate dealers are great advertisers, and catchy ideas in typography always appeal to them.

A very pleasing arrangement is the letterhead for the Republican Congressional Committee, here reproduced as Exhibit 3. It is symmetrical throughout and the party emblem is placed at the best possible position. I cannot conceive of a better way to handle the copy. I do not favor panel arrangements as a rule, for too often in such cases the matter is made to fit the design, which is a decided error and the cause of many weird arrangements. In this case, however, it gives the appearance of having been thrown about the design as a final touch, and is pleasing. Printers will do well to study carefully this design.

Exhibit 4 shows a splendid manner of handling a letterhead for a high school. The names of the members of the board of education and the teachers' names are placed on either side of the heading and the names are given prominence by being set in capitals. I believe the heading could be improved by setting the name of "E. M. Cox" in regular caps instead of Italic caps, and the word "Principal" in Italic lower case, just as the other names are, giving it special prominence through the use of the larger size of type. The design is by C. W. Ludtke, of Markesan, Wisconsin, who does splendid work. He is located in a very small town, but, judging from the work he has sent me, his equipment would do justice to a place many times the size of Markesan.

I am reproducing the letterhead of the Laurence Concert Company, Exhibit 5, because it shows how one can meet the demands of the performers in this line and yet keep within the bounds of good typography. It is striking, large and "showy," but, on the other hand, it is correct typographically, and is a good example to follow in the printing of stationery for theatrical people. The odd position of the manager's name adds novelty to the design. The original was printed in orange and black on buff stock, which, by the way, makes a very effective color combination.

When one considers that there are large firms who consider their trade-marks a leading resource of the business, the importance of these little devices is apparent. Many printers have them, and they are placed on the product of the plant so that those who see the work will know who did it. McMullin & Woellhaf, Burlington, Iowa, have a very fine work mark, and they use it religiously. Being good printers, this mark is never seen on poor printing, and I am sure it brings to their plant much business. In their letterhead, Exhibit 6, they have used this mark

to good advantage. The names of the two members of the firm are very happily placed between the rules at the top of the design. It is a splendid example of a printer's stationery.

✣ ✣ ✣

I am reproducing the letterhead of the Social Service League, Exhibit 7, because it shows an attractive and unusual way of handling a letterhead where there are many names. Placing the names along the side of the sheet as in this case relieves the congestion that would result had they been placed at the top with the rest of the matter. In the original this was a very attractive heading, the rule and ornament being printed in light green and the type matter in brown upon white stock.

✣ ✣ ✣

A Few Suggestions

It is a mistake to use too much matter on a letterhead. In the first place it increases the difficulty of securing a pleasing arrangement and, second, important features are liable to be overlooked in the maze of many and varied attractions. It is well, then, for the printer to quietly suggest to his customers who err in this respect that they eliminate all unnecessary information. The most effective letterheading is secured by using simply the name, address and business of the company, together with a few words about the product of the firm if the advertising feature is desirable.

✣ ✣ ✣

Good paper should invariably be used in the production of business stationery. The letterhead gives the recipient an insight into the character, business stability and financial condition of the writer and good paper is just as essential in correspondence as clean hands and a smooth shave are in mouth to ear conversation. I have often found that when a customer seems intent upon buying the cheapest paper I can often win him over by comparing a sheet of the cheaper paper at the side of a sheet of good quality. In a thousand letterheads the difference can hardly be more than $1.25, and properly solicited no business man will let that stand in the way of better stationery. Once using the better grade he cannot help but be pleased, and the chances are that you have won a regular customer.

✣ ✣ ✣

C. W. Harmony, Sapulpa, Okla., sent in specimen 8, a letterhead for a hardware firm. It is very appropriate for it shows strength, a very desirable quality in the printed matter for a hardware house. It is plain, too, and artistic without being decorative. I would like to know what the Slater Hardware people would think, however, if they should receive a letter from the John Deere Company saying they had decided to give the agency for their line to another local hardware dealer. I know a clothier who spent hundreds of dollars advertising a line of clothing. Then one of his competitors offered to buy more suits than he was buying and got the line, reaping many of the benefits of the advertising of the less astute clothier. That clothier now tears out all the labels from the clothing when it comes to him and substitutes labels bearing his own name, and in his advertising he never mentions the maker.

✣ ✣ ✣

I am showing Exhibit 9 because it represents the approved style for the stationery of the professional man. All the foundries have type faces that are good imitations of engraved letters and these are the best for this class of work. A good pressman can take one of these forms and accomplish results that are difficult to distinguish from the real article.

EDITOR TO SPEAK TO JOURNALISM TEACHERS

Charles Dillon, formerly head of the Department of Industrial Journalism at Kansas Agricultural College, and now managing editor of the Capper farm papers, Topeka, will speak at the coming meeting of the American Conference of Teachers of Journalism at the University of Wisconsin, November 28 and 29, on "The Kind of Men that We Need in Agricultural Journalism." The subject will be discussed by A. W. Hopkins, formerly editor of the Wisconsin Farmer, now professor of Agricultural Journalism at the University of Wisconsin.

MORE WORK THROUGH PUBLICITY

Address all samples and communications for this Dept. to Harry Albro' Woodworth, 43 St. Botolph St., Boston, Mass.

O. BYRON COPPER, before he was the veteran contributor to the National Printer-Journalist that he is now, said, in writing of a matter respecting which we were not in full accord, that he was glad I read his department. I wonder if he reads mine? — for I should be glad indeed if any feeble inspiration from this source may have set his mind to work so that the finished product is such advertising as the three-column ad shown as 1. On the pure reading matter that sets off this open ad handsomely Mr. Copper wrote: "Just to show you I practice my belief in publicity." The ad is from the La Crosse, Wis., Tribune, evidently an "esteemed contemporary" of the Bi-County Argus. The wording of the advertisement is a particularly clever appeal to readers of the La Crosse paper, and the allusion to the lower rates of the Argus as compared with those of the Tribune is delicate and humorous. Such an ad won't hurt the Tribune — in fact, it gets $5.00 for it — and it is sure to help the Argus.

I Believe in Newspaper Advertising

NOTE —I didn't have my picture printed here because I think I'm especially smart or good looking, but simply to attract your attention.

¶ As I told you before, I believe more implicitly in the advertising efficacy of my own newspaper than in that of any other, because I am personally aquainted with the many results secured for Argus advertisers; but I have a good deal of faith in this Tribune, too, because I got results from that first ad. of mine. I have faith and I got results, else I surely wouldn't dig up $5.00 of good money for these twenty inches. You La Crosse business men (who are the boys I want to reach) can buy twenty inches of space in The Bi-County Argus for only $1.60. The rate is only 8c the inch; circulation 1,000 copies weekly.

¶ The Bi-County Argus is a weekly newspaper published at De Soto, Wis., thirty miles south of La Crosse, and circulates in a territory tributary to the Gateway City. The La Crosse Business Man who isn't advertising in the Argus is neglecting an opportunity to increase business. Make a bid now for fall trade.

WRITE TODAY FOR SAMPLE COPY

O. BYRON COPPER, DE SOTO, WISCONSIN

No. 1

I do not know how De Soto merchants like the idea of La Crosse business men advertising in the Argus, but its columns are doubtless open to them as well; and in these days of intercommunication there is really too much of a disposition on the part of local business men to censor the advertising columns of their newspaper. I do not know anything about the Wisconsin field, but in others, I have noted that the strenuous kicks about mail-order firms advertising in the local press came from the merchants who did not patronize their local paper to anything like the extent they should for their own benefit, let alone the newpaper's and the community's. Possibly the De Soto business men are not competitors of the La Crosse advertisers, anyway; but if they are, it is up to them to show the advantages of trading at home. The best local advertisers I know use the columns of their local papers freely, and of other papers if they find it to their advantage; and their concern as to competitors works itself out in an effort — generally successful — to give better service. And there is some service that no outside advertiser can give the people of a local community.

I like to see the local advertiser who is active in looking after the consumers' interests get the local trade he deserves; and other things being equal, he generally gets it if he is a good advertiser.

This subject is a large one, and the voice of the consumer, who is "the ultimate sufferer" in these days of high living, is seldom heard in the discussion.

As to the typographical appearance of Mr. Copper's ad, Mr. Hanson would agree that it is typographically handsome. Mr. Frazier would admit that its "treatment" is in keeping with that required of a printer's announcement — so many newspaper publishers who are also printers seem to forget the latter fact in preparing an ad for a newspaper. And as a piece of composition which modulates a good "talk" properly, it is first-rate.

* * *

A Printer Who Has Kept Up to Date

On the walls of my workroom is a little motto, with an individuality pervading it; which, moreover, extends a message from a worker to other workers. It has been there for at least ten years, wherever that workshop has happened to be, appended to a poem that was written and put into type by Louis Arnold Ewing, which matches the motto slip in color-scheme and in sentiment. It is a little above the center of a piece of deckle-edge cover stock, and is taken from its place on the wall only to be passed along to the National Printer-Journalist for reproduction (No. 2), after which the editor will return it to me to be again attached to the poem, which I had reproduced years ago. The motto slip is evidently the last page of a folder or a booklet — it is so long since I received the job, the remainder of which was presumably reproduced in this department, that I forget what it was like in its entirety. But I do not forget the maker, who, as I said, put his individuality into the production. And this week I received two other jobs from this original printer, whose work has not been submitted to me for years, and knew the design on the envelope for his ere I had noted the stamp or the postmark. "An International Print-Shop" was the wording of the design — but it was its character that impressed me before its wording — some small fraction of a second before, but a long enough period to be appreciable. This could come from no one but E. W. Johnston, Jr., manager of the Review Company, Bridgeburg, Ontario, Canada, whom I had the pleasure of meeting personally when I lectured before the Ontario Employing Printers' Guild seven years ago.

A man should love his work, for that which he loves
to do he will do well.

3a

THE WISDOM OF THE EXPERIENCED

WHEN you want printing make up your mind what you want, go to some one who has demonstrated he can give you what you want, when you want it, and at a fair price. Don't shop around, get a lot of estimates, then think the lowest is the cheapest. Paper is a staple article: a printer of known ability commands a fair price for his service, and gives value received. Five good printers will figure on a specified job and not vary more than five per cent. If five estimates run in the neighborhood of five hundred dollars and the sixth is three hundred and seventy-five dollars, hesitate before you give the work to the three hundred and seventy-five dollar man. The chances are that you will be out more than the difference in the end.—*William E. Irons, in the Ad-League Bulletin.*

Good printing need not necessarily cost very much more than bad printing—indeed it need not cost any more. Actually, it never costs so much. And this is for the simple reason that what you pay for that produces what you have to have is cheap; and no matter how cheap anything is, it is dear at the price if it doesn't serve the purpose.—*Marshall Cushing.*

Advertisers are over-looking many a good sale by not doing more or better direct-mail work. Direct-mail advertising has certain advantages not obtainable through any other kind. You can concentrate with it on all or part of the prospects in a field without any lost motion.—*Tim Thrift.*

A successful mail order business, says one, needs a good letter writer. So does every business. But every business needs good stationery, first.—*Schaufele's Monthly.*

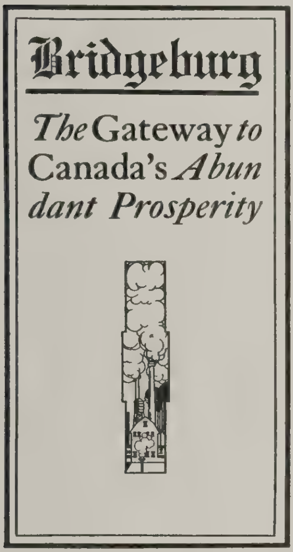
3b

"An International Print-Shop" is a large and very handsome booklet, mostly printed in black and lake on dark stock, with a cover very artistically lettered, embossed, composed, and printed in two colors and gold. The first two and the last two inner pages are on white plate stock, the second page having a handsome vignette of the imposing office. The page ending the original matter in the booklet is reproduced as 3a. The ornament, the line "Business-Building Printers" and the rule are red, the remainder green; the stock is dull-finished. It, as well as the other beautiful pages, gives an idea of the effectiveness to which the text draws attention.

Another page in red and green (3b) gives some quotations that are especially pertinent to the printing business as it is understood today by those who understand it.

The first page of a smaller booklet is shown as 4a. The outside border and the rule under the Old English are olive green. The inner border and the initials "G," "C," "A" and "P" are a brilliant red, which lights up the dark stock wonderfully; the remainder is black.

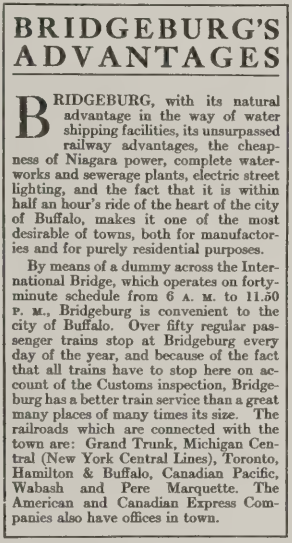
The first page of the body of the booklet, with its olive green rules and red initial, is shown as 4b. The literary composition of the most of both of these booklets is so good, with its short and effective sentences, that it might seem unkind to point out that the first sentence would be extremely difficult to parse satisfactorily. I do not object to the length of such a sentence as this, but what is the subject of "makes"? The sentence could easily be changed in another edition. But in making the change "Bridgeburg" should be left as the first word, as there is good display of the name in the initial and following capitals.



Bridgeburg

The Gateway *to* Canada's *Abundant Prosperity*

No. 4a



BRIDGEBURG'S ADVANTAGES

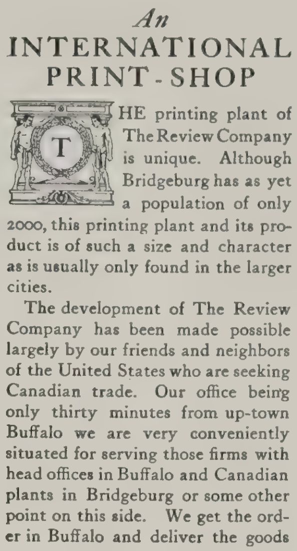
BRIDGEBURG, with its natural advantage in the way of water shipping facilities, its unsurpassed railway advantages, the cheapness of Niagara power, complete waterworks and sewerage plants, electric street lighting, and the fact that it is within half an hour's ride of the heart of the city of Buffalo, makes it one of the most desirable of towns, both for manufactories and for purely residential purposes.

By means of a dummy across the International Bridge, which operates on forty-minute schedule from 6 A. M. to 11.50 P. M., Bridgeburg is convenient to the city of Buffalo. Over fifty regular passenger trains stop at Bridgeburg every day of the year, and because of the fact that all trains have to stop here on account of the Customs inspection, Bridgeburg has a better train service than a great many places of many times its size. The railroads which are connected with the town are: Grand Trunk, Michigan Central (New York Central Lines), Toronto, Hamilton & Buffalo, Canadian Pacific, Wabash and Pere Marquette. The American and Canadian Express Companies also have offices in town.

No. 4b

Another page of the booklet is shown as 4c. Here is another style of composition, and yet it does not appear out of place; the individuality of the print-shop is there. The ornamental initial piece is in the red, and as its lines are fine, the shade is lighter than the other initial. Compare 4b and c still farther, and note the rules, the solidity and the black type in one; the lighter letters, the absence of border and the leading in the other. Surely the idea of having two different and good and harmonious styles of body composition in the same small booklet is a good deal like sending out a polite and pleasing salesman with samples.

Mr. Johnston is a quiet young man who impresses one as having a whole lot of reserve force. He loves his work, and he does it well.



An
INTERNATIONAL PRINT-SHOP

THE printing plant of The Review Company is unique. Although Bridgeburg has as yet a population of only 2000, this printing plant and its product is of such a size and character as is usually only found in the larger cities.

The development of The Review Company has been made possible largely by our friends and neighbors of the United States who are seeking Canadian trade. Our office being only thirty minutes from up-town Buffalo we are very conveniently situated for serving those firms with head offices in Buffalo and Canadian plants in Bridgeburg or some other point on this side. We get the order in Buffalo and deliver the goods

No. 4c

The above article overflowed from the November issue, where the wording of Mr. Johnston's card was, by mistake, run in Italic between two paragraphs in the same manner as some of my observations are printed. This motto I like better than any of my own, and I had no desire to take the credit of it.)

* * *

Cunning "'Prentice Hands"

The Apprenticeship Bulletin, which has been issued for years by apprentices in the North End Union School of Printing, Boston, Mass., has constantly improved in typography; and as no two issues that I have seen are in the same style, it shows how resourceful the young fellows have become. One page is given (4a) as an example of a typog-

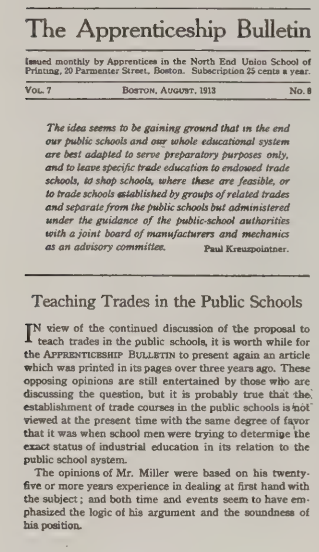
No. 5b

raphy which is certainly difficult, and even this would probably have looked better had the last line, say, been a little fuller; but many such jobs are often very unpleasing because of the difficulty of spacing such necessarily uneven lines. Here the job as a whole is very creditable for such work. The rules, the ornaments in the smaller panels, and the appropriate ornaments are brown; the remainder green.



The Apprenticeship Bulletin

Issued monthly by Apprentices in the North End Union School of Printing, 20 Parmenter Street, Boston. Subscription 25 cents a year.

VOL. 7 BOSTON, AUGUST, 1913 No. 8

The idea seems to be gaining ground that in the end our public schools and our whole educational system are best adapted to serve preparatory purposes only, and to leave specific trade education to endowed trade schools, to shop schools, where these are feasible, or to trade schools established by groups of related trades and separate from the public schools but administered under the guidance of the public-school authorities with a joint board of manufacturers and mechanics as an advisory committee. Paul Kreuzpointner.

Teaching Trades in the Public Schools

IN view of the continued discussion of the proposal to teach trades in the public schools, it is worth while for the APPRENTICESHIP BULLETIN to present again an article which was printed in its pages over three years ago. These opposing opinions are still entertained by those who are discussing the question, but it is probably true that the establishment of trade courses in the public schools is not viewed at the present time with the same degree of favor that it was when school men were trying to determine the exact status of industrial education in its relation to the public school system.

The opinions of Mr. Miller were based on his twenty-five or more years experience in dealing at first hand with the subject; and both time and events seem to have emphasized the logic of his argument and the soundness of his position.

The Apprenticeship Bulletin 65

In a month the classes of the two college-shop men increased thirty per cent. The third man's class dwindled until it finally contained only one pupil and we had to discontinue it. It simply goes to demonstrate that the vocational schools would not accomplish their purpose if they had been made part of the common school system."

The surest way to get what is coming to you is to meet it more than half way.

Improving the Man and the Job

By Arthur D. Dean

VOCATIONAL training goes further than making the man fit the job. It would do what it could to make the job fit the man. This is no idle play on words, for we find that the status of the job itself is changing. Scientific applications enter into it. New fields of science open up. New questions of economics arise. When a man takes only a job, he may be a farmer. When he trains himself for the job, he is likely to become an agriculturist. A man may be either a horse doctor or a veterinarian; a plumber or a sanitary engineer; a machine hand or a machinist; a politician or a statesman. It all depends upon the simple question: Has he fitted himself to the lowest,

No. 5d

What an artistic contents page — if it may be so called, for in the issue from which it was taken, the contents were few in number — is this (5b)! 5c and 5d are shown as admirable studies in highly artistic handling of magazine pages containing quotations and mottoes, which brighten so many modern magazines. No designer need be ashamed — nay, any designer should be proud — of such pages as this.

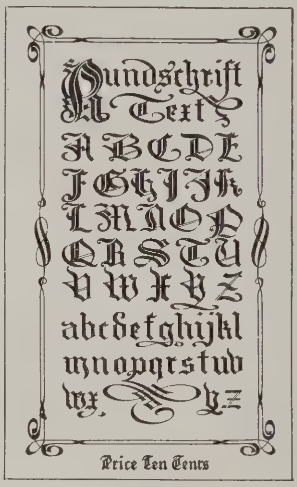
⁂

Two Schools of Printing — Some Remarks on Lettering It

Two Cleveland, Ohio, publications devoted to the printing art that it has given me great pleasure to receive, are Technical Printery, of which J. Orville Wood, instructor of the classes in printing at the West Technical High School, is editor, and the School Print Shop, edited by John A. Webster, instructor of the classes at the East Technical High School. These little magazines are "devoted" to the art preservative and explanatory of arts in all the good senses of the word "devote," and both are rare examples of artistic expression of the art.

Much of the work on the magazines — and this includes the writing of articles, poems, stories and editorials, the drawing of pictures, and lettering as well as type composition, presswork, binding, etc. — was done by the pupils of these schools.

The cartoon a student drew for this publication has as its subject the two Websters of the printing class — Noah (represented by his dictionary) and John A. The cover drawn by one student has excellent points — and its fault, which is a tendency to over-ornateness with nothing more ornamental than heavy black lines — is simply that of many a fine artist in his early work. The same student had in the May number a very pleasing design for the new year, 1914. The poster designs by students are exceptionally good, and their ornateness is of a kind in keeping with the designs — and but affords a pleasing contrast to the simplicity of the more important parts of the posters.



No. 6

The Rundschrift text alphabet (6) was done by Richard Buchwald, a student of the school I cannot say I particularly care for the knots at the side of the border — they are a little too much on the Gaskell's Compendium order, though the flourish to the "p" is harmonious with the text.

The price-line is not part of Mr. Buchwald's design, but is from the new cover of the New York Independent under its new management. I do not see how the third initial can be called a "C," and "Price Ten Tents" has an Arabian flavor. This letter looks to me, with its top flourish, like the traditional Quaker with his rotundity and his Fedora, whether he embellishes the Harrisburg capitol or a Quaker Oats advertisement. The other letter, which is (I was going to say also) unquestionably a T, brings a reminiscence of a lean, austere Puritan with his characteristic headgear drawn for me by an artist who has since achieved a world-wide reputation as an illustrator. He was also a good story-writer, and I had contracted for an illustrated story by him for a cooking magazine I edited as a side occupation. He brought me at the last moment a story entitled "A Puritan Christmas," and the only objection to either pictures or stories was that the Puritans of old did not celebrate Christmas. However, the pictures were so good that I found use for them.

The leading article in the School Print Shop gives the interesting information that 131 printing presses were installed in high schools throughout the country in the year ending last July, and that it was expected that double this number would be put in by public institutions in the next year.

The address is asked of every school (private, public, parochial or social settlement) print shop in the United States. For the convenience of those who desire to equip a printery for school use, three inventories have been compiled for technical schools with an attendance of from 350 to 1,500 pupils of outfits costing approximately $600, $1,000 and $1,500, respectively. Copies may be had by enclosing a two-cent stamp for postage to the School Print Shop, East Technical High School, Cleveland, Ohio.

Mr. Webster's night class, it is stated, included a number of advertising men, "some in charge of house organs for manufacturing concerns." If their house organs are as good typographically and otherwise as the School Print Shop, they will be far ahead of most house organs.

In a manila envelope of which this (7a) is the corner-design, the other publication comes.

The cover is shown as 7b. The ornament is orange, and the remainder is deep bronze blue; the stock is light blue. The lettering was done by Instructor Wood. Such combination lettering as this must be done with a great deal of skill to give an appearance in keeping with an age when the value of simplicity is appreciated. The skill was not wanting, and the whiting-out of the job helped its appearance wonderfully. A page of Roman capitals drawn freehand by Mr. Wood is shown in the body of the magazine (7c). The steady growth in the appreciation of lettering as an adjunct of type composition makes such instruction as that given in the two Cleveland schools of high importance. "When it is taken into consideration," says the note to this page, "that a large number of printers of today, after using type for years, if asked could not tell readily which side of the letter A or W, for instance, was light and which side heavy — we see the need for study along this line." The matter is really very simple. In most faces of Roman type or styles of Roman lettering, the lines or curves that are naturally made by the letterer with an up-stroke are light, and those made with a down-stroke are heavy. In making an A, for instance, almost any designer would begin at the bottom on the left hand, and would naturally make a light stroke till he got to the top, and then would make a heavy stroke coming down on the right-hand side.

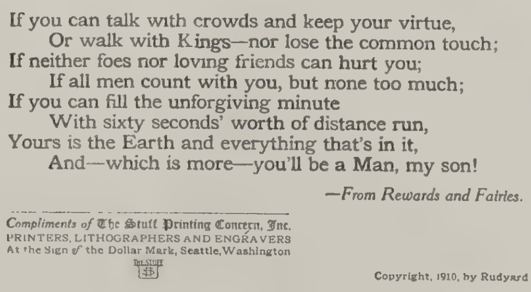
"If"

A little brown book from Harry S. Stuff, of Seattle, Wash., has on the handsome onyx-effect cover the word "IF" in dark initials, followed by the other magic word (in small characters) "— Kipling." Each of the light brown laid pages has a verse of the inspiring poem. The last verse is shown as 8, the "compliments" note, so cleverly handled, being all the advertising in the booklet.



If you can talk with crowds and keep your virtue,
    Or walk with Kings—nor lose the common touch;
If neither foes nor loving friends can hurt you;
    If all men count with you, but none too much;
If you can fill the unforgiving minute
    With sixty seconds' worth of distance run,
Yours is the Earth and everything that's in it,
    And—which is more—you'll be a Man, my son!

An Extra Silent Salesman — Who Talks

The booklet, "Make the Silent Salesman Talk," issued by the Suffolk Engraving and Electrotyping Company, of Boston, Mass., is on that sturdy brown speckled (not deckled) stock that nails are wrapped in — probably because the production gets right down to brass tacks, although it is thus modestly described in the running head that is written in a running hand, and runs through the book: "This is a foolish, silly little folder, but men are only boys grown up, and in spite of their assumed airs of dignity, responsibility and seriousness, they know that life isn't half as serious as they pretend. Most men of discernment smile once in a while even if the foolishness is only the sugar coating to an advertising pill. Smile at the foolishness. Digest the pill."

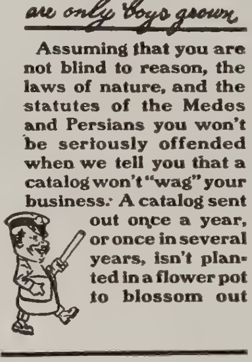
No. 9a

In caps of the heavy old-style type that is used so effectively throughout the book, this verse appears on the second page:

> There was a man who wrote a book
> And called it catalog.
> He sent it through the mail one day
> And thought the tail would wag the dog.

The three pages shown give an idea of the weakness of a very common argument, as no serious treatment of the idea could possibly do; and there should really be no need of "the pill" on the last page — the medicine has slipped down with the plum preserve.

The rules are in a brilliant red, and those at the top are printed over the reproduction of the writing. There are other carriers besides those who give a pictorial force to these pages, and the happiest of all is the one who is wiping the sweat from his brow on the back-cover page of a booklet that really advertises advertising.



are only boys grown

Assuming that you are not blind to reason, the laws of nature, and the statutes of the Medes and Persians you won't be seriously offended when we tell you that a catalog won't "wag" your business. A catalog sent out once a year, or once in several years, isn't planted in a flower pot to blossom out

"The Captious Critic" Writes a Cheery Critique

Critics do not take kindly to criticism, but they certainly cannot be so sensitive as poets; and a member of the fraternity who is so good-natured as to term himself "The Captious Critic," is evidently an exception to the rule, as I have always tried to be myself. And as the following letter rather "comes back" at me for some captious remarks of my own that I made in the July number, I gladly give it space, and only wish there was more of it. For the subject of Canadian advertising is a live one not only in Canada, but on this side of the border, across which the reciprocity of mutual interests will ever find a passage:

> Dear Mr. Woodworth: I have for many moons and for various reasons deferred replying to your criticism appearing in The National Printer-Journalist, of my captious criticism on the "Pinnace" Tobacco advertisement, to which I plead guilty.
>
> I agree with you that the brand of humor in Canada is considerably more American than English, but I have yet to be convinced that with one or two exceptions the humor appearing in the daily press has got one single feature to commend it.

In your criticism you have overlooked the fact that there is an ever-increasing English immigration into Canada year by year, and in our cities, at any rate, the humor in advertising which I took the liberty of commending, will certainly be appreciated by a very large section of the population.

From personal observation, it is safe to say that conditions in our big Canadian cities are rapidly changing, and although it may be difficult to find a difference between Toronto and, say, Rochester, Detroit or Buffalo, except that in the former city there is an absence of the Stars and Stripes, yet this extraordinary influx of population from the British Isles is setting a new condition, which the advertising man is bound to take note of.

I think, at any rate, that this "Pinnace" advertising is a whole lot more genuinely humorous than the freak "Stag" stuff which has been appearing in your leading American papers.

Criticism given in the right spirit is a mighty good thing, and at any time I shall only be too pleased to hear from you again. Very truly yours,

——— ———,

"The Captious Critic."

I do not print the signature, as it may be that the writer did not intend his name to be divulged to all. Really, my objection to the ad was that the story it told was one apparently taken from an American source by an English ad-writer who had spoiled the story by leaving out the point. I told the original story in a manner which I would not have employed had I been writing an advertisement, but I retained the point, which was one that I am sure would have been appreciated by any resident of Canada who understands the English language. Whether it would have sold tobacco or not is another point, but I think, as I explained, that humor — or whatever passes for it in the public mind at the moment — may be effective in bringing the name of a brand of tobacco to the mind of the consumer, where it would be entirely out of place in the advertising of most other commodities, particularly in Canada.

A Canadian advertising manager who was once, I am proud to say, my assistant, in a very fine address delivered in a Canadian city some time ago, urged advertisers to shun humor in their advertising as they would the Fiend incarnate. And yet what made the advertisements he has written so particularly pleasing and resultful was, according to my idea, the subtle, homely humor of which he is a master. There is humor and humor; there are kinds that are certainly out of keeping with the more serious forms of advertising, and there are kinds that should have no place in advertising at all. All advertising has — or should have — a serious purpose; and humor is sometimes a most effective aid in serious matters. A book has been written on "The Wit and Humor of the Bible." I never read the book, though I should like to; but I have observed the humor of some of the most effective parts of the Bible, and particularly the delicious irony which makes some of the sayings of Christ puzzles to the over-serious commentators. But irony is seldom good in an advertisement.

As to the freak "Stag" advertising, it has not impressed me enough to remember just what it consists of, but I know that the impression made by the picture of a stag in human costume, or the fact that the "Stag" manufacturers had sufficient confidence in their product to advertise it, or both impressions, led me to purchase a package of tobacco on which I saw a stag's head. Maybe the fantastic humor had nothing to do with it; but I have an idea it had. And if I buy a tin of "Pinnace" the next time I go to Canada, as I certainly shall — how am I to know now just what the influence was that led me to sample it?

As to whether a smoker buys any more than one package of "Stag," one tin of "Pinnace" — that is a question which has a good deal to do with the matter of how much of an advertising appropriation should be made or advised. But the day has gone by when inferior articles were expected to keep on selling themselves through advertising; so doubtless both "Pinnace" and "Stag" will continue to be bought, and to be advertised.

Mr. Shivers — is that his name? — sure! — who advertises his Panatellas in such publications as the Saturday Evening Post, is one of the best advertisers of a luxury into which the questions of quality and price enter to a marked degree. He is a humorist, but he does not employ his humor in anything that could possibly be termed freakish. He talks about the goods; the quality; the price, in ads that are read because they are bright and humorous, and talk about something in which smokers are interested, and so may become specifically interested in the Shivers product.

I have had a great deal of pleasure in reading the strictures of the Captious Critic, and am glad to know who he is. He and I think alike on most subjects, which perhaps accounts for some of the pleasure; and I do not think that our opinions on the subject we are discussing are really at any serious variance. And I like to read his work where I don't agree with him; such a frame of mind leads one to put one's self in the place of other minds and other constituencies; and unless one is particularly pig-headed — well, one is likely to learn something.

* * *

Service

For one or two Christmas issues of the National Printer-Journalist a good many years ago, I wrote some "Christmas Sermons" that seemed to be appreciated. They were along the line of the adoption of the Golden Rule in business; and I had meant to make this article a special summary of the extraordinary strides made of late in the new idea of "Service" as against the law of "Caveat emptor" — "Let the man who buys printing beware." Some of the data I desired to use was, however, not forthcoming as soon as I wanted it; but I hope to give more attention to the subject of Service, which you will admit I have been talking more or less since 1900, during the coming years. I want to make especial reference to the Service Departments in connection with printing offices, one of the most strongly conspicuous examples of which is the great Make-it-Pay Department of the Hill Publishing Company, already mentioned several times. I should be glad to hear from any printing house, large or small, that has established a Service Department, as well as those that make a specialty of service without having a particular department for it. Many of you may think that includes you; and I hope it does include all who think so. But something more definite than the mere abstract idea of service is being found to be a great help in all businesses at the present time as never before; and I hope this department will be able to give many concrete examples in that year of grade and prosperity, 1914.

* * *

An Epic — What Is an Epic, Anyway?

It was my custom in other years, when I did not have a Christmas sermon for the Christmas issue, to put in a Christmas poem. One that seemed particularly to appeal to readers of the N. P.-J. was that beginning, "Merry Christmas, Father Herbert." I have not been visited by the avant-courier or advance agent of the Christmas muse this year, from whom I was wont to obtain a few pointers, but I am constrained to give a poem that I wrote about five years ago, but did not make any endeavor to have published at the time, principally because the only paper I was connected with at the time was the National Printer-Journalist, which does not encourage poetry except at Christmas time. As it alludes to Christmas and shows how the local advertiser who realizes what a friend he has in the local publisher and printer, I give it herewith.

This poem comes very near to being a great poem. If Shakespeare had written it, it would have been great; but Shakespeare was dead, and even though Lord Bacon wrote his poems, Lord Bacon was just as dead — and so I had to write it myself.

The allusions were timely once. But **"labuntur anni,"** as Horace said — I have forgotten the meaning of **"labuntur,"** or I would translate it. But he was speaking of the great changes that come with the years — and they come quick with these years of ours. I should like this poem to become immortal — I ask the proofreader to look out for the "t"; I should like some future generation, in an age when advertising will have come into its own, to look on it as the earliest epic of the age of advertising. (Is the age we have entered on an age of anything so much as an age of advertising? I would pause for a reply if I thought I would get it.) But I was speaking of the advertising virtue, the poetic virtue of Timeliness; when I wrote the verses Roosevelt was president, and Loeb was his "man Freddy," as an old friend of mine used to say in referring to a famous character in fiction; King Edward was on the throne, and Collier's was carrying on a campaign against Lydia E. Pinkham for writing personal letters to trusting women after she was dead.

Even at this date some of my characters are as densely shrouded in obscurity as the "many brave men" who, to quote Horace in English this time, "lived before Agamemnon" and who "all died, unwept, unknown, in endless night, because they lacked a sacred bard."

But it is not the bard that keeps men famous in these regenerate days. (Please do not get this "degenerate.")

It is the sacred advertising man.

And even he has to whoop it up early and late.

It is easier now than in the days of Keats to write one's name in water.

Anyway, here goes for my effusion. It may never put my toes in the same niche of the Hall of Fame with those of the author of "Night Thoughts," of Mister Tapper of "Proverbial Philosophy" fame, of the Della Cruskan school, or of the immortal Sweet Singer of Michigan, suffragette captain of that host of song. But:

It still has some points which cannot be too strongly enforced in poetry, perhaps — and if that doesn't work, in good, strong, sledge-hammer prose on many a business man, or one who calls himself such, in many a local community — even at the present day — by the live printer and publisher who work for themselves as well as the community. The poem:

THE ADVERTISER

BY HARRY ALBRO' WOODWORTH

(Written in 1908, but most of it still so.)

The president, with Mr. Loeb, and all press-agents on the job;
  Spain's sporty head; the stout King Ted; the calculating Kaiser,
All practice eccentricity just to obtain publicity; —
  With ease their heads rest in their beds, — each one's an advertiser!
The kings of oil, the kings of toil, the farmer kings who till the soil—

Of meat, of wheat, of sugar sweet, and all that's good (or bad) to eat;
Of rail, and sail and cotton bale; — to make the poor consumer quail,
They have their press agent, — oh, yes, their own hired advertiser!
This glorious advertising age is writing large on History's page;
Some history is mystery, but this makes men the wiser;
And as to advertising lore, all wise men are advising more;
The man who's king of ev'rything is Mr. Advertiser!
Omicron Oil and Tedded Wheat, and all the drums that "can't be beat,"
"The ham what am," sardines and jam, and other foods not worth a—nalysis;
"The kind that cures," and health assures, though "Jollier's gets up and roars," —
The Pure Food Law can't stop the jaw of Mr. Advertiser!
Those who once only cared to hike when Santa Claus came down the pike,
Have Christmas cheer throughout the year by turning on the geyser
Of constant advertising power which makes the wheels turn every hour,
"All things arrive" unto the live and constant advertiser!
The dinky store whose owner swore: "I'll put one ad in, and no more,"
Has grown in size, and in supplies, since he has learned to advertise:
A merchant prince now, he's the quince; he's learned his little lesson since:
Who tries but once is but a dunce — he's not an advertiser.
The jeweler who thought 'twas due to stop his ad when June was through,
Knows wedding chimes ring at all times; at all times lovers buy, sir!
Short-sighted men once ceased till when "good seasons" should come 'round again;
Now, all the year you know he's here — the constant advertiser!
You've got to try to make folks buy through telling them "the reason why"
Each month and day, to make it pay — so advertising experts say;
Early and late, if you'd be great, just whoop 'er up with soul elate,
You'll gather in, you'll win the tin, if you're an advertiser!
The undertaker, baker, shaker, bold muck-raker, nature-faker,
The drummer, plumber, mummer, bummer, hummer, advertise all summer;
The printer, sprinter — each a hinter (and thus a minter) e'en in winter,
The fighter, writer, and inditer — are each an advertiser!
The liquor-seller, fortune-teller, even *John D. Rockefeller,
The rhetorician, statistician, electrician, keen logician,
The anthropologist, entomologist, bright biologist, glib geologist,
Tailor, mailer, sailor — every one's an advertiser!
The ethical and grave M. D.'s have learned from quacks without degrees—
They find an ad is not so bad — they're surely getting wiser!
And many presidents of banks to Advertising now give thanks
And now agree Security waits on the advertiser!
Defend us! ministers of grace are taking advertising space; —
They are not rash in paying cash for cutting such a dash-dash dash;
A Bible word is "advertise," so let the Bible put you wise:—
Don't hide your light 'way out of sight, but be an advertiser!
And even cities, now we see, would "bigger" and would "busier" be;
And many a state that would be great no longer plays the miser;
Your Uncle Sam is not a clam — for cost (not lost) cares not a—t all,
The U. S. A. will be, some day, Earth's greatest advertiser!

---

* Very much so.

✣ ✣ ✣

Advertising Typesetting in Chicago

The machine composition men of Chicago seem to do more and better advertising than those of other cities. I have described several of their handsome booklets. An exceptionally strong card as to wording is that with the heading, "The Scale Has Gone Up," issued by the Walden Typesetting Company, 124 W. Polk street, who exclusively monotypit. This mailing card is as up-to-date and in-touch-with-the-news as any direct advertising, this particular card being a bid for business from printers.

Another very artistic card blotter is "We're Ready for Business," sent by the Smith-McCarthy Typesetting Company, 508 S. Dearborn street, which advertises day and night service in monotype, linotype and make-up departments.

✣ ✣ ✣

Small Twelve-Leaved Calendar Within a Booklet

The booklet, "Who Is Liable? — United States Court Decisions," issued by the Miller Saw-Trimmer Company, Pittsburgh, Pa., is of legal-form size and appearance. Its cover has the delightful soft-rough-smooth effect given by Old Stratford laid stock, die stamped for a design of question-mark and saw, and with inner laid pages of a rougher finish. A novelty is the really handsome wafer on the last, or eighth, inner page. It is of course, one of the saw-toothed variety, and to it is glued a leaved calendar, that does not, because of the easy give of the cover-stock, bulge unduly.

✣ ✣ ✣

MANY JOURNALISM STUDENTS AT WISCONSIN

The students in the classes in journalism at the University of Wisconsin November 1, numbered 145, as compared with 112 at the same time last year, an increase of 30 per cent.

The enrollment in the four-year course in journalism at Wisconsin this year is 96, of whom three are college graduates. The freshman class in the four-year course in journalism numbers 38.

CHICAGO, DECEMBER, 1913

At the convention of the National Editorial Association in Cincinnati in 1886, it was claimed in an eloquent address by a delegate from one of the Southern States that had the National Editorial Association been in existence twenty-five years earlier there would never have been a Civil War. This idea met with general and enthusiastic approval.

Is it too much to believe, now, that if the newspapers of the whole world were united in one great parliament, with the leaders of the press meeting from year to year in the different countries, conferring together, studying conditions, comparing and harmonizing views, forming warm friendships and coming to intelligent and mutual understanding as to all national and international questions, that the results would not tend greatly to world peace? Enmity comes largely from lack of acquaintance and knowledge.

Then every patriotic and philanthropic member of the press should work earnestly for the great World's Press Congress at San Francisco in May, 1915. Not only will the World's Peace be advanced thereby but there will be many other great and untold benefits. Read the address of C. F. Hatfield on page 862 of this issue and learn of the great things being planned by the managers of the Panama Pacific International Exposition and then unite in efforts for the making the proposed Press Month and the National Editorial Convention and the World's Press Congress such as will be remembered and felt in beneficent results, to press and people, for all times.

* * *

We are particularly well pleased with the present issue of the National Printer-Journalist, and especially with the five departments written by our five department editors. We want the opinions of all our readers on this closing number of the twenty-sixth year that we have been editing and publishing this journal for the benefit of newspaper makers and printers. We seek only honest opinions but we will give, as a New Year's present, five dollars for the best and most appreciative review of this number, not over two hundred words in length, that reaches this office not later than January 10, 1914.

We believe that there is not an editor or printer who will not be paid in the masterful knowledge and inspiration secured, tenfold, for the time required in study and reading to make such a review instructive and in every way useful. Criticise where criticisim is deserved, but give us and your fellow readers the benefit of investigation and of your honest opinions.

The convention of the Educators in Journalism at the University of Wisconsin, November 28th and 29th, contained very much that will prove of value to all newspaper workers. A synopsis of the addresses and discussions will appear in the January, 1914, number of the National Printer-Journalist.

What impressed us, and ought to be a spur to editors and publishers, was the large percentage of attendance. If a like percentage of attendance by those engaged in newspaper work could be secured for the National Editorial Association at Houston, April 23rd-25th, there would be between seven and eight thousand answering roll call on that occasion and every one would receive benefits tenfold the cost. The calling would be put forward in power, public appreciation and profitableness to a degree beyond all that has heretofore been hoped.

Texas is a mighty empire, great in extent, wealth and hospitality and will welcome with open gates all who come and the harvest of productive publicity that will be reaped will put the State forward in a year far beyond what might otherwise require a whole decade.

* * *

If you want to understand the way to and the value of winning publicity, read the department of "More Work Through Publicity." If you desire to produce effective, pleasing, profitable job printing and how to secure the same in your office, read what Mr. Frazier has to say in his "Ideas for Progressive Typographers" and Mr. Hanson's Job Review.

* * *

Mr. Copper's "Newspaper Criticisms" grow in popularity from year to year. We were pleased to be informed, at the Madison convention, by Mr. Allen, head of the School of Journalism of Oregon University, that he found this department especially valuable in the practical instruction of classes as to the proper newspaper form, make-up, ad composition, matter and arrangement.

The Greatest Convention

Tentative Program of N. E. A. and Other Important Matters as to the Houston Convention

In our account of the proceedings of the meeting of the National Council of the National Editorial Association we have given, very fully, all that is necessary to fully enlighten as to the magnificent and munificent arrangements, all those who may wish to attend the convention of the National Editorial Association at Houston, Texas, on April 23, 24, 25, 1914, and to enjoy the splendid program, entertainments and wonderfully attractive itinerary of the great "Imperial State of Texas." All these have been planned on a scale and with a completeness and liberality unequalled in the history of conventions, not excepting the great convention of the great fraternal bodies of those of the Associated Advertising Clubs of America that have set the pace for the past four years.

Every organization of editors, publishers and newspaper workers is entitled to representation by one delegate for every twenty-five members, and also to one member of the National Council. Where a member of the National Council has not been designated, some member should be appointed by the President of each association, and name and present office be sent to Mr. George Schlosser, Secretary of the N. E. A., Sioux Falls, S. D. The secretary will want to communicate with the members of the National Council, from time to time, as to arrangements, etc. Delegates should also be named at the earliest possible date.

President J. Clyde Oswald, 25 City Hall Place, New York City, N. Y., asks the co-operation of all members of the National Council, which includes as well all past presidents of the Association, for suggestions as to men and women for the program — "editors or publishers who have made particular success in newspaper work in any department, whether it be in handling correspondence, editing, circulation, advertising or job printing." Every member should write him at the address given, making suggestions, at once.

The president has the laudable ambition of making the program "the strongest and most attractive of any convention ever held." This is due to the press and the people of Texas, who have planned so munificently and generously for the convention, and it is due to the calling and to all members of the National Editorial Association.

The organization is entering upon a new era of practical, useful activity, which will result in hundreds of thousands of dollars of increased profit, beside all the educational helpfulness and the enlarged pleasures and benefits incident to association and enlightening travel.

The president has sent out the following tentative program, which is to be rounded out with papers and discussions by the most progressive and practically efficient members of the calling:

Monday, A. M.— Opening Exercises; P. M.— From the Journalistic Point of View.

Tuesday, A. M.— Editorial Management; P. M. — Business Administration.

Wednesday, A. M.— The Mechanical Department; P. M.— Election of Officers.

He justly adds: "Texas is a big state. It extended its invitation in a big way and the entertainment it will provide will be on a big scale. In order to be consistent we must have a big convention, and the fact that the Council meeting in Chicago was the largest and most representative in recent years, gives encouragement to the belief that the 1914 convention will measure up to the expectations."

* * *

A Quarter of a Century of Optimism and Worthy Service

Omar D. Gray runs as impaneled side mottoes to his newspaper heading: "The old home paper with a weekly message" and "An optimistic paper with an optimistic pen!" He lives up to the thoughts and sentiments of these mottoes.

Twenty-five years ago, on August 28, 1888, then a boy of nineteen years, he purchased the Missouri Leader office and with the hopefulness and daring of youthful enthusiasm, made it "Omar D. Gray's Sturgeon Missouri Leader." On November 6, this year, he issued his quarter centennial number, the issue having been delayed by the destruction of his office by fire, when the edition that had been prepared was about ready to mail.

Notwithstanding loss and discouragement, the issue is entirely worthy and remarkably complete — containing, in its sixteen pages, with three hundred thousand ems of reading matter, the story of Boone County, Missouri, its institutions, its towns, its progress and its men, and telling of their accomplishments and attainments. Twelve thousand copies were issued to be read, at a fair estimate, by sixty thousand people and then to be re-read by the absent friends of hundreds of subscribers in all parts of the United States, and of the world, for that matter, as Missourians are found in all quarters of the earth. Dean Walter Williams, of Columbia, will doubtless be found among the interested absent readers, away off in Ceylon, or some other land that he has reached in his tour around the globe, interviewing the great editors of the world's press, and helping along the cause of the Parliament of the Editors of all nations, at San Francisco, in May, 1915. There is no limit to be placed upon the far-reaching presence and influence of the printed newspaper pages.

Before going further, we stop to note what has been constantly giving pleasure, as we have glanced through the pages of this worthy silver anniversary edition — and that is that the pages are clean, bright, well printed and illustrated with excellent views and portraits. It is difficult to give any satisfactory reviews of a publication given up to the treatment of home affairs, local industries and institutions, local men and local history, but our pleased attention has been enthralled by a three-column article entitled "Be Loyal to the Home Merchant" that contains many suggestions and truths applicable to all newspapers, whether published in metropolitan cities or in rural villages.

This article, after presenting all the reasons for loyalty to home enterprises and home business men, as logical deduction from facts and arguments that ought to be familiar to the conductor of every newspaper, closes as follows:

> Loyalty to the home merchant is the duty and the privilege of every good citizen. It is his duty because if he is a good citizen he ought to do all in his power to help other good citizens, and there are certainly no better citizens than our honest merchants. Loyalty to our home merchant is our privilege, because we not only make a private gain in the end, but because when we do something to help our town merchant we do something to help our town and our county, and what Boone County man, woman or child, is there who does not want to do this?

Among the illustrations to attract our attention were two groups. One with the eighty-fifth birthday party of a Mrs. A. E. Pollard, showing her girl friends, evidently of about the equal age to herself, gathered around her on the tree embowered lawn of her home. The other was of the past presidents of the Missouri Press Association at the home of Col. J. A. Hudson in Columbia on the occasion of the reunion last May. These gentlemen are sufficiently known and admired in Missouri to make their portraits of interest in every county of that state or in almost every newspaper of the United States. They were: Past Presidents Hudson, Stephens, White, Jacks, Goodwin, Williams, Jewett, Childers and Omar D. Gray, who has just reason to be proud of his Silver Anniversary Number, as his home people should be grateful for this and for his over twenty-five years of worthy work in their interests and for their betterment and pleasure.

Ozark Magazine

The Ozark Magazine is an ambitious publication of Springfield, Mo., representing, as its name implies, all the Ozark country. It is a region of great beauty, and of special interest by reason of its mines, its agriculture and its fruits, especially its great red apples, and has of late been made famous in the story of "That Printer of Udell's." Henry H. Martin is editor. It is an Ozark booster. The magazine was represented at the recent meeting of the National Editorial Association, and gave an illustrated account of the trip.

The Wage Calculator

We presented a scheme, with a tabulated calculator or ready reckoner, for ascertaining the selling cost of wages, by Geo. H. Benedict, last month. It will be found, we believe, very convenient in many offices, especially in such offices as have no satisfactory or complete cost system. It is simple and sufficiently accurate for most purposes. All prices should be founded on actual cost, yet there must be some standard basis as to cost. It would seem that the saleable time of the workers or actual journeymen in an efficient office, ought to be, on average, forty hours a week. Customers cannot justly be charged with an unreasonable or unnecessary loss of time. We commend careful study and consideration of this plan and would like the views of our readers and of cost experts as to its value.

The Niagara Falls Journal

The Niagara Falls Journal is an enterprising, ably conducted newspaper. It shows a healthy advertising patronage, but in its issue of September 23 it broke all records and distanced all competitors. This number contained thirty-two pages, the largest single issue ever published in Niagara County, and what is still more important, one advertisement of one firm covered fifteen of these great seven column pages. It is the largest advertisement ever published in any single issue of any newspaper in the great State of New York. The advertisement is the opening of the new store of Hirsch's Sons, which must have been no small event in the history of the store and of the firm.

The store was founded forty-eight years ago by the father of the present proprietor, and the first page of the advertisement appropriately contains portraits of the father and two sons and views of the old stores and the new, and a signed invitation to the "Grand Opening Exposition." Every page is surrounded with grapevine border and each department is given separate treatment on half or quarter pages. It is good as well as great advertising.

The Journal and its efficient manager, Mr. J. K. Dissett, are justly proud of this accomplishment, and deserve commendation and congratulations.

ACKNOWLEDGMENT OF SERVICE

Castle-Pierce Printing Company
Makers of Fine Catalogs
Oshkosh, Wis., November 1, 1913.

B. B. Herbert, Editor Printer-Journalist,
Chicago, Illinois.

Dear Mr. Herbert: I recall with pleasure the splendid services you personally rendered to the officers of the last state convention of Wisconsin printers at Milwaukee. And this was followed in the next issue of your Journal by a generous presentation of the proceedings of the meeting. It was a full report, and should have evoked the thanks of every printer at that meeting. I have no doubt it did, but printers are too prone to let you editors take for granted their acknowledgment of the splendid work being done by our trade journals.

Yours truly, W. M. CASTLE.

The United Typothetae and Ben Franklin Clubs of America

Annual Convention at New Orleans

NOTED as to attendance, as to the importance of the papers, work and accomplishments, as well as for the splendid entertainments and hospitality furnished by the kindly people of the Crescent City, the delightful weather and the generous, instructive, intelligent reports of the proceedings given by the city papers, the Twenty-seventh Annual Convention of the United Typothetae with the Ben Franklin Clubs of America, at New Orleans, October 21, 22 and 23, 1913, will go down in history as the one par excellent among conventions.

New Orleans proved to be an ideal convention city for October. Peace, joy, rushing activity and good will, from the opening invocation by Bishop Raval to the election and pleasant pledgings of the newly elected officers, characterized the proceedings and entertainments.

A welcoming address was delivered by the mayor, who furnished each member with an insignia of adoption, honor, protection and hospitality, in the shape of properly printed badges of golden hue.

As the mayor spoke in the more general manner for the city, Hon. John Dymond, the veteran editor and past president of the National Editorial Association, gave a closer, more intimate and fraternal welcome on behalf of the local members of the printing craft, and portrayed, with sympathetic eloquence, the wonderful improvement and growth of the trade of Ben Franklin, the whole printing industry. He referred to old New Orleans as a city classic and historic, with many traditions and customs that reached back to the days of chivalry and the early Spanish and French settlers.

There had, however, been a wonderful metamorphosis by which the city, while not entirely losing its early traditions, its historic places, nor its memories and customs, has been transformed into a modern commercial city with all the improvements in buildings, streets, parks, municipal utilities, in transportation, with cleanliness, electric lighting and scientific sanitation.

To the addresses of welcome, President Glossbrenner fittingly replied, and dwelt briefly on the history of the organization from its conception and first convention in Chicago, 1897, up to the present auspicious gathering. He referred to the great growth of the belief in the need of co-operation and spoke of the steps that had led for the consolidation or union of the two great organizations of master printers, the United Typothetae and the Ben Franklin Clubs of America, of which this convention witnesses the consummation. The result would be closer co-operation and greater strength to the organization.

Frank Cameron then presented President Glossbrenner, as a token of esteem from the New Orleans printers, a handsomely carved magnolia-wood gavel with silver trimmings and engraved plate, commemorative of the occasion.

The regular committees were appointed and banners were presented to Pittsburgh Typothetae, in honor of the greatest growth in membership during the year, and to the Philadelphia Typothetae for attaining the greatest membership.

The convention then got down to business and the reports of officers and committees were given and adopted. The most of these reports particularly concern the members and will be published in full in the Bulletin of the organization. The most important action of the convention was the adoption of the report of the committees on apprentices, published in the November number of the National Printer-Journalist.

Mr. C. D. Traphagen read an address containing reasons and principles, frequently urged in this magazine, as to the necessity of "Organization and Co-operation."

B. F. Scribaner, of Pueblo, Colo., gave, in an able and most entertaining address, twelve good reasons for membership in the organization: First, it would reduce bad debts one half; second, bring one in contact with red-blooded men; third, furnish reliable information as to production cost; fourth, provide ways for perfecting one's business methods and furnish a tested price list based on knowledge and experience; fifth, afford ideas and advice along the lines of efficiency; sixth, would help one to aid in the education of novitiates and in providing efficient workmen in the trade; seventh, secure a tabulation of results; eighth, assist in credits and collections; ninth, keep one posted in new methods and broadly informed; tenth, enable one to learn from the other fellow; eleventh, inspire one with a true spirit that would result in good effects on customers and employes; and, twelfth, he claimed that the organization permits the taking up of isolated propositions, provides means of co-operation with the supply houses, develops backbone, develops faith and confidence in the trade, and provides a means for a printer to do his duty to posterity and good citizenship.

He won applause and an unanimous vote of thanks by the practical excellence of his thoughts, as well as through humorous hits and incidents and his pleasing, forcible delivery.

The Credentials Committee reported six hundred and twenty-one enrolled.

The report of the Price List Committee showed that good and thorough work had been done and that at the present time the committee is at work collecting data for every department of the printing business, concerning the "unit" of production. This is a most important phase, for when the committee is enabled to tell what the average production of every operation is, it will have a standard of efficiency to guide, serve and inform as to whether employes and machinery are producing the results they should obtain. While the Cost System has given valuable information in showing the hour cost of each department, it is fully as important to know how much each machine or employe produces. Therefore, when a blank is sent with a request that you fill in all the information that records will permit, it is sincerely hoped all will co-operate.

The Cost Committee made the following recommendations:

First — For the purpose of arriving at the cost of production of printing, we recommend that the standard unit of product shall be the sold hour in the several departments.

Second — That the standard hour cost shall be the gross cost — namely, labor, plus all overhead expense, department and office.

Third — That the standard hour cost of caring for the overhead expense shall be to charge direct to each department all necessary items and to distribute office or general overhead expense on the basis of total department costs, including payroll.

Fourth — That stock handling, storage and shipping, as well as sales, shall, where possible, be kept on separate departments, or may be included as items of the general overhead to the end that same be included in gross cost of mechanical department.

Fifth — To cover cost of handling stock we suggest a minimum of 10 per cent be added to the delivered price at the plant. Profit to be added to this amount.

Sixth — That the standard rate of depreciation on standard machines to be charged to cost of production shall be ten per cent annually of original purchase price.

Seventh — That the standard rate of depreciation on type to be charged to cost of production shall be twenty-five per cent per annum of its original cost.

Ninth — That interest on investment (paid-in capital and surplus) at the rate of six per cent, or the legal rate of interest, is a proper charge to the cost of production.

Tenth — That the standard rate to be charged off for bad debts shall be one per cent of volume of yearly sales.

Eleventh — That in the operation of a printing plant to its average capacity, a minimum profit should be twenty-five per cent added to cost of production.

Twelfth — That the standard terms of sale of the printers' product shall be thirty days net, due on the 16th of the month following date of purchase. We further recommend that where local Typothetae credit and collection departments are in operation, a uniform agreement as to credits be adopted, and the same be printed upon the monthly statements of the members, the form to be somewhat as follows: "This firm is a member of the local Typothetae Credit and Collection Bureau. All statements are due the 10th of the month following date of purchase. All accounts overdue will be charged interest at the legal rate per annum."

Thirteenth — That for the purpose of arriving at the cost of monotype composition the keyboard and the caster be kept as separate departments.

Fourteenth — That chases and patent blocks in the average commercial plant be considered a part of the composing room equipment.

Fifteenth — That where type and material are kept standing for the convenience of the customer, a proper charge should be made.

Sixteenth — That in press work ink should be charged as a special item, and not included in the cost per hour of press work.

Seventeenth — As a requisite for determining costs, we endorse and deem necessary the use of an efficient loose leaf inventory.

Eighteenth — Experience has demonstrated that inventories for insurance adjustments by appraisal companies have proved most satisfactory.

Nineteenth — We recommend that the Cost Commission gather and tabulate complete statements of cost of production from as many standard cost system users as possible, throughout the country, and officially report their finding semi-annually to the trade directly or through the trade press.

Twentieth — We recommend that the mutual fire insurance companies operated by and for the printing trade receive the careful consideration of all employing printers.

Twenty-first — We recommend that printers' mutual casualty insurance receive careful consideration of all employing printers.

Twenty-second — We recommend the establishment of printers' credit associations in all localities where practical.

W. O. Foote, of Atlanta, gave "A Demonstration of Cost Accounting Systems," using a printed chart.

Ben F. Corday, of Cleveland, talked on "Salesmanship."

H. P. Kendall, of the Plimpton Press, Norwood, Mass., delivered an address on "Scientific Management." He treated of methods of handling and keeping records of stores; the placing of men at work suitable to each individual's abilities; the scientific selection of materials, and the scientific routing of work through a plant. The bookkeeping of supplies and stores should be kept in the office, and in handling work a complete route sheet should be made out for every job and copies placed in the hands of the foremen through whose departments the work must pass.

The convention ordered that three thousand copies of Mr. Kendall's address be printed and distributed.

R. T. Deacon, of St. Louis, read the paper of Earl R. Britt, of St. Louis, on the subject "Service."

Resolutions offered by Isaac Blanchard in connection with the publishing of a series of five text books of questions and answers to be used in teaching printing were adopted and referred to the Committee on Apprentices, as follows:

Whereas, The United Typothetae of America in convention assembled, believe that through the use of a series of five text books of questions and answers covering the entire requisite mental and technical equipment needed by a competent craftsman in the (1) composing room, (2) job pressroom, (3) cylinder pressroom, (4) bindery, and (5) office; that such United Typothetae of America office could most materially advance its own interests, and the welfare of the craft at large; and

Whereas, A definite plan of this work, and an initial pledge of financial support has been made in writing to this body by one of its members from New York; therefore, be it

Resolved, That the United Typothetae of America approve of said plan as presented, and instruct the Executive Council to select the necessary "Text Book Committee" and instruct them to proceed without delay in carrying out said plan.

Resolutions of protest against the Government's action in the free printing of envelopes were adopted without debate.

Whereas, Notwithstanding the protest of the United Typothetae of America, acting in conjunction with other national organizations in the allied trades, the practice of the United States Government in the matter of the free printing of envelopes is still continued.

Resolved, That the body desires again to place itself on record as protesting against this invasion of the rights of private business, and this discrimination against the printing industry; and be it further

Resolved, That a committee of three members be appointed to represent this body in any combined effort that may be made to induce the Government to abolish the practice.

Resolutions of appreciation of the hospitality extended by New Orleans Typothetae and printers and supply trade were adopted by a rising vote.

Resolution favoring the early decision by the Interstate Commerce Commission on the request of the railroads for permission to increase their freight rates was adopted. Speakers on this subject were Colonel Madden, of the firm of Jas. L. Regan, Chicago; Messrs. Edgell, Philadelphia; Ellick, Omaha; Donnelley, Chicago; Traphagen, Lincoln; Brandao, New Orleans, and Foster. The resolution follows:

Whereas, There appears to be a decided feeling of unrest and uncertainty among the general business public regarding the present railroad situation, which uncertainty vitally affects the printing industry; and

Whereas, The railroads claim that the tendency of the last several years has been toward reduced rates and increased operating costs, owing to higher wages and higher costs of materials, and additional requirements of recent legislation; be it

Resolved, By the United Typothetae of America, assembled in its Twenty-seventh Annual Convention, that we earnestly urge upon the Honorable Interstate Commerce Commission the necessity of giving thorough consideration at the earliest possible date to the application recently filed by the railroads for permission to increase freight rates.

M. L. Bath, of Shreveport, La., delivered an address on "Efficiency of the Printer in the Shop."

O. H. Pollard, of Winnipeg, talked on the subject of "Efficiency of the Printer in the Office." It is necessary that the office should be a presentable room, comfortable for the visiting customer, as well as for the owner. Attention to detail and system is necessary. A complete sample system is important, and a price list should be displayed prominently where every customer could see it.

Isaac H. Blanchard's paper on "Trade Schools" was read by George H. Gardner, of Cleveland, and was well received.

Resolutions on the Long Price List for Paper, were adopted as follows:

Whereas, The best interests of the entire printing industry demand that what is known as the "Long Price List" be adopted by every dealer in paper, this for the reason that a price list approximating retail selling price will immensely help the printer to sell his paper at a profit.

Whereas, The Long Price List will set the paper industry a long way forward in the correction of the abuse which now permits the retail consumer of paper to buy at prices as low as the wholesale prices the printer must pay.

Whereas, The proof that the Long Price List is correct in principle, were any proof other than common sense needed, is found in the fact that in practically every industry other than the paper industry the Long Price List prevails. Therefore be it

Resolved, That the Committee on Printing Trade United Typothetae of America that we place ourselves on record in favor of the Long Price List, and call upon every paper dealer doing business with our members to aid us in bringing about this reform by withdrawing all net lists and submitting therefore price lists which will give printers protection to the extent of not less than 25 per cent. Be it further

Resolved, That the Committee on Printing Trade Matters of the United Typothetae of America be, and is hereby instructed to be present at the next meeting of the National Paper Trades Association, and then and there use every honorable means to secure a pledge from that association that the Long Price List will be immediately adopted by each of its members.

The following were elected officers and members of the Executive Committee:

President — George M. Courts, Galveston, Tex.
First Vice-President — Albert W. Finlay, Boston, Mass.
Vice-President — Joseph A. Borden, Spokane, Wash.
Vice-President — Alfred F. Edgell, Philadelphia, Pa.
Vice-President — George H. Gardner, Cleveland, O.

Executive Committee: — Pliny Allen, Seattle, Wash.; D. A. Brown, Kansas City, Mo.; C. P. Byrd, Atlanta, Ga.; Robert T. Deacon, St. Louis, Mo.; William Green, New York City; E. A. Hines, Detroit, Mich.; George Horn, Baltimore, Md.; B. F. Scribner, Pueblo, Colo.; D. L. Johnston, Buffalo; H. W. J. Meyer, Milwaukee; W. E. Milligan, San Antonio; J. A. Morgan, Chicago; B. P. Moulton, Providence; William Pfaff, New Orleans; R. P. Purse, Chattanooga; T. H. Rice, Los Angeles; Eugene Saenger, Sioux Falls; C. W. Simmons, Waterloo; Fred L. Smith, Minneapolis; Edward L. Stone, Roanoke; John Stovel, Winnipeg; C. D. Traphagen, Cleveland; Charles F. Warde, Pittsburg; John S. Watson, Jersey City; H. C. Wedekemper, Louisville.

President Glossbrenner invited Mr. Courts to the platform, surrendered the gavel to him and introduced the convention to its new president. Mr. Courts said:

I am afraid you are expecting a speech. I may say that my elevation to this honor was because of a talent for keeping everlastingly at it. For twenty-five years I have maintained an active working interest in the Typothetae. I may add that this is the second honor of the sort which has come to me in the last ten days, for I was elected at Springfield, Mass., as the president of the National Stationers' and Blank Book Manufacturers' Association. I deem it a great rise to have come as I have from a newsboy to the head of this great printers' society, and I appreciate it, gentlemen. There is a little lady in the back of the room who also appreciates it. (Great applause.) I will give you the best that is in me, and I ask your assistance.

Mr. Albert W. Finlay, the newly-elected first vice-president, who assumes the important position of chairman of the Executive Committee, was escorted to the platform. He said:

I appreciate the honor you have conferred on me. Perhaps I am not so enthusiastic as I should be, for I am familiar with the immense amount of work necessary to make my tenure of office as first vice-president successful. I desire to compliment Mr. Courts on his work, and ask for the president and myself your support. Perhaps I will call on the members of the Executive Committee oftener than they have been heretofore. I believe they should be the active missionaries in their sections.

Mr. Ewing, of Birmingham, moved that a rising vote of thanks be extended to Mr. Glossbrenner and the other officers, who in the last year had so ably guided the affairs of the Typothetae. The motion was duly seconded and adopted by unanimous vote.

President Courts presented to Mr. Glossbrenner the De Vinne gold medallion which comes to every retiring president of the Typothetae. Mr. Glossbrenner replied to the presentation as follows:

There is no gift that I shall ever receive in the future which I will hold with higher regard than this. It is a symbol that I have striven to accomplish something. Twenty years ago I sat in a Typothetae convention. I determined to master my business, and I feel that I owe much to this association for starting me on the right road. I owe much to it for the associations and friendships I have formed in it. I want to thank you for the deference and consideration you have shown to the office I hold. I shall in the future, as in the past, do my utmost to serve you.

We wish to acknowledge our obligations to the Printing Trades News, of New York City, for the aid of its pages in preparing this brief summary of the proceedings of the great convention, which, on account of other engagements, we could not attend, though such another deprivation has seldom occurred since we attended the second convention of the U. T. A. in N. Y. City in 1888, and we hope will not occur again in the coming twenty-five years.

The Entertainments

Of the substantial hospitality evidenced in the entertainments afforded, the News says in part:

The entertainment of the members and their ladies of the United Typothetae by the New Orleans committee was continuous and well arranged by the New Orleans committees, which comprised both ladies and gentlemen.

A large number of printer-men who are enthusiastic golfers had brought their golf outfits and, in charge of Frank Dameron, of New Orleans, were taken to the links.

Monday evening a get-together-and-get-acquainted smoker was held at the De Soto Hotel. This was attended by fully 500 printers. Besides being a smoker, an extensive luncheon was provided. Two "colored boy" bands, one of brass, which was a wonder for the volume of sound produced, and the other a guitar trio, enlivened things. J. Zach Spearing acted as master of ceremonies and delivered a speech which put all in good humor. On the programme were popular melodies by the College Boys' Mandolin and Guitar Club; baritone solo by Pierre Blanchard, accompanied by Ferdinand Dunkley; W. J. Coquille in impersonations; monologue by Bernard C. Shields, and a lecture on "Equal Rights" by "Emmeline Rankhurst." The last named made a pronounced hit. No one knew who Mrs. Rankhurst exactly was, though "she" seemed to have all the foibles of local and visiting printers down pretty pat.

While the men were enjoying themselves at the smoker the ladies were entertained in the parlors of the St. Charles Hotel with a reception and musicale, which was followed by dancing. The local women's committee made everyone present enjoy themselves.

On Tuesday afternoon the ladies were given an auto tour throughout the principal streets and a visit to the parks and water purification plant. The tour was in charge of D. R. McGuire, G. M. Upton and Herbert Palfrey.

In the evening the Orpheum Theatre was filled to capacity by delegates, members and their ladies, where they enjoyed a high-grade vaudeville show.

Wednesday afternoon a tour through the French quarter, with its wealth of historical landmarks, was enjoyed, and in the evening there was an informal musicale and dance.

On Thursday morning a trolley ride to points of interest was enjoyed, followed by an afternoon tea for the ladies at the Country Club.

On Thursday evening, after the convention had adjourned, an ink manufacturer gave the officers and Executive Committee a banquet at the St. Charles.

The steamboat ride on the Mississippi River to a sugar mill was a great event, practically all the visitors boarding the steamer at 8:30 Friday morning. It was an all-day affair with luncheon and all sorts of drinkables served on board. A grand good time was enjoyed. It was fortunate the convention was held at this time, as the sugar grinding is done only about one month, and the mill had only started up that week. About every visitor came away with a piece of sugar cane as a souvenir.

After the return from the boat trip there was a general departure from the hotels, all assuring their hosts that never had they been more pleasantly entertained than during their stay in the old Southern town.

The Entertainment Committee consisted of Herbert Palfrey (chairman), G. M. Upton, George Labarre, D. R. McGuire, W. D. Grace, F. Bildstein, J. E. O'Donnell, A. C. Sharon, F. F. Hyatt, E. C. Palmer, W. G. Cleveland and Julius Meyer. The chairmen of other committees were: Publicity Committee, William Pfaff; Reception and Hotel Committee, Henry Claverie; Ladies' Entertainment Committee, Mrs. Charles Pursell; Ladies' Reception Committee, Mrs. M. R. Bankston. The local Executive Committee on Arrangements for the convention were: Frank Dameron (chairman), W. A. Brandao, H. A. Thiberge, William Pfaff, F. X. O'Donnell, Herbert Palfrey, and Henry Claverie.

IOWA ADMEN PLAN TO EXPLOIT THE STATE

Big Fund to be Raised to Advertise Hawkeye Resources

At a meeting of the Associated Advertising Clubs of Iowa, held at Davenport October 20, 21 and 22, the advertising men raised $3,000 as the nucleus for a fund with which to place a state-wide publicity commission in operation.

The subscriptions taken will be used to secure a fund of a quarter of a million with which to educate the people of Iowa to an appreciation of the resources of the state, and to inform the rest of the world that the great Hawkeye state offers opportunities to farmers, manufacturers and other good citizens with a little money and considerable industry, that can hardly be found anywhere else in the United States.

Iowa is known throughout the world as an agricultural community, and so no special effort to secure publicity to enhance this reputation will be made, but the fact that manufacturing is becoming a great industry in Iowa will be featured. It is not generally known, even among Iowans, that of the two million population in the state, one-sixth are engaged in manufacturing.

Most of the plants in operation are small, but they are growing, and there is room for many more. The manufacturer in Iowa is right at the door of his market, and there are many lines that can be conducted more advantageously from Iowa cities than from any other location.

Iowa has an abundance of coal and a great variety of raw material, and an almost unlimited buying capacity. It has frequently been stated that if a Chinese wall were built around the state, enough food would be raised and enough products would be manufactured to keep everybody happy and comfortable.

The advertising men believe that they have undertaken a great work, and that the whole state will rally to their support. The commission consists of five members, elected by the Associated Advertising Clubs. The chairman is B. F. Williams, Des Moines, and the members are: George Boysen, Cedar Rapids; W. O. Coast, Iowa City; O. J. Benjamin, Nevada; and Paul Davis, of Waterloo.

CHURCH PAPER ADVERTISING TO BE CENSORED

In years past we had a brief experience in publishing a church paper at Indianapolis, Ind., and to our surprise and discomfort found that advertising of prepared remedies or patent medicines furnished the larger part of the income.

We concluded that such advertisers had found the church people more ready to believe in the symptoms described and the remedies recommended than were others, more trustful and unsophisticated. There have been great reforms since then and more correct views have come to be accepted as to advertising ethics and responsibility. The church papers have not been the first to reform, but the new ideas have at last found lodgment among the clergy and other managers of church papers. It is stated that questionable advertisements will be prohibited in all publications of the Reformed Church within the jurisdiction of the East Pennsylvania Synod, according to a resolution adopted unanimously at the sixteenth annual convention. In keeping with his policy, all advertising offered the church publication will be censored closely by the committee on church publications.

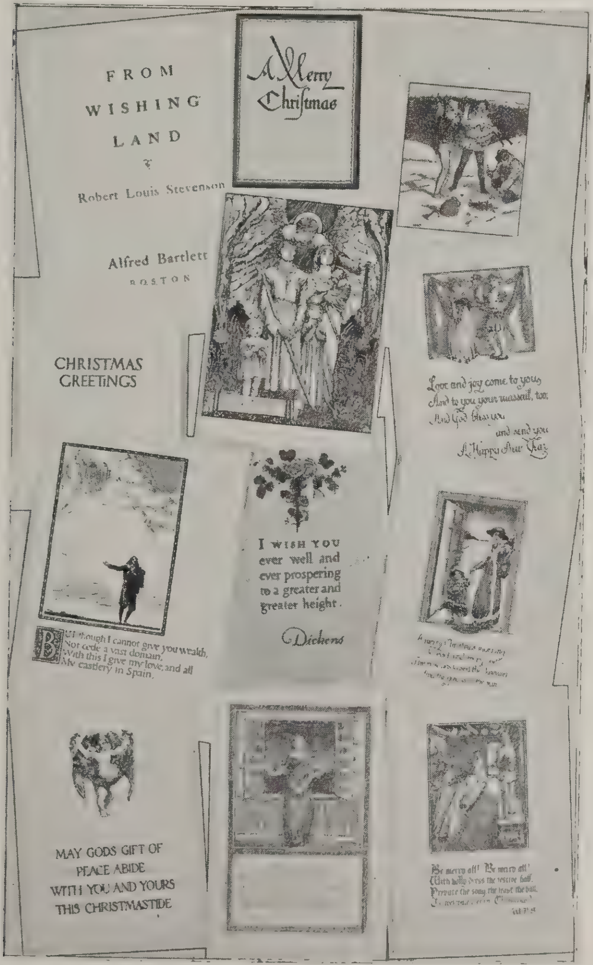
SPANISH PAPERS FOR JOURNALISM STUDENTS

The newspaper laboratory of the course in journalism at the University of Wisconsin has just received a gift of 83 Spanish newspapers. These papers, which will be added to the foreign newspaper collection of the laboratory, include practically every paper of importance published in Spain. They were collected by Dr. Grant Showerman, of the Latin department at Wisconsin, during a recent tour through Spain.

REVIEW OF JOB PRINTING

Address All Communications to E. S. HANSON, 538 S. Dearborn Street, Chicago

AS THIS issue of the National Printer-Journalist reaches its readers most of them will be in the midst of their Christmas work. They will be very busy, no doubt, but will nevertheless want to take time to look at the group of reproductions here shown, of the work of Alfred Bartlett, 69 Cornhill, Boston. It is as delightful a collection of Christmas cards and booklets as I have ever seen. The fact that most of them are printed from engravings rather than from type will possibly detract from their interest to some of our readers, who might otherwise want to follow them as suggestions for their own work. These are worked up in a variety of stocks and color combinations, some of the most attractive being printed on a heavy buff plate stock and printed in only one color, dark green and brown predominating. Antique dekel edge stock is also used on some of the work, in cream and brown, and printed in most satisfactory two color combinations. One of the pieces which is done almost entirely in type is a sixteen-page booklet containing Rudyard Kipling's "The Gypsy Trail." It is on a cream eggshell stock, which is not by any means expensive but still most satisfactory for the work. It is in board covers, the boards covered with dark green paper. Another booklet which is of particular interest, because the matter which it contains is seldom seen, is entitled "A Description of Jesus," and is from an old writing by Publius Lentullus, ruler of Judea in the reign of Tiberius Caesar. The entire booklet is printed from plates engraved in ancient style and has a buff paper cover over boards. Still another booklet contains Robert Louis Stevenson's poem "From Wishing Land," printed entirely from type. The title page is here reproduced. The poem itself is printed one stanza on a page, the stanza being printed at the top of the page, leaving the lower part blank.



FROM WISHING LAND
Robert Louis Stevenson

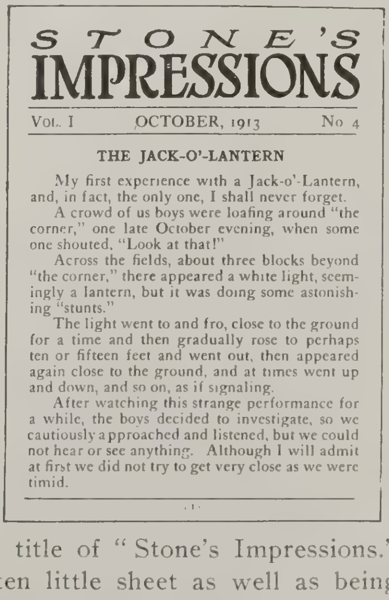
BOSTON
A Merry Christmas
CHRISTMAS GREETINGS
Love and joy come to you, And to you your wassail, too; And God bless you and send you A Happy New Year
But though I cannot give you wealth, Not cede a vast domain, With this I give my love, and all My castlery in Spain.
I WISH YOU ever well and ever prospering to a greater and greater height.
Dickens
MAY GODS GIFT OF PEACE ABIDE WITH YOU AND YOURS THIS CHRISTMASTIDE
Be merry all! Be merry all! With holly dress the festive hall.

✢ ✢ ✢

The Stone Printing & Manufacturing Company, Roanoke, Va., recently started a little house organ under the title of "Stone's Impressions." It is a well written little sheet as well as being done in attractive style in two colors.



STONE'S
IMPRESSIONS

VOL. I OCTOBER, 1913 No 4

THE JACK-O'-LANTERN

My first experience with a Jack-o'-Lantern, and, in fact, the only one, I shall never forget.

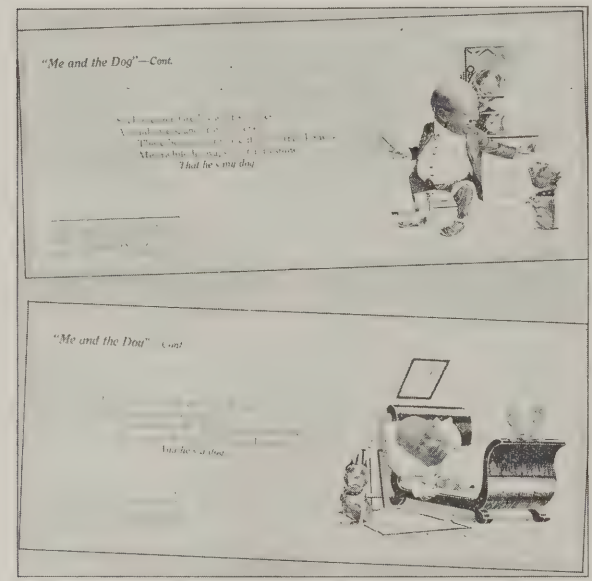
A crowd of us boys were loafing around "the corner," one late October evening, when some one shouted, "Look at that!"

Across the fields, about three blocks beyond "the corner," there appeared a white light, seemingly a lantern, but it was doing some astonishing "stunts."

The light went to and fro, close to the ground for a time and then gradually rose to perhaps ten or fifteen feet and went out, then appeared again close to the ground, and at times went up and down, and so on, as if signaling.

After watching this strange performance for a while, the boys decided to investigate, so we cautiously approached and listened, but we could not hear or see anything. Although I will admit at first we did not try to get very close as we were timid.

I almost threw Jo Anderson's dog blotters into the waste basket, thinking they were something which did not interest me. I soon found, however, that they were not of the waste basket variety but were decidedly different from the ordinary blotter. They are, I might say, perpetrated by the Jo Anderson Print Shop, Sacramento, Cal. Each one contains a stanza of a poem entitled "Me and My Dog" and an illustration to supplement the stanza, the illustration being from a pen and ink sketch drawn around a half tone of Mr. Anderson himself. With each blotter go a couple of printed slips, one of them giving something of the story of the dog and the other a synopsis of the preceding blotters, of which there are to be nine in all. The ones I have before me are the third and fourth numbers of the series, and neither of them says anything about printing except that one of them has this in small type in the corner: "Remember, the dog must eat and I must have your printing to furnish that bone." The other one has a line of similar import. Altogether it looks as though it might be a fairly remunerative class of print shop advertising.



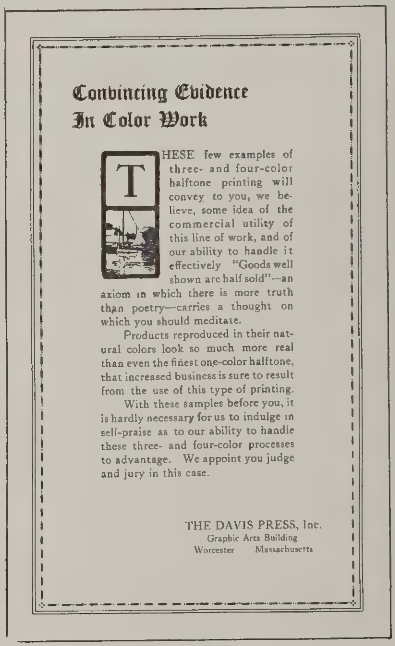
"Me and the Dog"—Cont.
That he's my dog
"Me and the Dog"—Cont.

* * *

I have been much pleased to look over a new volume entitled "Practical Typography," by Mr. George E. McClellan, and published by The Manual Arts Press, Peoria, Ill. Mr. McClellan is instructor of printing at the Lakeside Press School of Printing, Chicago, the big print shop which is customarily known under the firm name of R. R. Donnelly & Sons Co. Mr. McClellan has long experience as a practical printer and his success in teaching is sufficient guarantee of the subject matter of the book. It is primarily intended as a text book and is put up in convenient form for use for this purpose, being in loose leaf style. It contains sixty-three exercises, treating of composition in almost all of its phases, from correct spacing up to composition of tables and the make-up of a book. The exercises very largely supply actual copy for the student to set up, the copy itself being in the nature of instructive matter, so that the student memorizes the instructions at the same time that he is getting actual practice in composition. There are a number of things in the book which many who consider themselves accomplished compositors might well take note of, and it also contains a number of valuable tables and formulas which are worth keeping for reference. The book is altogether a valuable investment at the price of $1.50.

* * *

I am afraid that several specimens which should have gone to Mr. Woodworth have got into my basket. Here is one, for instance, from The Davis Press, Inc., Worcester, Mass. It is entitled "Convincing Evidence," and is confined principally to some samples of color work done by the Davis Press. The introductory page as reproduced herewith is a very good piece of typography, also.



Convincing Evidence
In Color Work

THESE few examples of three- and four-color halftone printing will convey to you, we believe, some idea of the commercial utility of this line of work, and of our ability to handle it effectively "Goods well shown are half sold"—an axiom in which there is more truth than poetry—carries a thought on which you should meditate.

Products reproduced in their natural colors look so much more real than even the finest one-color halftone, that increased business is sure to result from the use of this type of printing.

With these samples before you, it is hardly necessary for us to indulge in self-praise as to our ability to handle these three- and four-color processes to advantage. We appoint you judge and jury in this case.

THE DAVIS PRESS, Inc.

The Brandon Printing Company, Nashville, Tenn., sends out a folder in two colors on bond paper, under the title "Just a Word to the Busy Man." It is such an appeal as even a busy man would be willing to take time to look over, and is here reproduced in full:

> Did you ever feel a desire to place your wants before the public — in an attractive printed form — and then find yourself at a loss how to do it — what to say — what shape it would assume? Nearly every one has this experience.
>
> It is an art to properly make copy, and it takes an artist to put the copy in tangible form so the printer can produce it — the crystallizing of thought — possibly only the placing of a word here and there — just a touch of dignity in the selection of display — maybe an engraving or two — the proper use of paper, etc.

Well, this is our business.

We can do all of these things, because we make a study of it. Let us undertake the work for you. It is a valuable service and it's yours for the asking.

Why waste your time and risk attaining the results you want, when we have a splendid equipment ready to be used at any time? Consult us — Our ideas are new, vigorous, and will take.

We can produce schemes in attractive cut-out forms — lithographing or printing.

✣ ✣ ✣

The following letter from Axel Edw. Sahlin, art compositor and typographical designer, is of interest as showing that he has made a change in his location:

> I want to thank you very much for the splendid criticism you have always made on my further samples I sent you. I am now, under separate cover, sending you a few more; as you see some of them I have treated in Italic, which being the last of my work done at the Roycroft Shop. I am now working with the American Type Founders Company, Jersey City, N. J.

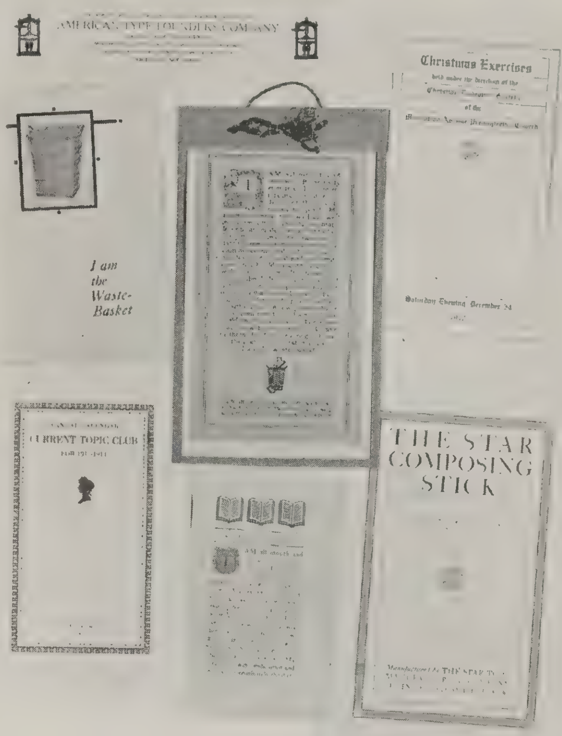
Rare ... Bills Wanted

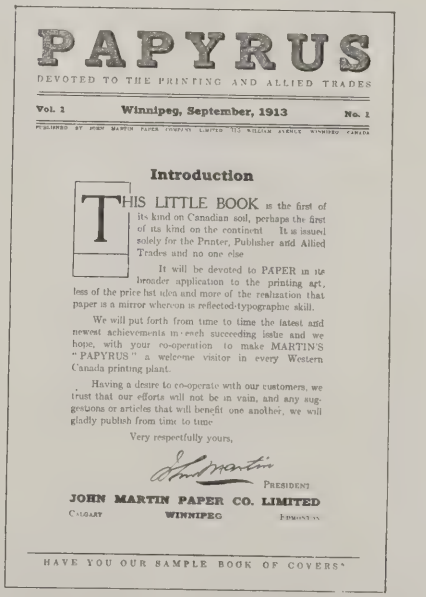
The American Type Founders Company has always had a reputation for an appreciation of art in typography, and has always had on its staff the best typographers that could be secured. This move is but another evidence of its business principle. I shall watch with considerable interest for specimens from Mr. Sahlin in his new location.

L. H. McNeil sends several attractive specimens already grouped up, which I am very glad to reproduce. I like particularly the cover for the Annual Calendar of the Current Topic Club and the circular for the Star composing stick. Both of these are in two colors.



✣ ✣ ✣

Another house organ, published by the John Martin Paper Company, Ltd., Winnipeg, and devoted to the printing and allied trades, is entitled "Papyrus," this title being in bold shaded type on the first page. In fact, the shaded type is used for display throughout, a fact which, in my opinion, detracts somewhat from the appearance of the publication.



PAPYRUS

DEVOTED TO THE PRINTING AND ALLIED TRADES

Vol. 1 Winnipeg, September, 1913 No. 1

PUBLISHED BY JOHN MARTIN PAPER COMPANY LIMITED 313 WILLIAM AVENUE WINNIPEG CANADA

Introduction

THIS LITTLE BOOK is the first of its kind on Canadian soil, perhaps the first of its kind on the continent. It is issued solely for the Printer, Publisher and Allied Trades and no one else.

It will be devoted to PAPER in its broader application to the printing art, less of the price list idea and more of the realization that paper is a mirror whereon is reflected typographic skill.

We will put forth from time to time the latest and newest achievements in each succeeding issue and we hope, with your co-operation to make MARTIN'S "PAPYRUS" a welcome visitor in every Western Canada printing plant.

Having a desire to co-operate with our customers, we trust that our efforts will not be in vain, and any suggestions or articles that will benefit one another, we will gladly publish from time to time.

Very respectfully yours,

John Martin
President

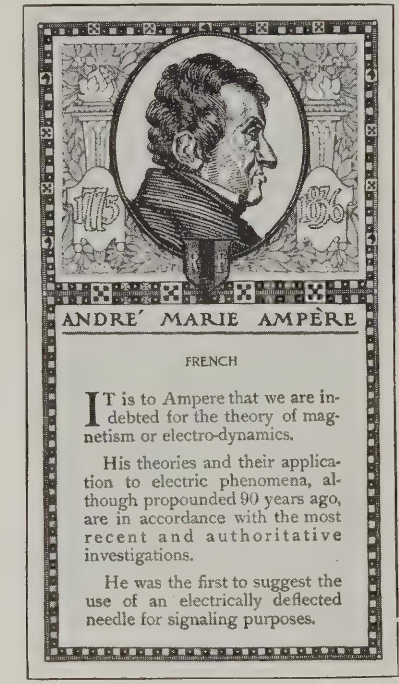
JOHN MARTIN PAPER CO. LIMITED
Calgary WINNIPEG Edmonton

HAVE YOU OUR SAMPLE BOOK OF COVERS?

lication, as it is used in combination with heavy rule and in other ways which render it out of harmony with its surroundings. This little organ has much in it of trade interest, however, and will be gladly received by those who are fortunate enough to be on the mailing list.

✣ ✣ ✣

I have an attractive booklet advertising Wagner electric motors, prepared by Ray D. Lillibridge, Inc., 111 Broadway, New York. The booklet is gotten out somewhat after the highly decorative German style, as a sample page will show.



ANDRE' MARIE AMPÈRE

FRENCH

IT is to Ampere that we are indebted for the theory of magnetism or electro-dynamics.

His theories and their application to electric phenomena, although propounded 90 years ago, are in accordance with the most recent and authoritative investigations.

He was the first to suggest the use of an electrically deflected needle for signaling purposes.

✣ ✣ ✣

A book of paper samples from Tileston & Hollingsworth Company, Boston, is unusually attractive. It shows Milton cover and text in a number of colors and styles. These are attractively printed in two or three colors, and serve to show in the very best style the quality of these papers.

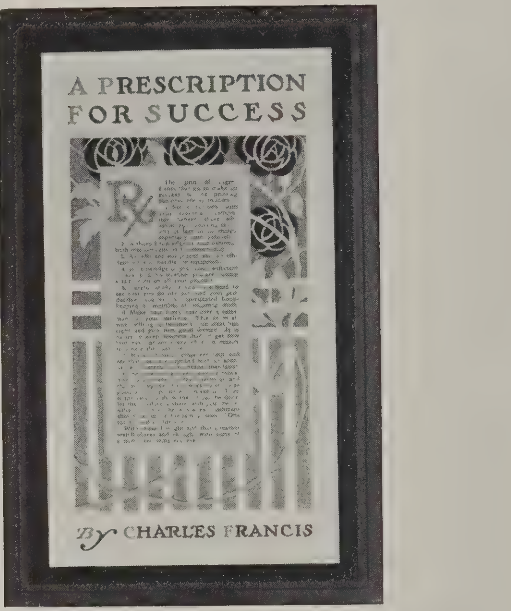
This wall card from the Charles Francis Press of New York, entitled "A Prescription for Success," has a brown background onto which a white stippled sheet is pasted and printed in several delicate colors. It is a most harmonious piece of work, very far from the flat, lifeless thing which I am afraid it will appear in the reproduction.

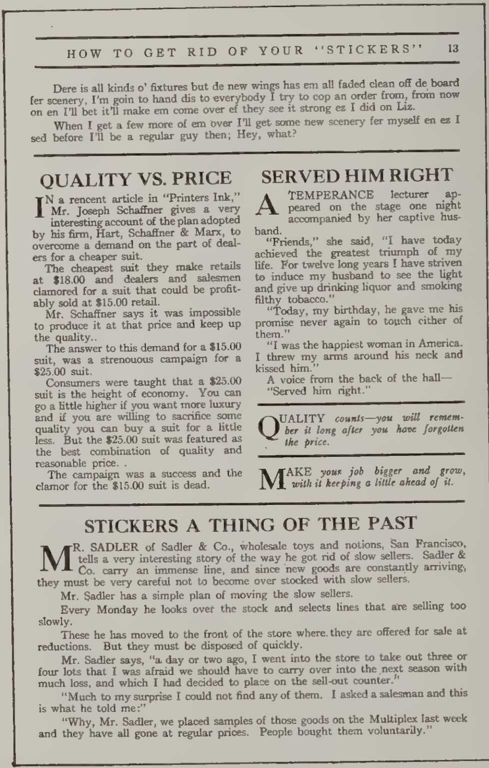


A PRESCRIPTION FOR SUCCESS

By CHARLES FRANCIS

✣ ✣ ✣

Another house organ which has come to my desk is entitled "The Guinea Pig," though why this title should have been chosen is something I have not yet been able to fathom. It is published by the Multiplex Display Fixture Company, St. Louis, Mo. A sample page of this publication will show that particular attention is being paid to an attractive make-up.



HOW TO GET RID OF YOUR "STICKERS" 13

Dere is all kinds o' fixtures but de new wings has em all faded clean off de board fer scenery, I'm goin to hand dis to everybody I try to cop an order from, from now on en I'll bet it'll make em come over ef they see it strong ez I did on Liz.

When I get a few more of em over I'll get some new scenery fer myself en ez I sed before I'll be a regular guy then; Hey, what?

QUALITY VS. PRICE

IN a rencent article in "Printers Ink," Mr. Joseph Schaffner gives a very interesting account of the plan adopted by his firm, Hart, Schaffner & Marx, to overcome a demand on the part of dealers for a cheaper suit.

The cheapest suit they make retails at $18.00 and dealers and salesmen clamored for a suit that could be profitably sold at $15.00 retail.

Mr. Schaffner says it was impossible to produce it at that price and keep up the quality..

The answer to this demand for a $15.00 suit, was a strenouous campaign for a $25.00 suit.

Consumers were taught that a $25.00 suit is the height of economy. You can go a little higher if you want more luxury and if you are willing to sacrifice some quality you can buy a suit for a little less. But the $25.00 suit was featured as the best combination of quality and reasonable price. .

The campaign was a success and the clamor for the $15.00 suit is dead.

SERVED HIM RIGHT

A TEMPERANCE lecturer appeared on the stage one night accompanied by her captive husband.

"Friends," she said, "I have today achieved the greatest triumph of my life. For twelve long years I have striven to induce my husband to see the light and give up drinking liquor and smoking filthy tobacco."

"Today, my birthday, he gave me his promise never again to touch either of them."

"I was the happiest woman in America. I threw my arms around his neck and kissed him."

A voice from the back of the hall—
"Served him right."

QUALITY *counts—you will remember it long after you have forgotten the price.*

MAKE *your job bigger and grow, with it keeping a little ahead of it.*

STICKERS A THING OF THE PAST

MR. SADLER of Sadler & Co., wholesale toys and notions, San Francisco, tells a very interesting story of the way he got rid of slow sellers. Sadler & Co. carry an immense line, and since new goods are constantly arriving, they must be very careful not to become over stocked with slow sellers.

Mr. Sadler has a simple plan of moving the slow sellers.

Every Monday he looks over the stock and selects lines that are selling too slowly.

These he has moved to the front of the store where they are offered for sale at reductions. But they must be disposed of quickly.

Mr. Sadler says, "a day or two ago, I went into the store to take out three or four lots that I was afraid we should have to carry over into the next season with much loss, and which I had decided to place on the sell-out counter."

"Much to my surprise I could not find any of them. I asked a salesman and this is what he told me:"

"Why, Mr. Sadler, we placed samples of those goods on the Multiplex last week and they have all gone at regular prices. People bought them voluntarily."

A book printed recently to show the construction of the new freight terminal at Chicago for the Soo Railway has proved of particular interest to me because of the very judicious handling of two pages in text. These pages have one or two lines rather widely spaced but otherwise they are most excellent.

* * *

Charles Ashcroft, manager of the News Publishing Company, Middelbourne, W. Va., sends a large number of samples, practically all of which are almost without fault. I have been particularly interested in a sheet of specimens among this lot, this sheet being a number of pieces of work for the company itself, and grouped together in an attractive way. I am showing a half-tone of this group just as it appears on the sheet, although the coloring cannot be shown, the printing being in four colors.

MIDDLEBOURNE, W. VA

This looks to me like a decidedly good piece of advertising for a print shop.

I should like to comment at considerable length on many of the other specimens, but it would consume too much space in this department.

The race program of the Tyler County Fair I would suggest has the advertisements printed in too large and bold a class of type. I believe the attractiveness of it would be increased greatly by a general lightening up all around.

The simple little card for Mr. McIntyre of the Mutual Life Insurance Company is well worth careful consideration.

* * *

"BETTER YEAR BY YEAR"

New York Press Association
Office of the Secretary
Dansville, N. Y., Nov. 4, 1913.

My Dear Mr. Herbert: Please give me credit for Printer-Journalist for another year. The Printer-Journalist grows better year by year, more practical, more inspiring. What stupendous strides forward the printing business is making in all its branches.

Yours fraternally,
A. O. BUNNELL.

COMMON-SENSE ASSERTING ITSELF IN VOCATIONAL TEACHING

The London County Council has this year decided to change the rules governing all technical schools in London under its jurisdiction. In future no lad is to be taught trades or to receive special technical instruction unless he has already attained a certain standard of elementary knowledge in the three Rs. Examinations are held, the passing in which serves as a standard. Lads who fail to pass are required to spend two evenings a week in an ordinary public night school, teaching English and arithmetic. Such a lad will be allowed to study one evening a week in the trade school. When he has upon examination shown satisfactory progress in the acquisition of elementary knowledge he is allowed to put in two evenings a week in the trade school and one evening a week in the elementary school. Upon passing the standard examination he is not required to continue in the elementary school. A well-known writer, commenting on this sensible restriction, says: "It is, after all, of very little service to have a well-informed and highly skilled man engaged in a technical institute pouring water through a sieve or repeating what are really abracadabras, because they carry no real significance or enlightenment to the young listener. It is a fact that a great amount of his time and the time of his teachers has been simply wasted."

Vocational schools are very numerous in Great Britain, as any municipality may, by establishing them, share in a national fund set aside for the maintenance of trade schools. The restriction set forth above applies to such trades as plumbing, carpentering, etc. It has been proved that it is usually impossible to make a good mechanic out of a lad who has lacked the opportunity or is defective in the power of application necessary to acquire the general elementary education given in the public schools. How much more is that elementary education necessary in lads who enter the printing business and have to deal with words and their meanings every hour they are on the payroll? No master printers should allow any lad to enter a composing room to learn typesetting who is not fairly proficient in the three Rs. To do otherwise is foolish, and is harmful both to the lad and the business — H. L. B.

* * *

A COURSE IN ADVANCED JOURNALISM AT PITTSBURGH UNIVERSITY

A round-table course in advanced journalism, taking up the popular newspaper questions of the day, has been added to the course in newspaper work at the University of Pittsburgh. At the first meeting of the class, T. R. Williams, managing editor of the Pittsburgh Press; C. R. Evans, manager of the Tri-State News Bureau; J. K. Burnett, assistant manager of the Tri-State News Bureau; Elmer R. Stoel, secretary of the Pittsburgh Publicity Association; Grif Alexander, Pittsburgh Dispatch; Fred E. Johnson, art editor, Pittsburgh Leader; Harry N. Bitner, art editor of the Press, and Charles S. Howell, retired newspaper man, took up the discussion of "What is News?" The discussion centered around the changing character of the news and the local story as a circulation getter.

The course is being offered for the benefit of any townspeople who are not particularly interested in the technique of newspaper work, but who desire to gain a more comprehensive knowledge of the editor's practices, his policy and methods. During the year members of the class will be expected to write three papers, the first on "How I Would Run a Newspaper"; the second, "Is the Endowed Newspaper Idea Feasible?"; and the last, on "The Future of American Journalism."

Under the head of editorial direction, the following subjects will be discussed: The make-up, newspaper management, newspaper policy, politics and newspapers, coloring the news, the syndicate game, "How I Would Run a Newspaper." Some of the points to be taken up in newspaper problems are commercial journalism, advertising, yellow journalism, women in journalism, the Sunday paper, are the woman's page features and sporting news overdone, newspaper libel, "Is the Endowed Newspaper Idea Feasible?" A history of Pittsburgh newspapers is to be one of the features in connection with the history of American journalism.

The total enrollment for the courses in the department of journalism, including the course in advertising and selling, has reached 115. In the beginning course, 34 students have registered, and 24 in the second year work.

The courses are being given by T. R. Williams, managing editor of the Pittsburgh Press, and Alvin H. Kessler, the new instructor in journalism from the University of Wisconsin.

* * *

REPORTING GREATEST WORK IN WORLD, SAYS STEFFENS

"Reporting is the greatest work in the world," declared Lincoln Steffens in addressing the students in the Course in Journalism at the University of Wisconsin recently.

"The reporter writes for millions, and millions depend upon him to explain the happenings of life so that they can understand them," continued Mr. Steffens.

"Our journalism is changing. The new and coming style will be fearless and will be written by those men who can go under the surface, who can look at life with open eyes and who can tell clearly what he sees. He must be able to see back of the acts of men and discern the social and economic forces that cause the acts, and he must explain these to his readers.

"We are not up against bad men, but bad conditions — wrong economic conditions — and these must be corrected before we can progress as we should. In correcting these evils the newspapers must take the lead.

"The great need today in the newspaper and magazine world is for men who possess the knowledge and the culture to take the achievements of the scientists, the astronomers, the great engineers, and the agricultural experts, and write it interestingly and correctly for the great mass of people who depend upon newspapers and magazines for their information."

* * *

Encore!

The Opera House Reporter, of Estherville, Iowa, has a managing editor in L. C. Zelleno who can give the world, that is all a stage, new proscenium-lights on the favorite characters, Success and Opportunity. An article in which Mr. Zelleno gives distinctly original ideas as to these is issued as a folder on cover stock by this bright journal of the amusement world. It should enable its readers, through the inspiration given by the thought that "Success is always roaming about," to grasp it as Mr. Zelleno has done in his editorial labors.

NEWSPAPER CRITICISMS

Address all communications to O. Byron Copper, De Soto, Wis.

NOTWITHSTANDING that the editor who does his duty is becoming more and more a recognized and appreciated figure in modern communities, there are times in the lives of practically all newspaper-makers when they grow despondent with the idea that they are not fully esteemed nor accorded the honor at home which is their due.

Little community progress, as well as little national progress, is possible without editorial initiative and boosting, and this explains why, both that editors are being more and more appreciated, as well as that many of them have moments of despondency in which they are cast down in spirit over the belief that their efforts to reform local deficiencies, or to improve defects, are not properly understood nor appreciated. It was some such thought as this that inspired me when I wrote the following verses, which I hereby dedicate to my brethren of the newspaper fraternity:

The History of Progress

What man hath ever tried to do
His best at anything,
And found his path with roses strewn,
Without some thorns to sting?
What man hath ever captured fame,
Except he far didst roam?
What prophet yet hath had the joy
Of honor in his home?

What man hath had convictions true,
And tried to make them good,
Who got reward from men, except
To be misunderstood?
What man hath labored earnestly
To help all human kind,
Whom half the world hath not despised
And bitterly maligned?

What man hath yet invented some
Remarkable machine,
Whom half the world didst not denounce
Or ridicule as mean?
What man hath yet tried to reform
Religion or the law?
Upon whose head there didst not fall
Anathemas most raw?

What man hath ever tried to change
The old for something new,
That did not have his enemies,
Who sought him to undo?
In short, what good hath anyone
Attempted in this life,
That it did not at once bestir
A deal of selfish pride?

The world seems so constructed that
To introduce a change,
Makes it as cross and churlish as
A mastiff with the mange;
Advancement is as poison to
The masses, in the main—
The fight of progress on today
Is history o'er again.

And so, if thou art pioneer
In any cult or cause,
Be it religion, politics,
Reforming creeds or laws,
Just buckle on your armor true,
And hold the fort, my son,
For that's the hard, but simple, way
All pioneers have won.

Heed not the censure of the world,
Nor Gossip's evil fame,
If worthy cause thou hast espoused
And honest is thy aim,
Push straight ahead with courage NOW,
And it is safe to say,
That future men will honor thee,
Though these do not today.

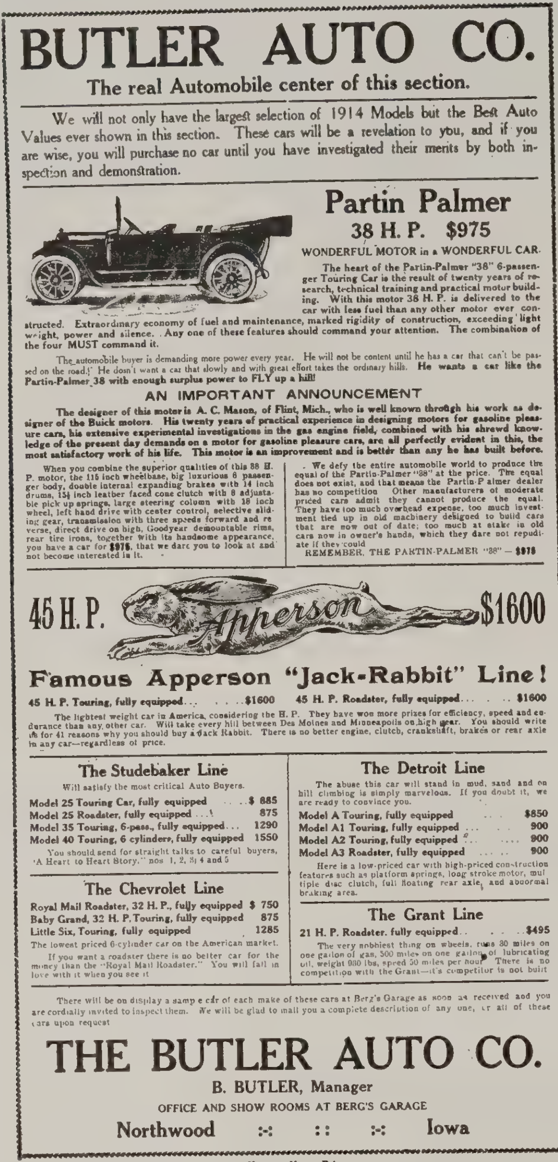
* * *

The following paragraph contained a cut of (presumably) the Herald editor himself:

> For fear that the people of Colorado may get it into their nuts, after sizing up the visiting editors, that they are a hard lot, after considerable persuasion, I secured the photo of one editor in the outfit who does not remind one of a horsethief. It is unnecessary to state that this editor belongs in Colorado. There were several other rather bright-appearing Colorado men in attendance at the editorial convention, but this was the best specimen I could capture. Each and every reader of the Herald correctly identifying this gentleman will receive the Herald one year upon payment of a dollar and a half in advance.

* * *

The first contribution to be considered is an advertisement from the Kensett, Iowa, News office, shown herewith as Exhibit No. 1. It is not a remarkable specimen, but just a simple, serviceable piece of printing, in the main, well done. About the only defect sufficiently prominent to warrant comment is the manner in which the tail was treated. "Northwood, Iowa," would have looked better closed up and centered, instead of spread out, with the dew-dads concocted of colons and hyphens intervening.



BUTLER AUTO CO.

The real Automobile center of this section.

We will not only have the largest selection of 1914 Models but the Best Auto Values ever shown in this section. These cars will be a revelation to you, and if you are wise, you will purchase no car until you have investigated their merits by both inspection and demonstration.

Partin Palmer

38 H. P. $975

WONDERFUL MOTOR in a WONDERFUL CAR.

The heart of the Partin-Palmer "38" 6-passenger Touring Car is the result of twenty years of research, technical training and practical motor building. With this motor 38 H. P. is delivered to the car with less fuel than any other motor ever constructed. Extraordinary economy of fuel and maintenance, marked rigidity of construction, exceeding light weight, power and silence. Any one of these features should command your attention. The combination of the four MUST command it.

The automobile buyer is demanding more power every year. He will not be content until he has a car that can't be passed on the road. He don't want a car that slowly and with great effort takes the ordinary hills. **He wants a car like the Partin-Palmer 38 with enough surplus power to FLY up a hill!**

AN IMPORTANT ANNOUNCEMENT

The designer of this motor is A. C. Mason, of Flint, Mich., who is well known through his work as designer of the Buick motors. His twenty years of practical experience in designing motors for gasoline pleasure cars, his extensive experimental investigations in the gas engine field, combined with his shrewd knowledge of the present day demands on a motor for gasoline pleasure cars, are all perfectly evident in this, the most satisfactory work of his life. This motor is an improvement and is better than any he has built before.

When you combine the superior qualities of this 38 H. P. motor, the 115 inch wheelbase, big luxurious 6 passenger body, double internal expanding brakes with 14 inch drums, 15¼ inch leather faced cone clutch with 6 adjustable pick up springs, large steering column with 18 inch wheel, left hand drive with center control, selective sliding gear, transmission with three speeds forward and reverse, direct drive on high, Goodyear demountable rims, rear tire irons, together with its handsome appearance, you have a car for **$975**, that we dare you to look at and not become interested in it.

We defy the entire automobile world to produce the equal of the Partin-Palmer "38" at the price. The equal does not exist, and that means the Partin-Palmer dealer has no competition. Other manufacturers of moderate priced cars admit they cannot produce the equal. They have too much overhead expense, too much investment tied up in old machinery designed to build cars that are now out of date; too much at stake in old cars now in owner's hands, which they dare not repudiate if they could.

REMEMBER, THE PARTIN-PALMER "38" — **$975**

Famous Apperson "Jack-Rabbit" Line!

45 H. P. Touring, fully equipped . . . . . . $1600 45 H. P. Roadster, fully equipped $1600

The lightest weight car in America, considering the H. P. They have won more prizes for efficiency, speed and endurance than any other car. Will take every hill between Des Moines and Minneapolis on high gear. You should write us for 41 reasons why you should buy a Jack Rabbit. There is no better engine, clutch, crankshaft, brakes or rear axle in any car—regardless of price.

The Studebaker Line

Will satisfy the most critical Auto Buyers.

Model 25 Touring Car, fully equipped	$ 885

Kensett News, Print

No. 1

✣ ✣ ✣

Years ago, during my first work in these columns of the National Printer-Journalist, one of my regular contributors was Howard C. Hull, now manager of the News Printing House of Charlotte, N. C. He showed great promise then as to his future achievements in the calling, and I was pleased to predict at that time that some day he would occupy a high place among printers. He used to contribute advertisements for review, and on more than one occasion entered as a competitor in this department's advertisement setting contests, in which he secured high places. But after a time, as he confesses in the following letter, he became silent so far as further communication with this department was concerned, but from other sources I gleaned from time to time news of his advancement, and was always pleased with each upward step in his printing career. And now comes this welcome letter, the first in several years:

Charlotte, N. C., Sept. 23, 1913.

Mr. O. Byron Copper, De Soto, Wis.

Dear Mr. Copper: It has been some time since I have sent you anything, so I am forwarding you in same mail as this, under separate cover, a copy of a special edition we got out here. It's rotten, I think. A "fake" special edition promoter came along and worked this up.

With best wishes, I remain, as ever,

Fraternally,
HOWARD C. HULL.

I cannot wholly agree with the brother in that the special edition of The Charlotte News is "rotten." In many ways it is quite creditable, especially in point of its mechanical features. In Exhibit No. 2 it affords me pleasure to reproduce the front page of this supplement, which shows skillful and well balanced treatment in design and composition. My criticism would be that, in point of contents, this specimen is not so good, evidently, as opportunity warranted; but, in the main, it is not deserving of any such uncharitable appellation as that used by the contributor. The reading columns breathe the spirit of "boost" and withal are creditable, the pages devoted to the News Printing House holding especial interest for me. From them I quote the following concerning Brother Hull:

NEW HOME OF THE NEWS PUBLISHING COMPANY

WATCH CHARLOTTE GROW

Progress **Prosperity**

No. 2

> Howard C. Hull, the manager of the job printing department, is one of the best known printers in the south, whose work has received more comments and awarded more prizes than any other printer in North

Carolina. Mr. Hull came to Charlotte with his family, from Asheville, more than a year ago, and has made many friends among business men and fraternities, he being at present the Chancellor Commander of Mecklenburg Lodge, No. 90, Knights of Pythias.

The pages of this special supplement were about 10¾ x 13½ inches in size, the stock a supercalendared book, on which the impression secured is good. The displayed portions were all simply, but neatly, gotten up, so that, in the main, as I intimated at the outset, the edition was a creditable creation.

* * *

Aledo, Illinois, October 17, 1913.

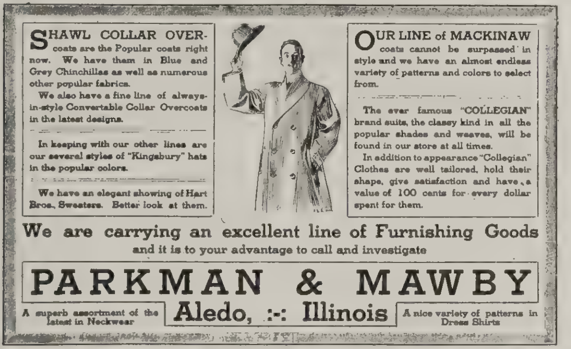
Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: I am sending you herewith an "ad" from our current issue for your criticism through the columns of the National Printer-Journalist. The last time I sent you an ad you dealt it a jolt that reminded one of a certain citrus fruit, but I must admit that it did me more good than any other one thing that I ever had happen to me in my career as a printer.

Yours respectfully,

E. ROY LOWNES.

That something has been the means of improving Brother Lownes' abilities as an ad-compositor is evident. We do not have to accept alone his free confession in the foregoing letter, but the moment we glance at his latest contribution, shown herewith as Exhibit No. 3, we have another convincing proof. I am happy, indeed, if some of this noticeable improvement is due to review in this department, even if that review was made at the risk of being unkind. This present ad from this contributor is laid out neatly and treated with saneness throughout. With but one little point in detail, there is nothing serious for the critic to object to, and that is the manner in which "Aledo, Illinois," was set. It would have simplified matters (and in just the degree one can simplify any part of his work, just so much better it becomes) to have omitted the colon-hyphen-colon ornament between these two words, drawing them together with only ordinary space between them. The effect would have been better thus, without necessitating any alteration of the box around the signature. Understand me, now, that this is really the only serious fault I find with this specimen, but will say, as a matter of education, that an ad of this kind is always better when greater margins of white are allowed, especially inside panels containing type matter; and it will be found preferable always to set the matter within panels in a size smaller type and solid, if necessary, to permit of these very desirable greater margins of white. Margins of from ten to twelve points are usually considered adequate, but I advocate and prefer from sixteen to eighteen and even twenty-four points.



SHAWL COLLAR OVERcoats are the Popular coats right now. We have them in Blue and Grey Chinchillas as well as numerous other popular fabrics.

We also have a fine line of always-in-style Convertable Collar Overcoats in the latest designs.

In keeping with our other lines are our several styles of "Kingsbury" hats in the popular colors.

We have an elegant showing of Hart Bros. Sweaters. Better look at them.

OUR LINE of MACKINAW coats cannot be surpassed in style and we have an almost endless variety of patterns and colors to select from.

The ever famous "COLLEGIAN" brand suits, the classy kind in all the popular shades and weaves, will be found in our store at all times.

In addition to appearance "Collegian" Clothes are well tailored, hold their shape, give satisfaction and have a value of 100 cents for every dollar spent for them.

We are carrying an excellent line of Furnishing Goods
and it is to your advantage to call and investigate

PARKMAN & MAWBY

A superb assortment of the latest in Neckwear

Aledo, :-: Illinois

A nice variety of patterns in Dress Shirts

OFFICE OF THE REVIEW

Bridgeburg, Ontario, Canada, October 10, 1913.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: For several weeks past you have been receiving a copy of The Bridgeburg Review, and I would like very much if you would criticise the work in the National Printer-Journalist.

In this paper you see the product of a plant where job work, particularly "long runs," is made a specialty and as there are only two presses which will take the sheet and these are busy practically every working hour the press-work on the newspaper must be reduced to a minimum and that is the reason we adhere to the ready-print, so as to make only one form.

The Fort Erie Times and the Ridgeway Herald are two sub-editions of the Review. The Times front page is gotten by folding the pages differently but the Herald front page is the same as that of Review, with the exception, of course, of the heading. We find the sub-edition plan a very satisfactory one. The additional cost is practically nothing while the smaller towns are given local papers of their own. Then there is a certain amount of legal advertising which we must receive.

You will perhaps think that as this paper is issued from an office having more facilities than the average country newspaper plant we should produce a better paper. That is so, to a certain extent, but our firm refuses to allow the newspaper cost to become excessive and the loss charged to the job department. In this plant an order is entered every week for the newspaper in the same manner that an outside customer's order is entered. When the expense is above the average the writer must give the firm a good excuse for the increase.

Bridgeburg and Fort Erie are towns on the Niagara river, immediately opposite Buffalo, N. Y., having a population of 350,000, Bridgeburg having 2,000. Because of the proximity to the large city the retail business here is practically dead and we have to depend on Buffalo for a large part of our advertising revenue. Then there is a field on only one side of us and that is not, perhaps, the best agricultural section in the world. So that in many respects our papers are seriously handicapped.

But in spite our difficulties, we believe we are producing a creditable paper. There is usually plenty of news and when there is scarcity of that we generally manage to manufacture some by means of an editorial carefully aimed in the right quarters. The writer cannot speak too strongly as to the value of the use of the editorial columns to liven things up locally. They not only make news, but create a great deal of interest in the paper. We do not touch national politics and do not take sides when there is an election for local offices. But at other times we do not hesitate to criticise the actions of the village council or the school-board if we think they need it. We have not lost a cent's worth of business, either printing or advertising in following out this method and we do not expect to. We get all the printing there is from Bridgeburg and about two-thirds of the municipal printing from Fort Erie. The writer considers the local editorial the most important matter in The Bridgeburg Review.

Hoping to see a criticism of our paper in the National Printer-Journalist, we are,

Yours very truly,
THE BRIDGEBURG REVIEW,
J. Geo. Johnston, Assistant Editor.

The foregoing interesting communication refers to a publication reviewed more or less thoroughly in last month's installment of Newspaper Criticisms, but, happily, the Bridgeburg Review is a paper worthy of more than one inspection. This is true, not only in point of contents generally, as there is an unusually fine news-service maintained, but it is particularly true of the Review's editorial department, which, as I believe I intimated in my comment of last month, is above the average in respect to choice of subject and style of literary composition. In this connection, I ask the reader to read with care the paragraph next to the last in the above letter. Indeed, the editorial is an important feature in any newspaper, if well done, and, while perhaps secondary to news, it can often be made of news, and, as Brother Johnston suggests, often results in the creation of news. And the brother is right again when he suggests that a newspaper will never lose any business by availing itself of the privilege of a free press. In fact, I believe most implicitly that free and fearless editorial expression is one of the surest means of meriting and getting business, it being taken for granted, of course, that a man who has brains enough to write an editorial at all, has sense enough to espouse worthy causes. And by this I do not mean to imply that a newspaper should shrink from espousing an unpopular cause, just because it is unpopular. I have a lot of confidence in public opinion. I believe the world is composed in the majority of good people. Public opinion represents the composite thought or view of a thing, and as the majority are good, this composite view is not apt to be often far wrong. Hence, when an editor is sure he is right, he need have no misgivings as to the result of his going ahead. But, I suppose, as a matter of fact, borne out by instances of history, public opinion is sometimes wrong, and this is so, perhaps, simply because of public ignorance. And this is where the newspaper through its editorials comes in with a service of ineffable value, by disseminating information that will have a tendency to clear the cobwebs of dogma and superstition from the public mind — which, after all, are often mighty influences in forming public opinion — and when a newspaper does this, it is said to be a "molder of public opinion."

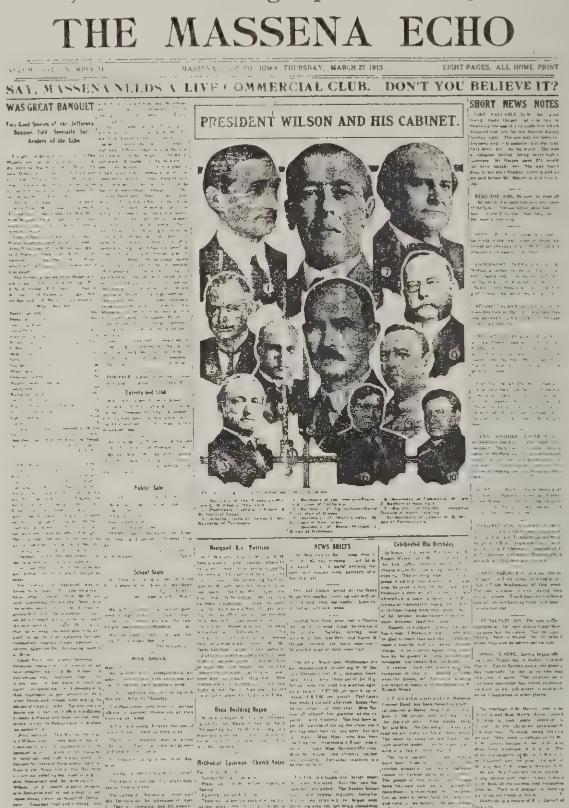
Massena, Iowa, Sept. 7, 1913.

O. Byron Copper, Esq., De Soto, Wisconsin.

Dear Sir: I am sending herewith a copy of my paper for your inspection and criticism. I read and enjoy your department in the Printer-Journalist. I sent in a copy of this same issue about two months ago but sent it to the Chicago office and have neglected to send one direct sooner. If you will reproduce the front page and the page ad in the P.-J., I will buy the cuts for use for advertising purposes. I have a small shop and am not "flush" with equipment but try to do the best possible under the circumstances. With kindest fraternal greetings, I am,

Yours very truly,
R. J. CORNELL.

The most remarkable, as well as the most commendable, feature about Brother Cornell's paper is that it is a six-column all-home-printed quarto, very liberally supplied with advertising matter of all kinds. That the front page is kept free from displayed matter is another point in the Echo's favor, but unfortunately, the presswork is rather defective, and in making up, not enough care is given to seeing that the several column rules do not extend below the type. To possess a neat appearance the column rules should all be of exactly an equal length and should line up exactly with the column bottoms. Exhibit No. 4 is the front page of the Echo, and Exhibit No. 5 is the full page advertisement, the latter lacking considerably in strength of display, due to its crowded condition. A slight relief would have been possible through the omission of the superfluous ornaments in the four corners, which certainly have no virtues



THE MASSENA ECHO

THURSDAY, MARCH 27 1913 EIGHT PAGES, ALL HOME PRINT

SAY, MASSENA NEEDS A LIVE COMMERCIAL CLUB. DON'T YOU BELIEVE IT?

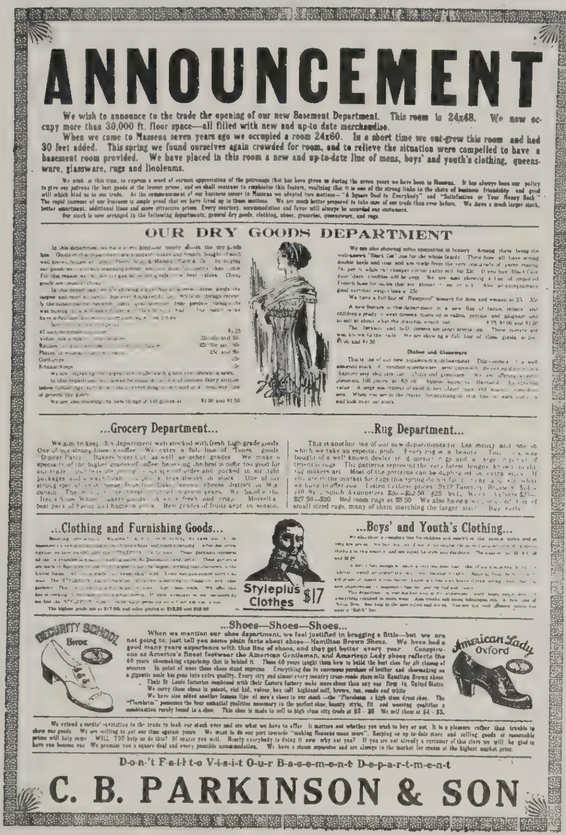
PRESIDENT WILSON AND HIS CABINET.

SHORT NEWS NOTES

No. 4

that would warrant their retention. This is a very neat ad, however, and the deep margins of white are pleasing; but it is to be regretted that so much "copy" was supplied that the effect is heavy and repellent to the average busy American. I think this is the one condition that every advertiser ought to aim to avoid. Being all-home-printed, the Echo gives a good deal of news, and, withal, is not a failure as a newspaper.



ANNOUNCEMENT

We wish to announce to the trade the opening of our new Basement Department. This room is 24x48. We now occupy more than 30,000 ft. floor space—all filled with new and up-to date merchandise.

When we came to Massena seven years ago we occupied a room 24x60. In a short time we out-grew this room and had 30 feet added. This spring we found ourselves again crowded for room, and to relieve the situation were compelled to have a basement room provided. We have placed in this room a new and up-to-date line of mens, boys' and youth's clothing, queensware, glassware, rugs and linoleums.

We wish at this time, to express a word of earnest appreciation of the patronage that has been given us during the seven years we have been in Massena. It has always been our policy to give our patrons the best goods at the lowest prices, and we shall continue to emphasize this feature, realizing that it is one of the strong links in the chain of business friendship and good will which bind us to our trade. At the commencement of our business career in Massena we adopted two mottoes—"A Square Deal to Everybody" and "Satisfaction or Your Money Back." The rapid increase of our business is ample proof that we have lived up to these mottoes. We are much better prepared to take care of our trade than ever before. We have a much larger stock, better assortment, additional lines and more attractive prices. Every courtesy, accommodation and favor will always be accorded our customers.

Our stock is now arranged in the following departments, general dry goods, clothing, shoes, groceries, queensware, and rugs.

OUR DRY GOODS DEPARTMENT

Dishes and Glassware

...Grocery Department...

...Rug Department...

...Clothing and Furnishing Goods...

...Boys' and Youth's Clothing...

...Shoes—Shoes—Shoes...

When we mention our shoe department, we feel justified in bragging a little—but we are not going to, just tell you some plain facts about shoes—Hamilton Brown Shoes. We have had a good many years experience with this line of shoes, and they get better every year. Conspicuous as America's finest footwear the American Gentleman, and American Lady shoes reflects the 40 years shoemaking experience that is behind it. These 40 years taught them how to build the best shoe for all classes of wearers. In point of wear these shoes stand supreme. Everything due to enormous purchase of leather and shoemaking on a gigantic scale has gone into extra quality. Every city and almost every country cross-roads store sells Hamilton Brown shoes.

Their St. Louis factories combined with their Eastern factory make more shoes than any one firm in United States.

We carry these shoes in patent, vici kid, velour, box calf, highland calf, brown, tan, suede and white.

We have also added another famous line of men's shoes to our stock—the "Florsheim" a high class dress shoe. The "Florsheim" possesses the four essential qualities necessary in the perfect shoe, beauty, style, fit and wearing qualities a combination rarely found in a shoe. This shoe is made to sell to high class city trade at $5 - $6. We sell them at $4 - $5.

We extend a cordial invitation to the trade to look our stock over and see what we have to offer. It matters not whether you wish to buy or not. It is a pleasure rather than trouble to show our goods. We are willing to put our time against yours. We want to do our part towards "making Massena mean more". Keeping an up-to-date store and selling goods at reasonable prices will help some. WILL YOU help us do this? Of course you will. Nearly everybody is doing it now, why not you? If you are not already a customer of this store we will be glad to have you become one. We promise you a square deal and every possible accommodation. We have a cream separator and are always in the market for cream at the highest market price.

Don't Fail to Visit Our Basement Department

C. B. PARKINSON & SON

No. 5

✠ ✠ ✠

Fulton, Missouri, September 11, 1913.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: In this mail I am sending you a copy of the current issue of The Gazette. It is about an average issue, though possibly it is just a little short on advertising.

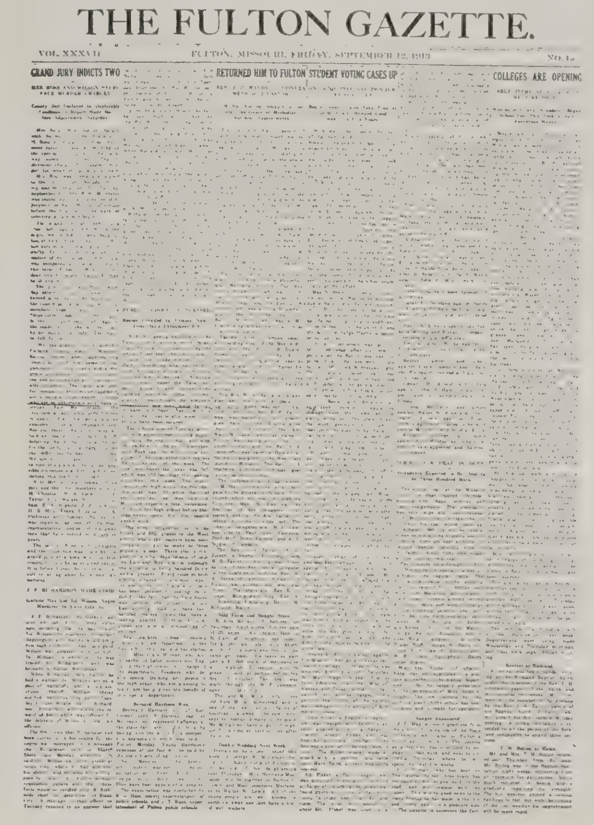
The paper is printed on a Cranston drum which we have had in use ten years. It is set on a standard No. 5 linotype.

The National Printer-Journalist of either August or September, 1910, contained a description of our building and plant.

Very respectfully,

OVID BELL.

A better newspaper than this Fulton Gazette from Brother Ovid Bell, it would be hard to find anywhere. It is a beautiful paper — a delightful paper to look at — as well as being an excellent paper in nearly every other respect. Exhibit No. 6 shows the Gazette's exquisitely clean front page, in which, I trust, the charming style of headings and its strict uniformity will be particularly noticeable and pleasing to all who inspect it. These heads, by their dainty, modest faces and uniformity of style, denote instantly that the men back of the Gazette are printer-journalists of fine taste and judgment. In the dignity of a paper's appearance, how wonderfully important is this simple little matter of head-lines. And yet how frequently do newspaper men, more especially those who make the home weeklies of this country, treat it as a matter of little significance, neglecting to maintain any regular style or method of harmony or unison



THE FULTON GAZETTE.

No. 6

in this respect. In such a newspaper there is invariably the aspect of carelessness and slovenliness. Happily, there is no such deplorable indication in this delightful publication from Missouri, the contents of which, too, are quite as commendable as the fine manner in which it has been treated at the hands of the mechanical men. Note that the front page (Exhibit No. 6) is filled with bright, clean news stories, full of interest, and written in a style to please and satisfy. Six of the other seven pages (all home printed) are just as replete with news, there being headed stories, correspondence and short locals, while one of the seven other pages is devoted to a budget of editorials, excellent in topic and modern in literary composition. Nor is the story of the Gazette's goodness yet all told, for there is the press work — a perfect delight in its height of perfection —and the ad-composition, which, with an evident plentiful supply of some of the choicest type faces of this age and plain brass rule borders, combined with intelligent composition along up-to-date lines, is just as good as it is possible for human hands to make it. Exhibits Nos. 7, 8, 9 and 10 are examples. The features in these ads that raise them far above the average are simplicity of design, abundant white margins and correct whiting out.

MILLINERY OPENING
SEPTEMBER 13, 1913

At which time the choicest millinery offerings of the season will be shown.

Particular attention has been given to hats for misses and children.

So comprehensive is the display that the younger heads may easily be adored properly and tastily, yet without working any special hardships on the parental purse.

It will afford us much pleasure to see the ladies of Auxvasse, Fulton and vicinity, at the opening next Saturday.

The pattern hats are beautiful. Those from our own work rooms show many creations that are distinctive and attractive.

No. 10

* * *

Ravenna, Nebraska, Oct. 20, 1913.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: I am an interested reader of your department of the National Printer-Journalist, and it occurred to me that you might be interested in seeing a copy of The News' "Booster" edition, issued on the 17th inst. I am sending you a copy by this mail.

Yours truly,
C. B. CASS.

I am truly thankful to Brother Cass for the privilege of inspecting this dandy special "booster edition" of the Ravenna News. It is printed on heavy calendared stock and consists of three sections, each composed of eight pages of seven-column size. In his editorial introduction of the edition, Editor Cass explains that it is Ravenna's contribution to the state-wide educational campaign inaugurated by the papers affiliated with the Nebraska Press Association, having for its purpose the advertising of Nebraska's resources and merits as an agricultural and industrial commonwealth, and as such Ravenna people may well feel proud of it. Three thousand copies were printed, those over and above the number mailed to regular subscribers being sold at ten cents the copy. The front page of the first section is embellished with a great half-tone occupying more than half the page, and consisting of a group of views of Ravenna industrial and business buildings. This section is filled with special articles pertaining to the city, county and state and their peculiar advantages as places in which to live and engage in business. Each page is made beautiful and more interesting by half-tone illustrations, many of them of three-columns' width. Aside from the special illustrated feature stories on the front and back pages, the contents of the second section of this fine "booster edition" consists of pen sketches of the men who do things in and about Ravenna, each sketch being accompanied by a good oval cut of the subject. The third and last section contains the regular week's news, supplemented with an evident overflow of special illustrated stuff. Every line of the special matter in this excellent edition of the News is well done, from the time it was inscribed by the editor's pen until it was turned from the press, and I must particularly compliment the clever workman who attended to the mechanical makeup of the pages, the arrangement being extremely neat and artistic and at the same time perfect in balance. From Brother Cass' own statement, I quote the actual cost of stock, engravings and linotyping of straight matter on this special number to have been between three and four hundred dollars, and then there is the cost of imposition, ad-composition and pressing uncomputed. One thing which has struck me as remarkable, while looking over this extraordinarily creditable sheet, is the fact that such few advertisements appear in its columns. In a town of Ravenna's proportions and business facilities, I should have expected page after page in such an edition of the home newspaper to be demanded for displayed advertising purposes, whereas, on the contrary, the ad spaces are what I would deem of a minimum number and of minimum size, the largest being not greater than a quarter page. Whether this is due to a lack of enterprise on the part of Ravenna's business men, or whether it was through choice of Editor Cass, who did not feel justified in swelling his special edition to extreme size, I, of course, am unable to judge; but, if the former, then the business men of Ravenna are surely in line for this department's heartiest contempt. In conclusion, I wish to say unreservedly that this special "booster edition" of the Ravenna News is a very commendable effort on the part of Brother Cass and his force of helpers, and it ought to prove a material factor in the vital forces set to work to increase immigration to Nebraska.

* * *

And now comes this initial number of the Deerwood (Minn.) Times, issued by Harvey E. Mussey, as owner and publisher, and his son, Homer F. Mussey, as managing editor, they of erstwhile connection with the publication of the Thief River Falls (Minn.) Times. This new Mussey creation is not "mussy" at all, but a neat, clean little six-column folio, all home print. A dandy editorial department is one of its finest features, with a delightful front page of good headed stuff, and a back page full of short locals. As yet, advertising patronage is not heavy, but such as the new enterprise enjoys is cleverly treated at the compositor's hands (Exhibit 35). With sincerity, I wish Brothers Mussey prosperity and happiness in their new field.

What's That?

Benson selling fresh meat? I guess yes! Selling some Dry Goods, also---some that's just right! New goods, too! Also Shoes, Groceries, etc!

Chas. E. Benson

No. 35

TYPES WHICH PRODUCE TWO-COLOR EFFECTS WITH ONE PRINTING

The fashionable color combination is harmonies of black, gray tones with black. Gray is a color most friendly to all other colors. Harmonies of varying tones of one color are always correct and always safe. Hitherto the typographic printer has procured such color harmonies by two printings. The halftone engravers a little while ago showed how these harmonies could be procured with one printing, one plate, one color, by varying the intensities of the tones from full black to grays, or from full blue to minor tones of blue, and so with browns, reds, etc.

Now, the ever-progressive American Type Founders Company has furnished types, borders, brass rules and ornaments for the same purpose. With one printing, one form, one color, a two-color contrast is obtainable by using these new products of the type foundry, and the results are exquisitely refined mass effects without heaviness; clarity and vigor in head lines which emphasize the text or illustrations instead of detracting from the power of the latter; harmony in typography never so easily obtained.

This new material is not in the latest (1913) specimen book of the American Type Founders Company, but pamphlets and specimen sheets may be had from any branch of the company, or from its agents everywhere. So far the new gray-tone materials comprise Cheltenham Bold Shaded, Antique Shaded, Copperplate Gothic Shaded, Floral Decorators, Grecian Shaded Borders, Gray Open Square Borders, Diagonal Shaded Borders, Lithotone Brass Rules, Gray Borders Nos. 1 and 2, and Linear Borders.

Such of this material as is called "shaded" should not be confused with the colorless knife-edged shaded effects of twenty years ago. In these new mis-called "shadeds" there are decisive color tones, produced in the only way varying tones can be provided by line artists, by the introduction of alternate lines of white with black, modifying the intensity of the full tones.

The printing lines are firm and strong and protected by a line of full color following the contours. This extension of possibilities in typographic printing is very interesting, and is creditable to the American Type Founders Company.

"PROOF OF PROGRESS"

A very handsome booklet, printed on extra quality deckle-edged paper, has reached this office from the J. W. Butler Paper Company. The above is the title and refers to the progress made by the company's Kansas City branch, and known as the Interstate Paper Company, and a combination with the Missouri Paper House, the new house to be named and known as the Missouri-Interstate Paper Company. The officers of the company are: President, J. F. Butler, vice-president and secretary of the J. W. Butler Paper Company of Chicago; vice-president, H. A. Olmsted, general manager of the distributing houses of the J. W. Butler Paper Company; second vice-president, George O. Thompkins, a long-time employe of the J. W. Butler Paper Company, who originated the Southwestern Paper Company at Dallas and Houston, Texas, in 1906, and the Interstate Paper Company of Kansas City, of which he was treasurer and general manager in 1910; treasurer, D. B. Fant, who has been treasurer and credit man of the Missouri Paper House; secretary and city salesman, F. P. Fruth, who, with his brother, established the Missouri Paper House in 1904, and who had been president and general manager; country salesman, J. Howard Tompkins, who had been with the Butler Paper Company since 1896.

The combination of the two companies, headed and managed by expert paper men, with a concentration of correct merchandising, affords the friends of both houses better purchasing facilities. "Service and Quality" are the claims of the company.

✣ ✣ ✣

PROGRESS OF THE NATIONAL PRINTING SHOW

Nearly one hundred concerns have signed for space at the National Printing and Allied Trades Exposition which is to be held in the new Grand Central Palace next April. Among those who recently signed are the Auto Falcon & Waite Die Press Company, New York; Toronto Type Founders Company, Toronto; National Sales Company, Chicopee Falls, N. Y.; Challenge Machinery Company, Grand Haven, Mich.; George P. Clark Company, Windsor Locks, Conn.

The following associations will be represented by booths at the show: United Typothetae of America, Ben Franklin Club of America, National Order of Pica, Printers' League of America, Typothetae of the City of New York, New York Master Printers' Association, New York Order of Pica.

The National Exposition Company will shortly issue a handsome poster in colors, advertising the Exposition, which will be distributed to printers and supply men.

It has been definitely stated that several of the exhibitors who have already signed up for space will show new machines at the 1914 show, which have never before been publicly exhibited.

The indorsement of the show by the Merchants Association of New York has had good effect in stimulating interest. As the matter stands, the Exposition has been indorsed by practically every association in the allied industries.

Arrangements are being made for the addition of educational features which will still further enhance the possibilities of the show. Considerable publicity will be secured in mediums reaching the business men, with the purpose of insuring a large and representative attendance to view the Graphic Arts Exhibits.

USEFUL MATRIX INFORMATION

The Mergenthaler Linotype Company of New York is to be commended not only for constantly making improvements and originating new features, but for issuing, just as constantly, booklets filled with useful suggestions and information for the benefit of the users of the linotype machines.

The latest booklet of the kind to reach our desk is properly entitled as above, "Useful Matrix Information." It contains valuable directions as to the simple but useful methods of finding "the face size of a matrix" and "the name or number of a font to which matrix belongs," accompanied by illustrations and testing diagrams.

Then follow the enumerations, by names, of some three hundred and fifteen font slots, face notches and teeth combinations of linotype matrix, and face notches on reference side. An explanation is given as to "matrix combinations" and the meaning of the word "combination" in connection with linotype matrix, of "pi matrix," "the cutting of combinations," etc.

The last pages are given up to "Matrix Tooth List and English Slug Chart," "Commercial Fractions" and "Advertising Figures." The booklet is of pocket size. A copy should be in the hands of every linotype machinist and machine operator.

⁂

THE BOOK YOU NEED

Attention is called to the advertisement of J. L. Frazier for his book, "Nifty Ideas for Thrifty Printers," which appears on page 915 of this number. Mr. Frazier advises us that the advertisement which appeared in last month's issue brought him a number of replies. The book is a splendid exhibition of the typographical art and deserves a large sale. Upon receiving his copy, L. H. McNeil, of Findlay, Ohio, who is perhaps the most consistent prize-winner in typographical contests in the United States, said: "It is the most complete book of its kind that has ever come to my notice." Every class of work handled in the average plant is represented by model designs that should prove of assistance to the proprietor, foreman, journeyman and apprentice.

The price of the book is $2, carriage prepaid, and is sold on a positive guarantee that it is authentic and just as represented. Those wishing copies should address J. L. Frazier, 604 Kentucky street, Lawrence, Kan., without delay.

⁂

OFFICE OF WILLIAM THOMSON PRINTERS' MACHINERY COMPANY

Last month, by oversight, the handsome business office of the William Thomson Printers' Machinery Company in Chicago was wrongly labeled as the Boston home office of the H. C. Hansen Type Foundry. It was one of those tricks of memory that came from the thought of the home of the Boston foundry that is represented in Chicago by the William Thomson Printers' Machinery Company, who have fitted up an office, at an expense of something less than a million dollars, that does great honor to both the company and the foundry.

⁂

The insert in this issue of F. E. Okie Company shows proofs of their gold ink ready to mix, which they claim to be the best on the market. The printing is the actual result on a run of ten thousand copies. The ink prints well, dries well, and will keep the color bright and will not tarnish. It is clean-working, keeps sweet in the varnish after mixing for any length of time and does not blacken or fill up, and the price is only $2 a pound.

MIEHLE COMPANY ANNOUNCEMENT

The Miehle Printing Press and Manufacturing Company of Chicago has acquired the old-established business undertaking heretofore carried on by the Huber-Hodgman Printing Press Company of Taunton, Mass. As is well known to the printing trade, the latter company has manufactured "The Hodgman" two-revolution flat-bed press, and as the Miehle Company announces its intention of continuing to build that press at the Taunton works, those printers who are accustomed to using "The Hodgman" will be able to obtain it as in the past.

⁂

THE STANDARD

It is putting the standard high when printers are urged to "do all the printing of your town." However, it is just and so considered by all right thinking men, provided only that the printer is equipped with the means for doing the work in a way profitable to himself and satisfactory to his people. It is the claim of the Wood & Nathan Company that the Standard High Speed Automatic Printing Press will enable the printer to do expeditiously and profitably the many lines of specialty printing now quite generally sent out of town.

The announcement of this company, on pages 766 and 767, is worthy of study for its suggestions as to keeping printing at home. It is a big advertisement for a printing company to be able to announce the purchase of a new and up-to-date machine that will handle in a satisfactory manner all classes of printing and then to follow up such an announcement by making good and by an appeal for the home support that is the rightful due. It will bring increased business.

⁂

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC.

of **The National Printer-Journalist,** published once a month at Chicago, Illinois, required by the Act of August 24, 1912.

NOTE.— This statement is to be made in duplicate, both copies to be delivered by the publisher to the postmaster, who will send one copy to the Third Assistant Postmaster General (Division of Classification), Washington, D. C., and retain the other in the files of the postoffice.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order . .

A COLD SIMPLEX STEREOTYPING OUTFIT, $19 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage, for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

THE VAN BIBBER ROLLER CO., Sixth and Vine St., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

BINDERY MACHINERY FOR SALE—On account of edition work in printing departments crowding us for floor space, we offer the following bargains:

	Our Price
One 30-inch Monitor Power Perforator with patent adjustable feed gauge, made by Latham Machinery Co.; cost $190	$125.00
One Hickok Ruling Machine, without striker, 32-inch cloth, large assortment of pens, no power; cost $260	90.00
One Rotary Book Sawing Machine, table 26x45 inches, made by Standard Machinery Company, hand or power, 5 saws on arbor; cost $150	60.00
One 32-inch Horizontal Board Cutter or Gauge Table Shears, cast iron frame and top, made by Standard Machinery Co.; cost $95	65.00
Twenty-five pairs used News Cases	75c per pair
Twenty-five 2-3 used Job Cases	30c each

All machines in GOOD WORKING ORDER and big bargains for the money. Send half cash with order, or if monthly payments are desired give proper references.
CANTWELL PRINTING COMPANY, Madison, Wis.

WANTED—APPRENTICE LADY LINOTYPE OPERator at three dollars for eight-hour day, in Port Angeles, Wash. Will pay more if the lady is able to assist in reporting, writing changes for ads, etc. What is needed is a young woman of good address and initiative, who can assist with outside work and also learn to operate the linotype, so that she can work part of the time on linotype and part of the time on outside work, as the linotype composition is limited in amount. The linotype room and all surroundings are pleasant; the town has a population of 3,500 of the very best and most agreeable people, largely from the Middle-Western and Eastern states, the remainder are native Washingtonians; social conditions are of the happiest; the people are active, cordial, friendly, and there are no cliques or factions. The city is growing rapidly, location beautiful and climate healthful and in every way ideal. Address Webster Publishing Co., The Olympian Leader, Port Angeles, Wash.

Bargains in Printing Presses
FOR SALE

Ocular Demonstration Convinces and Makes Sales

By Harry A. Cochrane

It is agreed by the builders of automobiles that it is essential to their sales that their machines be inspected by possible buyers. In consequence, the Automobile Shows have grown to tremendous size and their patronage by buyers is greater each succeeding year.

The same will be true of the Printing, Lithographing and Allied Trades Exposition, which has now become a feature of the trade. The exhibitors at the 1913 Exposition, at the Grand Central Palace, New York, were pleased with the results. We print herewith a letter from one press builder, which should engage the attention of those who want direct results.

THE AUTOPRESS COMPANY,
High Speed Automatic Printing Presses, 95 Madison Avenue, New York.
May 20, 1913.

In behalf of The Autopress Company, I want to say that the recent National Printing Exposition, held in New York City, April 19-26, was a splendid success. No other Convention or Exposition ever produced as much business for us.

Practically all completed Model A Autopresses at our factory were sold out during Exposition Week and the output of our new models, C, 13 x 19, and CC, 14 x 20, exhibited at the Exposition for the first time, was sold out entirely, so that we are now taking orders therefor only for delivery after August 15th. We feel sure this WORLD'S FAIR FOR THE PRINTING WORLD must have benefited every exhibitor and visitor.

Very truly yours, THE AUTOPRESS COMPANY,
Morris D. Kopple, President.

Aside from the opportunity to become acquainted with the Employing Printers and Lithographers, which the Exposition affords, it is a fact that there is nothing like an OCULAR DEMONSTRATION to convince a possible buyer that a machine will do the work he wants done and as speedily as he requires. There is a natural spirit of conservatism in the minds of the average printer, or, for that matter, any manufacturer, and he has to SEE a new thing which he is unfamiliar with BEFORE he will invest his money in it.

The same is true of supplies, especially paper. Showings of Printing and Lithographing results on a paper manufacturer's or distributor's product is more convincing than any other means of interesting the printer, and this Exposition will have a PAPER PRODUCT SHOWING which will be the greatest ever brought together.

In inks and other supplies, there is also an opportunity to show results in the printed and lithographed product, and to get in touch with many possible customers who are there in the investigating frame of mind.

The 1914 Printing, Lithographing and Allied Trades Exposition will undoubtedly attract more PRINTERS, MORE BUYERS OF PRINTING AND LITHOGRAPHY and more representatives of firms SELLING TO PRINTERS AND LITHOGRAPHERS than any other heretofore held in America, and it is pre-eminently the place where money can be expended to the BEST ADVANTAGE to show a machine or product.

TO SUPPLY MEN AND MANUFACTURERS:

As the space for this Exposition is being sold rapidly, selections should be made at once to secure preferred positions.

Address NATIONAL PRINTING, LITHOGRAPHING AND ALLIED TRADES EXPOSITION, Harry A. Cochrane, President, 200 Fifth Ave., New York City, 'Phone Gramercy 724.

JUST OFF THE PRESS—A BOOK OF REAL SERVICE

NIFTY IDEAS FOR THRIFTY PRINTERS

A De-luxe Volume of More than 100 Classy Typographical Designs in One-, Two- and Three-Color Harmonies on White and Colored Stock.

ENDORSED BY SOME OF AMERICA'S LEADING TYPOGRAPHERS. READ WHAT THEY SAY—

L. H. McNeil, Findlay, Ohio: "Your book is the most complete of any of this nature that has come to my notice. It should be in the hands of every printer who is looking for a book that is a guide to correct typography," etc.

C. W. Ludtke, Markesan, Wis.: "We would not take the price we paid for it if we could not get another copy. To say that we are pleased is putting it mildly," etc.

McMullen-Woellhaf Ptg. Co., Burlington, Iowa.: "The volume should prove of inspiration and assistance many times worth its price to the ambitious workman, whether apprentice, journeyman or foreman," etc.

National Printer-Journalist (monthly $2)
Printing Art Suggestion Book (monthly $1)
$2.50

The Printing Trade News

The Printing Trade News, 64 pages, is published weekly and has a very comprehensive business news service from all sections of the country. It deals entirely with the affairs of the business office and the executives. It collects weekly beside printing house news, that of the binders and rulers, the electrotypers, engravers, trade composition houses, the supply trade paper houses, lithographers, etc., has a business fiction story each week, patents of interest to printers, and editorially reviews important doings of printers and publishers during the week.

The Printing Art Suggestion Book

This is a monthly publication issued by the University Press, Cambridge, Mass., containing examples of typographic and other designs intended to assist the printer and those who are printing in the choice of color schemes, inks, and papers. It contains samples of standard papers, as well as novelties which are brought out from time to time by the various mills. It is full of ideas and suggestions for typographic design, display, and color schemes.
